# INTRODUCTION

THIS, *the eleventh issue of the Britannica Book of the Year will be distributed to more than 300,000 subscribers. For close to a decade, year after year, this volume has been well within the best-seller range.*

*The wide distribution is in part a result of a developing and an essential public interest in the leaders and in the events which help shape the lives of peoples everywhere. Newspapers are read. Radio reports are closely followed day by day. But since radio reports are forgotten and newspapers are thrown away, there is apparently a need for a more permanent record of contemporary history. In free countries that need may be fulfilled.*

*Books prepared by scholars years hence may well be more accurate accounts of the year 1947, because they will have been written with the knowledge of what happened not only in 1947, but in the years after, and therefore will be written, one hopes, with greater penetration and objectivity. Books by historians of the future will lack, however, the excitements of one written and produced on the run by those who were daily affected by the year's changes.*

*More than 500 contributors of a variety of opinion and experience have written this book. It is their handiwork. It is also, in a sense, the handiwork of every contemporary, because to the best of their ability the authors have reflected the experience of each one who reads.*

*The Book of the Year is the diary of the free citizen. No official, no government censor, has modified it. And that is significant. For so long as any country permits the exchange of information without constraints, there is some hope for the emergence of a free and a peaceful world.*

* * * * * * * *

*The Book of the Year was made not only by its authoritative contributors, but by the constantly watchful staff of the Editorial Department; by Miss Elsiebeth McDaniel and her assistants, Miss Martha Harriett Mullen, Miss Jean Mays and Miss Helen Julia Zeller, who marshalled the receipt and control of articles; by Mrs. Ruth Soffer, who assembled the illustrations; by the stylists and research checkers, Mrs. Jewel Braun Holahan, Miss Starr Spratt, Mrs. Ann S. Overton, Mrs. Ruth S. Rutherford, Mrs. Joyce Williams Ellis and Mrs. Melvina G. Hilland; by Miss Doreen Fae Rieke, who contacted the contributors on all queries in copy; by Mrs. Helga Buenger and Miss Caryl J. Opatrny, who recorded the flow of copy to and from the printers; by Miss Wilma Widdicombe, who laid the final page arrangements; by Miss Elaine M. Jost and Miss Mildred W. Benson, the indexers—all of whom worked under the general direction of Mrs. Mae H. MacKay and her two immediate assistants, Mrs. Harriet L. Milburn and Miss Lorene Lawson, to speed the articles to the presses.*

WALTER YUST

# EDITORS AND CONTRIBUTORS

WALTER YUST, EDITOR OF ENCYCLOPÆDIA BRITANNICA
AND OF THE BRITANNICA BOOK OF THE YEAR

HOWARD E. KASCH, *Associate Editor of the Book of the Year*

## LIBRARIAN CONSULTANTS

# CALENDAR OF EVENTS, 1947

**For elections and disasters of 1947, see under those headings in the text. For obituaries of prominent persons who died during 1947, see under the entry Obituaries.**

## JANUARY

1 **British government** assumed formal title to all nation's coal fields as measure nationalizing coal mines became law.

2 **Unanimous decision** was taken by senate Republicans to prevent Sen. Theodore G. Bilbo (Dem., Miss.) from taking office, pending full debate on floor of cases against him.

**Rep. Charles A. Halleck** of Indiana was named Republican leader of house of representatives; Rep. Sam Rayburn of Texas was appointed leader of house Democrats.

**Suits seeking $400,000,000** as portal-to-portal retroactive pay adjustments were filed in Detroit federal district court against Ford, Chevrolet and Chrysler motor car companies by United Automobile Workers.

3 **Measure for 20% reduction** in personal income taxes, to become retroactive to Jan. 1, was introduced by Rep. Harold Knutson (Rep., Minn.) in house of representatives.

4 **Bernard Baruch** and other members of U.S. delegation to U.N. Atomic Energy commission resigned because work of formulating program for atomic energy control had been completed; Baruch said he saw "no reason" why U.S. should discontinue making atomic bombs until ratification of treaty.

**Sen. Bilbo** (Dem., Miss.) voluntarily postponed his plans to fight for seat in upper house on grounds that he needed to undergo operation for cancer of jaw.

**"Dangerous and widespread plot"** against Hungarian republic was announced by Hungarian interior ministry, which said conspirators sought to restore Adm. Nicholas Horthy to power.

5 **Warning of possible coal shortage,** Emanuel Shinwell, British minister of fuel and power, said fuel priority would be given to vital public utilities and industries.

**Leon Henderson and Wilson W. Wyatt** were named temporary co-chairmen of organizing committee of Americans for Democratic Action, new liberal organization.

6 **Pres. Truman** renewed vow of co-operation with Republican majority in congress in annual message on state of union; he urged legislators to outlaw "indefensible" jurisdictional strikes and to require "binding" settlement of labour disputes, but warned against "punitive legislation" and "vindictive" labour laws.

**Soviet Union** was asked by U.S. state department to return control of Dairen promptly to China.

**Appointment of Lt. Gen. Lucius D. Clay** as commander of U.S. forces in European theatre, succeeding Gen. Joseph T. McNarney, was announced by war department; Lt. Gen. Geoffrey Keyes was named to succeed Gen. Mark W. Clark as chief of U.S. occupation army in Austria, with Clark scheduled to become commander of U.S. 6th army.

7 **Pres. Truman** nominated Gen. George C. Marshall as secretary of state, succeeding James F. Byrnes, who resigned because of ill health; on leaving Nanking, Marshall ascribed failure of his efforts to bring peace to China to "almost overwhelming suspicion" that Chinese nationalists and communists had of each other; and denounced "dominant group of reactionaries" in Kuomintang and "irreconcilable communists."

9 **Accusations by Andrei Gromyko,** soviet delegate, that U.S. insistence on atomic energy decision was move to delay general disarmament were denied by Herschel Johnson, U.S. delegate, in debate at U.N. Security council.

**Poland** was advised in U.S. note that policy of "suppression, intimidation and coercion" of opposition violated both letter and spirit of Yalta and Potsdam pacts.

**London dispatches** reported U.S.S.R. had asked Norway for permission to establish military bases on Spitsbergen Island.

**Reduction of federal budget** by between $3,000,000,000 and $4,000,000,000 and temporary continuance of corporation and wartime excise tax rates so that personal income taxes could be cut 20% were advocated by Sen. Robert Taft (Rep., O.).

10 **U.N. Security council** voted 10–0 to assume responsibility for guaranteeing integrity and independence of Free Territory of Trieste; Australia abstained from voting.

**Annual budget** submitted to congress by Pres. Truman for fiscal year starting July 1 put expenditures at $37,528,000,000, revenue at $37,730,000,000 and military costs at $11,256,000,000; president also urged revision of postal rates to avoid substantial deficit.

**Isolation of virus** causing poliomyelitis in state said to be 80% pure was announced by Stanford university.

11 **Albanian government** rejected British demands for apology and compensation for lives of seamen lost when two British warships struck mines in Corfu channel, and implied that Greek vessels might have laid the mines.

**Friendship pact** was signed by Turkey and Trans-Jordan.

12 **Six survivors** of Navy plane that crashed in Ellsworth Land, coast of Antarctica, were saved by rescue plane and returned to Byrd expedition vessel; three of wrecked aircraft's crew had been killed in accident.

**Truce** between Jewish underground and British military in Palestine was ended when former blew up Haifa district police station, killing four persons.

14 **Conditional credit** of $100,000,000 was set aside by Export-Import bank for Italy to finance its imports from U.S.

**Auguste Champetier de Ribes,** of Popular Republican movement, was re-elected president of French council of republic.

15 **Prime Minister Clement R. Attlee's office** announced Britain and France agreement to conclude military alliance within framework of U.N. charter "at earliest possible moment."

**Vyacheslav Molotov,** soviet foreign minister, rejecting U.S. contention that Polish government was intimidating political opposition, said he saw no need for "interference in internal affairs of Poland."

16 **Vincent Auriol,** Socialist leader, was elected as 1st president of new 4th French republic, receiving 452 of 883 votes cast.

17 **Leon Blum's refusal** because of ill health to continue in office as premier led Pres. Auriol to select Paul Ramadier, another French Socialist, to form cabinet.

**100% margin requirement** for purchase of securities on stock exchange was reduced to 75% by U.S. federal reserve system.

**Persons burned** by atomic blasts at Hiroshima and Nagasaki suffered hair loss, reduction of white corpuscles and disfiguring scars, according to statement made by Allied Headquarters Public Health Welfare section at Tokyo; last death directly attributable to atomic bombings was said to have occurred in Oct. 1945.

18 **Ellis Arnall** resigned as governor of Georgia in favour of Lt. Gov. M. E. Thompson, who proclaimed himself "acting governor" and requested Herman Talmadge to vacate governor's office and executive mansion at Atlanta.

**Hopes** for Communist-Kuomintang peace in China faded when Yenan Communists rejected Nanking government's proposal for new conferences.

**French forces** opened drive to dislodge Viêt-Nam armies from strong positions about Hué, capital of Annam in Indo-China.

19 **British foreign office** declared it had protested to Premier Stalin against "misleading" *Pravda* article stating that Foreign Minister Bevin had disavowed Anglo-soviet alliance.

**Government bloc candidates** won 383 of 444 seats in election for new Polish parliament which was singularly free of disorders; Peasant party took only 27 seats.

20 **Premier Alcide de Gasperi** resigned as premier of Italian coalition government in crisis caused by split in Socialist party.

21 **Charges** that three high officials of Tennessee Valley authority were "communists," made by Sen. Kenneth D. McKellar (Dem., Tenn.) at senate hearing, were denied by Gordon R. Clapp, nominee for TVA chairmanship.

**Edouard Herriot** was elected president of French National assembly.

22 **Paul Ramadier** formed coalition cabinet composed of majority of French political parties with Georges Bidault as foreign minister and Maurice Thorez as a vice-premier.

**Herbert Hoover** accepted assignment from Pres. Truman to undertake economic mission to central Europe for study of food and other problems.

23 **Andrew J. May,** former Democratic representative from Kentucky, and Henry M.

## JANUARY—*Continued*

Garsson, Murray Garsson and Joseph Freeman, officials of wartime munitions combine, were indicted by federal grand jury in Washington on charges of conspiring to defraud federal government.

**24** **Premier Stalin,** agreeing that Foreign Minister Bevin's statements on British foreign policy did not repudiate Anglo-soviet alliance, said pact needed revision before it could be extended.

**Argentine foreign office** disclosed Pres. Juan D. Perón had issued decree empowering government to purchase assets of business firms once owned by axis nationals.

**Demetrios Maximos,** former banker and royalist, formed new coalition government in Greece.

**25** **Warren R. Austin,** U.S. delegate on U.N. Security council, said U.S. was opposed to any change in Big Five veto power, but asserted nations participating in world atomic plan would be obligated to take punitive action against violators even if council failed to act.

**Agreement** was reached by U.S. Steel Corp. and C.I.O. United Steel Workers on job reclassifications under which steel workers would receive $32,000,000 in back pay and $17,000,000 in wage increases.

**26** **Provision permitting** Netherlands businessmen to deal directly with Germans in merged U.S.-British economic zones was disclosed in Berlin.

**27** **Premier Demetrios Maximos** announced Greek government was prepared to offer general amnesty to all guerrilla bands that capitulated within specified time, in order to halt civil war.

**Mrs. Eleanor Roosevelt,** elected chairman of U.N. Human Rights commission, declared main problem was how to "enforce" international bill of rights which that body would write.

**28** **U.S. state department** charged that Polish government failed to carry out "solemn pledges" to hold free and unfettered elections as required in Yalta and Potsdam agreements.

**Terms of British-Burma agreement** under which Burma would elect constituent assembly and have interim government and ultimately complete independence were submitted to commons by Prime Minister Attlee.

**29** **State department** announced abandonment of U.S. effort to mediate Chinese civil war.

**31** **Evacuation** of British women and children from Palestine was ordered by Lt. Gen. Sir Alan G. Cunningham, British high commissioner, in move to combat Jewish underground.

**Blame** for ordering 10% rent increase without presidential approval was taken by Maj. Gen. Philip B. Fleming, director of Office of Temporary Controls; Fleming's measure was countermanded at last minute by Pres. Truman.

**Hans Fritzsche,** radio spokesman of nazi government, was sentenced to nine years at hard labour by Bavarian denazification court in Nuernberg; Heinrich Hoffman, Hitler's personal photographer, was sentenced to ten years at hard labour.

**Vatican** was accused by Yugoslav government of harbouring and aiding alleged Yugoslav war criminals to escape to South America.

## FEBRUARY

**1** **Labour-management agreement** for voluntary settlement of disputes in building and construction industries was announced by Pres. Truman.

**French Government** memorandum suggested France rule Ruhr basin so that area instead of serving as future arsenal for German aggression would be used to help reconstruct the destroyed communities of Europe.

**2** **Gen. Marshall,** in message to Jewish Labour committee, said U.S. urged and would continue to urge all nations to co-operate for speedy resettlement of European displaced persons.

**Premier Alcide de Gasperi** of Italy formed new coalition cabinet embracing Christian Democrats, Communists and Socialists.

**3** **Congress** was asked by Pres. Truman to extend some of his war powers for another year in order to complete effective reconversion.

**Adm. William H. P. Blandy** was appointed to succeed Adm. Marc Mitscher as commander of U.S. Atlantic fleet.

**4** **Franz von Papen** was arrested in midst of his trial before German denazification court in Nuernberg and charged with having falsified Hindenburg's will.

**5** **Jewish national council** turned down British ultimatum that official Jewry help British military ferret out underground; Irgun Zvai Leumi, aggressive underground group, said it would "fight to last breath" against British authority.

**U.S. and Soviet Union** were deadlocked over U.N. procedure for regulating atomic energy and armament, with U.S. wishing to treat each question separately and U.S.S.R. insisting on treating them as a whole.

**Boleslaw Bierut** was elected president of Poland, receiving 408 of votes in parliament against 24 in opposition; Józef Cyrankiewicz, Socialist leader, was given a mandate to form cabinet.

**6** **Gerhart Eisler,** alleged "brains" of Communist party in U.S., was charged by house committee on un-American activities with conspiracy to overthrow government, contempt of congress, perjury, income tax and passport falsification; committee rejected Eisler's request to make statement in own behalf.

**Robert E. Hannegan** (Democratic national chairman) said Pres. Truman would be called upon to become Democratic nominee for president in 1948; White House said Truman had "no comment" to make on Hannegan speech.

**Appeal for truce** and negotiations on basis of 1946 agreement for Indo-China was made by Viêt-Nam delegates in Paris.

**7** **New law** proclaimed by British military government decreed political amnesty for about two-thirds of 1,500,000 Germans suspected of naziism in British zone.

**8** **Friedrich Flick,** German steel industrialist, and four associates were indicted by U.S. military government for war crimes and crimes against humanity on "vast scale."

**British proposal** for compromise of Arab-Jewish problem in Palestine was rejected by Arab delegates to Palestine parley in London.

**Greek government** was urged by Trygve Lie, secretary general of U.N., to stay scheduled execution of group of convicted guerrillas until Security council had time to study controversy.

**Claims** of Mount Clemens Pottery Co. employees for portal-to-portal pay were dismissed in entirety by Federal Judge Frank A. Picard of Detroit.

**10** **Industry** and public utilities in more than half of industrial Britain were halted as government cut off power in drastic move to conserve dwindling coal stocks.

**State of war** between Allied powers and Italy, Finland, Rumania, Bulgaria and Hungary was formally terminated by signature of peace treaties in Paris; Yugoslavia and Greece joined four of former axis satellites in protesting certain provisions of pacts; only Rumania seemed satisfied with treaty terms; in Italy, populace observed 10 min. of silence in protest against peace treaty.

**12** **U.S. and Canada** reached agreement to continue wartime military co-operation on voluntary basis "for peacetime joint security purposes."

**13** **Pres. Truman** branded as "absolutely unfounded" charges made by Sen. Kenneth McKellar (Dem., Tenn.) that David E. Lilienthal, nominee for chairmanship of U.S. Atomic Energy commission, was either communist or marginal communist.

**Pres. Truman** reiterated oppo-

| BULGANIN | March 3 |
| TRUMAN | March 12 |
| ATTLEE | March 12 |
| HOOVER | March 23 |

**Justice Robert H. Jackson** denounced supreme court for its alleged disregard of customs and contracts of industry when deciding wage-hour cases.

**18 Chinese government** was reported to have asked U.N.R.R.A. for permission to sell $200,000,000 worth of U.N.R.R.A. supplies on "black market."

**Sec'y of State Marshall** rejected soviet complaint that Undersec'y of State Acheson "grossly slandered" Soviet Union, declaring Acheson's "frank" reply was made in "line of duty."

**19 Tennessee** state legislature voted ban on closed shop.

**20 British government** announced intention of withdrawing from India by June 1948; Adm. Viscount Mountbatten was named viceroy of India, succeeding Viscount Wavell.

**Irgun Zvai Leumi,** Jewish underground organization in Palestine, cut oil pipe lines in two places and staged mortar and machine-gun attack against royal air force field near Hadera.

**Soviet Union** slashed budget for armed forces in 1947 by more than 5,600,000,000 rubles and increased funds for scientific research by about 1,500,000,000 rubles.

**21 Congress** was urged by Pres. Truman to appropriate $350,000,000 for relief in liberated areas; the president proposed also that distribution of relief supplies be controlled directly by U.S.

**British government** White Paper stressed necessity for continued frugal existence and harder work to meet plan for increasing 1947 exports to 140% of prewar volume.

**Italy** signed agreement with Argentina under which thousands of Italian workers, artisans and technicians would be permitted to emigrate to Argentina.

**22 Britain's decision** to give India independence by June 1948 was hailed as "wise and courageous" move by Jawaharlal Nehru, Congress party leader.

**23 Allied intelligence agents** arrested several hundred leaders of nazi underground movements in British and U.S. zones of reich.

**Dr. Werner Heisenberg,** German atomic scientist, alleged that Soviet Union was tempting German scientists with large salaries to conduct research for soviet government.

**Contract for construction** of Saudi-Arabian section of 1,000-mi. oil pipe line linking Saudi-Arabian oil fields with Mediterranean was awarded to five U.S. engineering companies.

**24 Lt. Gen. John R. Hodge** told U.S. newsmen in Washington reports that Soviet Union was organizing army of 500,000 Koreans in its zone were seemingly true.

**Franz von Papen** was sentenced to eight years in labour camp after German denazification court in Nuernberg found him guilty of being major nazi offender.

**25 Foreign Sec'y Bevin** implied that partisan politics had impelled Pres. Truman to make his demand in 1946 for admission of 100,000 Jews to Palestine, further asserting this statement wrecked hope of friendly solution of Palestine problem.

**26 Pres. William Green** of A.F. of L. conceded desirability of altering some features of Wagner act, but warned congress that "bitter hatred" of workers would rise against more drastic labour restrictions.

**Lewis W. Douglas** was named by Pres. Truman to become U.S. ambassador to Great Britain.

**Foreign Sec'y Bevin** was rebuked by White House for his "unfortunate and misleading" suggestion that Pres. Truman's statement on Palestine was meant for domestic political purposes.

**40 persons** were injured in riot started when 50,000 Belgian war veterans stormed Brussels to demand bonus payments and other privileges.

**27 Foreign Sec'y Bevin** minimized his clash with Pres. Truman over Palestine issue and emphasized in report to commons that his government enjoyed "most cordial" relations with U.S.

**Herbert Hoover** urged U.S. and Britain each to expend $475,500,000 to save Germany from starvation and chaos, warning that survival of western civilization in Europe depended on its survival in reich.

**28 P-82 U.S. fighter plane** flew 4,978 mi. nonstop from Hickam field, Hawaii, to La Guardia airport, New York City, in 14 hr. 33 min., establishing new nonstop record for fighter craft.

## MARCH

**1 16 persons** were killed in Palestine as Jewish underground attacked British installations; 13 of this number were killed in bombing of British officers' club at Jerusalem.

**Resignation** of T. V. Soong as premier of China was announced by Executive Yuan.

**2 Warsaw dispatches** indicated Polish underground was disintegrating and that thousands of members were taking advantage of government's general amnesty pledge to lay down arms and return to civil pursuits.

**2,400** Buffalo, N.Y., schoolteachers ended week-long strike after Mayor Bernard Dowd offered to provide salary increases for 1947–48 school year ranging from $300 to $625.

**3 Mexico** and other hemispheric republics were assured by Pres. Truman, who visited Pres. Miguel Alemán in Mexico City, that U.S. would adhere to policy of nonintervention in their affairs.

**Winston Churchill** urged British government to speed Palestine problem to U.N. to end "squalid warfare" in Holy Land.

**Premier Stalin** resigned post as minister of armed forces because of pressure of other duties; Gen. Nikolai A. Bulganin was named his successor.

**4 State department** disclosed that Greek government had made appeal to U.S. for prompt assistance.

**France and Britain** signed 50-year treaty of alliance in Dunkirk ceremony; Foreign Sec'y Bevin said pact was designed not to block Soviet Union but to build "perfect pattern for universal peace."

**5 U.N. Security council** heard Andrei Gromyko, soviet dele-

## MARCH—*Continued*

gate, charge U.S. atomic energy control plan was designed to give U.S. monopoly of atomic energy and assert plan's control provisions represented meddling in internal affairs of other countries.

6 **British government's decision** to withdraw from India in June 1948 was approved in commons; Churchill voiced "grief" at "clattering down of British Empire," suggesting government should invoke aid or advice of U.N.

**Contempt conviction** of John L. Lewis and United Mine Workers was upheld by supreme court by 7–2 vote; $10,000 fine against Lewis was sustained but $3,500,000 levy against union was reduced to $700,000.

**State department** announced it had accused Soviet Union of "unjustified interference" in Hungary's internal affairs and had requested probe by Allied Control commission.

7 **John L. Lewis** told senate committee on labour and public welfare that government could do nothing to prevent coal strikes unless it was prepared to adopt totalitarianism.

8 **Jewish underground bands** in Palestine defied British martial law to stage three attacks on army and police centres in Tel Aviv area.

**Sec'y of State Marshall** expressed view that adoption of four-power 40-year alliance against reich should precede signature of peace treaties with Germany.

**International Harvester Co.** announced plan to initiate series of price cuts that would save its customers $20,000,000 annually.

9 **Tribal chieftains** of Western Samoa directly petitioned U.N. Trusteeship council for union of Western and American Samoa and self-government.

**U.A.W. local** voted to end 440-day strike against J. I. Case Co. in Racine, Wis., and to accept wage increases ranging from 25 cents to 26 cents hourly.

17 **Public disclosure** that U.S. army and navy were experimenting with deadly radioactive cloud which could be discharged from nonexplosive shells dropped by planes was made by Glenn L. Martin before senate subcommittee.

18 **Irgun Zvai Leumi,** Palestinian underground force, said it would agree to truce during U.N. on-the-spot inquiry provided British forces also stopped fighting.

**Warning** that U.S. would be especially vulnerable to biological warfare was contained in 40,000-word technical summary of dangers of bacterial warfare issued simultaneously in New York and Chicago by American Association of Scientific Workers.

19 **U.S.** was advised by Andrei Gromyko, soviet representative on U.N., that continuance of its atomic energy monopoly was "illusory."

**U.S. supreme court** ruled in 6–3 verdict that news stories criticizing a trial judge do not constitute contempt, thus setting aside conviction of three Texas newspapermen on these grounds.

20 **Additional appropriations** similar to $400,000,000 fund sought for Greece and Turkey and $350,000,000 foreign relief fund were temporarily ruled out by Sec'y of State Marshall.

**Proposal** to establish a national science foundation that would overcome nation's shortages in scientific skills was approved in senate by 79–8 vote.

21 **All 28 defendants** accused of lynching Negro were acquitted by jury of 12 white men in trial held in Greenville, S.C.; Judge J. Robert Martin, Jr., expressed displeasure with verdict by refusing to thank jurors for their services.

**60 railroads** in eastern district of U.S. were granted fare increases by Interstate Commerce commission.

22 **Greek-Turkish aid bill** was signed by Pres. Truman who hailed it as "vigorous effort to help create conditions" of world peace.

**Soviet resolution** to curb activities of U.N. subcommission watching for incidents at Greek frontiers was rejected in Security council by 6–2 vote.

23 **Congress** was urged by Pres. Truman to extend limited portion of his war powers until July 1948, to control domestic use and export of few critical materials necessary to national interest.

24 **Premier Ramadier** issued decree under which personnel of French public utilities would be kept on job under military rule in event of strike.

26 **Herbert Hoover** urged immediate negotiation of peace treaty with Japan as well as conclusion of Anglo-U.S. peace settlement with their respective occupation zones in reich.

**Coup d'état** staged by former president Gen. Anastasio Somoza unseated duly elected Nicaraguan government headed by Pres. Leonardo Arguello.

27 **22 nazi guards** and foremen of Mauthausen concentration camp who were found guilty by U.S. military court of wholesale slaughter of prisoners were hanged in Landsberg prison.

**Benjamín Lacayo Sacasa** was designated provisional president of Nicaragua pending new elections; Pres. Arguello was declared by congress "incapacitated" to hold office for failure to preserve public order.

28 **Left-wing Socialists and Communists** were left out of new Italian cabinet formed by Premier Alcide de Gasperi.

29 **House appropriations committee** was told by Gen. Carl A. Spaatz, air force commander, that army expects its main defenses to be on "Arctic frontier" in event of another war.

30 **Madrid dispatches** reported Spanish government would not put obstacles in way of Spanish businessmen wishing to trade with Soviet Union.

31 **Ferenc Nagy** was ousted as premier of Hungary while vacationing in Switzerland and was replaced by Lajos Dinnyes, prosoviet member of Small Landholders party.

**Abd el Krim** jumped ship at Port Said, Egypt, allegedly upon personal invitation of King Farouk who asked Rif leader to stay in Egypt under his protection.

## JUNE

1 **Compulsory military training** for all U.S. males reaching age of 18 was recommended by Pres. Truman's advisory commission on military training, which said such training was indispensable to nation's security in atomic age; commission also warned 12 largest U.S. cities could be destroyed in single day's attack.

**Katayama Tetsu,** Japan's new prime minister, expressed hope that Japanese democracy would be "permeated by spirit of Christian love and humanism."

2 **State department** suspended $15,000,000 credit to Hungary.

**Emil Sandstroem,** Swedish jurist, was elected chairman of U.N. Committee of Inquiry on Palestine.

3 **British proposal** for partitioning India into separate Hindu and Moslem states, with both states operating at least temporarily within British commonwealth, was announced jointly in New Delhi and London.

**Sen. Arthur H. Vandenberg** (Rep., Mich.) denounced "apparent treacherous conquest" of Hungary by communists and told senate it might become necessary for U.S. to bring Hungary's case to "trial" before U.N.

4 **Resignation of Spruille Braden** as assistant secretary of state for American republic affairs as of July 1 was announced by Pres. Truman.

5 **Sec'y of State Marshall** in Harvard university speech suggested U.S. would help Europe solve its economic ills provided European countries themselves adopted joint program (this so-called "Marshall plan" was later known as the European Recovery program).

**Senate** approved Italian peace treaty by 79–10 vote and accepted Hungarian, Rumanian and Bulgarian peace treaties without recorded vote.

**Pres. Truman** announced appointment of Dwight P. Griswold and Richard F. Allen as heads of Greek aid program and field administrator of foreign relief fund.

**Pres. Truman** declared Argen-

### JUNE—*Continued*

tine-U.S. estrangement was ended as state department announced resignation of George Messersmith as ambassador at Buenos Aires; president gave Messersmith credit for establishing good relations between governments.

**6** **Taft-Hartley labour bill** was voted 54–17 in senate.

**7** **"Law of succession,"** restoring status of traditional monarchy in Spain and making Dictator Franco chief of state for life, was unanimously approved by Spanish cortes.

**8** **Señora Eva Duarte Perón,** wife of Pres. Juan D. Perón of Argentina, was given 21-gun salute on arrival in Madrid.

**9** **Norman Armour** was nominated assistant secretary of state by Pres. Truman to fill vacancy caused by resignation of Spruille Braden.

**10** **Pres. Truman** paid state visit to Ottawa, becoming first U.S. president ever to make state visit to Canada.

**11** **Rationing of sugar,** except for industrial uses, was lifted by Sec'y of Agriculture Clinton P. Anderson as of June 12.

**Andrei Gromyko,** soviet delegate to U.N., accepted international inspection of atomic energy but insisted atomic bomb should be outlawed before international agreement is reached.

**State department** disclosed U.S. sent note to soviet authorities in Budapest charging that Russians had taken unilateral action "in most flagrant interference in Hungarian affairs."

**12** **Mrs. Mildred (Babe) Didrikson Zaharias** defeated Jacqueline Gordon of London, at Gullane, Scotland, becoming first U.S.-born woman ever to win Women's British Amateur golf championship.

**13** **Foreign Sec'y Ernest Bevin** hailed Sec'y of State Marshall's address at Harvard university as great speech, declaring Britain would take initiative in preparing joint European economic program.

**14** **Pres. Truman** lauded Italy, but sharply reproved Hungary, Bulgaria and Rumania for their oppressive measures, as he signed peace treaties with all four states.

**15** **British plan** for partitioning India into Hindu and Moslem states was accepted by All-India committee of Congress party, which however rejected independence for princely states.

**16** **Tax bill** calling for cuts in personal income taxes ranging from 10.5% to 30% was vetoed by Pres. Truman on grounds it would probably induce "very recession we seek to avoid."

**17** **Pres. Truman's veto** of tax reduction bill was sustained in house of representatives as opponents failed by two votes to obtain necessary two-thirds majority to override it.

**Frank Hague,** Democratic political boss, resigned as mayor of Jersey City, N.J., and was succeeded by his nephew, Frank Hague Eggers.

**18** **Warning** that rejection of soviet efforts to place atomic questions on agenda of U.N. Commission for Conventional Armaments would mean "collapse" of disarmament efforts was sounded by Andrei Gromyko, soviet delegate to U.N.

**Denial** that he had influenced changes in Hungarian regime was issued by Lt. Gen. V. P. Sviridov, soviet chairman of Allied Control commission in Hungary.

**19** **Foreign Secretary Ernest Bevin** told commons that British "appeasement" of Russia had ended and that Britain was determined to work for European reconstruction with or without U.S.S.R.

**World speed record** of 623.8 mi. per hour was established by Col. Albert Boyd flying a P-80R, U.S. army jet-propelled aeroplane.

**20** **After Pres. Truman** vetoed Taft-Hartley labour bill as "menace to successful democratic society," house of representatives overrode his veto by 331–83 vote.

**21** **Italian constituent assembly** gave Premier de Gasperi's government confidence vote by narrow margin of 274–231.

**23** **Taft-Hartley labour bill** became law as senate overrode Pres. Truman's veto by 68–25 vote.

**Department of justice's antitrust division** filed suit in N.Y. federal court against A.S.C.A.P. (American Society of Composers, Authors and Publishers) charging A.S.C.A.P. with engaging illegally in world-wide cartel and conspiring to monopolize music-performing rights.

**Soviet agreement** to attend conference of Big Three foreign ministers with Britain and France to discuss Marshall plan was announced by Moscow radio.

**24** **Gen. Eisenhower's appointment** as president of Columbia university, succeeding Dr. Nicholas Murray Butler, was officially announced in New York city.

**Standard Oil Co. of Indiana** rationed its gasoline stocks to retailers in 12 midwestern states because demand was running 15% ahead of supply.

**Nearly 200,000 U.S. soft-coal miners** staged walkout in apparent protest against passage of Taft-Hartley labour bill.

**25** **U.S. note to Rumania** charged that arrest of opposition members was deliberate effort to suppress democratic elements by "terroristic intimidation."

**26** **Wool price-support bill** was vetoed by Pres. Truman as measure whose tariff prohibitions would undermine "our leadership in world affairs."

**27** **U.N. Security council** was urged by Warren R. Austin, U.S. delegate, to permit use of force to prevent Yugoslavia, Albania and Bulgaria from aiding armed bands that might violate Greek territory.

**Gerhart Eisler,** alleged Communist "brain" in U.S., was sentenced to one year in jail and fined $1,000 by federal court in Washington.

**28** **Congress** was told by Gen. Eisenhower that U.S. army was "poor second" to soviet armed forces.

**29** **Warning** that "death of our society" would result unless "imperative problem" of international control of atomic energy was solved was issued at Princeton, N.J., by Emergency Committee of Atomic Scientists.

**30** **Announcement** that French government broke up plot instigated by monarchists and Vichyites to overthrow republic and set up fascist dictatorship was made by Interior Minister Edouard Depreux.

**Bill** that would make Hawaii 49th state of union was adopted by house of representatives by 196–133 vote.

**Measure extending rent control** in adulterated form was reluctantly signed by Pres. Truman, who labelled it as "most unsatisfactory law," but added rentals would be much worse without it.

**U.N.R.R.A.** was officially ended as of midnight.

### JULY

**1** **Sec'y of State Marshall** branded as "malicious distortion," charges that U.S. employed its foreign aid program to secure political and economic domination in Europe.

**2** **Threat of soft-coal strike** vanished with John L. Lewis' disclosure that 40% of coal industry agreed to give miners improved contract and wage boosts totalling more than $3 daily per worker.

**Anglo-French-Russian aid conference** in Paris broke up after soviet Foreign Minister Molotov rejected Marshall plan and warned France and Britain not to act alone on European reconstruction lest they split continent into eastern and western blocs; Bevin declared Britain had faced threats before and would not be deterred from doing "what we consider our duty."

**3** **Ernest Bevin** and Georges Bidault, British and French foreign ministers respectively, summoned 22 European states to convene in Paris July 12 to discuss French proposal on Marshall plan for aiding Europe.

**United Nations** was advised in blunt language by Sir Alexander Cadogan, British delegate to Security council, to "tear up the Charter and pack up" if it could not take action to settle Balkan border warfare.

**Former Rep. Andrew J. May** was convicted by federal grand jury in Washington of taking bribes from Henry and Murray Garsson in return for using his congressional influence to secure favours for Garsson munitions enterprises; Garsson brothers were found guilty of conspiring to defraud U.S. government of May's services through bribery.

**4** **Pres. Truman** inferentially rebuked Soviet Union for allegedly obstructing world reconstruction in Fourth of July address at Charlottesville, Va.; Foreign Sec'y Ernest Bevin told Independence day gathering in London that nothing would ever divide U.S. and Britain and warned U.S.S.R. against carrying "provocation too far."

**Premier Paul Ramadier** won 331-247 vote of confidence from French assembly on his anti-inflation program; he said during debate that France accepted Marshall plan without qualifications.

**5** **Pres. Truman** disclosed that U.S. shipped abroad 18,433,000 long tons of grains and other foodstuffs during year ending June 30, but urged no relaxation in food-export program because millions of "still desperately hungry" persons needed U.S. food products.

**Epidemic** of "flying discs" or saucers allegedly seen through-

**JULY—*Continued***

out U.S. were dismissed by military and civilian experts as possible prank of nature magnified by "popular imagination."

6 **Pledge** that Argentina's resources would be made available for "material and economic rehabilitation of all suffering nations" was made by Pres. Juan D. Perón; he also urged eradication of all forms of totalitarianism, whether of right or left.

**Spanish national radio** said 80% of electorate turned out to vote in referendum to approve Dictator Franco's law of succession; impartial reports said many Basques in Bilbao area remained away from polls.

**U.N. inquiry committee** holding sessions in Jerusalem was told by Jewish agency spokesmen that Britain deliberately obstructed expansion of Jewish industry and was engaged in large-scale "exploitation" of Jewish Palestine.

7 **Congress** was called upon again by Pres. Truman to admit into the U.S. a "substantial number" of displaced persons from eastern Europe who had refused repatriation to communist-controlled countries.

**House of representatives** ignored treasury warning of inflation and passed by 386-0 vote bill permitting veterans to cash total of $1,792,000,000 in terminal leave bonds.

8 **Resolution** that U.N. Security council recommend withdrawal of foreign troops and military personnel from Greece was introduced by Andrei Gromyko, soviet delegate.

**Eugene Dennis,** secretary of U.S. Communist party, was sentenced to year in jail and fined $1,000 for contempt of court; Dennis rejected judge's offer to appear before congress and purge self of contempt charge.

9 **Soviet Union** was urged by Norman Armour, assistant secretary of state, to reconsider stand on Marshall plan and attend Paris conference.

**Estimated 2,800 persons** in Athens and Peiraeeus areas were arrested by order of Greek government to foil alleged communist revolution.

10 **Betrothal** of Princess Elizabeth to Lt. Philip Mountbatten, former Prince Philip of Greece, was formally announced by King George VI, although the fact was known on the 9th.

**Czechoslovakia** reversed decision to attend Paris parley on Marshall plan presumably because of pressure put on Premier Klement Gottwald by soviet leaders.

11 **Announcement** was made by Dwight P. Griswold, U.S. administrator of Greek aid, that $35,000,000 worth of U.S. military supplies were being prepared for shipment to Greece to aid latter's armies in their fight against "bandits."

**Pres. Truman** disclosed that Gen. Albert Coady Wedemeyer would be dispatched to far east to appraise "over-all situation" in China and Korea.

12 **Representatives** of 16 nations opened conference in Paris to work out program for economic rehabilitation of Europe under Marshall plan, leaving door open to other European countries not represented.

**Federal court** in Charleston, S.C., ruled that Negroes were entitled to vote in state's democratic primary elections, hitherto reserved exclusively for whites.

14 **Sec'y of State Marshall** told annual conference of governors in Salt Lake City, Utah, that western European countries would drift into soviet economic orbit unless they received U.S. aid.

**Second bill** to cut personal income taxes was passed in senate by 60-32 vote.

15 Drive by 2,500 Greek guerrillas against Yanina was halted by Greek government troops according to statement by Athens cabinet minister.

**Gen. Lucius D. Clay,** commander of U.S. zone of Germany, received new directives from joint chiefs of staff to take measures to stabilize political and economic conditions, thus enabling reich to make maximum contribution to European recovery.

16 **U.S. proposal** to call 11-nation conference as soon as possible to discuss drafting of Japanese peace treaty was submitted to Allied Far Eastern commission.

17 **Robert N. Denham** was named by Pres. Truman as general counsel to reorganized five-man National Labor Relations board.

**More than 800 federal employees** were ousted from jobs on disloyalty charges following secret investigations, civil service commission disclosed.

18 **Robert P. Patterson** resigned as secretary of war and Kenneth C. Royall was appointed his successor by Pres. Truman.

**French protest** against any scheme that would expand Germany's industrial potential was communicated to U.S. state department by Henri Bonnet, French ambassador.

**Bill** under which speaker of house would succeed president when there is no vice-president was signed by Pres. Truman; under new measure, Joseph W. Martin, Jr. (Rep., Mass.), would succeed Truman should latter fail to complete his term.

**Pres. Truman's veto** of tax reduction bill was overriden by 299-108 vote in house of representatives, but was sustained in senate where vote of 57 to 36 to override was 5 short of required two-thirds majority.

**Legislation** terminating British rule over India was completed when royal commission signified assent to British independence bill.

19 **Bill** authorizing cash redemption of terminal leave bonds issued to veterans was passed unanimously in senate by 85-0 vote.

20 **Netherlands troops** opened military operations against Indonesian Republican forces in Java in what was described as "police action" by Hubertus J. van Mook, acting governor-general.

**Former premier U Saw** and 19 of his aides were arrested while 3 others were killed by Burmese police in raid connected with machine-gun massacre of 7 Burmese council ministers.

21 **Anti-poll tax bill** was adopted in house of representatives by 290-112 vote.

22 **Pres. Truman's plan** to co-ordinate major federal housing agencies into single unit was approved in senate.

**House un-American activities commission** was told by Victor A. Kravchenko that Soviet Union was infesting U.S. with spies and pursuing policy that would make war "inevitable."

23 **Herschel V. Johnson,** deputy U.S. delegate, told U.N. Security council that Albania, Bulgaria and Yugoslavia menaced world peace and that entire globe would suffer if war broke out in Balkans.

**Moscow radio** disclosed Soviet Union rejected U.S. proposal to call preliminary 11-nation conference in Washington to discuss Japanese peace treaty; Russians protested that U.S. acted unilaterally in calling parley without having consulted U.S.S.R., Britain or China.

24 **Batavia** dispatches indicated Netherlands troops had won control of Java's strategic areas, but that Indonesians were preparing to conduct guerrilla warfare.

**Measure** designed to fix social security payroll tax at its prevailing levels until Jan. 1, 1950, was approved by congress and sent to Pres. Truman for signature.

25 **Strong Democratic opposition** thwarted effort of senate Republicans to force probe of Att'y Gen. Clark's handling of fraud charges in Kansas City elections of 1946.

**Large collection of documents** in files of Abraham Lincoln which had been ordered sealed by Robert T. Lincoln, son of civil war president, for 21 years after his own death, were formally opened to public in Washington.

**Andrew J. May,** former representative, and Henry and Murray Garsson were sentenced from eight months to two years in federal prison after conviction on war bribe charges.

26 **Legislation** unifying U.S. armed forces was signed by Pres. Truman, who appointed Sec'y of Navy James Forrestal as secretary of defense.

**Bill** permitting veterans to cash terminal leave bonds was signed by Pres. Truman who advised, however, they keep bonds if need for funds was not imperative.

27 **Pres. Chiang Kai-shek** complained that dispatches of certain U.S. writers and correspondents on Chinese government corruption and inefficiency endangered Sino-U.S. relations.

**Saudi-Arabian plans** to expend $270,000,000 on internal projects were disclosed by Fuad Bey Hamza, minister of development; funds for development were expected to accrue from royalties paid King Ibn Sa'ud by U.S. oil companies.

29 **Senate subcommittee** investigating government contract given to Howard Hughes for construction of $18,000,000 flying boat during World War II heard industrialist Henry J. Kaiser declare that "very beautiful frameup" blocked his wartime efforts to build fleet of 200-ton cargo-carrying planes.

**U.S. Steel Corp.** and other steel plants announced move to increase steel products $5 per ton as of Aug. 1.

**U.S. resolution** for establishment of semipermanent Balkan frontier commission was vetoed in U.N. Security council by Andrei A. Gromyko, soviet delegate.

## JULY—*Continued*

30 **U.N. Security council** was asked by Australia to order both Netherlands and Indonesian republic to cease hostilities promptly and arbitrate differences peaceably.

31 **U.S. offer** of its "good offices" to mediate Netherlands-Indonesian war was placed before U.N. Security council by Herschel V. Johnson, U.S. deputy delegate.

**Peace treaty** with Allies was ratified by 262 to 68 vote in Italian constituent assembly.

**Buckingham palace** announced Princess Elizabeth would wed Lt. Philip Mountbatten Nov. 20 in Westminster abbey.

## AUGUST

1 **U.N. Security council** voted 8-0 to call on Indonesian and Netherlands governments to cease fighting and settle differences by arbitration; Britain, France and Belgium abstained.

2 **John W. Meyer,** publicity aide for Howard Hughes, disclosed that from 1943 to 1945 he expended $5,083 in entertaining Elliott Roosevelt (then army air officer) in effort to get war contract for reconnaissance planes.

3 **Indonesian and Netherlands governments** announced willingness to call off hostilities in compliance with U.N. Security council's request.

5 **Demand** that U.N. Security council order British to evacuate Egypt and Sudan was placed before council by Mahmoud Fahmy el-Nokrashy Pasha, Egyptian prime minister.

**Failure of grand jury** sitting in Jackson, N.C., to indict seven white men on charges of attempting to lynch young Negro was denounced as "miscarriage of justice" by Gov. R. Gregg Cherry, who said he would order reopening of case.

6 **Howard Hughes,** testifying before senate investigating committee, said Sen. Owen Brewster, committee chairman, had offered to kill inquiry into military aviation contracts if Hughes would agree to merge Pan-American Airlines with TWA.

**Prime Minister Attlee** warned in commons speech that government would order new sacrifices to increase production for export and save dollar balances; Attlee also disclosed that balance of U.S. loan would be gone by end of 1947.

**State department** charged that Rumania, by suppressing National Peasant party and arresting Juliu Maniu, its leader, had violated peace treaty with U.S.

7 **Labour government's drastic program** to meet economic crisis was approved in British house of commons by 318-170 vote.

**New bill** which would provide for merit promotion of officers in army and navy was signed by Pres. Truman.

**International Bank for Reconstruction and Development** approved loan of $195,000,000 to the Netherlands, but stipulated funds were to be used solely for reconstruction of homeland, and not for Netherlands Indies or military purposes.

8 **House of commons** passed on second reading Labour government bill asking for sweeping emergency powers to deal with Britain's economic crisis; opposition leader Winston Churchill accused Labourites of seeking "blank check for totalitarianism."

**Eight largest U.S.** moving-picture companies agreed to suspend indefinitely shipment of U.S. films to Britain, because of "confiscatory" British tax on earnings of imported films.

**Pres. Truman** signed Sugar act of 1948 after making public assurances from Sec'y of State Marshall that measure would not become "economic threat" to hemispheric sugar producers.

9 **Sec'y of State Marshall** informed France of U.S. willingness to confer with France and Britain "without delay" on plans for raising industrial production in Germany.

10 **Gen. Lucius D. Clay** reported that U.S. had released last of 8,010,007 German prisoners of war and had completed destruction of German military defense works in U.S. zone.

**William P. Odom,** landing his aircraft at Chicago's Douglas airport, established record for solo round-the-world trip, flying 19,645-mi. course in 73 hr. 5 min. 11 sec.

11 **Sen. Homer Ferguson** (Rep., Mich.) suddenly called suspension of senatorial inquiry into Howard Hughes's war contracts.

**U.N. Sec'y Gen. Trygve Lie** admitted deterioration in world political situation, but added he did not believe that any responsible statesman "can, or does, contemplate the prospect of war."

12 **Declaring Greece** was in "grave peril," Deputy U.S. Delegate Herschel V. Johnson introduced resolution before U.N. Security council ordering Albania, Bulgaria and Yugoslavia to stop helping Greek guerrillas.

**Britain, France and Belgium** lost fight to prevent Indonesian republic from giving its view on Indonesian-Netherlands dispute in U.N. Security council.

13 **Thousands of new casualties** were caused by Hindu-Moslem rioting in Lahore and other areas of Punjab province.

**Sec'y of Treasury Snyder** moved to spike rumours of U.S. increase in gold price by declaring that responsible Washington quarters neither planned nor discussed such action.

14 **Att'y Gen. Tom Clark's investigation** to determine responsibility for conspiracy to increase prices of food, housing and clothing was approved by Pres. Truman.

**Italian debt** of about $1,000,000,000 was cancelled by U.S. which also liberalized many of "burdensome" financial and economic clauses in Italian peace treaty.

**U.S. resolution** ordering three soviet satellites in Balkans to cease aiding Greek guerrillas was branded in U.N. Security council as "crudest interference" in Greece's internal affairs by Andrei Gromyko, soviet delegate.

15 **Britain's long rule over India** was formally ended and country achieved independence as two separate dominions, India and Pakistan; Mohammed Ali Jinnah was sworn in as governor-general of Pakistan and Jawaharlal Nehru as prime minister of dominion of India; in London, India office was abolished and King George VI formally approved appointment of Arthur Henderson as minister of state for commonwealth relations, and conferred an earldom on Viscount Mountbatten who became governor-general of dominion of India.

**Sec'y Marshall's rejection** of soviet proposal that Japanese peace treaty be written only by U.S., Soviet Union, Britain and China was disclosed by state department.

**U.S. delegation** at opening of Inter-American conference near Rio de Janeiro proposed all nations covered by hemisphere defense treaty be obliged to take part in defense against aggressor.

**Gerhart Eisler,** regarded as top Communist agent in U.S., was convicted in federal court on passport fraud charges.

16 **Establishment of military government** of "Free Greece" was proclaimed in broadcast by Gen. Markos Vafeiades, Greek guerrilla leader.

**Nikola Petkov,** Bulgar opposition leader, was sentenced to death on charges of conspiracy against government by Sofia district court.

17 **U.S. steel industry** was charged with illegal price-fixing and restraint of competition by Federal Trade commission.

18 **Branding** Bulgarian death sentence passed on Opposition Leader Nikola Petkov as "gross miscarriage of justice," U.S. called on Soviet Union to urge Bulgar government to suspend sentence pending review of case.

**Admission of Yemen and Pakistan** to U.N. was voted unanimously by Security council but applications of Albania, Outer Mongolia, Trans-Jordan, Eire and Portugal were rejected.

## AUGUST—*Continued*

19 **Australian and U.S. resolutions** aimed at solving Balkan controversy were vetoed by Andrei Gromyko, soviet delegate in U.N. Security council.

**U.S. offer** to settle Indonesian-Netherlands dispute was rejected by Sutan Sjahrir, Indonesian representative, who renewed demand that U.N. Security council set up arbitration commission to settle controversy.

20 **Delegates** to Inter-American peace conference at Petrópolis, Brazil, heard Sec'y of State Marshall warn that U.S. economic aid to Europe must take precedence over any "Marshall plan" for Latin America.

**Britain and U.S.** announced joint agreement to end free convertibility of pounds sterling into dollars in move to halt drain of Britain's slim dollar resources.

**Herschel V. Johnson,** U.S. deputy delegate to U.N. Security council, asked U.N. general assembly to assume jurisdiction on Balkan question.

**New NLRB policy** of dismissing cases where unions failed to comply with Taft-Hartley law's registration requirements was announced by Robert N. Denham, NLRB's general counsel.

**Record surplus** of $4,700,000,000 at end of 1948 fiscal year was forecast by Pres. Truman in annual midyear budget review.

21 **Pres. Truman** named Kenneth C. Royall as secretary of army, John L. Sullivan as secretary of navy and W. Stuart Symington as secretary for air.

**State department** disclosed U.S.S.R. protested against impending Anglo-U.S.-French parley to increase industrial output in Anglo-U.S. zones of Germany; department also revealed that U.S. lodged another protest with U.S.S.R. over continued Russian occupation of Chinese port of Dairen.

**Andrei Gromyko,** soviet delegate, vetoed applications of Italy and Austria for U.N. membership on ground that Italian peace treaty had not yet been ratified and that peace negotiations with Austria had not yet been started.

22 **Anglo-French-U.S.** parley to discuss measures for raising industrial production in Anglo-U.S. zones of Germany opened in London.

**Argentina** jolted Inter-American Defense conference with proposal that Americas agree to act collectively to repel aggression only in case of external aggression.

23 **Failure** to rally country in fight against guerrillas was one of major factors in resignation of Greek government headed by Premier Demetrios Maximos.

**Army revolt in Ecuador** led to overthrow of Pres. José María Velasco Ibarra and assumption of power by Defense Minister Col. Carlos Mancheno who proclaimed himself president.

24 **Need** for "drastic, far-reaching political and economic reforms" in Chiang Kai-shek's government was stressed by Lt. Gen. Albert C. Wedemeyer on concluding his study of Chinese situation as Pres. Truman's personal representative.

**French People's rally** was formally launched by Gen. De Gaulle who announced he would present lists of candidates for October municipal elections.

**Dispatches from Lahore** in Pakistan reported that Sikhs in eastern Punjab province were slaughtering hundreds of Moslems daily and burning Moslem villages.

25 **Soviet delegation in Korea** was charged with attempting to "usurp" functions of U.S.-soviet joint commission by Maj. Gen. Albert E. Brown, chief of U.S. delegation.

26 **U.S. proposal** that Allies review death sentence passed on Nikola Petkov by Bulgar government was rejected as "interference" in Bulgarian internal affairs by Moscow government.

**10 of U.N.** Security council's 11 members appealed to Netherlands and Indonesian republic to obey cease-fire order issued nearly four weeks earlier; United Kingdom abstained from voting.

27 **"Siege economy" measures** under which food, motoring and foreign travel were placed under severe rationing was ordered by British Labour government.

**Program** calling for expansion of scientific research at cost of at least 1% of national income was laid before Pres. Truman by his scientific research board.

28 **Both Pres. Truman and Gov. Dewey** of New York called for universal military training in messages to American Legion convention opening in New York city.

**Pres. Truman** and Pope Pius XII mutually pledged in exchange of letters to work jointly for permanent world peace.

29 **Disclosure** that atomic power plant had been successfully operating at low power from Nov. 1946 was made by Dr. Norris E. Bradbury, director of Los Alamos Scientific laboratory.

**Constantin Tsaldaris** was sworn into office as premier of Greece.

**Anglo-U.S. plan** to raise industrial output of their merged zones of Germany to 1936 production levels was jointly announced in Berlin.

**Four-power conference** for setting up united, independent Korea was urged on Soviet Union by U.S. state department.

**Moscow radio** announced soviet ratification of peace treaties with Italy, Finland, Hungary, Bulgaria and Rumania.

30 **Treaty of Rio de Janeiro** for hemispheric defense was formally and unanimously adopted by delegates of all 19 nations in Inter-American parley at Petrópolis, Brazil.

**Plan** for raising industrial production in Anglo-U.S. areas of Germany was denounced by Marshal Vassily D. Sokolovsky, soviet military governor, as violation of 1946 four-power agreement.

**Bendix Trophy race** was won by Paul Mantz, covering 2,054-mi. distance from Van Nuys, Calif., to Cleveland, O., at average speed of 460.423 mi. per hour.

31 **Termination of British mandate in Palestine** and partition of country into Arab and Jewish states were recommended by majority of U.N. special committee on Palestine; Zionists generally approved U.N. report although Arabs were opposed to any division of Holy Land.

**Results** of Hungarian national elections assured Communists of victory; observers claimed voting was fraudulent and dishonest.

**Food Minister John Strachey** announced that Britain would suspend temporarily all purchases of food from U.S.

## SEPTEMBER

1 **William Green,** A.F. of L. president, exhorted U.S. labour and friends to rally in voting bloc to defeat in 1948 elections those federal and state legislators who supported "new wave of hostile anti-labour legislation"; Philip Murray, C.I.O. president, said determination of U.S. workers to change antilabour complexion of congress was being translated into political action; former Vice-Pres. Henry Wallace warned at Detroit labour rally that third party would be created in U.S. unless Democratic party was transformed into "party of peace and prosperity."

**Communist party** won first place in Hungary's national elections while Catholic-supported People's Democratic party was second in polling.

2 **Pres. Truman** in speech before Inter-American Defense parley in Petrópolis, Brazil, reiterated fidelity to U.N., but emphasized that U.S. was determined to remain strong to carry out objectives of permanent peace.

**Soviet-U.S. impasse** was deepened by Moscow rejection of U.S. demand to open Dairen as international port and by Washington rebuff of soviet protest against plans for raising German industrial output in Anglo-U.S. zones of reich.

3 **Pres. Truman** announced lifting of ban prohibiting export of radioactive isotopes to scientists in foreign countries.

**The pictures on this page are, left to right:**

| CRIPPS | Sept. 29 |

## SEPTEMBER—*Continued*

**British Foreign Sec'y Ernest Bevin** called on U.S. to "redistribute gold in Fort Knox," and to use storaged ingots to finance world recovery.

4 **Themistocles Sophoulis** became Greek prime minister after Constantin Tsaldaris agreed to serve as deputy premier in Sophoulis' government.

5 **Fourth International Cancer Research congress** at St. Louis was told by Dr. Richard Lewisohn of N.Y. that regressions of breast cancers were produced in 43% of experimental animals injected with newly discovered vitamin.

**Washington dispatches** disclosed that Office of Naval Research was co-operating with 100 leading U.S. universities in developing scientific projects and in training graduate students in science.

**Cyrus S. Ching** was sworn in as director of new Federal Mediation and Conciliation service.

6 **Berlin dispatches** said U.S. military government was asked by Washington not to overemphasize German bungling of food and farm program lest congress refuse to authorize funds for export of food to reich.

**30 countries,** including Russia, filed applications with U.S. Atomic Energy commission for radioactive isotopes, according to statement made at Fourth International Cancer Research congress in St. Louis.

**John Deferrari,** former fruit peddler, presented $1,000,000 gift to Boston Public library.

7 **Pope Pius XII** appealed to world Catholics to rally with all their strength to fight foes of church.

**Fighting** between Moslems and Hindus spread to New Delhi, capital of India.

8 **German V-2 rocket** was successfully fired from U.S. aircraft carrier "Midway" in Atlantic tests.

**Greek Prime Minister Sophoulis** announced plan to invite international board to supervise and guarantee full amnesty for all guerrillas who laid down their arms.

10 **British Foreign Sec'y Ernest Bevin** suggested U.S. institute peacetime program of lend-lease to help Europe.

**12-point program** to raise Ruhr coal output to 300,000 tons daily under German management was jointly announced by U.S. and Britain.

12 **Warning British government** might start new manufactures unless private business produced more and better export goods was sounded by Sir Stafford Cripps, president of board of trade.

**Disclosure** that 12 European nations and Iceland decided to form group to study customs unions was made by French foreign ministry.

13 **NBC stations** voted unanimously to ban broadcast of all crime and mystery shows before 9:30 P.M. (New York time) to minimize possibility that they would be heard by children.

**Prime Minister Nehru** of India said flareup of Hindu-Moslem fighting forced India and Pakistan into hasty exchange of populations involving about 4,000,000 persons.

14 **Premier Ahmad Ghavam-es-Saltaneh** presented new cabinet to Iranian parliament, declaring his government would not permit interference in country's affairs.

**Palmiro Togliatti,** Italian Communist leader, denounced U.S. as "world dictatorship" trying to "spread another war" in speech before 100,000 Communists who shouted "Death to Truman!"

15 **Andrei Gromyko,** soviet representative on U.N., used double veto in Security council to block U.S. plan to permit general assembly to make recommendations on Greek question.

**Warning** of "boom-and-bust" danger in rising grain prices, Commodity Exchange authority asked big U.S. grain exchanges to double margin requirements in grain futures.

16 **Dr. Oswaldo Aranha** of Brazil was elected president of second regular session of U.N. general assembly, defeating H. V. Evatt of Australia, 29 votes to 22.

**Approval** of revised draft report submitted by 16 nations to receive aid under Marshall plan was announced by William L. Clayton, undersecretary of state.

17 **Sec'y of State Marshall** proposed that U.N. set up standing committee within general assembly to "consider situations and disputes impairing friendly relations."

**Pres. Truman,** travelling back to U.S. from Brazil aboard battleship, radioed orders to Washington that James Forrestal be sworn in as secretary of defense in view of "whole general international situation."

18 **Andrei Vishinsky,** soviet deputy foreign minister, charged before U.N. general assembly that U.S. had expansionist plans centring about world domination; he accused influential U.S. circles of trying to fan war psychosis, naming as "instigators" John Foster Dulles, Morgan, Ford and Rockefeller interests and American Legion and others.

**John L. Sullivan and W. Stuart Symington** were sworn in as secretaries of navy and air force, respectively.

19 **European conferees** on Marshall plan adopted report estimating that western European trading area would need $19,310,000,000 from American countries during next four years.

20 **Warren R. Austin,** chief U.S. delegate to U.N., branded as "absolute falsification" charges of "warmongering" laid to certain U.S. circles by Andrei Vishinsky, Russian deputy foreign minister.

**French Foreign Minister Georges Bidault** denied Vishinsky's charge that Marshall plan was attempt to make Europe subservient to U.S., and said France would continue its task of trying to unite world's "two hostile blocs."

21 **Rumanian, Hungarian and Bulgarian governments** were advised by British spokesman that additional flagrant infringements of freedom in their countries would be regarded as criminal violations of peace treaties.

**Archbishop Joseph E. Ritter** warned Roman Catholics of St. Louis, Mo., that they would be excommunicated automatically if they persisted in plans to take civil action against him to prevent admission of Negroes to parochial schools.

22 **Robot-piloted** Douglas C-54 Skymaster transport plane flew from Newfoundland to London without human aid.

**16-nation European conference** on Marshall plan ended after conferees signed and dispatched to Washington their requests for economic aid.

23 **U.N. general assembly** overrode soviet objections to inclusion on agenda of Greek question, problem of Korean independence and Italian peace treaty.

**Nikola Petkov,** Bulgarian opposition leader who was convicted of plotting against government, was hanged in Sofia prison.

**NLRB's general counsel** sued two union locals (one for alleged refusal to bargain and other for carrying on secondary boycott) for violating Taft-Hartley labour law.

25 **Pres. Truman** urged all Americans to conserve food to bring down prices and to release supplies to Europe's hungry.

**Pres. Truman** appointed Gen. Carl A. Spaatz to new office of chief of staff to U.S. air force; Arthur S. Barrows was named undersecretary of air force and Dr. Vannevar Bush was named chairman of Research and Development board.

**Andrei Gromyko,** soviet delegate, proposed in U.N. Security council to vote for Italy's admission to U.N. provided Hungary, Bulgaria, Rumania and Finland were admitted simultaneously.

26 **Britain's decision** to end its Palestine mandate was announced before U.N. general assembly's committee on Palestine by Arthur Creech Jones, colonial secretary.

**Andrei Vishinsky,** soviet deputy foreign minister, said any attempt to destroy principle of unanimity in U.N. Security council would make great-power co-operation "impossible"; Yugoslav delegation to U.N. warned that U.S. resolution charging Albania, Bulgaria and Yugoslavia with Balkan aggression "smells of dynamite of new world war."

**Simultaneous withdrawal** of U.S. and soviet troops from Korea by beginning of 1948 was proposed by Gen. Terentyi Shtikov, chief of soviet delegation.

27 **Claim** that U.S. could export 500,000,000 bu. of wheat during 1947–48 crop year without "grave hardship" was made by Pres. Truman's committee on foreign aid.

**Sen. J. Howard McGrath** succeeded Robert E. Hannegan as chairman of Democratic national committee.

29 **Jamal el-Husseini,** spokesman of Arab Higher committee, told U.N. special committee on Palestine that Holy Land Arabs would not accept partition or a federal Palestine.

**State department** disclosed Foreign Minister Molotov rejected U.S. protest against Moscow magazine article slurring Pres. Truman, disclaiming government responsibility for press statements.

**Prime Minister Attlee** overhauled Labour government, naming Sir Stafford Cripps as minister for economic affairs with

### SEPTEMBER—*Continued*

sweeping powers to co-ordinate country's whole economic policy.

30 **Refusal** of soviet foreign ministry to permit U.S. senatorial delegation to enter Russia to inspect U.S. embassy at Moscow was disclosed by state department.

**Argentina and Canada** were elected on first ballot to seats on U.N. Security council.

## OCTOBER

1 **U.S. air force** formally achieved independence as military organization on par with army and navy.

**Capture** of Communist-held port of Chefoo was announced by Chiang Kai-shek's government.

**U.S. decision** to resume full diplomatic ties with Bulgaria was announced by Robert A. Lovett, acting secretary of state.

2 **Britain's Conservative party** unanimously adopted politically "advanced" charter recognizing need of government controls and desirability of some phases of nationalization.

3 **Netherlands government** disclosed that Queen Wilhelmina for "reasons of health," would temporarily turn over royal power to Crown Princess Juliana.

5 **U.S. people** were urged by Pres. Truman to observe voluntarily meatless Tuesdays, poultryless Thursdays and to conserve food for starving Europe.

**At secret meeting** in Poland, communist leaders of nine nations adopted manifesto opposing U.S. "dollar imperialism" and decided to set up "information bureau" in Belgrade; new organization called "Cominform" was tantamount to re-establishment of Comintern.

**Voters in Saar** reversed plebiscite of 1935 which had turned basin over to Germany and elected candidates pledged to economic fusion with France.

6 **U.S. was accused** of converting Greece into "military base" and of destroying Greek "independence and sovereignty" by Andrei Vishinsky, soviet deputy foreign minister.

**New York Yankees** won baseball's world series, defeating Brooklyn Dodgers 4 games to 3.

7 **11 cabinet ministers** were dropped by Prime Minister Attlee as he overhauled British government in economic crisis.

**U.S. railroads** were granted 10% emergency increase in freight charges on all commodities except coal, coke and iron ore which were put on special rate schedule.

**NLRB overrode** by 4–1 vote ruling of its general counsel, Robert N. Denham, that top officers of A.F. of L. and C.I.O. were required to sign noncommunist affidavits to comply with Taft-Hartley labour law.

8 **Approval** of U.S. proposal to create special U.N. committee to watch over Greece's border was voted by U.N. general assembly's Political and Security committee.

**Arrest** of two former army photographers on charges of theft of atomic energy photographs was disclosed by FBI Director J. Edgar Hoover.

9 **Decision** of Union of South Africa to lend Britain about $320,000,000 in gold was announced by Prime Minister Jan C. Smuts.

10 **U.S.-British-Italian** protocol provided for prompt return to Italy of $25,000,000 in gold discovered in north Italy by U.S. 5th army.

**First contingent** of U.S. war dead was returned to U.S. at San Francisco on steamer "Honda Knot."

11 **More than 1,000 mayors** of U.S. cities received telegraphed appeals from Charles Luckman, head of Citizens Food committee, to co-operate with nation-wide food conservation program.

**Partition of Palestine** was endorsed by Herschel V. Johnson, U.S. representative on U.N. general assembly's Palestine committee, who also suggested establishment of "special constabulary" to keep order in Holy Land.

**Yugoslavia** broke off diplomatic relations with Chile in answer to latter's charges that Yugoslav government had sponsored "communist plot" in South America.

12 **Leftist People's bloc** nosed out Christian Democratic party for first place in Rome's municipal elections.

13 **Soviet proposal** for resolving Greek question was defeated 40 votes to 6 with 11 abstentions in U.N. Political and Security committee.

**Soviet delegate** to U.N. general assembly's committee on Palestine endorsed partition of Palestine on grounds that Arab-Jewish tension made single state unfeasible.

14 **Soviet Deputy Foreign Minister Vishinsky** charged U.S. proposal to set up "little assembly" in U.N. was a "farce" and said U.S. was attempting to "steamroller" its plan through general assembly on discovery that "liquidation of veto was legally impossible."

**Premier Paul Ramadier** denounced as "political manoeuvre" strike of Parisian transit workers that paralyzed all of city's bus and subway services.

**A.F. of L.** delegates at San Francisco annual convention overrode John L. Lewis' objections and agreed to amend federation's constitution to comply with Taft-Hartley labour law.

15 **Delegates** to C.I.O. annual convention in Boston unanimously endorsed U.S. foreign policy after hearing address by Sec'y of State Marshall who said basic tenet was freedom or totalitarian enslavement.

16 **Pres. Truman** charged that gambling on grain exchanges was responsible for large part of food price increases and disclosed that Att'y Gen. Tom C. Clark was investigating grain speculations.

17 **Treaty** giving Burma complete independence in Jan. 1948 was signed in London by Prime Minister Attlee and Premier Thakin Nu of Burma.

**Resolution** calling for Korean elections under U.N. commission and establishment of Korean government was placed before U.N.'s Political and Security committee by Warren R. Austin, U.S. delegate.

18 **Making of recordings** and transcriptions by 225,000 members of American Federation of Musicians was banned "once and for all" by A.F.M. President James C. Petrillo; ban was to become operative Dec. 31, 1947.

**Sec'y of Interior Julius A. Krug** reported to Pres. Truman that U.S. economy was capable of undertaking substantial foreign aid program without jeopardizing U.S. security or living standards.

**Official boycott** of U.N. subcommittee set up to work out compromise of "little assembly" plan was announced by U.S.S.R. and its supporting states in eastern Europe.

19 **French People's Rally,** headed by Gen. de Gaulle, replaced Communists as strongest single party in France after polling more than 40% of vote in municipal elections.

21 **Brazil and Chile** formally severed diplomatic relations with Soviet Union.

**U.S. resolution** to establish permanent committee to assist in settling disputes between Greece and soviet satellites in Balkans was voted 40–6 in U.N. general assembly.

22 **Chairman J. Parnell Thomas** of house un-American activities committee said his group would produce evidence that at least 79 persons in Hollywood had been engaged in subversive activities.

**Soviet demands** for oil concession were rejected by 102–2 vote in Iranian parliament.

23 **Sir Stafford Cripps,** Britain's economic czar, disclosed country halted tobacco purchases from U.S. and ordered new cuts in food rations; Swedish government said its own imports of motor cars, nylons, plastics and films from U.S. would be halted.

**Pres. Truman** called special session of congress for Nov. 17 to appropriate funds for relief in western Europe and to curb soaring domestic prices.

**Dr. Carl F. Cori** and his wife, Dr. Gerty T. Cori, of U.S. and Dr. Bernardo Houssay of Argentina were jointly awarded Nobel prize in medicine.

24 **Sen. Robert Taft** (Rep., O.) formally announced his candidacy for Republican nomination to presidency.

25 **State of Maine** was proclaimed disaster area by Pres. Truman who ordered Federal Works agency to provide assistance to regions destroyed or damaged by forest fires.

**Distilleries** producing more than 95% of U.S. whisky and alcohol closed down at midnight for 60-day period to release grains for Europe's needy.

26 **Second balloting** in French municipal elections showed Socialists running far ahead of Communists.

27 **Hollywood** "revolt" against "communist" inquiry staged by house committee on un-American activities started with refusal of John Howard Lawson, film writer, to answer whether he was Communist party member; Eric Johnston told committee not to imprison Americans merely "on suspicion" of being communists.

**Gen. Charles de Gaulle** called for dissolution of assembly and national elections in France "as soon as possible."

**Compromise resolution** condemning all forms of propaganda in any country that might encourage act of aggression was

## OCTOBER—*Continued*

unanimously voted 56–0 by Political and Security committee of U.N. general assembly.

**Maharajah Sir Hari Singh** provisionally joined his state of Kashmir and Jammu to dominion of India as air-borne Indian Sikh troops fought Moslems in Kashmir's mountains.

28 **Russia** requested simultaneous withdrawal of U.S. and soviet troops from Korea by beginning of 1948 and suggested that elected Korean delegates from both zones be permitted to take part in discussions of Korean questions at U.N. general assembly.

**Danish Communists** lost 9 of 18 seats in parliamentary elections while Social Democrats and Agrarians shared major electoral honours.

**Spreading cholera epidemic** in Egypt took 6,132 lives from its beginning Sept. 3; offer of Jerusalem's Hebrew university to dispatch anticholera serum to fight epidemic was ignored by Egyptian government.

30 **17 leading** U.S. investment banking houses were accused of violating antitrust laws in civil complaint filed by department of justice.

**Premier Paul Ramadier** won vote of confidence in French assembly by narrow margin of 300 to 280 votes.

**House committee on un-American activities** abruptly halted inquiry into Hollywood "communism."

**U.S. proposal** to set up U.N. commission to watch over Korean elections was voted 41–0 in Political and Security committee of U.N. general assembly; Russia and several other countries abstained from voting.

31 **Greek government** announced emergency tax program to raise additional $120,000,000 to meet increased military expenditures and other costs arising from war with guerrillas.

**Slovak** semiautonomous government resigned under pressure from Slovak Communists.

**U.A.W.** reversed earlier stand and voted to sign anticommunist affidavits in compliance with Taft-Hartley labour law.

## NOVEMBER

1 **British Labour party** was decisively defeated by Conservatives in municipal elections in England and Wales.

2 **Howard Hughes** put his 200-ton flying boat, which cost $25,000,000, through successful test flight.

**Conservative party's** demand for general elections, based on its successes in Britain's municipal elections, was rejected by Labour party.

**U.S. Communist party** decided not to join newly formed Communist information bureau because of domestic "political situation."

3 **Compromise resolution** condemning all war propaganda was voted unanimously by U.N. general assembly.

**Stanislaw Mikolajczyk** reached London after escaping from Poland.

4 **Republican victory forecasts** were upset in Kentucky where Earle C. Clements, Democrat, was elected governor over G.O.P. opponent; Judge John Cornelius Stennis was elected to fill unexpired senate term of Theodore Bilbo in five-man Mississippi contest in which Rep. John E. Rankin ran last.

**U.S.** was accused by soviet and Slav delegates at U.N. general assembly's Political and Security committee of having suppressed democratic elements in Korea.

5 **U.S. army newspaper** in Vienna reported that Zoltan Pfeiffer, leader of Hungarian Independence party, fled Hungary to escape Communist wrath.

6 **Soviet Foreign Minister Molotov** told Moscow audience on 30th anniversary of bolshevist revolution that atom bomb secret "has long ceased to exist"; most U.S. authorities held Molotov's speech meant Russia had merely learned technique of making bomb.

7 **Mme. Ana Pauker,** Communist member of Rumanian government, was appointed Rumanian foreign minister.

8 **Proposal for expenditure** of up to $17,000,000,000 on European aid with objective of preventing World War III was sent to Pres. Truman by his committee on foreign aid, headed by Sec'y of Commerce W. Averell Harriman.

9 **Bangkok** was seized in coup d'état staged by Siamese military clique headed by Field Marshal Luang Pibul Songgram who announced overthrow of Premier Thawan Thamrong Nawasawat's government.

**Rationing of potatoes** to three pounds weekly per person was put into effect in Britain by John Strachey, food minister.

10 **Sec'y of State Marshall** asked congress to take prompt and urgent action to provide $597,000,000 of stopgap aid to France, Italy and Austria; Pres. Truman reported that U.S. aid had helped Greece to avert economic collapse and preserve freedom.

**Kashmir city of Baramula** was completely wrecked after 13-day raid staged by Moslem tribesmen.

**U.S. and U.S.S.R.** reached compromise agreement over Palestine and endorsed new U.N. partition plan under which Britain would end mandate and military occupation by May 1, 1948.

11 **United Automobile Workers** endorsed anticommunist position of its right-wing faction and re-elected Walter Reuther president; George F. Addes, left-wing leader, was defeated for vice-presidency by Emil Mazey, a Reuther supporter.

**Bucharest military tribunal** sentenced Dr. Juliu Maniu and Ion Mihalache, both Rumanian Peasant party leaders, to life imprisonment on treason charges.

12 **Pres. Walter Reuther** consolidated grip on U.A.W. as his right-wing supporters ousted R. J. Thomas and Richard T. Leonard from top-level offices.

**Britain's new tax program** called for raising £208,000,000 by increasing sales taxes, doubling profit taxes and issuing levies on advertising appropriations.

**Communist riots** widened in Italy as Palmiro Togliatti, Communist chieftain, called on party's central committee to "intensify agitation against" government both inside and outside parliament.

13 **French Communists** were accused of fomenting Marseilles riot by Premier Paul Ramadier, who told excited national assembly that government would "go limit" in defending republic against them.

**Sir Stafford Cripps** was appointed chancellor of exchequer following resignation of Hugh Dalton, who admitted he had inadvertently released information on new budget to press.

**Nobel prizes** went to; André Gide, French writer, for literature; Sir Edward Victor Appleton for physics and Sir Robert Robinson for chemistry.

**U.N. general assembly** adopted U.S. proposal creating "little assembly" by 41-6 vote over bitter protests of Soviet Union and its bloc; 6 Arab states abstained from voting.

14 **Majority** of U.N. members ignored soviet warning of "grave consequences" and voted 43-0 with 6 abstentions, to establish U.N. commission to supervise elections and establish provisional government in Korea.

**Sec'y of Army Royall** announced U.S. army would add 170 officers and men to existing complement of 40 officers and men in its Greek military mission.

**Wage raises** totalling $100,000,000 yearly and changes in four working rules were granted to two railroad unions by Class I railroads in first settlement of kind worked out without government mediation.

15 **Four-year** $600,000,000 program for construction of 46 passenger liners was recommended by Pres. Truman's ad-

visory committee on merchant marine.

16 **British military forces** started scheduled withdrawal from Palestine.

**American Iron and Steel institute** and 101 steel producers were accused by Federal Trade commission of combining to block increased production and of discriminating against far west in selling methods.

17 **Pres. Truman** asked congress for authority to reimpose price controls, rationing and wage controls to prevent economic disaster in U.S. and to enable country to fulfil foreign-aid commitments; Truman's program was denounced by Sen. Taft as "step toward a completely totalitarian nation."

**State department sources** disclosed that U.S. tariff reductions, ranging up to 50% on major imports, had given stimulus to world trade.

18 **Soviet officialdom** and communist groups were warned to end "calculated campaign of vilification and distortion of American motives in foreign affairs" by Sec'y Marshall who asserted there was "no truth whatsoever" to their charges of U.S. imperialism and warmongering.

19 **Paul Ramadier** resigned as premier as French strike movement spread to coal and steel industries.

20 **Princess Elizabeth,** heiress presumptive to British throne, and Prince Philip, duke of Edinburgh, were married in London.

**Charles Luckman** resigned as director of government's food conservation program with Pres. Truman's assent, although latter asked Luckman to be part-time head of Citizens Food Advisory committee.

**Russia** informed Iranian government that cancellation of Russo-Iranian oil treaty was hostile action incompatible with normal relations between two countries.

21 **Gen. Omar N. Bradley** was appointed by Pres. Truman to become chief of staff of U.S. army upon Gen. Eisenhower's retirement; former Maj. Gen. Carl R. Gray, Jr., was named Bradley's successor as administrator of veterans' affairs and Maj. Gen. Clifford B. Cates was made commandant of U.S. marine corps.

**Congress** was asked by Sec'y of Agriculture Anderson for broad powers to curb speculation on grain exchanges.

**At least 3 persons** were killed and 30 others injured in fresh outbreak of rioting in Italy between communists and security forces.

**U.N. conference** on trade and employment opened in Havana.

22 **Robert Schuman** of Popular Republican Movement became premier of France after government he formed won 412–184 vote of confidence in national assembly.

23 **Six-engine XC-99** military transport—world's largest land aircraft—successfully completed 62-min. test flight near San Diego, Calif.

24 **Price ceilings** were reimposed on canned fruits and vegetables by Canadian government.

**Debate** on administration's $597,000,000 stopgap aid plan for European relief was opened with warning by Sen. Arthur Vandenberg that prompt action was needed to block Communist "wrecking crews" from killing recovery in western Europe.

**Federal reserve board** asked for authority to restrict instalment purchases for at least three-year period after three government agencies warned banks to exercise "extreme caution" in lending policies.

25 **Federal reserve board's** anti-inflation program calling for continued high taxes, tighter housing credit, longer working hours and strict government economy was presented to congress by Chairman Marriner S. Eccles; he also requested authority to make all commercial banks maintain new "special reserve" to reduce "swollen money supply."

**Opening in London** of Big Four's Council of Foreign Ministers was marked by soviet Foreign Minister Molotov's request to place Austrian peace treaty last on agenda.

**Robert E. Hannegan** resigned as postmaster general to head syndicate which bought controlling interest in St. Louis Cardinals baseball team and farm clubs for $3,000,000; Pres. Truman nominated Jesse M. Donaldson as Hannegan's successor.

26 **Molotov-Marshall tiff** snagged proceedings in Council of Foreign Ministers, with soviet foreign minister assailing western democracies as imperialist war fomenters and with Marshall replying that Molotov did not believe his own accusations.

**Pres. Truman's air policy commission** was told by W. Stuart Symington, secretary for air, that at least 630 of heaviest bombers strategically distributed throughout world were needed to meet state department's estimate of international situation.

27 **Plan to abolish** artificial exchange rate and to let lira's value be determined by supply and demand was announced by Italian cabinet.

28 **Premier Robert Schuman** won 322–186 vote of confidence in French assembly after promising energetic action to meet strike situation.

**13 high nazi generals** were indicted on charges of war crimes and crimes against humanity by U.S. military government tribunal in Nuernberg.

29 **U.S. army** ordered remaining 2,500 U.S. officers and men to prolong stay in Italy; move was linked to Washington's anxiety over continued Italian unrest.

**Paris police** entered Communist newspaper plants and suppressed editions after Premier Schuman asked French national assembly for six-month emergency police powers to suppress Communist agitators.

**U.N. general assembly** approved by 33–13 vote proposal to divide Palestine into Arab and Jewish states, both to achieve full independence by Oct. 1, 1948; Zionists expressed joy over U.N. action while Arab delegates were bitter.

30 **French national assembly** approved Premier Schuman's measure authorizing call of 80,000 reservists to use as police force to combat strikes.

## DECEMBER

1 **NLRB** disclosed it had brought suit in federal court in Utica, N.Y., against union violation of Taft-Hartley act.

**Disclosure** that proving ground for military and peaceful products and nuclear fission was being built on Eniwetok atoll was made by U.S. Atomic Energy commission.

**French Communists** seized possession of national assembly to prevent expulsion of Communist member whose ouster was ordered by Pres. Edouard Herriot.

2 **Anti-inflation program** of Chairman Marriner S. Eccles of federal reserve board was rejected as unsound by members of Eccles' own advisory council.

**Arabs and Jews** battled in Jerusalem with Haganah, Zionist defense army, leading reprisals against Arabs who looted Jewish shops; call on Arab world to start Holy War against Palestine partition was issued by Moslem holy men of El Azhar university in Cairo.

4 **Government bill** providing heavy penalties for sabotage and strikes was approved by 413–183 vote in French national assembly.

**List of 90 organizations** of alleged questionable loyalty to U.S., prepared under Att'y Gen. Tom C. Clark's supervision, was made public by special board reviewing federal employee loyalty.

**Soviet Foreign Minister Molotov** was accused by Sec'y of State Marshall during session of London Council of Foreign Ministers of trying to disrupt European recovery program with his attacks on U.S. policy.

5 **44 persons** were killed in outbreak of Arab-Jewish violence in Aden.

**The pictures on this page are, left to right:**

## DECEMBER—*Continued*

**10 Hollywood figures** who refused to tell Thomas committee whether they were communists were indicted by federal grand jury for contempt of congress.

**Joe Louis** retained world's heavyweight title by narrow margin after being twice floored by Jersey Joe Walcott in 15-round title bout in New York city.

**Campaign plans** to raise $8,000,000 for drive to repeal Taft-Hartley labour law were unanimously approved by more than 200 top members of A.F. of L.

6 **Plea** for unceasing battle to conserve country's natural resources was made by Pres. Truman in speech at Everglades National park, Fla.

8 **U.S. supreme court** ordered new trial for Eddie Patton, Mississippi Negro condemned to die on murder charge, on ground that Negroes were excluded from jury that convicted him of slaying white man.

**Inter-American Defense treaty** was ratified in U.S. senate by 72–1 vote.

9 **Communist labour leaders** in France called off strikes, summoning all workers to return to jobs.

**Russia and France** exchanged insults, with Moscow expelling French repatriation mission and breaking off trade talks and Paris retaliating by ousting soviet repatriation mission.

**Complete authority** to allocate and ration steel, fuel and most foods was requested of congress by administration to carry out four of ten points in Pres. Truman's anti-inflation program.

10 **Sec'y Marshall** called on Russia to end practice of seizing German assets in occupation zone after charging that Soviet Union expropriated German assets at rate of $500,000,000 yearly.

**Iranian Prime Minister** Ahmad Ghavam-es-Saltaneh failed in a vote of confidence in the Majlis (parliament) and resigned.

11 **London Council of Foreign Ministers** dispelled some of gloom surrounding it by agreeing to set level of German steel output at 11,500,000 ingot tons yearly.

**Pres. Truman** announced he would oppose any G.O.P. measure to relax antitrust laws and told congress that nothing short of his own ten-point program would curb inflation.

**Russia and Britain** reached basic agreement on trade pact under which Britain would receive food and Soviet Union machinery, J. Harold Wilson, president of board of trade, told commons.

12 **Edwin W. Pauley** defended his commodity trading as normal hedge against inflation and told senate appropriations committee that he relinquished $100,000 paper profit after accepting post as special assistant to secretary of war.

**Pres. John L. Lewis** of U.M.W.A. sent curt note to William Green announcing mine union's withdrawal from A.F. of L.

**Leftist-dominated** chamber of labour called off two-day general strike in Rome after Italian government acceded to some demands made by strikers.

**Soviet Foreign Minister Molotov's angry** criticism of western attitude on reparations, at London Council of Foreign Ministers, led Sec'y Marshall to retort that Molotov's procedure made it difficult to respect "dignity of Soviet government."

14 **Soviet government** announced plans to fight inflation by issuing new currency and abolishing all food rationing starting Dec. 16.

**Last** of U.S. troops in Italy left country aboard transport that sailed from Leghorn (Livorno).

**Sec'y Marshall** flatly denied Russian charges that U.S. business interests were acquiring German property and profiting on German coal and lumber exports at London Council of Foreign Ministers.

15 **East-West chasm** widened as London Council of Foreign Ministers adjourned with little accomplished.

**Drastic reorganization** of U.S. higher education was recommended by Pres. Truman's 28-man commission on higher education; group denounced as wasteful, segregation and quota systems practised in many higher institutions.

**Moscow radio** announced complete evacuation of all Russian troops from Bulgaria on Dec. 14 in accordance with peace treaty.

16 **Charge** that Russia had taken from its German occupation zone "considerably more" than $7,000,000,000 worth of reparations was made by Foreign Sec'y Bevin.

17 **U.S.** agreed to pay most of cost of running Anglo-U.S. zone of reich in return for controlling voice in zone's economic affairs.

18 **U.S.S.R.** was accused by Foreign Sec'y Bevin of infringing on sovereignty of satellites by preventing their participation in European Recovery program.

19 **Congress** was asked by Pres. Truman to authorize 4-year European Recovery program costing $17,000,000,000 to halt "selfish totalitarian aggression."

**Alcide de Gasperi's** 5th government won 303-118 vote of confidence from Italian constituent assembly after he vigorously denied opposition accusations that his government toadied to U.S.

**Maj. Gen. Bennett E. Meyers** and former associate Bleriot Lamarre were indicted by federal grand jury in Washington on charges of giving false testimony at senate inquiry.

**Bill** directing Sec'y of Agriculture Anderson to supply names of "all traders" on commodities exchanges was approved by congress and signed by Pres. Truman.

20 **Sen. Taft** contended congressional powers voted in special session would permit Pres. Truman to check virtually all principal inflationary causes "if he really wishes to do so."

21 **Report** calling for $135,000,000 national scholarship program for colleges and universities was issued by Pres. Truman's commission on higher education.

**Iranian press dispatches** said former Premier Ahmad Ghavam-es-Saltaneh was arrested and his passport seized as he was about to board U.S.-bound plane.

22 **Constitution** creating Italian republic was approved in constituent assembly by 453–62 vote.

**U.S.** action in detaining two Greek Communist correspondents on Ellis Island brought rebuke from U.N. Sec'y Gen. Trygve Lie who pointed out that U.S. was obliged to grant special status to accredited reporters under U.N. headquarters agreement.

**Sec'y of Agriculture Anderson** published list of 711 large traders in commodities exchanges.

**Agreement** leasing 13 military bases to U.S. for defense of Panama canal was rejected by 51–0 vote in Panamá assembly.

**Friedrich Flick,** German industrialist, was found guilty of war crimes by U.S. military court in Nuernberg and sentenced to 7 years in prison from the time of his arrest in Aug. 1945.

23 **Harold Stassen,** G.O.P. presidential aspirant, obliquely charged that "administration insiders" had improperly profited in commodities markets.

**"First Provisional Democratic** Government of Free Greece" was proclaimed by Gen. Markos Vafeiades, Greek guerrilla chieftain, in communist-dominated areas.

**Bill** providing $522,000,000 in stopgap relief for France, Italy and Austria, $18,000,000 for China and $340,000,000 for U.S. occupational expenses was signed by Pres. Truman.

**U.S. government** announced it was evacuating all military bases in Panamanian republic outside of Canal Zone.

**Pres. Truman** pardoned 1,523 men convicted during World War II of violating Selective Service act.

24 **Creation** of interdepartmental committee for scientific research and development was announced by Pres. Truman, who appointed John R. Steelman as his liaison agent with new body.

25 **Proof** that scientists could produce an infectious cold was offered in article by Dr. Norman H. Topping and Dr. Leon T. Atlas issued by U.S. public health service.

**Nationalist** China's new constitution was proclaimed as being in force by Nanking's publicity organs.

26 **Pres. Truman** delegated all authority for European stopgap aid plan to Sec'y Marshall.

**Gen. Hideki Tojo** charged U.S. and Britain forced war on Japan as he took witness stand in trial of Tokyo war criminals.

28 **Pres. Truman** announced he would sign G.O.P. anti-inflation bill, but said he would be shirking duty if he failed to tell public that measure was "pitifully inadequate."

29 **Henry A. Wallace** announced plans to run for president on third-party platform pledged "to positive peace program of abundance and security, not scarcity and war."

30 **King Michael** of Rumania announced decision to abdicate; shortly thereafter Rumanian government proclaimed "People's Republic."

31 **Sec'y of Agriculture Anderson** urged congress to halt listing of commodity speculators on ground that it caused "heartache" to many innocent people, but added that listing of public officials involved in grain speculation should continue.

# BOOK OF THE YEAR

**Abrasives.** The salient data on abrasives in the United States are presented in the accompanying table, supplemented by brief notes on general conditions.

*United States Production of Abrasives*

(In short tons, or as indicated)

| | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|
| Aluminous Abrasives | | | | |
| Corundum* | 5,686 | 6,402 | 6,244 | 4,207 |
| Emery | 6,666 | 6,940 | 7,856 | 6,188 |
| Carbon Abrasives | | | | |
| Industrial diamonds, carats* | 12,175,430 | 12,656,835 | 10,793,285 | 4,705,118 |

| Metallic abrasives† | 124,954 | 144,550 | 146,771 | 111,512 |

*Imports; no domestic production. †Includes Canada also.

Most types of abrasives were in greater demand in 1946, and both domestic production and imports reacted accordingly. Tripoli, quartz, grindstones and tube mill liners increased in output, sales of garnet were the greatest after 1925, and new high records were made by sand abrasives and pumice. Pulpstones were again produced in small amount, after two years of inactivity. Of the list, declines were limited to emery and millstones. The demand for artificial abrasives was concentrated on silicon carbide, which increased 19% in output, while metallic abrasives dropped 24% and aluminum oxide fell 10%.

**Foreign Trade.**—The dollar value of all natural abrasives imported into the U.S. in 1946 was $15,320,284, compared with $13,493,381 in 1945 and a high of $23,456,221 in 1944. Heavy increases in the value per carat for certain types of industrial diamonds were mostly responsible for the 1946 increase, though the weight of stones imported dropped sharply. Besides diamonds, there were increased values for pumice and flint, while corundum, emery wheels, and burrstones declined.

Exports of abrasive materials from the U.S. rose from $2,087,598 in 1945 to $2,426,853 in 1946, as compared with the 1942 high of $6,684,352.

**Canada.**—Except for sand and quartz there is little production of abrasives in Canada. Ontario has a small output of corundum, which decreased from 1,317 short tons in 1945 to 1,190 tons in 1946, while New Brunswick turned out 225 tons of grindstones in 1945 and 250 tons in 1946. (G. A. Ro.)

**Abyssinia:** *see* Ethiopia.

**Academy of Arts and Letters, American:** *see* Societies and Associations.

**Academy of Political and Social Science, American:** *see* Societies and Associations.

**Accident Insurance:** *see* Insurance.

**Accidents.** Accidental deaths in the U. S. during the first nine months of 1947 totalled 75,900, an increase of more than 3,000 over the nine-month total in 1946. The largest portion of the increase was in public nonmotor vehicle deaths, but occupational and home deaths were also more numerous than in 1946. Motor vehicle deaths, however, totalled about 1,700 less than during the preceding year.

Home accidents were responsible for 25,200 deaths during the first nine months of 1947, which was 1,200 more than the corresponding figure for 1946.

Safety work throughout the nation continued to expand during 1947. Activities of the National Safety council and its affiliated state and community organizations were intensified, along with the accident prevention efforts of industry, schools, and governments, and private agencies of many kinds.

A National Safety congress was held in Chicago in 1947. The 10,000 delegates attending represented every phase of safety in every part of the country.

A Highway Safety conference—a follow-up of the one in 1946—was called by President Harry S. Truman in June of 1947. At this meeting educators, engineers, police, jurists, motor vehicle administrators, safety council executives, governors, and mayors worked out recommendations covering accident records, laws and ordinances, education, enforcement, engineering, motor vehicle administration, public information and organized public support. (*See* also FEDERAL WORKS AGENCY.) (R. L. Fo.)

**Traffic Accidents.**—Although considerable progress was made in highway safety during 1947, there still remained a tremendous amount of work to be done.

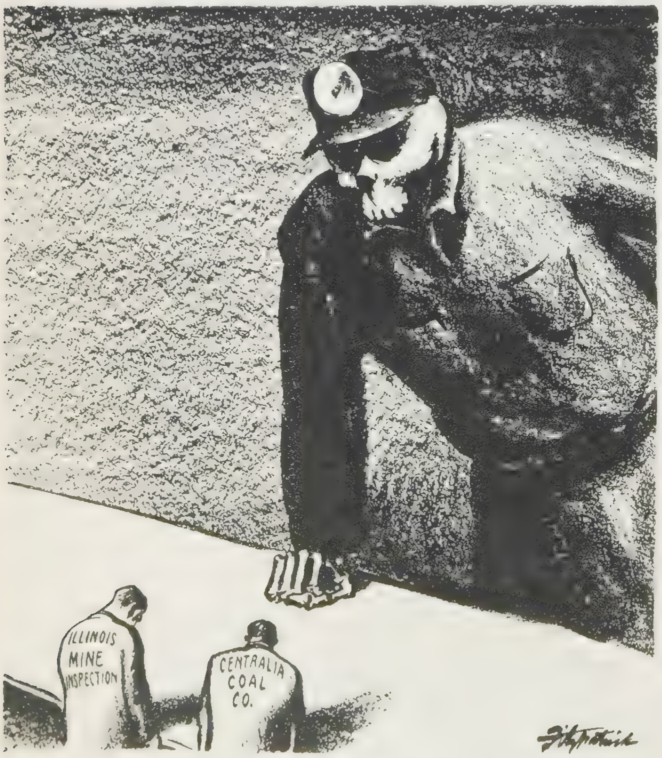
The 1947 traffic toll was 32,000 deaths and approximately 1,100,000 nonfatal injuries. The value of property destroyed and damaged by 1947 traffic accidents was estimated at $900,000,000. The 1946 death toll was 33,700.

The mileage death rate—deaths per 100,000,000 vehicle miles—was estimated at 8.6, lowest in the nation's history. Travel was generally about 10% above 1946 and 12% higher than in 1941.

The nation's top safety experts gathered in Washington, D.C., June 18-20 to study progress made since adoption of the Action Program of the president's Highway Safety conference in 1946. Delegates reported need for more rapid adoption of the program at the community level.

Two committees, the Federal Committee on Highway Safety and the State Officials' National Highway Safety committee, were activated to assist in this work. They were to co-operate with the National Committee for Traffic Safety, the third major committee established by the 1946 conference.

One of the most important developments of the 1947 conference was establishment of a new advisory group on highway safety research which was to re-examine and reappraise knowledge of highway accident causes and remedies. The advisory group was appointed by Major General Philip B. Fleming, general chairman of the conference. Sidney J. Williams, assistant to the president of the National Safety council, was chairman of the group.



"YOU GAMBLED BUT I PAID," an indictment by Fitzpatrick of the *St. Louis Post-Dispatch,* charging negligence in the tragic mine explosion at Centralia, Ill., in March 1947

Grand award winners in the National Traffic Safety contest, conducted by the National Safety council, were Washington, D.C., in the intercity section and Connecticut in the state section. Cities winning first place in their respective population groups were: Washington, D.C. (500,000 and more); San Diego, Calif., and Memphis, Tenn., tie (250,000 to 500,000); Omaha, Neb. (100,000 to 250,000); Hamtramck, Mich. (50,000 to 100,000); Rochester, Minn. (25,000 to 50,000); and Logan, Utah, and Albert Lea, Minn., tie (10,000 to 25,000).

A special honour roll listed 160 cities with population from 5,000 to 10,000 which went through 1946 without a traffic death.

Omaha, Neb., took the grand award prize in the National Pedestrian Protection contest sponsored by the American Automobile association. Top honour among states was won by Connecticut. Detroit won first place among cities of more than 500,000 population. Other first place winners were Schenectady, N.Y. (50,000 to 100,000); Hamtramck, Mich. (25,000 to 50,000)[1]; Wilmette, Ill. (10,000 to 25,000); and Ely, Minn. (less than 10,000).

Considerable improvement was noted in the police phases of enforcement, particularly in the areas of personnel increases and selective enforcement.

Both Los Angeles and Chicago, assisted by the Traffic Division of the International Association of Chiefs of Police, reorganized their traffic control programs. Los Angeles increased its general police budget by $3,000,000 for purchase of new equipment and addition of 1,170 officers, a portion of which would be assigned to traffic. Traffic personnel was increased 70%.

Chicago reorganized its control program, including court handling of traffic cases, in an effort to reduce deaths and injuries. Traffic personnel was being increased from 569 to 1,040. The city planned to spend approximately $5,000,000 for enforcement during 1948.

The American Bar association took the lead in the work of improving court handling of traffic cases. Working with the Northwestern University Traffic institute as co-sponsor, the association held regional conferences for traffic court judges and prosecutors for the purpose of acquainting them with modern problems of enforcement and adjudication. Funds for the program were provided by the Kemper Foundation for Traffic Safety.

The state of New York established a division of safety under the direction of Thomas W. Ryan. Its purpose was to coordinate safety efforts of government departments with other interested organizations and agencies in a state-wide co-operative safety effort.

Organization of the California highway patrol as a separate state agency, recommended by the International Association of Chiefs of Police Traffic division in a survey of the state's law enforcement agencies in 1946, was accomplished in October. Clifford E. Peterson was named commissioner.

A comprehensive survey of safety education programs in colleges and universities was undertaken by the National Commission on Safety Education. The study also outlined best methods of initiating safety activity, particularly those organized as special bureaus of public safety.

The National Committee on Uniform Traffic Laws and Ordinances was organized during 1947. Its purpose was to make periodic reviews of the Uniform Vehicle code and the Model Traffic ordinance—the recognized national standards for state and municipal traffic legislation.

---

[1] Hamtramck's population is approximately 50,000. It was placed in the 50,000 to 100,000 population group for the National Traffic Safety contest; in the lower group for the National Pedestrian Protection contest.

The Uniform Laws division of the Automotive Safety foundation conducted pilot studies for cities and states wishing to determine how their traffic laws conform with national standards. Representative states and cities which had such comparative analyses made during 1947 were Michigan, Indiana, Arizona, New York city, Lansing, Mich., and Lafayette, Ind. A similar study was made of the Model ordinance for Colorado cities under the sponsorship of the Colorado Municipal league.

Twenty-nine colleges and universities held training courses for motor vehicle fleet supervisors during 1947. Approximately 900 supervisors, having management of about 185,000 drivers of commercial vehicles, were enrolled.

The Inter-Industry Highway Safety committee was organized by the automotive and allied industries. Its purpose was to encourage dealer and sales representatives of these industries to assist and co-operate with state and local officials having legal responsibility for safety, and with all civic and business groups enlisted in the safety movement.

The Public Roads administration of the Federal Works agency reported that improvement of the nation's highways proceeded at a faster rate in 1947 than in previous years. Contract awards authorized by the states during the year called for $895,000,000 worth of work on 44,700 mi. of road. This was approximately $150,000,000 more than the cost of road construction contracted for in 1946.

The 1947 total included contracts for Federal-aid projects to cost $640,000,000 and involving 19,800 mi. of roads.

The Institute of Traffic Engineers appointed one of its members to the position of its first full-time executive secretary in April. The institute was planning a series of regional traffic engineering conferences to provide in-service training for highway and municipal engineers and others having responsibility for facilitation and safety of traffic movement. The first of the conferences was to be held at the University of Minnesota early in 1948. Others were to be held in Florida, Texas, southern California and Oregon.

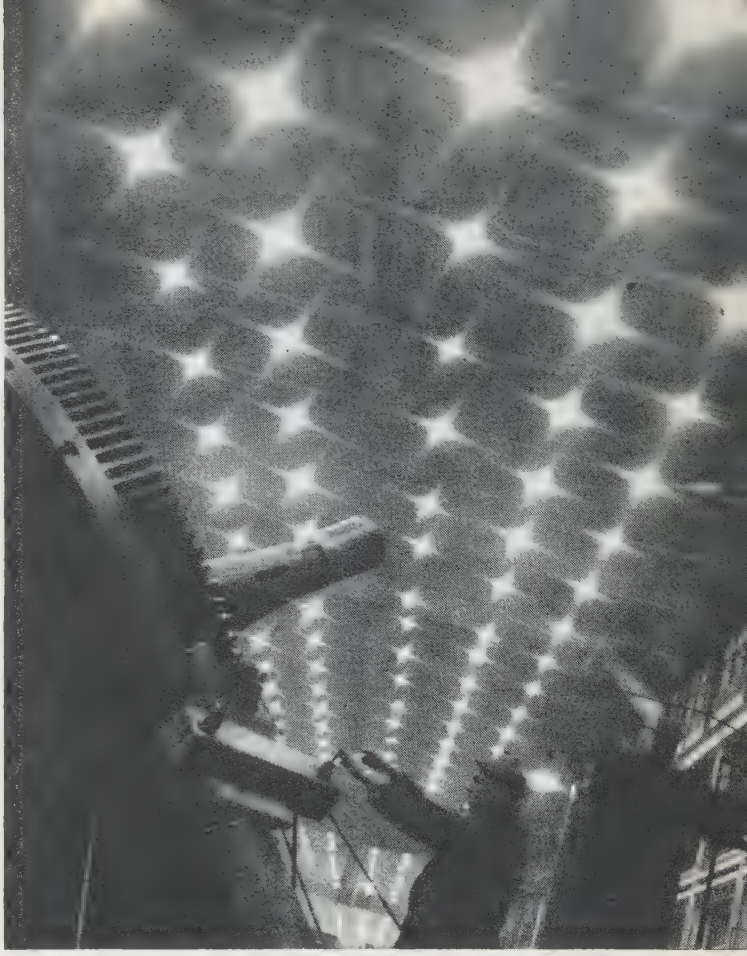
The Alfred P. Sloan Foundation, Inc., awarded a $15,000 grant to the Yale university Bureau of Highway Traffic for a special study of relationships, policies and technical practices of state and local agencies concerned with traffic administration. The grant would finance two research fellowships for the project, which would attempt to establish a more effective approach to the application of modern engineering techniques of street and road problems.

The Northwestern University Traffic institute finished its 11th year of training city and state police in specialized traffic control. Training of key army personnel was continued at the institute as part of the traffic phase of the army-wide safety program. Four courses had been held.

Work of the Traffic division of the International Association of Chiefs of Police was expanded to include administrative traffic engineering surveys and assistance in remodeling traffic legislation and courts, as well as routine traffic control installations.

Reorganizational work in Chicago, Los Angeles and Denver was the most important undertaken by the Traffic division during the year. The organization also worked with the Utah State Highway Patrol; and departments at Billings, Mont.; Salt Lake City, Utah; Portland, Ore.; Richmond, Calif.; Montgomery, Ala.; Jamestown, N.Y.; Fort Wayne, Ind.; Waterbury, Conn.; and Oakland County, Mich.

The I.A.C.P. regional training program was expanded. New York university, the University of Southern California and Georgia School of Technology co-operated in offering courses. (F. M. K.)



MERCURY VAPOUR LAMPS installed during 1947 at the Westinghouse Electric Corp. plant in Pittsburgh, Pa., creating an average of 45 footcandles of light near floor level to provide a maximum of safety against industrial hazards

**Canada.**—Industrial accidents cost Canada $48,200,000 in compensation and medical bills in 1946 (1945: $25,100,000). The 1946 figure was 375,804 accidents (1945: 331,483), of which 1,010 were fatalities (1945: 1,101).

Accidents on Canadian farms during the 12 months ended June 1, 1947, totalled 37,200 of which about half involved lay-offs from work of more than 3 weeks. Percentages were: 11.9% in the maritimes, 28.7% in Quebec, 24.1% in Ontario, 32.9% on the prairies, and 2.4% in British Columbia; 31.5% happened to farm people within the age group of 25-44 years and 25.3% in the group of 45-64 years; 56.2% happened in the six months May to October; 6.7% caused partial or permanent disability. About 600,000 man-hours were lost.

During the 16-year period ended Sept. 1947, 10,066 persons were killed and 175,168 were injured in automobile highway accidents in Ontario. Property damage amounted to $31,000,000. In 1947 the Ontario government took measures to control these fatalities by (1) stiffening the Highway Traffic act which provided suspension of licenses for 14 traffic offenses, (2) ordering the department of highways to conduct a vigorous educational campaign, (3) providing the provincial police with 300 cars having two-way frequency modulation radio equipment. Similar stiffening of highway traffic regulations in Manitoba reduced accidents 30.2% (1946: 1,914; 1947: 1,335). (C. Cy.)

**Great Britain.**—Eighty-eight people lost their lives and more than 220 were injured in railway accidents in Great Britain during the year. Aircraft accidents in Great Britain were responsible for 31 deaths. Although some improvement was shown in road accident statistics during the earlier part of the year, the total of 523 deaths in September was the highest for that month since 1942. Total killed and injured during the first 9 months was 125,166. On Oct. 7, the Committee on Road

Safety (chairman, G. R. Strauss, until September parliamentary secretary to the ministry of transport) presented its final report. Recommendations included periodical inspection of all motor vehicles, and penalties for pedestrians and cyclists guilty of traffic offenses.

## Acheson, Dean Gooderham

(1893– ), U.S. government official, was born on April 11, in Middletown, Conn., and received a law degree from Harvard in 1918. He served as a naval ensign in World War I and later became private secretary to Louis D. Brandeis, associate justice of the U.S. supreme court. He then engaged in law practice. In Feb. 1941 he was appointed assistant secretary of state, and with the formation of the United Nations Relief and Rehabilitation administration in 1943, Acheson became the U.S. member of its council. After the resignation of Joseph C. Grew, Acheson was named (Aug. 16, 1945) to succeed him as undersecretary of state.

In 1947, Acheson became one of the foremost champions of the Truman doctrine, and in a statement before the house foreign affairs committee on March 20, he discounted the possibility that implementation of the administration's Greek-Turkish aid program would lead to war, declaring that failure to make the doctrine effective might lead to conflict. In subsequent statements, Acheson called for extension of the administration's authority to embargo exports to certain foreign countries (May 8) and blamed (June 15) Russia's "pursuit of policies diametrically opposed to the very premises of international accord" for retarding world recovery.

Acheson left the government's service to return to his private law practice on June 30.

## Aden.

A British colony in southwest Arabia, including Perim Island in the strait of Bab-el-Mandeb and the Kuria Muria islands, five in number, off the Dhufar coast of Oman. Area (Aden and Perim): 80 sq.mi.; pop. (1946 census): 86,309. The Aden protectorate (western and eastern) covers an area of about 112,000 sq.mi.; pop. (estimated): 630,000. Languages: English and Arabic (Indian languages and Somali also spoken in the colony); religion: predominantly Moslem. Governor: Sir Reginald S. Champion (appointed 1944).

**History.**—Much attention was given to housing and town-planning in the colony during 1947. In July 1947 it was announced that 57 licences had been given for the construction and reconstruction of houses in Aden and 4 for the erection of new temporary buildings. A grant of £27,500 was approved under the Colonial Development and Welfare act toward the cost of constructing working-class dwellings. In educational matters, the project for the establishment of a new ("Lord Lloyd") college in the protectorate proceeded somewhat slowly. The British council felt themselves compelled, for financial reasons, to withdraw from the scheme; but later in the year a grant of £100,000 for its support was sanctioned under the Colonial Development and Welfare act.

**Finance and Trade.**—The monetary unit in the colony is the Indian rupee (30.17 U.S. cents in 1947); in parts of the protectorate the Maria Theresa dollar is also used. Revenue in the colony (1946–47 estimated): Rs. 99,50,000, expenditure Rs. 94,04,000. In the protectorate: expenditure for 1946–47 was estimated at £305,150. Imports (1945) were valued at £11,536,000 and exports at £5,838,000. There is no public debt. (J. E. SH.)

**Adjusted Compensation:** *see* VETERANS' ADMINISTRATION.
**Adult Education:** *see* EDUCATION.

## Advertising.

Advertising in 1947 was marked by increased volume that reflected the unprecedented business activity in the United States. Expenditures for 1947 and 1946 were estimated as follows:

*Advertising Expenditures**
(Millions of Dollars)

| | 1947 | 1946 |
|---|---|---|
| Newspapers | $1,302.1 | $963.8 |
| Radio | 485.1 | 489.5 |
| Magazines | 464.7 | 402.7 |
| Direct mail | 324.8 | 278.8 |
| Trade and business papers | 207.4 | 178.0 |
| Outdoor | 110.8 | 85.9 |
| Farm papers | 47.0 | 35.7 |
| Miscellaneous | 762.4 | 654.5 |
| Total | $3,704.3 | $3,088.9 |

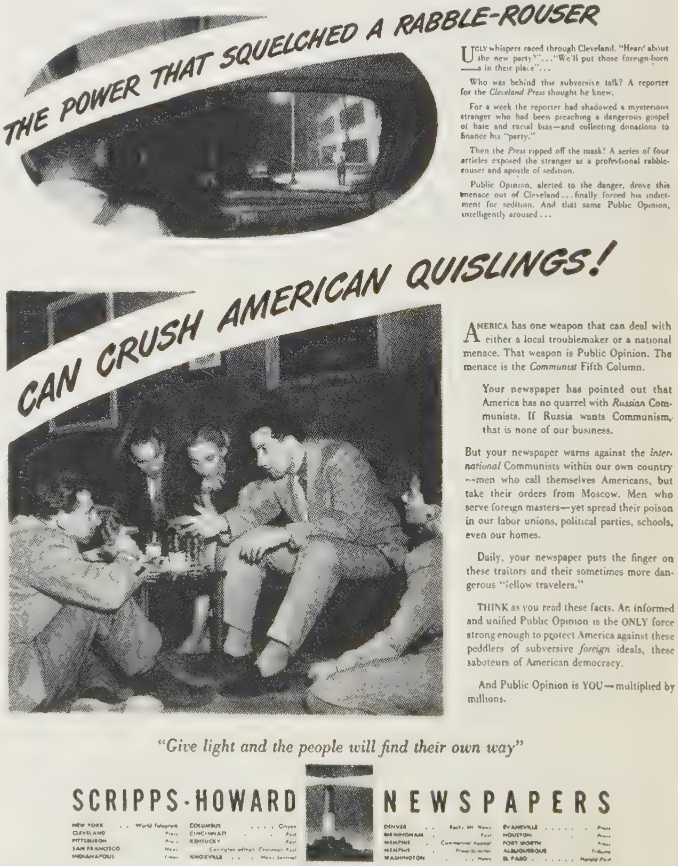
*Estimates by Hans Zeisel, McCann-Erickson, Inc.

The increase was caused to some extent by rises in rates and changes from black and white to colour in publication advertising. Although volume was higher than ever before, students of advertising speculated upon the fact that the proportion of national income spent for advertising in 1947 was only 1½%, whereas the $2,600,000,000 spent in 1929 represented 3%.

Advertising was marked during 1947 by competitive selling that had been largely absent during World War II. It became more competitive not only in the more direct selling appeals used, but also in the devices employed. Increasing use was made of premiums and contests, for example.

Costs of advertising continued to rise. A typical advertiser who spent $1,000,000 for magazine advertising in 1945 found that he had to budget $1,300,000 in 1948 to secure the same number of pages in the same magazines, because both space charges and costs of mechanical preparation had risen.

After several months of research, a joint committee of the Association of National Advertisers and the American Asso-



THE POWER THAT SQUELCHED A RABBLE-ROUSER
CAN CRUSH AMERICAN QUISLINGS!

UGLY whispers raced through Cleveland. "Heard about the new party?"..."We'll put those foreign-born ——s in their place"...

Who was behind this subversive talk? A reporter for the *Cleveland Press* thought he knew.

For a week the reporter had shadowed a mysterious stranger who had been preaching a dangerous gospel of hate and racial bias—and collecting donations to finance his "party."

Then the *Press* ripped off the mask! A series of four articles exposed the stranger as a professional rabble-rouser and apostle of sedition.

Public Opinion, alerted to the danger, drove this menace out of Cleveland...finally forced his indictment for sedition. And that same Public Opinion, intelligently aroused...

AMERICA has one weapon that can deal with either a local troublemaker or a national menace. That weapon is Public Opinion. The menace is the *Communist* Fifth Column.

Your newspaper has pointed out that America has no quarrel with *Russian* Communists. If Russia wants Communism, that is none of our business.

But your newspaper warns against the *international* Communists within our own country—men who call themselves Americans, but take their orders from Moscow. Men who serve foreign masters—yet spread their poison in our labor unions, political parties, schools, even our homes.

Daily, your newspaper puts the finger on these traitors and their sometimes more dangerous "fellow travelers."

THINK as you read these facts. An informed and unified Public Opinion is the ONLY force strong enough to protect America against these peddlers of subversive *foreign* ideals, these saboteurs of American democracy.

And Public Opinion is YOU—multiplied by millions.

*"Give light and the people will find their own way"*

ONE OF A SERIES of advertisements sponsored by the Scripps-Howard newspapers and selected by the Annual Advertising Awards jury as contributing most to the advancement of advertising as a social force during 1947 ciation of Advertising Agencies announced a program of advertising to promote understanding of the U.S. economic system. Subsequently the Advertising council announced that it would help put this program into effect.

Shortage of paper continued to be a limiting factor in the development of European advertising. In England, France and several other countries, it remained still impossible to buy much advertising space in the newspapers. Schedules had to be placed on a problematical basis, with size of individual advertisements strictly limited. Equipment for outdoor advertising suffered badly, and metal sheets to replace panels destroyed were largely unavailable. Printing presses of the continent had insufficient parts available to keep them in good condition. In spite of these many drawbacks, however, volume of European advertising was increasing.

Many European advertising agencies disappeared completely during World War II or were greatly harmed by it. Although conditions were generally improved, countries such as Poland, Yugoslavia and Rumania were still unable to handle U.S. advertising as the year ended.

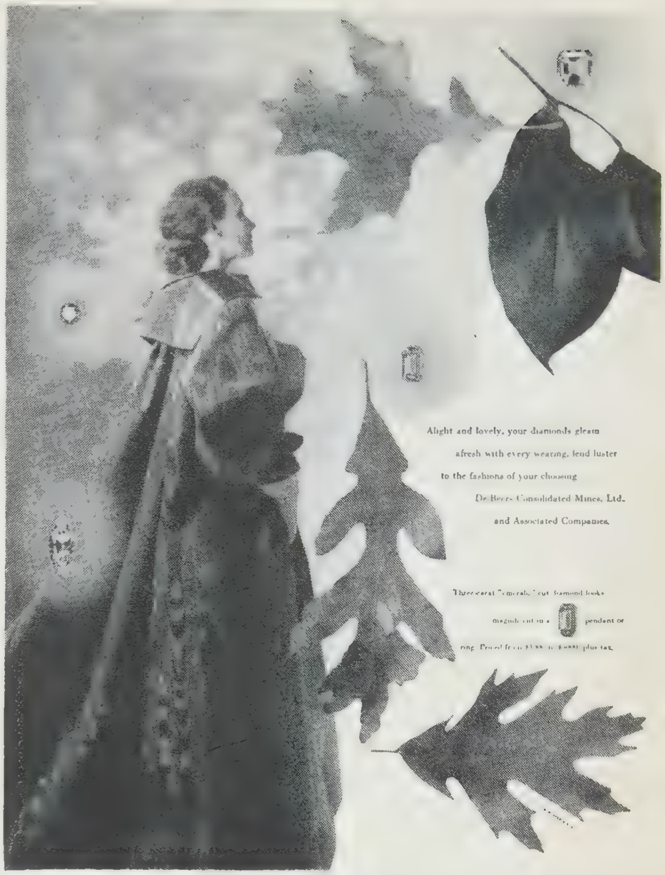
**Newspapers.**—The Bureau of Advertising of the American Newspaper Publishers association estimated that national advertising placed in U.S. newspapers during 1947 amounted to $372,000,000, or $102,000,000 more in dollar volume than for 1946. In a study of the readership by women of 979 grocery advertisements, conducted by the bureau, it was found that newspaper advertisements with dominant illustrations were better read than those with incidental illustrations, that those with photographic illustrations received better readership than those using wash or line drawings, that those with dominant reverse plate areas were less effective than those with positive treatment. The average readership of advertisements with food illustrations was 50% higher than that of the other advertisements.

In the move for more postwar advertising, weeklies were joining the Audit Bureau of Circulations at a faster rate than before. It was announced that 556 of them had enrolled and that applications were in from 147 others, so they were outnumbered only by the 1,117 daily newspapers represented in the bureau.

In the competition to retain their share of the advertising dollar, newspapers were turning to the use of colour. At the start of 1947, it was estimated that only 398 daily newspapers were equipped to accept advertising in at least one colour besides black; of these, 156 could reproduce two colours in addition to black and white and 86 the maximum three additional colours. It was estimated that by the end of the year approximately 500 newspapers were equipped to print in colour. Of the newspaper presses on order, colour printing was specified in 90%. (*See* also NEWSPAPERS AND MAGAZINES.)

**Radio.**—In 1947 radio ownership, multiple-set ownership and total radio listening in the U.S. were at all-time peaks, as the radio manufacturers were establishing all-time production records. Columbia Broadcasting system stated, on the basis of a survey, that 35,900,000 homes in the United States, or 93% of all, had 52,500,000 operating receivers, exclusive of automobile and portable radios. One out of every three families had more than one radio, an increase of 89% over figures for 1944. Two sets for each family instead of one increased listening 28% or 62 minutes a day, according to CBS. With one set, the family devoted 223 minutes a day to listening; with two sets, 285 minutes.

The year saw accentuation of trends that had been apparent in commercial radio after the end of World War II. There was a general swing back to less expensive shows. Creation of programs was being taken up increasingly by the networks, with the agencies and clients tending to control the various elements of the programs. Another trend was toward transcribed programs. Surveys showed listener indifference as to whether or not a show was transcribed and a wide general acceptance of transcribed programs by local stations with a strong dependence upon them for programming. The "disc jockey," or radio commentator whose chief task is to play records, came into prominence. Another trend was for cigarette companies to buy time during the day in an effort to reach more women. Still another development was the use of limited networks for supplemental campaigns, the introduction of new products, trials of new programs, and so on.

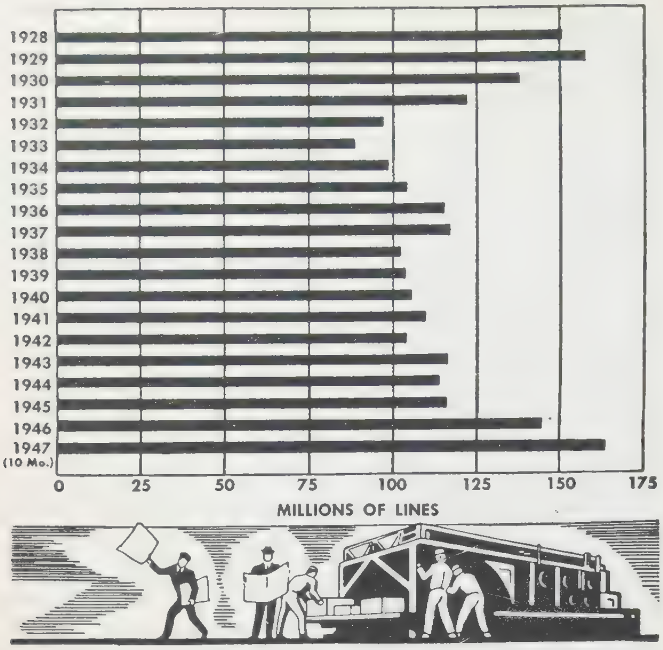


Alight and lovely, your diamonds gleam
afresh with every wearing, lend luster
to the fashions of your choosing
De Beers Consolidated Mines, Ltd.
and Associated Companies.

DIAMOND ADVERTISEMENT (original in colour) prepared for De Beers Consolidated Mines, Ltd., adjudged the most technically distinguished of 1947 by criteria of visual presentation (layout, art, typography)

There was widespread criticism of radio commercials. One move by the industry to offset this criticism was the proposal by the National Association of Broadcasters of a code of standards. If adopted, this would reduce advertising on the air from 3% to 20%. The code proposed the following reforms: (1) a stipulation that no 15-minute program contain more than three minutes of commercials; (2) the placing of only one commercial spot announcement between regularly scheduled programs; (3) a ban on any commercial announcement in the middle of a news broadcast less than 15 minutes long; (4) an unqualified prohibition on the dramatization of political or other controversial issues.

In March the Broadcast Measurement bureau's Area Audience Report was received by its subscribing stations and members of the American Association of Advertising Agencies and the Association of National Advertisers. A project upon which the BMB had been working from 1945, the 780-page book showed audiences of 800 radio stations in 3,500 United States and Canadian counties and in 1,200 cities. BMB also reported 575 subscribers as of Jan. 1, 1948, including 568 stations, 4 national and 3 regional networks.



NEWSPAPER ADVERTISING (total linage in 52 cities of the United States): average per month. Compiled by Media Records, Inc.

A study of merchandising aids offered by radio covered 535 amplitude modulation (AM) stations in cities of 50,000 population or more and revealed that 73% of these stations offered some form of merchandising assistance, the most common form consisting of notification of distributors and dealers of advertising campaigns and providing advertisers with market data.

Facsimile broadcasting, bringing a small printed newspaper broadcast directly into the family living room, grew in importance as a form of news dissemination. A facsimile set produces on a roll of sensitized paper the same shades of black and gray that appear on the original copy at the broadcasting station. It permits the transmission of pictures as well as copy at the rate of 500 words a minute. (*See* also RADIO.)

**Television.**—Television made great strides during the year. As of Jan. 1, 1948, there were approximately 170,000 sets in operation in the United States, compared with 8,000 a year before.

A survey made for General Foods corporation studied television audiences in the New York city area, where it was estimated that 64% of television sets were situated. It was found that 71% of owners called their sets "wonderful," that an average family owning television in New York had a set with a seven-inch or ten-inch screen and had owned the set from 4 to 12 months. The family was composed of 3.3 persons, had an average evening audience of 3.47 persons for each viewing set. Average tune-in was 17 hours a week. First preference of the audience in respect to programs was for more new movies. Sponsor identification of seven programs checked by the coincidental method was 68%. (*See* also TELEVISION.)

**Magazines.**—An estimate by the Magazine Advertising bureau put 1947 as the greatest year in the history of magazine advertising. The 101 general and 11 national and regional farm magazines reported upon (Sunday supplements excluded) were estimated to have gross advertising revenue of $440,000,000, a figure $59,000,000 higher than in 1946 and nearly twice as high as the total advertising volume carried in magazines in 1943.

In July the bureau reported on individual advertisers of the previous year. In 1946 there were 57 advertisers who spent $1,000,000 or more in the nation's magazines, as against 49 in 1945, 27 in 1942 and 24 in 1939. These 57 advertisers invested $113,200,000 in magazine advertising during 1946.

In Jan. 1948 the bureau released the first report on its Nationwide Magazine Audience Study. It showed that 68.9% of all persons 15 years old or more in the United States, both urban and rural areas, read at least one magazine, and in 82.5% of all families at least one individual was a magazine reader. Hence, it was said, magazines had an audience of more than 75,000,000 persons and 31,000,000 families. The report showed that 89% of all individuals with high school or college education read magazines.

Magazines continued to expand in other countries. *World Horizons,* the first of a projected overseas chain of 55 magazines affiliated with *United Nations World,* appeared in May 1947 in Sweden. Other overseas editions were planned for France, Great Britain, Uruguay, Mexico. Macfadden Publications, Inc., announced that after World War II it had established or re-established 9 overseas editions out of a total of 15 planned, and announced that they shortly would be taking U.S. advertising. Beginning with the 1948 February edition, *The Reader's Digest* planned to publish a special edition for South Africa to carry advertising. Crowell-Collier Publishing company announced it was planning to issue a multilingual international magazine to be prepared editorially in New York city, then translated into foreign languages and printed and distributed in other areas of the world by local publishers.

The first report of the Continuing Study of Farm Publications was issued by the Advertising Research foundation. It measured the readership of *The Ohio Farmer* and was sent to advertisers, agencies and publishers. Subsequent reports studied *The Washington Farmer* and *Successful Farming.* Among matters studied were number of readers per subscriber family, readership of individual advertisements and editorial features, subscribers' acreage, livestock and crops.

The average circulation per issue during the first six months of 1947 for 249 magazine members of the Audit Bureau of Circulations was 163,118,748, compared with 161,022,740 for 1946 and 100,044,196 for 1940. A survey showed that approximately 40,000,000 copies of comics magazines were sold each month, at a cost of some $4,000,000.

The Hulton Readership survey was conducted in Great Britain for the first time since before the war. It was an analysis for advertisers of the readers of British national, seminational and local morning and evening daily newspapers; local weekly and biweekly newspapers; national and seminational Sunday newspapers; and fortnightly and monthly magazines. The analysis was by region, sex, age, social class and other characteristics. It estimated a total population of 35,800,000 aged 16 and more as readers, and that percentages of this population reading the various types of periodicals were as follows: national morning newspapers, 78.3%; national Sunday newspapers, 89.9%; evening newspapers, 66.6%; local weeklies or biweeklies, 56.5%; general weekly magazines, 70.3%; general monthly magazines, 29.0%.

**Direct Advertising.**—An estimate by the Direct Mail Advertising Association, Inc., put U.S. direct advertising expenditures in 1947 at $750,000,000, with approximately half of this in direct mail. Its definition of direct advertising included direct mail and all unmailed printed promotion such as product literature, dealer helps, printed point-of-sale material, house organs, catalogues, printed public relations materials, annual reports, package inserts, calendars, letters. A year-end survey by the association stated that 70.8% of the reporting firms declared that they would increase their budgets for direct advertising in 1948, with 27.8% planning the same expenditure as in 1947 and 1.4% expecting to spend less.

The association, with a membership of 1,500 companies, announced the establishment of a new advisory board to promote the more effective and extensive use of direct advertising in all parts of the United States.

**Trade and Business Papers.**—The Business Paper Advertising competition conducted by the Associated Business Papers included 912 campaigns represented by 2,736 individual advertisements, or 163 more entries than in 1946. Judges expressed concern over the large number of entries in which the advertiser made no effort to check effectiveness of his advertising and the lack of continuity in advertising campaigns.

The National Conference of Business Paper Editors changed a 29-year-old rule to admit editors of publications not members of the Associated Business Papers group.

In April it was announced that in 1946 U.S. manufacturers had used approximately 25,000 pages of advertising in U.S. business and class magazines in the export field. The information was based upon a survey among 26 U.S. companies publishing magazines in the export field.

**Outdoor Advertising.**—National outdoor advertising in 1947 was estimated as 26.3% greater in volume than in the previous year. Equipment was being expanded as materials became available, and it was expected that there would be sufficient facilities in 1948 to take care of the 19% increase in business with which the year opened.

Traffic Audit Bureau, Inc., published a study of outdoor advertising in Ft. Wayne, Ind., a city chosen as typically U.S. It was the first TAB study since the war.

A total traffic or gross outdoor advertising circulation increase of 37.6% compared with 1939 was recorded by the TAB study. Passenger automobiles constituted 82.3% of total vehicular traffic; trucks, 13.1%; other vehicles, 4.6%. It was found that 76% of persons more than 14 years old go outdoors daily, and that 35% of the trips are in connection with jobs, 22.6% for social purposes, 14.7% for shopping, 8.1% to go to church, 4.8% to attend school and 14.8% for other reasons. Of a total of 3,547 trips analyzed, 47.2% were by automobile only and 20.2% by foot only.

**Transportation.**—Volume of transportation advertising was $23,000,000 in 1947, or 7% higher than in 1946, according to an estimate by the National Association of Transportation Advertising, Inc. Rate increases accounted for more than half of this increase. The volume was divided almost equally between local and national advertising, both classifications showing same percentage of increase.

A major development during the year that helped account for some of the gain was standardization of sizes and additional installations of travelling displays on the outside of transit vehicles.

## Afghanistan.

A Moslem kingdom lying between U.S.S.R. (N.), China and India (E.), Pakistan (S.) and Iran (W.). Area: *c.* 270,000 sq.mi.; pop. (est. 1946): 12,000,000. Chief towns (pop. est. 1946): Kabul (cap., 206,200); Kandahar (77,200); Herat (75,600); Mazar (41,900). Language: Persian, Pashtu; religion: Mohammedan. Ruler: Mohammad Zahir Shah; prime minister: Sardar Shah Mahmud.

**History.**—The change of cabinet that took place in 1946, after a period of 17 years without change, led to the proclamation of a general amnesty for political prisoners and the setting up of a high court of justice for the trial of future political offenders. Because of close ties of kinship and common cultural tradition, Afghanistan was deeply concerned over the question of the right to self-determination of the Afghans of the North-West Frontier province of India, arising from the creation of the separate independent states of India and Pakistan. Afghanistan sent an observer-delegate to the Geneva meetings of the U.N. Conference on Trade and Employment. (A. R. Pk.)

**Education.**—1946: schools 369, pupils *c.* 100,000; the University of Kabul was extended to five faculties.

**Finance.**—1946: currency, Rs. 3.95 (Afghan) = Rs. 1 (Indian) = 30.23 U.S. cents.

**Trade and Communication.**—Foreign trade: exports (1945–46) Rs. 718,431,373; exports to Great Britain (1946) Rs. 294,030; imports from Great Britain (1946) Rs. 1,696,840. Roads (1947): motor roads 5,107 mi., caravan roads *c.* 1,500 mi. At the beginning of 1947 there was one radio broadcasting station, at Kabul.

**Agriculture.**—By 1945 one-fifth of the soil was under cultivation. Production for export, 1945–46 (in short tons): dried fruit 44,000; wool 7,700; cotton 4,400; karakuls 2,400,000 skins.

## Agricultural Research Administration.

Established in 1941 to direct and co-ordinate research in the United States department of agriculture, the Agricultural Research administration comprises seven agencies whose functions are the conduct of research and certain regulatory activities based on research. The component agencies are the bureaus of agricultural and industrial chemistry; animal industry; dairy industry; entomology and plant quarantine; human nutrition and home economics; plant industry, soils and agricultural engineering; and the office of experiment stations.

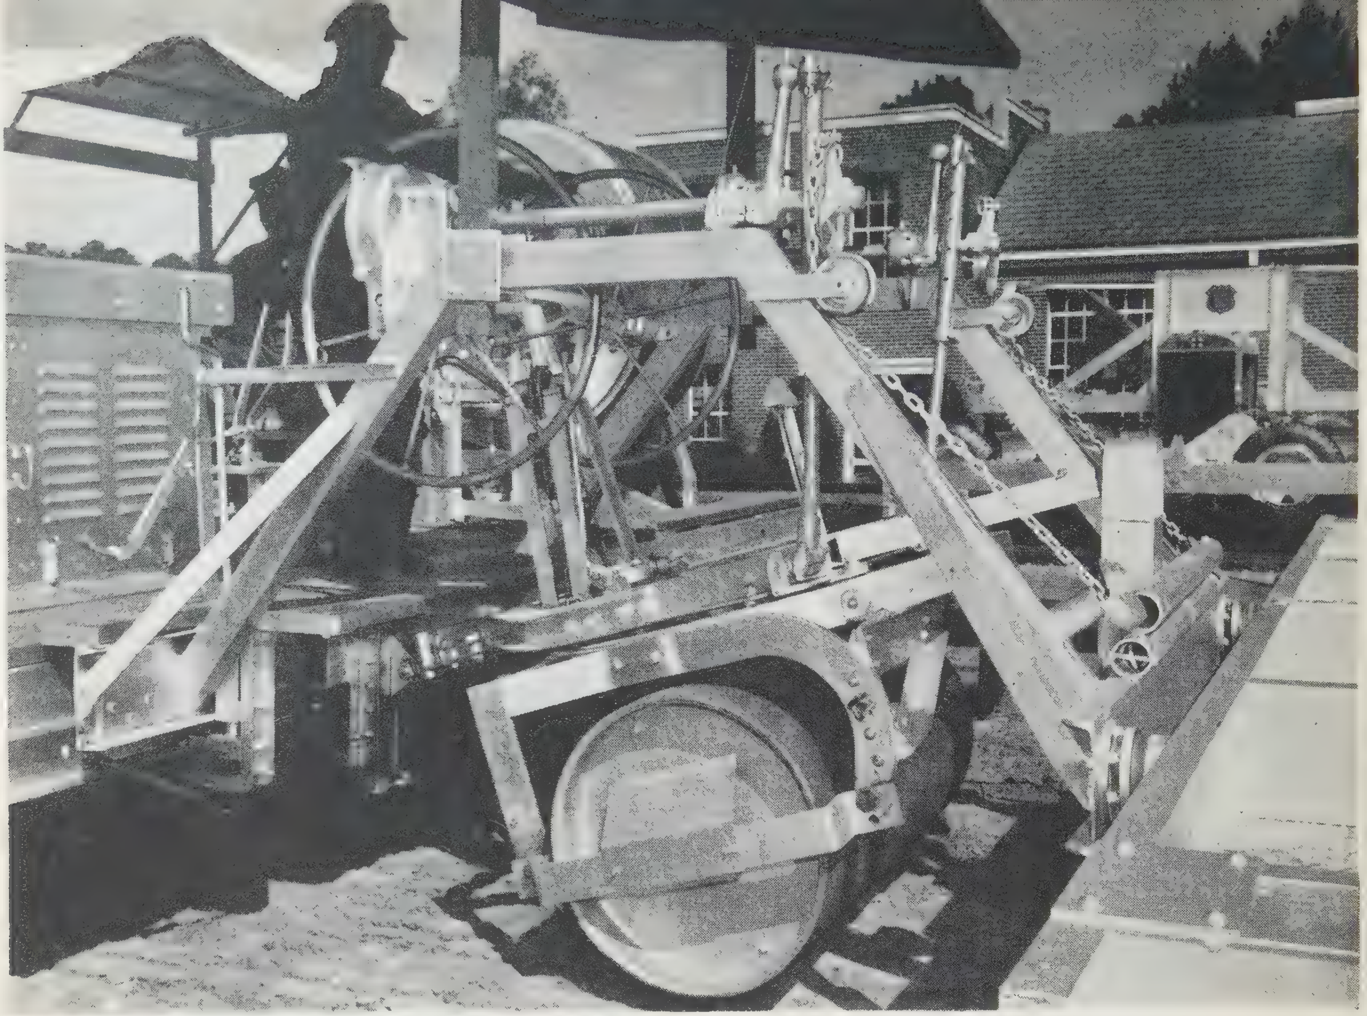
The congress of the U.S. in 1947 provided funds to put into effect the provisions of the Research and Marketing act of 1946. The ARA has responsibility for planning and carrying out much of the research to be done under the act, in co-operation with state agricultural experiment stations and other research agencies. Many projects were set up and work was begun on a large number in 1947.

Several years of intensive research by the bureau of agricultural and industrial chemistry reached fruition in 1947 in the successful operation of a continuous-process turpentine still. Gum from southern pine trees, diluted with turpentine and heated to 350° F., is sprayed continuously into a chamber at the top of a 20-ft. vertical pipe, where the turpentine in the gum vaporizes and the rosin flows downward. The new-type still uses less than two-thirds as much steam as the conventional batch-type still and requires only half as much labour to operate, while the products are of a more uniform quality.

A method for utilizing soybean protein as an adhesive in the manufacture of casings for shotgun shells was put into commercial practice after being devised by bureau scientists.

It was shown that farmers can keep home-rendered lard fresh in home storage for a year or more by adding 2 or 3 lb. of hydrogenated vegetable fat to each 50 lb. of lard at the time of rendering.

Biochemists at the Southern Regional Research laboratory



SOIL FITTING CAR used by the U.S. department of agriculture in 1947 to condition soil for experimental purposes at its field laboratory in Auburn, Ala.

found that the pigments of cottonseed can readily be separated from the oil and meal by solvents. Removal of the pigments improves the quality of the meal as a livestock feed and for other uses.

During 1947, advances were made by the bureau of animal industry in showing further the possibilities of hybridization of farm animals. Hybrid hogs produced large litters of pigs that made fast and economical gains. In poultry breeding, 65 lines of inbred poultry were made ready for experiments in crossing.

It was shown that losses of poultry from Newcastle disease can be considerably reduced through the use of vaccines. Average production of eggs by turkeys of the Beltsville Small White breed was increased experimentally through selective breeding. This was a promising development, because higher egg production tends to reduce the cost of turkey poults, an important economic factor in turkey raising.

A compound of benzene hexachloride, xylol and pine oil, introduced into the ears of cattle infested with the spinose ear tick, killed the ticks and protected the cattle against reinfestation for about 3 weeks. Toluene (methyl benzene) was found to be effective for removing internal parasites from several kinds of animals.

Feeding experiments by the bureau of dairy industry showed that dairy heifers can be successfully raised from 10 months to 2 years of age without any grain in their ration provided they are given all the good-quality hay and other roughage they will eat. This reduces by half the amount of grain formerly thought necessary for proper development of the dairy heifer during this period.

A test developed earlier for determining whether Cheddar cheese had been made from raw or pasteurized milk was improved and adapted in 1947 for application to practically all milk products, including cheeses of all kinds, butter, buttermilk, ice creams and sherbets and milk drinks. It is possible through the use of this test to determine, for the protection of the public, whether milk used in one of these products has been properly pasteurized. A variation of 1° F. below the standard in the pasteurization temperature used can be detected.

A method was developed for recovering protein from cheese whey, 7,000,000,000 lb. of which is fed to livestock or wasted annually in the U.S. Each 100 lb. of whey yields $3\frac{1}{2}$ pounds of protein.

A number of new insecticidal materials were tested against insects in fields and greenhouses in 1947 by the bureau of entomology and plant quarantine. Chlorinated camphene, hexaethyl tetraphosphate and tetraethyl pyrophosphate each showed promise of being effective for controlling certain insect species. Chlordane proved toxic to grasshoppers and roaches. Aerosol formulations containing hexaethyl tetraphosphate were found to be more effective against some greenhouse pests than aerosols containing DDT. Benzene hexachloride continued to show promise against certain cotton pests.

Many of the compounds under test as insecticides were found to have the advantage over standard materials of being effective in very small—in some cases minute—quantities.

In connection with studies of bees, it was found that the bacterium which causes the bee disease American foulbrood produced a substance that inhibited the growth of organisms causing a number of human and animal diseases. The National Institute of Health entered into co-operation with the bureau in studies to determine the medical importance of this possible new antibiotic.

An important regulatory activity of the bureau of entomology and plant quarantine in the last few years was the inspection of aeroplanes at ports of entry into the U.S. In 1947 harmful insects and plant matter that carried infection were found on more than ¼ of the 58,500 planes inspected.

Three years of research by the bureau of human nutrition and home economics resulted in 1947 in the publication of new directions for home canning of 12 low-acid vegetables in pressure canners. Processing periods 25% to 50% shorter than previously recommended were shown to be safe for a number of these vegetables. This meant a saving of time and fuel for the home canner, as well as better flavour, texture and vitamin value of the canned food.

The protein values of several important food grains were compared by nutritionists of the bureau. Rolled oats were found equal or superior to all the other grains tested, both in quality and quantity of protein. Rice, though lowest in quantity of protein, was equal to oats in protein quality. Rye, whole wheat, barley and corn followed, in that order, in nutritional quality of protein.

Work on fibres and fabrics was advanced through studies on cotton, wool and synthetic fibres. It was shown that elastic recovery of fabrics cannot be predicted from that of the yarns from which they are made. For example, nylon yarn has greater elasticity than wool, but nylon fabric does not have as much stretch as a similar wool material.

A series of publications on planning, constructing or remodelling, and equipping farmhouses for greater comfort and efficiency was begun co-operatively by the bureaus of human nutrition and home economics, and plant industry, soils and agricultural engineering. Three bulletins were issued, one on how to plan remodelling, one providing cut-outs to aid in planning and one on easy-to-build kitchen cabinets.

Plant breeding, control of plant diseases, the study of soils, the influence of fertilizers on plant growth and farm machinery are the major fields of research of the bureau of plant industry, soils and agricultural engineering. Many of its investigations are carried on in co-operation with one or more of the state agricultural experiment stations.

Each year a number of new varieties of crop plants, promising higher yields and better disease resistance, are released to growers. Among the new varieties of 1947 were an early peach for the southeast, a new sugar cane that will not lose its sugar content when held in the field for a considerable time, a sugar beet for the west that is resistant to curly top disease and yields a high percentage of sugar, new hybrid corns with desirable characteristics for certain localities or purposes, a new variety of oats for New York that is well suited to combine harvesting, improved cotton varieties, a strawberry high in vitamin C (ascorbic acid), a Lima bean that produces well in hot weather, a midwinter lettuce for the southwest and a disease-resistant white cabbage.

A new kind of nitrogen fertilizer was developed which becomes available to plants more slowly because of a slow rate of solubility. A combination of urea and formaldehyde (both of which unfortunately are scarce at present), it was named "Uraform." Because it supplies nitrogen at a uniform rate over a long growing period and does not leach out of the soil easily, it promised to eliminate the need for additional fertilizer applications during the growing season.

Spraying equipment was designed to facilitate the application of the herbicide 2,4-D from aeroplanes to kill weeds in grain crops without using great quantities of water, which had been a limiting factor in spraying from the air.

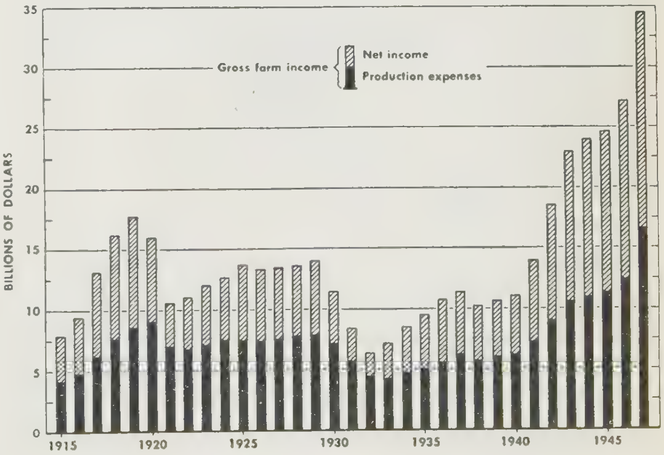
The office of experiment stations administers federal grants to the state agricultural experiment stations. State stations were granted $7,206,208 of federal money in the fiscal year 1947, under which more than 3,300 research projects were active. The Research and Marketing act of 1946 expanded the responsibilities of the office in 1947. (W. V. L.)

## Agriculture.

A new high record of prosperity was attained by United States agriculture in 1947 in income although total production was about equal to the record years 1944 and 1946. The assets of the industry were estimated by the U.S. department of agriculture on Jan. 1, 1947, at $111,209,000,000, the largest in history, and gross income in 1947 at $34,600,000,000. Total assets at the end of 1947 were even higher but exact estimates would not be available until midyear 1948. The year was characterized by indications of a turn downward in livestock and crop production while prices rose to new record heights; demand for farm products continued unabated at home and abroad. The postwar decline, so long feared by farmers, did not arrive and government appeals for continued maximum production of most crops were repeated for the ninth successive year. No such long-continued period of farm prosperity had ever occurred in the country's history.

The world food crisis continued and became even more acute in the second half of the year, creating world-wide political and economic problems for governments. From early spring numerous agencies, national and international, began surveys and warnings of the vital importance of feeding the distressed peoples as an essential to peace and to prevent revolution and political chaos. (*See* FOOD SUPPLY OF THE WORLD.) U.S. farmers at first were cautious, however, and seemed inclined to retrench their operations. The total acreage had declined from the peak in 1944 through 1945 and 1946. While the cultivated area expanded in 1947, it did not quite reach the level of 1944. Food grains production was the largest on record but livestock feed grains were the smallest after 1939. This was not planned by producers but was the result of unfavourable weather for the corn crop. This decline in feed grains combined with high prices of all feeds caused a further decline in livestock production which began in 1945. The significant changes in 1947 briefly summarized were: record crops of wheat, rice, peanuts, sugar beets and pears; below-average crops of corn, barley, rye, cotton, sweet potatoes, sugar cane. Other crops were near record in size or about the average of recent years. In livestock the changes were: heavy marketings of beef cattle, a slight recovery in hog production, continued decline of sheep and lambs, dairying and poultry raising showing little change. Farm prices reached new peaks for all crops and livestock except fruits. Farm debts were paid and large balances were accumulated by farmers in cash bank deposits, bonds and investments.

**Crop Production.**—Total U.S. crop production in 1947 as estimated by the U.S. department of agriculture was slightly



GROSS FARM INCOME: net income and production expenses of U.S. farm operators, 1915–47, including government payments beginning in 1933. Compiled by the U.S. bureau of agricultural economics. 1947 data are tentative estimates

Table I.—*Index Numbers of the Volume of Agricultural Production through Two War Periods**

(1935–39 = 100)

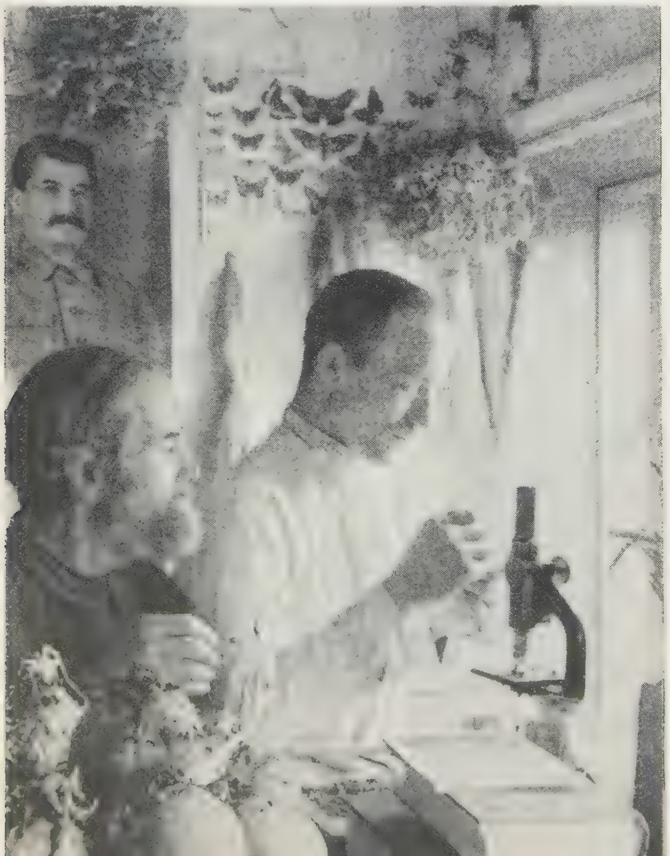
*Estimates by the U.S. department of agriculture.

less than the totals of 1942, 1944 and the all-time record of 1946. This was chiefly the result of the smaller corn crop. The total acreage of 52 crops harvested was 348,355,000 ac. compared with 344,931,000 ac. in 1946, the high total of 352,538,000 ac. in 1944 and the 10-year average, 1936-45, of 336,550.000 ac. Unfavourable weather made it impossible to attain the record of 1946 even with nearly 4,000,000 ac. larger area. Nearly 358,000,000 ac. were planted to crops but 9,500,000 ac., or about 2½%, was lost. This was a relatively small loss, which is usually 12,000,000 ac.-16,000,000 ac. and once was 46,000,000 ac. in 1936. Floods caused most of the acreage abandonment in 1947.

Corn planting was delayed by wet spring weather and the harvested acreage was 5% less than in 1946 and 7% less than the average. It was also the smallest after 1894. Yields also declined and were 8 bu. per acre less than in 1946 at 28.6 bu. per acre. The result was a crop of corn 26% less than in 1946, and the smallest after 1936.

The 1947 wheat crop was the outstanding record of the year amounting to 1,365,000,000 bu., 18% more than the 1946 crop, more than 50% more than the 10-year average and the 4th crop of more than 1,000,000,000 bu. Winter wheat, sown in good condition in the fall of 1946, was alone more than 1,000,000,000 bu. for the first time, since spring wheat amounted to only 22% of the total. Nine states, including the principal wheat states of Kansas and Oklahoma, had record-breaking crops, Kansas alone producing 21% of the nation's total crop. Wheat growers responded to the high market price and the government's request for expansion in 1946 by planting nearly 78,000,000 ac. The average yield, 18.4 bu. per acre, was exceeded only in 1942. So little of the seeded area was abandoned that the 74,186,000 ac. harvested was the largest on record. The crop was concentrated in the great plains wheat belt. Five states—Nebraska, Kansas, Oklahoma, Texas and Colorado—produced about 62% of the entire winter wheat crop, or 661,000,000 bu., which was more than the 10-year average for the entire country. Of the spring wheats the increase was chiefly in durum which was 19% more than in 1946 with a yield of more than the average.

COLLECTIVE FARMER at a rural laboratory in the Mari autonomous republic, U.S.S.R., in 1947. Experimental tests helped peasants select those crops which would yield the most fruitful harvest and increase the national food supply



Four 1,000,000,000-bu. wheat crops together with the large surplus carried over in 1942 and 1943 made up the enormous supply of more than 8,000,000,000 bu., or an average of more than 1,500,000,000 bu. per year. Domestic consumption increased to more than 951,000,000 bu. in 1942 and to 1,216,000,000 bu. in 1943. Exports were small in these years and did not increase until 1945 when the total reached 391,000,000 bu. In 1947 about 400,000,000 bu. was exported and for 1948 the goal was set at 450,000,000 bu. The large six-year supply of wheat was largely consumed in the U.S. and not exported at the expense of domestic consumption. The high consumption of 1943 was because of the use of about 487,000,000 bu. for feed and 108,000,000 bu. for alcohol making. Consumption for food averaged about 520,000,000 bu. after 1940.

Table II.—*Production of Principal U.S. Crops, 1933–47*

(In thousands)

| Year | Corn bu. | Oats bu. | Wheat bu. | Cotton bales | Tame hay tons | Rice bu. | Tobacco lb. | Potatoes bu. |
|---|---|---|---|---|---|---|---|---|
| 1933 | 2,399,632 | 733,166 | 551,683 | 13,049 | 66,530 | 37,651 | 1,371,131 | 342,306 |

| 1935 | 2,303,747 | 1,194,902 | 626,344 | 10,638 | 78,138 | 38,784 | 1,297,155 | 386,380 |
| 1936 | 1,507,089 | 785,506 | 626,766 | 12,399 | 63,536 | 49,002 | 1,154,131 | 331,918 |
| 1937 | 2,644,995 | 1,146,258 | 873,993 | 18,946 | 73,785 | 53,364 | 1,553,405 | 393,289 |
| 1938 | 2,542,238 | 1,053,839 | 930,801 | 11,943 | 80,299 | 52,303 | 1,378,534 | 371,617 |
| 1939 | 2,619,137 | 937,215 | 754,971 | 11,817 | 75,726 | 52,306 | 1,848,654 | 364,016 |
| 1940 | 2,449,200 | 1,235,628 | 816,698 | 12,566 | 86,312 | 52,754 | 1,451,966 | 397,722 |
| 1941 | 2,672,541 | 1,176,107 | 945,937 | 10,744 | 82,358 | 54,028 | 1,261,364 | 357,783 |
| 1942 | 3,175,154 | 1,358,730 | 981,327 | 12,824 | 92,245 | 66,363 | 1,412,437 | 371,150 |
| 1943 | 3,034,354 | 1,137,504 | 841,023 | 11,427 | 87,244 | 64,843 | 1,402,988 | 464,999 |
| 1944 | 3,203,310 | 1,154,666 | 1,072,177 | 12,230 | 84,076 | 68,161 | 1,956,022 | 383,134 |
| 1945 | 2,880,933 | 1,535,676 | 1,108,224 | 9,015 | 95,289 | 68,150 | 1,993,837 | 418,020 |
| 1946 | 3,249,950 | 1,497,904 | 1,153,046 | 8,640 | 89,195 | 72,216 | 2,319,409 | 484,174 |
| 1947 | 2,400,952 | 1,215,970 | 1,364,919 | 11,694 | 89,194 | 79,345 | 2,167,702 | 384,407 |

The short corn crop reduced feed grains, and barley and rye were also less than average while oats, sorghum and peas were more than average. The four feed grains totalled the smallest after 1939. The total tonnage of feed grains was estimated at 96,000,000 tons compared with 124,000,000 tons produced in 1946. The yields of all crops considered together was 129% of the 1923-32 average compared with 134% in 1946 and the peak of 136% in 1942. Oilseed crops yielded a high total, soybeans, flaxseed and peanuts all turning out well. Tobacco declined about 4.5% from 1946. Sugar from cane and beets increased about one-eighth more than in 1946.

The 1947 cotton crop was put at 11,694,000 bales, which was about 3,000,000 bales more than the 1946 crop but almost 1,000,000 bales less than the 1936-45 average. The yield was high, however, at 265.4 lb. per acre.

Potatoes, which had been heavily overproduced in 1946, declined one-fifth in total output even though the yield was near the record. The sweet potato crop was grown on the smallest acreage after 1924 and was less than average. Hay production was more than average. Commercial truck crops for fresh market amounted to 15% more than average but 12% less than

EIGHT COMBINES harvesting wheat in a field of cut grain near Gilby, N.D., in Sept. 1947. Trucks in the foreground waited to carry the record-priced harvest to nearby elevators

in 1946. Canning crops also declined 13% from 1946 but were still 21% more than average.

Fruits and nuts were less in total quantity than the record of 1946 but generally more than average. Apples were 6% less than in 1946, peaches 4%, grapes 1%, while pears made a new high record. Oranges were 5% less than in the previous year, but grapefruit and lemons about 5% more. Tree nuts were about 12% more than average.

The four World War II years of high agricultural production and two postwar years of even larger output led farmers to think of retrenchment if a period of surplus was to be avoided. The needs of Europe, Britain and other countries, the proposal of the Marshall plan, etc., led the U.S. government to call again for maximum goals for 1948. The program for 1948 as announced in November asked for 9,000,000 more acres than were cultivated in 1947. The increases were principally in feed grain, sorghum, beans, potatoes and corn. All livestock and products were put at lower totals than 1947 and the average.

**Table III.—*U.S. Production and Yield Per Acre, 1947 and 1946***

| | 1947 | | 1946 | |
|---|---|---|---|---|
| | Yield | Production in thousands | Yield | Production in thousands |
| **Field Crops** | | | | |
| Corn, bu. | 28.6 | 2,400,952 | 36.7 | 3,249,950 |
| Wheat, bu. | 18.4 | 1,346,919 | 17.2 | 1,153,046 |
| Oats, bu. | 31.5 | 1,215,970 | 34.7 | 1,497,904 |
| Barley, bu. | 25.5 | 279,182 | 25.2 | 262,258 |
| Rye, bu. | 12.8 | 25,977 | 11.7 | 18,879 |
| Flaxseed, bu. | 9.9 | 39,763 | 9.3 | 22,585 |
| Rice, bu. | 47.3 | 79,345 | 45.9 | 72,216 |
| Hay, all, tons | 1.36 | 102,500 | 1.36 | 100,739 |
| Beans, lb. | 9.76 | 17,164 | 9.81 | 15,859 |
| Soybeans, bu. | 16.3 | 181,362 | 20.5 | 201,275 |
| Peanuts, lb. | 667.0 | 2,251,640 | 649.0 | 2,038,355 |
| Potatoes, bu. | 182.0 | 384,407 | 186.3 | 484,174 |
| Sweet Potatoes, bu. | 93.5 | 57,178 | 98.3 | 66,424 |
| Tobacco, lb. | 1,156.0 | 2,167,702 | 1,182.0 | 2,319,409 |
| Sugar beets, tons | 13.8 | 12,248 | 13.2 | 10,562 |
| Cotton, bales (yield in lb.) | 265.4 | 11,694 | 235.4 | 8,640 |
| **Fruit Crops** | | | | |
| Apples, bu. | ... | 112,503 | ... | 119,410 |
| Peaches, bu. | ... | 82,981 | ... | 86,643 |
| Pears, bu. | ... | 35,350 | ... | 34,447 |
| Grapes, tons | ... | 3,094 | ... | 3,120 |
| Oranges, boxes | ... | 112,560 | ... | 118,680 |
| Grapefruit, crates | ... | 62,270 | ... | 59,520 |

The continuing high farm prices were considered a stronger supporting factor than the general appeals for a surplus for export. Many farmers remembered the depression that followed World War I when export demand was expected to continue strong.

**Livestock Production.**—The livestock cycle, which swings up and down at periods of seven to ten years, started a decline in 1945 that was gaining speed in 1947. The long-continued decline of horses and mules went on steadily, sheep numbers reached new lows, the heavy slaughter of cattle in late 1947 reduced the breeding stock and the number of dairy cows also slumped.

The principal reason for the continued declines in 1947 was the shortage and high cost of feed. While prices for meat were high, this was not enough to offset the hazard of using expensive feeds, in the opinion of stockmen.

Cattle numbers were down almost 1,500,000 head at the beginning of 1947. Slaughter of beef animals was heavy through the year and further reduced numbers. Prices for all classes of cattle advanced steadily, making new high records in the fall of more than the top in 1946 when price controls were removed. The top was $40 per 100 lb. for fat steers paid in Chicago, Ill., and Omaha, Neb., in December.

The number of milk cows declined about 2% in 1946 and the high price of veal led to heavy marketing of young stock. Beef and veal slaughter in 1947 made a record of more than 12,000,000,000 lb., almost two-fifths larger than the prewar average, 1935-39. The high prices of beef and veal in the retail markets were reflected in high prices of feeder cattle which discouraged stockmen in view of the poor corn prospects early in the year. Stocks of beef declined from the high of 1945 but were larger in 1947 than in 1946. Exports were more than double any previous year and five times the total of 1946. Civilian consumption rose to nearly 70 lb. per capita compared with the prewar average of about 55 lb. per capita. The unusual situation was that in a year of high production came the highest prices and the greatest rate of consumption.

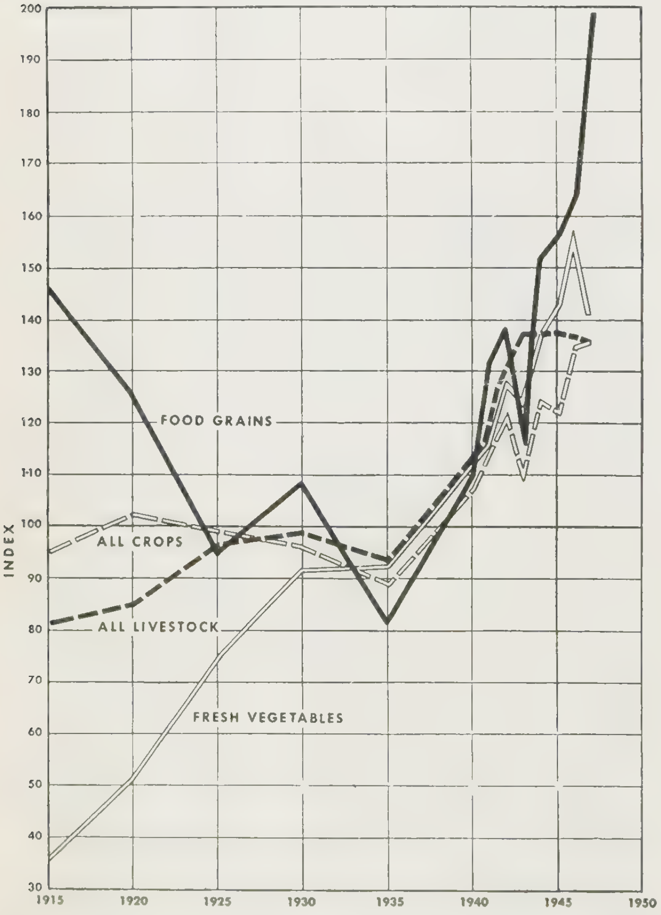
Pork production continued the decline begun in 1944 after the high record output. The number of hogs declined about 7%

in 1946 and was 32% less than the peak of 1944 on Jan. 1, 1947. The pig crop in the spring of 1947 was 52,786,000 head which was more than that of a year earlier and the fall crop 31,352,000 head, making a total of 84,138,000 head, about 1% more than was raised in 1946, but about 1% less than the 10-year average. Total pork production for the year 1947 was less than a year earlier and civilian consumption of pork declined to 69 lb. per capita compared with 75.7 lb. consumed in 1946 and the high record of 80.2 lb. in 1944. The smaller corn crop discouraged farmers and a decrease of 10% in sows kept for spring pigs was reported in Dec. 1947. The number of hogs on farms was estimated to have declined 6% during 1947. Hog production was also smaller in Canada, Europe and Argentina because of the high prices of feed grains. Average prices of hogs to farmers reached a peak of $27.20 per cwt. in September and then declined under the pressure of heavy marketings resulting from the poor corn prospects.

Sheep numbers at the beginning of 1947 were the smallest after records began in 1867. Both eastern farms and western ranges had fewer animals and the lamb crop declined 2,300,000 head from 1946 to the smallest number in 22 years. Less than the average number of sheep were fed in the corn belt. Sheep and lambs reached the peak of prices in Sept. 1947, then declined to the end of the year. While these prices were about three times the prewar average, the interest in sheep raising appeared to be waning. On the ranges the lack of experienced herders was the principal complaint.

Average consumption of lamb and mutton continued at about 6 lb. per capita compared with the record of 7.2 lb. in 1942 and 1945.

Numbers of dairy cows and of replacement heifers were both lower at the beginning of 1947, but high milk and butter prices stimulated some increase in heifers kept for milk production. The herds were closely culled because of the high prices that could be had for beef. This resulted in higher production per cow and a slight increase in total milk production. Prices of milk paid to dairymen declined through 1947 on the average although retail milk prices were advanced in some areas late in the year.



UNITED STATES food production, as measured by index numbers, maintained a record high level in 1945 and 1946, following the end of World War II. Food grains reached new high records while livestock declined slightly

The poultry industry, which had declined through 1946, recovered slightly in 1947 and late in the year was larger than the same period a year earlier. The total output of poultry meat and eggs was almost the same as in 1946 but more potential laying hens were on farms in the early fall. The campaign to have poultryless days to save grain put on by the president's food committee was soon found to be a mistake and had little effect on the marketing of hens. Egg production actually increased while the campaign was going on. The chief factor in holding down egg production was the high price of feed. Poultry and egg prices held steady through 1947 to September, then declined slightly.

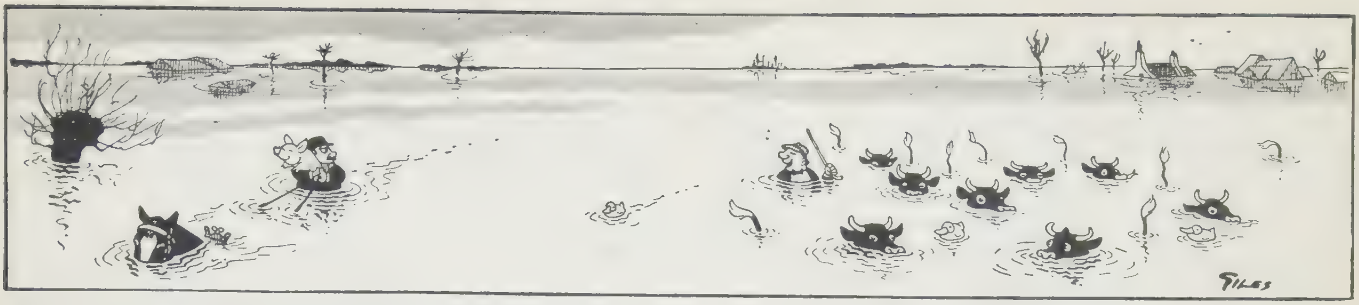
The decline in numbers of horses and mules continued. Purchases for export helped to maintain prices which were about the same in the fall of 1947 as a year earlier. Mules advanced a little in price when considerable numbers were purchased for export to Mexico to replace animals killed in the foot and mouth disease campaign.

**Food Stocks and Exports.**—The large production of foodstuffs, combined with larger than average surpluses and reserves, made possible the largest exports of foodstuffs in the history of the United States in the year ending June 30, 1947. In fact, it was more food than any other country ever exported in a single year, amounting to more than 19,000,000 tons.

Stocks of various foodstuffs varied widely. U.S. stocks of wheat which had reached 1,000,000,000 bu. in 1943 were only 682,000,000 bu. in 1946 which was slightly more than the prewar average. Rice, rye, corn and barley were not much more than average. Oats reserves were at a record high in 1946, however, almost twice the average. Meats of all kinds were about average and fats and oils were low. The large exports came from the increased production almost entirely, in spite of high civilian consumption. Exports absorbed the surplus that had been used for military forces in the war years.

The U.S. exports went principally to the U.S. and British zones in Europe 3,200,000 tons; United Kingdom 1,700,000 tons; Italy 1,464,000 tons; France and North Africa 830,000 tons; other European countries 4,500,000 tons; Japan and Korea 1,708,000 tons; India 1,027,000 tons; China, East Indies, Philippines 1,030,000 tons; Latin American countries 2,000,000 tons and the remainder to various parts of the world. Food grains made up more than 15,000,000 tons of the total of 19,000,000 tons, and wheat and flour accounted for 10,000,000 tons of the grain. The estimated needs under the proposed Marshall plan amounted to a similar large total which the large crops of 1947 could supply provided domestic consumption did not increase, which was regarded as unlikely at the high prices prevailing in late 1947. While U.S. reserves were lower than they had been for some time they were not less than the prewar average.

Wheat exports in the year ending July 1, 1947, amounted to the record total of 574,000,000 bu. The goal for the next fiscal year was put at 570,000,000 bu. and the Citizens Food committee plan for saving wheat was begun in September to save 100,000,000 bu. of grain, mostly wheat, in order to make the goal by July 1948. Plans to save grain by limiting the feeding of livestock were proposed to save even a larger amount but congress had taken no action by the year's end.



"MIND YOU, WE FARMERS ARE NOTORIOUS GRUMBLERS," by Giles of the *Daily Express* (London), a wry defense of the British farmers' burdens as increased by floods and unusually bad weather early in 1947

**Farm Prices.**—The prices of farm products followed the rising general price level to new heights in 1947, exceeding all previous records. The index of prices paid to producers for all crops and livestock started the year at 260 (100 = average 1909-14) which was somewhat less than the peak of 273 reached in Oct. 1946. The general farm price level rose quickly to 280 in March, then dropped to 271 in June, to be followed by a recovery to 286 in September, 289 in October, a slight decline in November and a new high record of 301 in December. This curve of prices followed the general pattern of previous years except that seldom before had record high prices been reached in the midst of the harvest season in the fall.

The price advances occurred in nearly all groups of farm products except tobacco, cotton, fruit and vegetables, which fluctuated but made little or no gain for the year as a whole. The greatest increases in prices were in food and feed grains, the former advancing about 75 points and the latter 100 points during the year. The price of wheat reached the all-time-high record of $2.74 per bushel to growers in November and stood at $2.79 in December compared with $1.88 per bushel a year earlier. Corn reached a peak of $2.40 per bushel in September, almost as high as wheat. In some markets corn sold at times for more than wheat. Cash wheat at Chicago reached a new record high of $3.26 per bushel in October. The reason for the high price of grains was the great demand for European relief and the efforts of the government to save grain for export. Never before had high prices been seen in a year of record crop production in the United States. The slump in tobacco prices was the result of a large crop in 1946 together with the growing difficulty of other countries to get dollars with which to buy.

Livestock, sold for meat, advanced about 60 points during the year and stood at 360% of the base in December which was relatively higher than any other product except tobacco. Dairy products declined until June and then advanced again but not to the level of the first of the year. Poultry and eggs advanced steadily through the year to a new high average for the year.

Prices paid by farmers for all commodities, interest and taxes advanced from an index of 215 to 239, farm wages 399 to 404 with the result that the parity ratio for farmers was almost the same as in 1946, at 120% of the base.

**Table IV.**—*Farmers' Average Prices, Certain U.S. Crops, on Selected Dates*

(in cents per unit)

| | Wheat per bu. | Corn per bu. | Oats per bu. | Barley per bu. | Rye per bu. | Buck-wheat per bu. | Pota-toes per bu. | Eggs per doz. | Cot-ton per lb. |
|---|---|---|---|---|---|---|---|---|---|
| Oct. average, 1909–13 | 88.1 | 64.8 | 38.4 | 60.5 | 72.0 | 71.1 | 65.0 | 23.8 | 12.10 |
| Oct. 15, 1936 | 106.8 | 97.9 | 43.1 | 84.2 | 80.4 | 78.3 | 97.9 | 27.6 | 12.23 |
| Oct. 15, 1937 | 88.7 | 58.9 | 28.8 | 52.0 | 63.8 | 62.4 | 48.5 | 25.2 | 8.10 |
| Oct. 15, 1938 | 52.2 | 41.9 | 22.1 | 36.1 | 32.9 | 54.5 | 51.0 | 27.1 | 8.53 |
| Oct. 15, 1939 | 70.3 | 47.6 | 30.3 | 42.2 | 45.1 | 62.7 | 66.4 | 22.9 | 8.73 |
| Oct. 15, 1940 | 68.2 | 59.4 | 28.3 | 38.2 | 40.5 | 54.4 | 52.0 | 23.7 | 9.35 |
| Oct. 15, 1941 | 91.0 | 64.9 | 38.9 | 49.1 | 51.3 | 64.3 | 67.2 | 31.8 | 16.55 |
| Oct. 15, 1942 | 103.5 | 77.5 | 43.2 | 57.6 | 52.9 | 77.0 | 102.5 | 37.4 | 18.87 |
| Oct. 15, 1943 | 135.0 | 107.0 | 77.4 | 103.0 | 101.0 | 110.0 | 128.0 | 45.2 | 20.28 |
| Oct. 15, 1944 | 142.0 | 113.0 | 65.9 | 95.4 | 108.0 | 102.0 | 142.0 | 38.8 | 21.25 |
| Oct. 15, 1945 | 151.0 | 113.0 | 62.8 | 101.0 | 138.0 | 106.0 | 126.0 | 42.6 | 22.30 |
| Oct. 15, 1946 | 188.0 | 171.0 | 79.9 | 135.0 | 199.0 | 144.0 | 122.0 | 51.5 | 37.69 |
| Oct. 15, 1947 | 266.0 | 223.0 | 109.0 | 177.0 | 249.0 | 197.0 | 150.0 | 55.3 | 30.65 |

**Farm Income.**—The grand total farm income of 1947 reached the record amount of $34,600,000,000. This was the gross income, which includes not only cash received from sales but also government payments and the estimated value of products consumed on the farm, and a rental value for farm dwellings. The realized net income was estimated at $18,000,000,000, which was the gross income less expenses, estimated at $16,600,000,000. The quantity of farm products sold times the price received, or the cash receipts for farm marketings, was estimated by the U.S. department of agriculture to be $30,000,000,000 compared with $24,500,000,000 received in 1946 and a new high record for all time. Government payments amounted to $340,000,000, which was less than half the amounts paid in 1946.

Estimates of the expenses of production in 1947 reflected the increases in prices of general commodities purchased by farmers and farm wages, both of which advanced steadily through 1947 at a rate somewhat slower than prices of farm products. Total expenses were estimated at $16,600,000,000 leaving $18,000,000,000 as the realized net income of farm operators. Expenses in 1946 were estimated at $14,044,000,000. This total included $617,000,000 for taxes, $228,000,000 for farm mortgage interest, $2,536,000,000 paid for hired labour, maintenance of machinery and buildings $2,210,000,000 and the value about $8,000,000,000 for feed, fertilizer, livestock and operation expenses.

The effects of the large farm income were shown in the decline of farm debts. After Jan. 1940 the total farm mortgage debt was reduced by 25% to 1945 and 5.1% more in 1946. A slight increase was reported early in 1947 because of increased sales. The total farm mortgage debt in Jan. 1947 was about 27% less than what it was in Jan. 1940. Another large part of the increased income was spent on farm repairs and improvements, replacement of obsolete farm machinery, and modern equipment for the farm plant.

**Farm Land Values.**—The value of farm real estate continued to rise steadily until the middle of 1947 when the first signs of a decline were noticed in the south Atlantic states. The index of farm land values reached 162 in July 1947, compared with 100 for 1912-14, which was only 8 points less than the high record of 1920. This was a rise of 10% in a year. The index of 162 compared with 84 for the year 1940 indicated that land values had increased 95% from prewar and the large farm income of 1947 was expected to continue the rise because the volume of sales during the 12 months ending in March 1947 was the highest on record, amounting to 57.7 per 1,000 of all farms. Farm buyers paid cash in more than one-half of the sales in 1945-47. The proportion of loans made by commercial banks and private individuals increased steadily from prewar years. The total farm mortgage debt was smaller every year after 1940 until 1946 when there was a small increase.

The first signs of a check in the land boom came in 1947 when the south Atlantic and south central states reported slight declines in values. At the same time increases in other regions more than offset these declines. The advances appeared to be higher in the central states. The total value of agricultural real estate was estimated to be $58,604,000,000 on Jan. 1, 1947, compared with $33,642,000,000 in 1940.

During World War II the number of farms operated by tenants declined and was down to 32% of all farms by 1945 compared with 39% in 1940. This change was because of tenants' buying land to become owner-operators. Many farms operated by tenants were sold when the young tenants went to war. A large number of returning veterans who were formerly tenants purchased farms upon their return. Many of these were assisted by the government.

**Farm Debt.**—The total indebtedness of agriculture was steadily reduced by the several successive years of high income. Farm mortgages decreased steadily from 1927 to 1946 but in 1947 a small increase was estimated. Total farm mortgages were estimated at $4,890,000,000 on Jan. 1, 1947, or about $160,000,000 more than a year earlier. The farm mortgage debt of 1946 was less than for any other year after 1914 and less than half the high peak of $10,786,000,000 in 1923. The 1946 increases were in all regions except the corn belt and great plains. From the end of World War II more farmers were buying new equipment rather than reducing debts further. Another factor was the large number of farm sales, many of which created new mortgages.

Loans from commercial banks, various government agencies, etc., not secured by mortgages were estimated at $2,024,000,000 on Jan. 1, 1947, compared with a peak of $2,439,000,000 in 1943 and $1,522,000,000 in 1938. The total of such loans was remarkably uniform from 1940 to 1947. When the total of farmers' bank deposits, estimated at $11,100,000,000, is considered, these non-real-estate loans are relatively small. Total equities of farm owners were estimated at $102,795,000,000 on Jan. 1, 1947, compared with $90,759,000,000 a year earlier and $43,781,000,000 in 1940. The total net income from sales and government payments was estimated at $18,889,000,000. Farm mortgage interest was estimated at $228,000,000 for 1946 but no estimates were available for interest on other types of loans.

Farm taxes increased through 1946 and also in 1947 as the net worth of farm real estate and personal property advanced in value. The estimated tax bill of U.S. farm operators was $617,000,000 in 1946, compared with $554,000,000 in 1945 and the prewar average of $442,000,000, 1935-39. About the same increase occurred in 1947 but exact estimates were not available at the end of the year.

**Farm Population.**—At the beginning of 1947 there were 27,550,000 people on farms in the U.S. which was an increase of 2,360,000 from the wartime low of Jan. 1, 1945, when the total was 25,190,000 persons. This total was still about 17% less than the prewar total of 30,289,000 in 1940. The recovery in farm population in 1945 and 1946 was chiefly because of the return of 1,250,000 men from the armed forces, out of a total of 2,400,000 men who entered the forces from 1940 to 1946, inclusive. About three of every four men who went to war returned to farms by Jan. 1947. There were also more births than deaths on farms, the birth rate in 1946 being the highest after 1929. This accounted for a gain of 773,000 persons in 1945 and 1946. There was also a larger back-to-the-land movement in 1945 than in previous years, but in 1946 there was a small net movement from farms. The southern states lost the most farm population during the war, 3,287,000 persons between 1940 and 1945. Only about three-fifths of their loss had been regained after 1945. After 1900 when the total U.S. population was 76,000,000, this total had doubled to 143,000,000 in 1947. At the same time rural population increased only from 45,800,000 in 1900 to 58,600,000 in 1947. Of the total rural, 31,000,000 were not on farms but in villages and suburban areas while 27,600,000 were on farms. While in 1900 rural population exceeded that classed as urban, in 1947 rural constituted only 58,600,000 compared with 84,400,000 urban or about 70%.

**Farm Labour.**—The high production of 1947 was achieved with a larger labour supply than in any other year after 1943. Total farm employment was estimated by the U.S. department of agriculture at 10,157,000 in 1947 compared with 10,010,000 in 1946 and the prewar average of 10,920,000, 1935-39. Of the total for 1947, 7,930,000 were family workers and 2,227,000 hired workers. The labour supply in 1947 was well distributed. The number of family workers in 1947 had almost regained the 1940 level for the country as a whole. The number of hired hands had not recovered so fast.

Special agricultural labourers were brought into the United States from Canada, Mexico, Jamaica, Bahamas, etc., to the number of about 60,000 in 1947. Of these 40,000 came from Mexico, mostly to California and Arizona.

New machinery on farms enabled operators to do more work and take care of larger acreages, but did not materially reduce the number of hired hands needed. Staple crops, except cotton, employed labour-saving machinery; but truck, fruit and other special crops still required a large amount of hand labour.

Wages paid hired labour continued to advance to new high records in 1947. The advance was 8% more than in 1946 and 3 times the 1940 level. Average wages per month with board were $97.80 on Oct. 1, 1947, compared with $91.40 a year earlier and $27.10 in 1935–39. Wages, without board, were $112.00 on Oct. 1, 1947, $104.00 a year before and $34.10 in prewar years. The daily wage without board averaged $5.25 per day in 1947 compared with $1.55 average in 1935-39. The total hired labour bill for U.S. agriculture was estimated at $2,151,000,000 in 1946 compared with $722,000,000 in 1935-39. Benefits other than wages raised the total to $2,536,000,000.

**Farm Machinery.**—The estimated expenditure of $800,000,000 for new farm machinery in 1946 and a like amount in 1947 indicated the rate at which farm equipment was being replaced after the war. This amount was about twice the average annual expenditure in 1935-39 indicating that machines had been heavily worn during the war years of intensive farm work. The total value of machinery and motor vehicles in 1947 was put at $6,889,000,000 and the increase over the previous year at about 10%. The value of all machinery had more than doubled in value after 1941. Farmers spent about 5% of their net income on new machines and motors in 1946 and would have bought much more had it been available.

**Fertilizers.**—The use of commercial fertilizers increased again in 1947 as it had during the war years. Even more would have been used had it been available. Total fertilizer consumption was estimated to be about 14,000,000 tons compared with 13,200,000 tons in 1946 and a prewar average of 7,270,000 tons. Prices of fertilizers were relatively low compared with farm prices.

**Marketing Research.**—An act of congress known as the Research and Marketing Service act of 1946 provided, beginning in 1947, for research, education and service by the U.S. department of agriculture and state agricultural experiment stations in the marketing field. Up to mid-1947 the projects for study were being outlined and it was expected that it would be two or three years before important results would be forthcoming. This was the first time that a comprehensive research program had been authorized by the U.S. congress in the marketing field. The appropriation would be increased as the projects were developed, beginning with $15,000,000.

The national marketing bill increased steadily with the volume of agricultural production to more than $11,000,000,000 compared with about $8,000,000,000 in 1935. The marketing charges amounted to 48% of the retail cost of foodstuffs in 1946 compared with 60% in 1940. The farmer's share of the consumer's $1 was estimated at 52 cents in July 1947 compared with 56 cents in March.

**Soil Conservation.**—The soil conservation service, begun in 1933, had organized by June 30, 1947, about 1,865 soil conservation districts and 24 other districts for special purposes. After 1946 all 48 states and Puerto Rico passed laws to permit local farmers and landowners to farm districts for soil conservation. These covered an area of more than 1,000,000,000 ac., including 4,450,000 farms, three-fourths of all farms in the nation. The development of plans for the best use of soils in these districts was completed for about 500,000 farms by federal experts and farmers working together.

**Crop Insurance.**—In 1947 more than 500,000 producers were protected by crop insurance on wheat, cotton and flax. The total insurance amounted to about $500,000,000 with premiums amounting to $51,000,000. These policies gave protection against loss of yield with an option of coverage of either 50% or 75% of the long-time average yield of the farm. (J. C. Ms.)

**Great Britain.**—1947 was a difficult year for British farming. At the start hard weather with snow and then floods caused disastrous losses of sheep on the hill farms and set back spring cultivations all over the country. Parts of the fenland in East Anglia were still flooded at the end of April, and in most districts the ground was not fit to sow the spring corn until mid-April, a month later than usual. Potato planting was carried into June. An exceptionally sunny, hot summer made some amends and the late-sown crops grew well. By the time harvest came the season had caught up with the calendar and in August farmers everywhere had a run of luck with perfect harvest weather; all the cereals were gathered in first-class condition and without excessive labour. Yields were light and cereals fell to less than the ten-year average in weight per acre; this was true also of the potatoes and sugar beets, but with the dry weather continuing, these crops were lifted in excellent condition and the potatoes were expected to keep well. The outcome of the year's trading was meagre for many farmers, especially in the eastern counties of England, where the corn and sugar beet crops normally bulk largely in the farmers' receipts.

Parliament gave much time in the spring and summer to consideration of the Agriculture bill, which received the royal assent in August. This act established the principle of guaranteed markets and prices for a wide range of agricultural products, and for the first time after the ill-starred Corn Production act at the end of World War I the British farmer was promised stability by act of parliament. This measure received the general blessing of all political parties, although there was much detailed criticism of some of the provisions covering the relations between landlord and tenant and the continuance of the supervisory powers of the minister through county agricultural executive committees. All three partners in the industry—landowners, farmers and farm workers—agreed that high standards of management must be maintained and that any landowner or farmer who failed to meet his obligations in this respect should, after due notice and a period of supervision, be required to make way for someone else.

The county committees, who were to act as the minister's agents in maintaining satisfactory standards in farming, were to be selected by the minister from panels of names submitted by the Central Landowners' association, the National Farmers' union and the two trade unions representing agricultural workers. In this way the farming organizations had more direct responsibility for the standard of farming in each area than the committee members in World War II, who were appointed direct by the minister of agriculture without consultation with the farming organizations. It could not at the end of 1947 be said that under the new arrangements the teamwork between the ministry and the county committees was as close and effective as was desirable, or that the new National Agricultural Advisory service established by the minister had yet gained sufficient strength and standing to replace the county advisory staffs with their local farming connections and close contacts with the universities. It was, however, true that, while only perhaps one farmer in ten was making regular use of technical advice before World War II, the help of the scientists in 1947 reached one farm in four.

## Air Conditioning.

Shipments of air-conditioning equipment in 1947 exceeded shipments in 1940 and 1946 and reached a new all-time peak in spite of continuing shortages of materials and components.

Statistics for air-conditioning equipment are not easily separable from statistics for refrigerating equipment. The trend can be determined, however, from shipments of specific types of air-conditioning equipment as published by the U.S. bureau of census as follows:

*U.S. Domestic and Export Shipments*
*of Specific Types of Air Conditioning Equipment*

| | | Number | Value |
|---|---|---|---|
| Room air conditioners | 1940 | 30,873 | $4,584,406 |
| | 1946 | 23,562 | 4,923,798 |
| | 1946–9 mo. | 14,052 | 2,804,183 |
| | 1947–9 mo. | 37,980 | 8,566,135 |
| Self-contained air conditioners | 1940 | 5,880 | 4,466,926 |
| | 1946 | 16,561 | 12,734,228 |
| | 1946–9 mo. | 11,706 | 8,463,047 |
| | 1947–9 mo. | 21,863 | 20,323,229 |
| Air conditioning, remote-type unit coolers | 1940 | 5,955 | 2,269,210 |
| | 1946 | 9,551 | 3,880,182 |
| | 1946–9 mo. | 4,891 | 2,664,443 |
| | 1947–9 mo. | 13,048 | 4,734,406 |

Room air conditioners of the window-sill and floor-mounted type, usually air cooled, are used principally in offices and to some extent also in residences and for other applications. Shipments in the first nine months of 1947 were 23% more in number and 87% more in value than in 1940.

Self-contained air conditioners, usually water cooled, ranging from 3 to more than 20 tons ice-melting effect per 24 hr. are principally used in commercial and industrial applications. Shipments in the first nine months of 1947 were 270% more in number and 350% more in value than in 1940.

Air-conditioning unit coolers are a part only of a system for commercial or industrial applications. Shipments in the first nine months of 1947 were 120% more in number and 107% more in value than in 1940.

Air-conditioning equipment also includes reciprocating and centrifugal condensing units, evaporative condensers, cooling towers, air washers, heat-transfer surface, controls and other equipment.

Product developments during 1947 were in the nature of refinements rather than unusual new designs with the possible exception of packaged "heat pumps." There was a continuing trend toward the use of higher speeds for refrigerating condensing units of the multiple-cylinder design resulting in more compact, lighter-weight units. There was a trend toward greater use of remote-type room air conditioners in multiroom buildings supplied with refrigeration and heating from a central plant.

Heat pumps of the self-contained type, ranging in size from 3 h.p. to 20 h.p., were sold by several manufacturers in 1947 for commercial and residential application.

The heat pump extracts heat from outside air, well water or other source in a manner similar to a household refrigerator which extracts heat from a cabinet. The heat removed from the household refrigerator is wasted to the kitchen, but in the heat pump it is used for building heating. It had attractive possibilities because it was capable of supplying typically three to four times as much heat as the heat equivalent of the electrical energy input, and it provides complete year-around air conditioning in one self-contained unit. There were, however, many economic and technical problems in the development and application which would require the close co-operation of the manufacturer, contractor and electric utility company for their successful solution. ## Aircraft Manufacture.

Financial losses and decreasing production, together with plans for correcting these conditions, highlighted the 1947 aircraft manufacturing picture in the U.S. Fifteen major concerns estimated that 1947 net losses, even after tax carry-backs and other credits, would be double the net 1946 loss of $11,684,000. Total aircraft production dropped from 96,318 military planes for the 1944 wartime peak, to 36,204 civil and military planes in 1946, with totals for 1947 estimated at about 17,000. The greatest decrease was in personal plane production which fell to an estimated 15,000 in 1947 from 34,407 in 1946.

Testimony before the president's air policy commission, established to formulate an aviation program, clarified the nature of the problems and the various proposals for meeting the industry's needs. There was agreement that government aid would be necessary to maintain an industry able to supply adequate peacetime military and civil aircraft needs and expand quickly in a national emergency. However, opinions differed on the form aid should take and how it should be administered within a private enterprise economic system.

The contrast of conditions in the aircraft industry with the prosperity existing in the over-all industrial picture in the country lent weight to a popular conclusion that the situation was in part a stage of development in a new field, complicated by wartime expansion and reconversion. In any event, the underlying factors were extremely involved and interwoven. First, there was insufficient demand to support large production facilities and profitable operation. Military purchases, which constitute an estimated 90% of total aircraft sales even in peacetime, were smaller than had been anticipated during the war; and it became evident that under existing conditions steady demand to compensate for reduced military orders could not be expected from either private flying or air transport. Attempts to offset waning markets by turning to nonaviation activities were not entirely successful.

The increasing cost and time involved in developing complex modern planes were other factors contributing to manufacturing difficulties. The fact that the B-29, even under wartime acceleration, entered service five years after specification agreement, and that Douglas, with fewer than 200 orders, did not expect to break even on the DC-6 unless 300 were produced, vividly illustrates these conditions. In addition, higher overhead expenses, inability to plan continuous production with spotty short-term orders, and lack of standardization plagued manufacturers.

Table I.—*Number of Aircraft Produced in the U.S. During the First Nine Months of 1947 and 1946*

| | 1947 | 1946 |
|---|---|---|
| Military | 1,323 | 917 |
| Civil | 13,697 | 25,505 |
| 1-engine | 13,484 | 25,109 |
| 2- and 4-engine | 213 | 396 |
| Total (all types) | 15,020 | 26,422 |

Source: U.S. bureau of the census and the Civil Aeronautics administration.

Mass production methods had to be abandoned in many instances and trained personnel dismissed. However, by December it was hoped postwar contraction had ended and that an early increase in military orders plus adoption of a sound government policy would effect improvement.

Lightplane manufacturers encountered greater difficulties than the industry as a whole and several underwent reorganization. Others, fighting reduced demand, pushed the development and integration of sales organizations. To supply business and agricultural markets where demand was greatest, more four-place planes, in relation to two-place planes, were produced.

Britain's problems, similar in certain respects, were complicated by the country's general economic difficulties. Production was disrupted by severe weather and shortages of material, fuel and labour. In the fall, the government's strict economy measures had adverse effects such as cancelled orders, but the industry escaped drastic curtailment. Notwithstanding delayed deliveries, all-important exports were estimated to be greater for 1947 than for 1946.

Table II.—*British Exports of Aircraft and Aircraft Engines in 1947 and 1946*

(11 months ended Nov. 30)

| | 1947 | 1946 |
|---|---|---|
| Complete aircraft | 1,641 | 1,268 |
| Aircraft engines | 1,495 | 738 |

Source: British board of trade.

Although the Canadian aircraft industry had shrunk from its wartime size, progress was made in several domestic designs, including a jet airframe and engine. Civil plane production equalled one-fortieth of the total number of all types produced annually during the war. In Australia, government plants produced military planes at a reduced rate. De Havilland's plant was building the prototype of the first Australian civilian design, the Drover for "out back" operations.

**Civilian Equipment.**—Financial difficulties and cancelled orders necessitated abandonment of several models, including the publicized Republic Rainbow, Martin 303 and Cunliffe-Owen Concordia. However, development, production and delivery of other new planes moved forward. In the U.S. transport field, Lockheed delivered improved Constellation models. The Douglas DC-6 went into widespread use, but after accidents was temporarily grounded for modifications. Boeing's 80-place, four-engine Stratocruiser was in production with deliveries scheduled for 1948. The high-speed, short-haul Martin 202 began operating. Deliveries were initiated on the first U.S. pressurized two-engine aircraft, the 40-place, 300 m.p.h. Convairliner with jet exhaust auxiliary propulsion.

In Britain, after disappointing tests, Tudor I's were returned to the manufacturer for changes. Conflicting issues about the plane subsequently developed, resulting in the formation of a government board of inquiry. Work continued on the other seven Tudor Marks, or types, with Mark IV beginning scheduled operation for British South American Airways. Prototypes of the Hermes IV, pressurized, 40-passenger, four-engine landplane and the 28–40 place, 282 m.p.h., two-engine Airspeed Ambassador began flight tests. Flying boats, holding their place in British equipment, were under construction and Short's 24–45 passenger Sandringhams were delivered.

Britain had in production several medium transports or "feeders," notably the Dove, successfully operated domestically and abroad. Although no U.S. feeder planes were produced, the Northrup Pioneer and Beech 34 were ready if orders warranted.

In the U.S. new four-place lightplane models were announced, some by manufacturers formerly producing only two- and three-place planes. Among these were the Piper Cruiser, Cessna 170, Ercoupe Four and Aeronca 15. The Stinson Voyager and Beech Bonanza were popular four-place planes in use. In Britain the three-passenger, steel Auster Autocrat became the standard lightplane. Flying in prototype were the four-place Auster Avis; Elliotts' Newbury Eon, three- or four-place; and the Prestwick Pioneer, four-place, for operation in areas with inadequate airports.

In Canada, DC-4M's, produced in nonpressurized version for the royal Canadian air force and pressurized for Trans-Canada Air Lines, began operation on transatlantic routes. The five-place Beaver for passenger or cargo "bush" operation successfully completed trials and the two-place Chipmunk was well received on delivery.

As European manufacturers recovered from the war, an impressive group of all types of planes emerged. Sweden's two-engine, 24–32 passenger Scandia transport was in production. Particularly interesting was the big, six-engine French Latecoere 631 flying boat placed in operation by Air France.

With the importance of cargo increasing, several cargo versions of passenger transports were flying; but specifically designed cargo planes were rare. New models of the U.S. air force Packet and the British Miles M. 68 had detachable fuselages. Bell's two-place and Sikorsky's four-place helicopters were delivered for civilian use in the U.S., and the two-place Sikorsky S-52 with all metal rotor blades was certificated. Bristol's 171, first British helicopter for commercial use, flew in prototype.

**Research and Technical Developments.**—A forward step in the free exchange of ideas and information in aviation research was made with the organization of an annual Anglo-American conference by the British Royal Aeronautical society and the U.S. Institute of Aeronautical Sciences. During September the first meeting was held in London. Discussions revealed that much fundamental research continued to focus on problems of high-speed flight in the subsonic, trans-sonic and supersonic ranges. In many cases work consisted of consolidation, adaption and refinement of previous developments of a radical nature.

Prominent among the techniques employed for exploring high-speed flight was the use of controlled model aircraft and pilotless missiles (also being developed as military weapons). The first of a trans-sonic and supersonic British model aircraft series reproduced the basic design of the Miles M. 52, piloted project abandoned in 1946. The U.S. National Advisory Committee for Aeronautics utilized missiles to study stability and control, the aerodynamics of basic shapes, specific aeroplane configurations and power plants. Another technique was the use of piloted experimental planes. The navy-Douglas-NACA D-558-1 joined the army-Bell-NACA XS-1 in flying tests. There were reports that the XS-1 had exceeded the speed of sound but these were not confirmed by authorities. Construction of the D-558-2, another of the planned research craft, was completed. In England data obtained from the De Havilland 108 were to be applied to future military and civil planes.

An increasing number of planes incorporated new designs perfected through years of research in aerodynamics. The more radical were limited to military and experimental aircraft such as the Northrup YB-49, jet-propelled successor to the XB-35 Flying Wing, the Armstrong Whitworth A.W. 52, jet successor to the tailless glider, and the Boeing XB-47, one of the most advanced designs flying.

Although reciprocating engines were used exclusively on civil planes and on many military types and work was done on ram-jet and rocket engines, gas turbines, both turbine jets (turbo-jets) and airscrew turbines (turbo-props), were the centre of attention in the power plant field. Experiments revealed that each of the basic turbine types was capable of many variations and combinations. Research concentrated on taking advantage of their strengths and overcoming their weaknesses. The U.S. added experimental turbo-jet bombers to its list of jet fighters. In Britain four-engined Lincolns and Lancastrians, with two of the reciprocating engines replaced by turbo-jets, were used as "flying test beds." Similar testing was undertaken for turbo-props and plans for their installation in commercial planes came nearer fruition.

Sweptback, thin wings posed problems in undercarriage retraction. One solution was the tandem undercarriage of a Martin bomber. The Civil Aeronautics administration in the U.S. sponsored a program to develop castoring undercarriages. These would permit crosswind landings, making possible single-runway airports, and add greatly to the utility of the personal plane.

The first British propellers for turbine installation were officially approved. Automatically feathering propellers and automatic propeller synchronizers were perfected for U.S. civil transports.

Efforts to adapt major technological advances to personal and training planes covered all categories. Noise reduction was considered vitally important. Interesting experiments were conducted with "roadable" aeroplanes, convertible to automobiles by detaching the wings. (G. M. M.)

## Airports and Flying Fields.

The revised 1947–48 federal-aid program, which merged the funds for the two years, called for the construction or improvement of 908 airports at an estimated cost to the federal government of $66,569,590, with local or state sponsors providing an additional $70,235,095.

The revision in plans, announced Aug. 5, 1947, was made necessary by the reduced 1948 appropriations. The new plan merges the actual appropriation of $32,500,000, made by congress for 1948, with the $45,000,000 appropriation for 1947.

In approving the new program, T. P. Wright, administrator for civil aeronautics, declared that the CAA's primary consideration was aeronautical necessity, and that he had not been able to program all projects for which the CAA had received applications for federal assistance. The CAA had on file, late in 1947, a backlog of approximately $250,000,000 in requests for federal aid.

The program included 896 projects for the continental United States, of which 725 were for the construction or improvement of class 1, 2 and 3 airports and 171 were for class 4 or larger, of which only 3 involved the construction of new class 4 or larger airports. By early December, 12 projects had been programmed in the territories and Puerto Rico.

Of the $66,569,590 of proposed federal expenditures, $35,295,055 was for construction or development of class 3 or smaller airports, and $31,274,535 was for class 4 and larger.

The apportionment of $77,500,000 of federal funds appropriated for the fiscal years 1947 and 1948 consisted of $4,087,500 for administrative purposes, $3,315,500 for projects in the territories, $52,572,750 according to state area and population and $17,524,250 for a discretionary fund.

The proposed federal expenditures comprised $49,997,985 of the $52,572,750 apportioned among the states as provided in the Federal Airport act, plus $14,818,530 from the discretionary fund and $1,753,075 from funds apportioned to Alaska, Hawaii and Puerto Rico.

Of the total amount of $140,702,885 of federal and sponsor funds for the development and improvement of airports, the percentage of cost as related to land was 10% (the government participates only to the extent of 25% for land acquisition), 8% for buildings and 82% for other items.

A combined total of 4,728 airports in the U.S. was reported as of April 1, 1947, including: 958 subclass 1, 1,745 class 1, 777 class 2, 490 class 3, 758, class 4 and over. This total may also be broken down according to types of operation, as follows: commercial 2,124, municipal 1,484, CAA intermediate 198, military 760, all others 162, total 4,728.

**Air Navigation Aids.**—The broad picture in air navigation aids during 1947 concerned the changeover from low frequency to very high frequency in all U.S. airways communication and signal services. This change-over was important to every airport user whether the user was operating the biggest of commercial airliners or flying little two-place aeroplanes around an airport. The change-over, of course, was to be gradual. The CAA was scheduling the installation of new facilities as fast as funds and equipment would permit and it was anticipated that perhaps in 1950, possibly 1949, enough of the facilities would be changed over to warrant the gradual discontinuance of the old type of facilities. In the meantime, however, both would be operated.

As of Jan. 1, 1947, there were 43,387 mi. of "implemented" federal civil airways in the U.S. There were 10,600 mi. of "unimplemented" federal civil airways, together with ocean route mileage of 7,442. The total of all airways was 61,429 mi.; 38,610 mi. were under air traffic control and about 8,200 mi. were not controlled.

The U.S. had at hand the means to conquer the problem of bad-weather flying across country. The economic value of the knowledge is apparent in the regularity of air line schedules in spite of weather that used to be unflyable. The U.S. was embarking on an instrument landing aid program that would make landing at the destination possible in substantially any weather. For the future, the U.S. would have the instrument landing system, high intensity approach lights, precision beam radar equipment and possibly an initial service test installation for dispersing fog through heat, the system the British called Fido during World War II.

The instrument landing system (ILS) is in effect a four-element system consisting of a localizer beam for guiding the pilot right and left toward the centre line of the runway, a glide path for bringing him down to a safe lighting angle to the runway surface, radio marker beacons set along his approach path to tell him how close he is to the end of the runway, and high intensity lights along the immediate approach to the end of the runway. To supplement this system there was being used the radar system known as ground controlled approach to monitor ILS approaches, help prevent collisions in the vicinity of the field and for ground-controlled landings in emergencies and on request. (E. M. E.)

**Other Countries.**—The progress made in regard to airports and flying fields in Great Britain and Europe during 1947 was concerned more with landing aids, flying control and general amelioration rather than with any spectacular addition to the number of civil aerodromes; there was continued improvement of the ground organization of civil aviation. In Great Britain there were, however, 123 aerodromes available for civil aviation during 1947.

Radio aids to flying and the organization necessary for them, at the major aerodromes in Europe, were scheduled by the principal countries, and appropriate instructions were issued internationally. Aerodrome lighting made progress, and work went on in the installation of apparatus. This work was still in its early stages, and many experiments had still to be made in the type, colour, intensity and pattern of lighting. There also remained the general co-ordination internationally of methods and systems; work on this was being concentrated on the major international airports.

Air traffic control along the air routes and in the vicinity of aerodromes was still being worked out; much would depend on the experience gained in the practical application of this control during the winter months of 1947–48.

The laying down of permanent runways at the main European airports progressed as far as was possible under the difficult economic conditions which prevailed. At Heathrow, the London airport, 270 ac. of concrete runways were laid. Orly, the Paris aerodrome, was also able to report progress in this direction, while at Le Bourget, the other Paris aerodrome, work on the runways went on steadily. At Poland's main aerodrome, Okecie, at Warsaw, work on the terminal building was completed and two concrete runways, 5,904 ft. and 5,580 ft., went into service. Amsterdam adopted plans to extend Schiphol aerodrome by providing a new passenger terminal and administration building, and improved runways at a total estimated cost of $4,000,000. In Norway, Sola was chosen to be the main base for the Scandinavian air lines to North America. Sola was said to rank as one of the best aerodromes in Europe. Basle-Mulhouse, the joint French-Swiss aerodrome near the frontier, came into constant use; work on it went on during 1947 and it would eventually rank with the best aerodromes in Europe. In Ireland, Shannon airport was declared the world's first free airport.

In Italy the aerodromes near the principal cities were once again brought into use for civil aviation and were being used extensively by Italian and international air transport companies.

Much of the work done on European aerodromes was still repair of wartime bomb damage. (*See* also AVIATION, CIVIL; AVIATION, MILITARY.) (H. R. G.)

GROUND CONTROL APPROACH equipment being installed at the National airport, Washington, D.C., in Jan. 1947. G.C.A. sets in planes permit pilots to be "talked down" by ground operators making visual reference to radar scopes

NATIONAL AIR RACE CONTESTANTS, seen from a hangar at Cleveland, O., in Aug. 1947. Paul Mantz, flying a P-51 from Van Nuys, Calif., to Cleveland, won the Bendix trophy race for the second successive year

## Air Races and Records.

A three-day world air show held in the U.S. during 1947 was a demonstration of the army, navy and marine corps air strength, witnessed by top-ranking armed forces officers. While it was the only listed world event, it produced exhibitions only, rather than any winners.

The two classics still remained the Cleveland air races and the Miami All-American air manoeuvres. Paul Penrose of Venice, Calif., was top money winner at Miami, taking the $10,000 speed race. The Western Airlines pilot flew a converted P-51 Mustang and averaged 307.605 m.p.h. over the 15 mi. course. Charles Walling, Jr., of Houston, Tex., was second in a converted Lockheed F5G, averaging 304.740 m.p.h. Bruce Raymond, Hammond, Ind., placed third in a P-51 at an average of 302.775 m.p.h.

All the aircraft in this—the Miami All-American classic—were purchased by their civilian owners at army surplus sales. All craft had the certification of airworthiness from the Civil Aeronautics administration.

The national air races at Cleveland, O., drew the largest entry in the event's long history. A record total of 92 planes entered competition for $85,000 in prizes. The Thompson trophy race was won by Cook Cleland, averaging 396.1 m.p.h. and winning $19,500 of prize money; Richard Becker was second, 390.1 m.p.h., winning $8,100; J. Demming, 389 m.p.h., $4,600, third; Steve Beville, 360.8 m.p.h., $3,000, fourth; Tony Levier, 357.4 m.p.h., $2,000, fifth.

Paul Mantz won the Bendix trophy race and $10,000 with an average speed of 460.423 m.p.h.

The Goodyear trophy race was won by William Brennard, 22-year-old test pilot of Oshkosh, Wis., who travelled 165.857 m.p.h. to take the $25,000 midget classic. Mrs. Ruth Johnson won the Halle trophy for women pilots over a 75-mi. course. All contestants in this race flew At-6 advanced trainers. Mrs. Johnson made a speed of 223.3 m.p.h. for the 5 laps. Grace Harris of Kansas City was second, with an average of 215 m.p.h. Third was Mrs. Edna Gardner Whyte of Fort Worth, Tex., whose average was 210.7 m.p.h.

In a 200-mi. gliding contest, Dan Pollard of Roanoke, Va., soared from Elmira, N.Y., to Asbury Park, N.J., in a French-built craft called the Air-100.

Steve Beville also won the 105-mi. Kendall trophy, a part of the national air races, and thus added $2,500 to his earnings. His average was 384.6 m.p.h. (T. J. D.)

**A.L.A.:** *see* AMERICAN LIBRARY ASSOCIATION.

## Alabama.

Alabama, located in the heart of the "deep south" of the United States, was admitted to the union Dec. 14, 1819, as the 22nd state. It is popularly called the "Cotton State," or the "Yellowhammer State." Area: 51,609 sq.mi. (51,078 sq.mi. of land and 531 sq.mi. of water). In 1940 the total population of the state was 2,832,961. Of this number 1,849,097 were whites, 983,290 were Negroes and 574 were classified otherwise; 2,821,004 were native-born and 11,957 were foreign-born. In 1947 the total population of the state was estimated by the U.S. census bureau at 2,824,000. Montgomery, the capital city, in 1940 had a population of 78,084, Birmingham, the state's largest city, 267,583 and Mobile, the state's only seaport city, 78,720.

**History.**—The principal elective officials of the state in 1947 were: James E. Folsom, governor; J. C. Inzer, lieutenant governor; Albert A. Carmichael, attorney general; Dan Thomas, state auditor; Haygood Paterson, commissioner of agriculture and industries; Sibyl Pool, secretary of state; John Brandon, state treasurer; Austin R. Meadows, state superintendent of education. During 1947 there were two special sessions of the state legislature in addition to the regular biennial session. Most of the laws enacted were of local interest to the various counties. The principal matter of state-wide interest was the ratification by the voters of a constitutional amendment allowing certain earmarked income tax revenues to be used for educational purposes. It was believed this would be a great factor in helping to raise the state's educational standing.

**Education.**—During the academic year 1946–47 (ending June 30), the total number of public schools in the state was 3,914. Total enrolment for these schools was 648,894. Of this number 435,818 had primary school standings and 213,076 had secondary school standings. There were 12,432 elementary and 7,447 secondary teaching positions in public schools. There were 8 state institutions of higher learning with a total of 32,659 students enrolled and 1,137 teachers: University of Alabama; Alabama Polytechnic institute, Alabama State College for Women, Florence State Teachers college, Jacksonville State Teachers college, Livingston State Teachers college, Troy State Teachers college and Montgomery State Teachers college.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Amounts spent for public assistance categories in Alabama during the fiscal year 1946–47 (ending Sept. 30) and average number of recipients (in parenthesis) during 1946–47 were as follows: old age assistance $10,431,323.24 (48,916); aid to the blind $230,343.84 (968); aid to dependent children $2,916,223.10 (7,833); aid to children in foster care (county) $104,626.00 (538); aid to children in foster care (state) $47,139.14 (118); aid to handicapped $848,989.64 (4,553); temporary assistance $42,893.67 (189). During the fiscal year 1946–47 approximately 87,600 veterans were paid, under the G.I. Bill of Rights, unemployment compensation totalling $34,285,907.61. Approximately 56,700 nonveterans were paid unemployment compensation totalling $8,463,378.21. State correctional institutions are largely self-supporting. On Sept. 30, 1947, there were 25 state prisons with a white male population of 1,456, Negro male population of 2,543, white female population of 48 and Negro female population of 176 (total prison population 4,223). Total prison expenditures for the fiscal year 1946–47 were $3,699,408.74. At the close of the fiscal year (Sept. 30, 1947) there were 3 state reformatories with a population of 221 white males, 313 Negro males, 120 white females, 64 Negro females (total reformatory population 718). Total reformatory expenditures for the fiscal year 1946–47 were $466,196.82.

**Communications.**—The state highway system consisted of 7,317 mi. of road; the county system had 52,956 mi. of road, and there were approximately 4,000 mi. of municipal streets. For the fiscal year 1946–47 state expenditures for highways by the state highway department were $29,124,630.11. Estimated railroad mileage was 5,342. There were 8 airways with a total airway mileage of 1,233. The number of airports (including those owned by the U.S. war department) was 87. There were 280,000 estimated telephones in the state.

**Banking and Finance.**—On June 30, 1947, there were in Alabama 153 state banks and 1 branch, which had total deposits of $282,319,164.71 and total resources of $302,056,227.95; 67 national banks and 22 branches which had total deposits of $860,116,835.29 and total resources of $921,052,772.05. On Jan. 1, 1947, there were 18 federal savings and loan associations with total resources of $28,341,119 and 8 state savings and loan associations with total resources of $5,444,979. According to best available information, total net state government receipts in the fiscal year 1946–47 were $145,017,055.11; total net disbursements during that period were $144,152,964.36; state bonded indebtedness on Sept. 30, 1947, was $33,889,000; and cash and investment balances on the same date were $79,923,708.

**Agriculture.**—The total value of agricultural production for 1946 amounted to $501,734,000. The total acreage harvested in 1946 amounted to 6,450,000 ac. The cash income from sale of crops was $258,998,000; sale of livestock and livestock products amounted to $1,801,000; income from government payments was $7,509,000. Dry weather during the growing season of 1947 reduced the crop yield in all parts of the state, especially in the northern areas. Continued dry weather during the fall months, however, materially aided in the harvesting of crops.

Table I.—*Leading Agricultural Products of Alabama, 1947 and 1946*

| | 1947 | 1946 | Value, 1947 |
|---|---|---|---|
| Cotton, bales | 935,000 | 822,000 | $147,262,000 |
| Corn, bu. | 42,842,000 | 42,005,000 | 98,537,000 |
| Cottonseed, tons | 355,000 | 313,000 | 28,045,000 |
| Peanuts, tons | 146,900 | 130,000 | 27,911,000 |
| Hay, tons | 687,000 | 780,000 | 16,488,000 |
| Sweet potatoes, bu. | 5,084,000 | 5,225,000 | 11,947,000 |
| Oats, bu. | 5,083,000 | 5,537,000 | 5,845,000 |
| Irish potatoes, bu. | 3,330,000 | 4,646,000 | 4,862,000 |
| Peaches, bu. | 1,525,000 | 1,250,000 | 3,660,000 |
| Sugar cane syrup, gal. | 2,160,000 | 2,430,000 | 3,348,000 |
| Sorghum syrup, gal. | 1,680,000 | 1,827,000 | 2,520,000 |

**Manufacturing.**—The total estimated value of manufactures in Alabama in 1946 was $1,500,000,000. The 3,268 manufacturing establishments in 1946 had an average of 200,780 employees, to whom they paid wages of $371,631,113.

Table II.—*Principal Mineral Products of Alabama, 1945 and 1943*

| Mineral | Value, 1945 | Value, 1943 |
|---|---|---|
| Coal | $76,411,098 | $59,203,104 |
| Iron Ore | 13,701,737 | 19,870,480 |
| Stone | 3,326,753 | 3,178,908 |
| Cement | 8,146,139 | 11,265,088 |

**Minerals.**—The value of Alabama mineral production in 1944 was $108,460,000; in 1943 the value was $102,013,000. (J. E. Fm.)

**Alaska.** Alaska, northernmost territory of the United States, is located between the meridians of 130° W. and 173° E. longitude and between the parallels of 51° and 72° N. latitude. It has an area of 586,400 sq.mi. and an estimated population (1945) of 134,000, made up of about 60% whites and 40% Eskimos, Aleuts and Indians. Juneau (1940 est. pop. 5,748) is the capital and other principal cities are Ketchikan (4,601), Wrangell (1,142), Petersburg (1,288), Sitka (1,945), Seward (1939 census, 949), Anchorage (3,488), Fairbanks (3,304) and Nome (1,550).

**History.**—The legislature met in its regular biennial session in 1947. It revised its law code and enacted a law providing that the names of all candidates appear on the same ballot with designation as to the political party with which they are affiliated. It made appropriations of approximately $11,000,000. Revenues are raised from taxes on fisheries, mining, businesses, gasoline and a per capita on men of $5 per year from ages 21 to 55 and women in the same age bracket who are gainfully employed.

Under the veterans' bonus measure enacted by the legislature in 1946, Alaska veterans of World War II may obtain loans up to $10,000 at 4% interest to establish businesses, buy homes, farms, fishing boats, etc., or may elect to take a cash bonus of $10 per month for every month of service. Bonuses can be repaid and loans obtained, and when loans are paid new loans may be secured.

Principal officers of the territory are governor and secretary of Alaska, both appointed by the president; treasurer, auditor, attorney general, highway engineer and commissioner of labour, all elected; commissioner of health, commissioner of taxation, commissioner of agriculture, commissioner of mines and commissioner of education, all appointed. The governor in 1947 was Ernest Gruening.

**Education.**—There were 70 elementary schools in Alaska with an enrolment of 7,297 in the 1947 school year. The 24 high schools had an enrolment of 1,451; 96 day schools, an enrolment of 3,636, and 3 boarding schools maintained by the Alaska Native Service for Indian, Eskimo and Aleut children, an enrolment of 870. The University of Alaska, only institution of higher learning in the territory, is located at Fairbanks. It offers courses in agriculture, arts and letters, business administration, chemistry, engineering, education, general science, home economics, mining and premedicine. It had an enrolment in the fall of 1947 of 334.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Alaska has a liberal public welfare program. This includes old-age assistance, aid to dependent children and relief of destitution. In addition it has a Pioneers' home, located at Sitka, where aged persons may reside. Maximum assistance to the aged is $60 per month. The 1947 legislature appropriated $1,230,000 to carry on the welfare program for two years. Of this amount $750,000 was matched by federal funds under a cooperative agreement with the federal government.

**Finance.**—The territory had no bonded indebtedness. Its cash balance at the end of 1947 was $2,500,000. Its 14 territorial and federal banks had deposits of $60,000,000.

**Production.**—Alaska produced 4,142,199 cases of salmon in 1947 with

TASK FORCE "FRIGID," conducted by the U.S. army at Fairbanks, Alaska, early in 1947, proved that personnel was more adaptable to arctic warfare than equipment. Ladd field, near Fairbanks, is shown at high noon under an ice fog a value of $80,000,000. This was about 2,000,000 cases under normal production, but prices were high. Other fisheries such as halibut, cod, shrimp and crab had an estimated yield of $20,000,000. Annual return from fur is approximately $2,000,000. Mineral production was down in 1947, because of high costs and the inability of some properties to operate at profit. Gold production was around $7,000,000. There was some production of coal and platinum. (L. M. W.)

**Alaska Highway:** *see* ROADS AND HIGHWAYS.

**Albania.** A republic in the western part of the Balkan peninsula, along the Adriatic shore. Area: 10,629 sq.mi.; pop. (1946 est.): 1,120,500. Chief towns (pop. 1930 census): Tirana (cap., 30,806); Scutari or Shkodër (29,209); Koritsa or Korçe (22,787); Elbasan (13,796). Language: besides the literary Albanian, there are two dialects spoken, the Gheg north of the river Shkumbi and the Tosk in the south. Religions (1930 census): Moslem 688,280; Greek Orthodox 210,313; Roman Catholic 104,184. President of the republic and prime minister: Colonel General Enver Hoxha.

**History.**—The Communist-controlled government enjoyed its third year of office. During political trials, early in 1947, nine Albanians were sentenced to death for allegedly plotting to assassinate government officials, with the help of members of the British military mission. On May 15, parliamentary immunity was withdrawn from ten deputies of the peoples' assembly. On Sept. 27 nine of the deputies together with seven other accused were condemned to death for organizing acts of sabotage and terrorism against the state. The U.S. state department denied allegations that U.S. citizens were implicated in the affair. Dissension within the government itself was shown by the arrest and imprisonment of Sejfulla Maleshova, founder-member of the Albanian Communist party and later minister of information, together with the postwar Albanian representative in Italy, Colonel Kadri Hoxha. No reasons were given for these actions. On Oct. 4 Great Britain refused to hand over the Albanian subjects in Italy claimed as war criminals by the Albanian government. With considerable help from 156,000 tons of U.N.R.R.A. supplies valued at $27,450,000, the government was able to complete major tasks in its reconstruction program. All roads and bridges destroyed by the Germans were repaired, and work on the construction of a railway line was restarted. Demobilization of the 75,000 men in the Albanian national army was not begun and a law making military service obligatory was passed.

On March 26, following British protests to Albania over the mining of two destroyers in the Corfu channel, the soviet delegate at the Security council of U.N. vetoed a majority finding that an unnotified minefield in the Corfu channel could not have been laid without the knowledge of the Albanian government. Britain afterward referred the dispute to the International Court of Justice. (*See* also INTERNATIONAL COURT OF JUSTICE.)

During the year, the Albanian government continued its hostile attitude toward Britain and the U.S. On July 13 Premier Enver Hoxha stated that the British themselves might have laid the mines which damaged their destroyers in the Corfu channel. In denouncing the Marshall proposal, the deputy foreign minister stated: "This plan aims at dividing Europe in order to fulfil the Churchill plan of a western bloc." The Albanian government's attitude to the western democracies was summed up in the final words of a speech given by Premier Enver Hoxha on Oct. 7, "Be on your guard against the agents of imperialism. Our country is advancing and will always advance because it borders on Marshal Tito's Yugoslavia, who helps us to restore our economy and protects us, with U.S.S.R. help, against Anglo-U.S. intrigues." In July the premier paid an official visit to Moscow. As the outcome of this visit the Soviet Union granted Albania a credit with which to purchase industrial and agricultural equipment.

The Greek government's protests against Albanian violation of its northern frontiers, coupled with Greece's claim to part of south Albania, known as Northern Epirus, was the cause of bitter attacks by Albanian press and radio. (S. E. Ws.)

**Finance and Trade.**—On Dec. 11, 1946, the country formed a customs union with Yugoslavia; the Albanian lek is equal to the Yugoslav dinar.

**Communications.**—Work on railroads was begun in 1947, one line to link the port of Valona (Vlonë) with the Yugoslav system, and another planned to run from Tirana to the port of Durazzo. Telephone subscribers (1942) 1,119.

**Alberta.** Most westerly of the three prairie provinces of Canada, Alberta was created by parliament in 1905. The area is 255,285 sq.mi., of which 6,485 sq.mi. are water; pop. (1941) 796,169, (1947 est.) 822,000. Largest city is Edmonton, provincial capital, (1943) 131,050. Administered by a lieutenant governor, an executive council and a 63-member legislative assembly, Alberta is federally represented by 17 members of parliament and 6 senators.

**History.**—The Social Credit government announced in 1947 a surplus of $6,028,281, which resulted mainly from provincial liquor profits of $9,718,034, the highest in history. The gasoline tax was boosted from seven to nine cents a gallon. New minimum wage rates of $25 a week for men and $18 a week for women were established. Compulsory automobile accident insurance was introduced. Hutterite colonies were limited by legislation to 6,400 ac., with no colony nearer than 40 mi. to another. The government opened Alberta House in London, England, to facilitate migration of Britons and British industry to Alberta. The "Alberta Bill of Rights," invalidated in 1946 in part by the Alberta supreme court, was invalidated completely on an appeal to the privy council.

The discovery and successful development of the Leduc oil field, 18 mi. from Edmonton, was the biggest single provincial economic event of 1947. The first well blew in Feb. 13.

**Agriculture.**—In 1946 the gross value of grain crops was $243,000,000; dairy products were valued at $36,700,000; poultry production at $21,000,000. During 1947 Alberta farmers retired $39,734,000 of farm mortgage obligations. In 1946, 14,532,200 ac. were under field crops, the largest in provincial history. Total number of livestock (horses, cattle, sheep, swine) in 1946 was 4,270,000, while the 1944 high had been 5,648,000.

**Minerals.**—Coal production for 1946 was 8,734,696 short tons; for the first eight months of 1947 it was 797,204 tons below the similar period

OIL STORAGE TANKS at Leduc in Alberta, Canada, where ten firms were prospecting on farmlands believed to be rich in oil for 1946. Restrictions on coal-mining leases were lifted, reversing an 11-year policy, thus opening the province's estimated 61,000,000,000 tons of coal reserve to individual or company exploitation.

**Industry.**—The gross value of 1945 production was $599,366,498. Net value was $359,235,626, which was 5.9% of Canada's total. Per capita production was $434.91.

**Education.**—Enrolment in educational institutions for the 1944–45 school year totalled 172,567. Acute teacher shortages were relieved by a three-way government program: 200 annual scholarships of $200 each to encourage students to enter the profession; a 14% increase in teachers' pensions; increased school grants in Calgary and Edmonton. (C. Cy.)

## Alcohol, Industrial.

U.S. production of industrial alcohol—700,000,000 gal.—was higher in 1947 than in 1946 but did not reach the 1944-45 high total of 1,101,000,000 gal. The 1946 output was 403,700,000 gal. Tax-paid output was reported as 329,000,000 gal. to July 1, 1946, and 520,000,000 gal. for the following year. The amounts of grain used in alcohol making declined sharply in 1946-47 after prohibition of the use of any wheat and restrictions on other grains. Total grain used in 1946-47 was estimated at 162,000,000 bu. compared with 173,522,000 bu. in 1946 and 289,541,000 bu. in 1944-45. Only 227,000 bu. of wheat were used in 1946, left over from previous purchases; 66,700,000 bu. corn, 4,235,000 bu. rye, 86,900,000 bu. barley, 10,000,000 bu. potatoes and 3,820,000 bu. sorghum seed were also used.

Limitation of the manufacture of alcoholic beverages in late 1947 to save bread grains did not reduce the output of denatured alcohol. The demand for alcohol in the manufacture of artificial rubber continued. (J. C. Ms.)

**Alcoholic Liquor:** *see* BREWING AND BEER; LIQUORS, ALCOHOLIC; WINES.

## Alemán, Miguel

(1902– ), Mexican statesman, was born in Sayula, Veracruz state, the son of a shopkeeper who became a revolutionary general. Graduated in 1928 from the law school of the National University of Mexico, he was admitted to the bar in the same year. After a successful legal career, Alemán entered politics, becoming a member of the senate and governor of Veracruz state. In 1940 he managed Gen. Manuel Avila Camacho's presidential campaign; in 1946 he ran for president himself and was elected by an overwhelming majority. Inaugurated on Dec. 1, 1946, Alemán affirmed his faith in hemispheric unity, and on the domestic plane, he assured Mexican workers continued state protection.

On March 3, 1947, United States President Harry S. Truman made a state visit to President Alemán in Mexico City; on that occasion, Alemán extolled the U.S. president and said that foreign capital "with a proper respect for our laws" would be welcome. Returning the state visit (April 29–May 7), Alemán addressed a joint session of congress in Washington, D.C., on May 1 and warned that "democracy, if not backed by force, whets the appetites of dictators."

Foreign policy, however, was a subsidiary issue in his annual report to the Mexican congress (Sept. 1) in which the hoof-and-mouth disease was regarded as the government's gravest problem.

## Alexander of Tunis, Harold Rupert Leofric George Alexander,

1ST VISCOUNT, OF ERRIGAL (1891– ), British field marshal and governor-general of Canada, was born on Dec. 10, the third son of the fourth earl of Caledon. He was educated at Harrow and Sandhurst, and was commissioned in the Irish guards in 1911. He served on the western front during World War I; was twice wounded, five times mentioned in dispatches and received the distinguished service order and military cross.

At the beginning of World War II he led the 1st division in France, and was responsible for the successful evacuation of the British expeditionary force at Dunkirk. He was then appointed general officer commanding, southern command. In March 1942 he evacuated the British troops from Burma after the capture of Singapore. In Aug. 1942 he became commander in chief, middle east, and in Feb. 1943 deputy commander in chief, North Africa, to General Dwight D. Eisenhower. In Nov. 1944, in succession to General Sir Henry Maitland Wilson, he was appointed supreme Allied commander in the Mediterranean, where he led the Allied attack on Italy that resulted in the German surrender in May 1945. He was promoted field marshal as from June 4, 1944, the date of the fall of Rome, and in Jan. 1947 was created a viscount.

He took office as governor-general of Canada in April 1946. In June 1947 President and Mrs. Truman visited Ottawa as his guests, the first state visit ever made to Canada by a president of the United States.

## Alfalfa.

The United States alfalfa crop in 1947 was estimated at 33,475,000 tons of hay, slightly more than the 31,741,000 tons harvested in 1946 and above the average of 30,840,000 tons in the decade 1936-45. The second and third cuttings were good in the great plains region, but late cuttings were hurt by dry weather in the central states. The crops of the west were generally excellent, especially in California. Acreage harvested, estimated at 14,908,000, was practically the same as for 1946 and the 10-year average. Average yield was 2.25 tons per acre in 1947.

*U.S. Production of Alfalfa Hay in Leading States*
*1947, 1946 and 10-year Average, 1936–45*
(In thousands of tons)

| State | 1947 | 1946 | 10-yr. average | State | 1947 | 1946 | 10-yr. average |
|---|---|---|---|---|---|---|---|
| California . . . | 4,623 | 4,623 | 3,650 | Colorado. . . . | 1,333 | 1,255 | 1,291 |
| Wisconsin. . . . | 2,263 | 1,517 | 2,280 | Montana . . . . | 1,264 | 1,237 | 1,062 |
| Nebraska . . . | 2,058 | 1,735 | 1,308 | Utah. . . . . . | 931 | 893 | 972 |
| Idaho . . . . . | 2,007 | 2,010 | 1,950 | Ohio . . . . . | 803 | 840 | 892 |
| Kansas. . . . . | 1,981 | 1,569 | 1,209 | Oklahoma . . . | 800 | 607 | 515 |
| Minnesota . . . | 1,685 | 1,917 | 2,400 | Washington. . . | 740 | 809 | 728 |
| Michigan . . . . | 1,693 | 1,404 | 1,918 | Missouri . . . . | 736 | 792 | 644 |
| owa . . . . . . | 1,585 | 1,615 | 2,032 | Indiana . . . . | 722 | 690 | 799 |

The price of alfalfa hay advanced to an average of $21.90 per ton in Jan. 1947, then declined to about $18.00 per ton in August as the prospects for a large new crop appeared. By December the price was $20.40 reflecting the effort to reduce grain in livestock feeding.

The 1947 alfalfa seed crop was the second largest on record, estimated at 1,699,400 bu. compared with the all-time record of 1,822,400 bu. harvested in 1946. Acreage harvested was smaller than in 1946, but the average yield was 1.66 bu. per acre compared with 1.55 bu. in 1946. Alfalfa seed prices averaged $14.50 per bushel in the fall with a wide range between sections, from $22.30 per bushel in the east north central states to $11.30 in the south central. (*See* also HAY.) (J. C. Ms.)

**Alien Property Custodian, Office of:** *see* FOREIGN INVESTMENTS IN THE UNITED STATES.

## Aliens.

**Alien Registration.**—The initial registration for aliens began on Aug. 27, 1940, and continued through Dec. 26, 1940. During this period 4,889,770 aliens registered as residents of continental United States. Factors determining the alien population are net immigration, naturalization and mortality. By using the true figures for immigration and naturalizations, and estimating the alien mortality for the period, it is possible to arrive at the approximate alien population. On such a basis it was estimated that there were approximately 3,000,000 resident aliens in continental United States on June 30, 1946. That estimate did not take into account those in the country temporarily; that is, nonimmigrants, border crossers and imported labourers.

**Naturalization.**—The number of aliens naturalized in the fiscal year 1947, 93,904, was the lowest since the period of World War I. Of the number naturalized, 16,462 were military and 77,442 civilian naturalizations. In the preceding year 150,062 persons were naturalized.

For the fiscal year 1947, 11,092 members or former members of the military and naval forces residing in the United States, Alaska, Hawaii, Puerto Rico and the Virgin Islands were naturalized on the basis of petitions filed with naturalization courts. In addition, a total of 5,370 persons serving abroad with the armed forces of the United States were admitted to citizenship by designated representatives of the immigration and naturalization service under the administrative process. Naturalizations were granted in the following areas: Germany 33; England 94; Italy 26; China 29; Mexico 64; American Samoa 140; Guam 248; Philippine Islands 4,652; all other countries 84. The number of aliens naturalized during the year ended June 30, 1947, is shown in the table.

*Aliens Naturalized During Year Ended June 30, 1947, by Countries or Regions of Former Allegiance*

| Country or Region of Former Allegiance | Total Naturalized | Civilian | Military In U.S. Under Sec. 701 | Military Abroad Under Sec. 702 |
|---|---|---|---|---|
| All countries | 93,904 | 77,442 | 11,092 | 5,370 |
| Austria | 1,930 | 1,882 | 43 | 5 |
| British Empire | 20,328 | 16,956 | 3,278 | 94 |
| China | 831 | 479 | 323 | 29 |
| Czechoslovakia | 2,239 | 2,110 | 121 | 8 |
| Germany | 10,703 | 10,313 | 357 | 33 |
| Greece | 1,847 | 1,729 | 117 | 1 |
| Hungary | 1,595 | 1,556 | 34 | 5 |
| Italy | 11,516 | 10,680 | 810 | 26 |
| Mexico | 3,336 | 1,636 | 1,636 | 64 |
| Philippines, Republic of the | 10,764 | 3,510 | 2,602 | 4,652 |
| Poland | 6,495 | 6,223 | 269 | 3 |
| Union of Soviet Socialist Republics | 3,562 | 3,407 | 154 | 1 |
| Yugoslavia | 1,258 | 1,176 | 79 | 3 |
| Other countries | 17,500 | 15,785 | 1,269 | 446 |

Throughout the year 3,953 petitions for naturalization were denied, as compared with 6,575 petitions denied during the previous year. There were 94 judgments of naturalization revoked and certificates of naturalization cancelled during the year, a reduction of 92 as compared with the preceding fiscal year. In 78 cases the foreign service of the department of state initiated the action because the naturalized citizens of the United States became permanent residents of foreign countries within five years after naturalization. In 16 cases the immigration and naturalization service initiated action because naturalization was otherwise fraudulently or illegally procured.

Nationality may be lost involuntarily through conviction of treason against the United States, conviction by court-martial of desertion from the armed forces of the United States in time of war and as the result of such conviction the person is dismissed or dishonourably discharged from such forces; departing or remaining away from the United States in time of war to avoid training and service in the land or naval forces, and by protracted residence abroad of naturalized citizens. It may be lost voluntarily by naturalization in a foreign state, or the performance of certain other acts identified with citizenship of a foreign state. During the fiscal year 6,758 persons thus lost United States nationality. In addition, there were approximately 4,500 American-born Japanese who had been naturalized in Japan. There was, also, an unknown number of persons who lost United States citizenship by reason of their failure to make a timely return to the United States.

Petitions for naturalization were filed by 88,802 persons, a decrease of 28% from the 1946 fiscal year, when 123,864 petitions were filed. Declarations of intention filed increased to 37,771. There were 28,787 declarations filed in the fiscal year 1946; 31,195 in 1945; 42,368 in 1944; and 115,664 in 1943.

**Alien Enemies.**—Alien enemies include natives, citizens, denizens, and subjects of countries with which the United States was at war—Japan, Germany, Italy, Hungary, Rumania and Bulgaria.

The beginning of the fiscal year 1947 found 1,539 alien enemies in the custody of the service, of whom 1,165 were in custody under alien enemy proceedings and 374, in whose cases alien enemy proceedings had been terminated, were in custody under immigration proceedings. During the year 180 additional persons were received (including five born at the internment camps), while 758 departed from detention facilities—34 under presidential removal orders; 29 as repatriates (including 14 Germans, 14 Japanese and one other); 215 preremoval parolees; 477 releases; and 3 deaths, leaving 587 under alien enemy proceedings at the close of the fiscal year, of whom 307 were in custody at the expense of the service and 280 on work projects. This figure was made up of 203 Germans and 384 Japanese. During the year ended June 30, 1947, 280 Japanese internees were placed with the Deerfield Packing corporation, Seabrook Farms, N.J., as voluntary workers for current wages under a form of relaxed internment, while 171 were paroled to the same employer. The only remaining internment camp was that located at Crystal City, Tex., which had a population at the close of the year of two German adults, 105 Japanese adults and 71 Japanese juveniles.

Litigation testing the legality of the Alien Enemy act of 1798 (50 U.S.C. 21–23) and the presidential proclamation issued thereunder had prevented removals of alien enemies from actually being effected in all but relatively few cases. Litigation had prevented removal in the cases of 460 Japanese who renounced their United States citizenship pursuant to section 401(i) of the Nationality act of 1940, as amended, and of 159 alien Japanese who were residents of the United States at the outbreak of World War II.

**New Legislation.**—The act of Aug. 9, 1946 (public law 707) provided for the continuance of the farm labour program through June 30, 1947.

The act of April 28, 1947 (public law 40) extended the farm labour program to Dec. 31, 1947. Under this act alien labourers were allowed to be imported, and those already in the U.S. were allowed to remain until Dec. 31, 1947, under certain conditions.

The act of May 16, 1947 (public law 66) amended section 327(h) of the Nationality act of 1940 so as to permit photographic services on government property for the benefit of persons seeking to comply with requirements under the immigration and nationality laws.

The act of May 31, 1947 (public law 81), amended the Nationality act of 1940 so as to permit naturalization proceedings for sick or physically disabled persons to be held at places other than the office of the clerk of court or in open court.

The act of June 28, 1947 (public law 126), extended from June 30, 1947, to Dec. 31, 1947, the act facilitating the admission of alien fiancées or fiancés of citizen members of the armed forces of the United States.

The act of July 1, 1947 (public law 155), corrected an error in section 342(b)(8) of the Nationality act of 1940 by making 50 cents the minimum rather than the maximum fee for information from copies of the service records.

The act of July 22, 1947 (public law 213), amended the "War Brides" act of Dec. 28, 1945, by extending the benefits to spouses of racially ineligible races if they were married to United States citizens before or within 30 days after the passage of the act.

The act of July 23, 1947 (public law 221), provided for the issuance of certificates of citizenship to certain Metlakahtlan Indians of Alaska who acquired United States citizenship under the act of May 7, 1934.

The act of July 30, 1947 (public law 274), amended section 12 of the Immigration act of 1917. This amendment gives the attorney general and the commissioner authority to prescribe the contents of manifests. This means that the manifest, formerly required by law to delineate 35 different items about each alien arriving at a port of the United States by ship, could be reduced to contain only identifying information since the other necessary data are in the documents of admission. In co-operation with the state department, the code of federal regulations was amended to provide for the use of the duplicate and triplicate copy of the visa application as a document used for certifying to the admission and departure of aliens. (*See* also LAW.) (W. B. MI.)

**Great Britain.**—The number of aliens registered with the police at the latest date in 1947 for which figures were available was 313,254 (males, 181,360; females, 131,894). (The figure at Nov. 1, 1946, was 257,742.) The principal nationalities represented were: American, 14,743; Austrian, 13,294; Belgian, 9,362; Chinese, 9,482; Czechoslovak, 8,199; Dutch, 10,521; French, 13,498; German, 27,893; Italian, 17,245; Latvian, 9,303; Norwegian, 6,387; Polish, 76,535; Russian, 37,486; and Swiss, 11,862. Members of the diplomatic and consular services of foreign governments, members of the British and Allied forces on leave for less than 16 days, British protected persons, short-term visitors and women who had lost their British nationality by reason of marriage were all exempt from registration and are not included in these figures.

The following is a comparative table of foreign traffic at United Kingdom ports:

| | July 1945 | July 1946 | July 1947 |
|---|---|---|---|
| Aliens Entering . . . . . . . . | 8,880 | 37,096 | 85,278 |
| Aliens Leaving . . . . . . . . . | 13,697 | 29,208 | 60,277 |

The settlement of Poles for whom the British government assumed responsibility proceeded throughout the year. Approximately 200,000 Polish servicemen had been brought to the United Kingdom and, of these, 102,000 had either volunteered to return to Poland or were actually repatriated. In addition, about 13,500 dependents arrived in Great Britain and more than 18,000 were still to come.

Between Jan. 1 and Nov. 30, 1947, 13,634 applications for naturalization were lodged; this compares with a yearly average of 1,708 before World War II. The number of certificates granted during the same period was 16,838. The rate of naturalization was officially stated to be 18,000 a year. Up to Oct. 31, 1947, 162 persons had been deported under deportation orders made during the year. (P. T. H.)

## Alimentary System, Disorders of.

**The Oesophagus.**—Difficulty in swallowing may be due to a variety of causes, some of them familiar, others obscure or infrequent, like bulbar and pseudobulbar paralysis, involving the upper part of the spinal cord, and myasthenia gravis, a general weakening of the muscles, and severe vitamin deficiency states. In the last-named group, one may properly include a disturbance termed the Plummer-Vinson syndrome, reports concerning which figured prominently in U.S. and Scandinavian medical literature during 1947. M. Savilahti stated that the features common to the disease are difficulty in swallowing and anaemia and that the majority of the patients are middle-aged or elderly women.

There was a paucity of reports bearing on the pathologic changes in the Plummer-Vinson syndrome, so that the contribution of Savilahti was welcome. Former reports noted that enlargement of the spleen was present in as high as 18% of cases of thickening of the wall of the oesophagus. Small degenerated areas, chronic oesophagitis and small areas of ulceration in all parts of the organ were also observed. Several investigators demonstrated mucosal webs and strictures. Scandinavian observers confirmed the presence of strictures when the syndrome is advanced, along with dilatation of the oesophagus. An apparent decrease in the frequency of occurrence of this disease in the United States was noted and was attributed to the generally improved nutritional state of the populace brought about by more favourable economic conditions.

TYPICAL HABITAT of snails which are hosts of *Schistosoma*, an Asiatic blood fluke; about 5% of the snails taken from this marsh on Leyte Island were infected with blood flukes. The boy in the foreground has the protruding abdomen typical of persons with schistosomiasis

**Stomach and Duodenum.**—The mechanism of pain in ulcer of the stomach and duodenum had been a subject of extensive research and controversy, and in the opinion of many the problem still awaited solution. G. L. W. Bonney and G. W. Pickering, confirming and amplifying the results of Walter L. Palmer, presented evidence that the pain is due to the action of a sufficient concentration of hydrogen ions for a sufficient time on a defective gastric or duodenal wall through chemical stimulation of pain nerve endings exposed in the crater of the ulcer.

Are gastric ulcer and duodenal ulcer different diseases? Franklin Hollander noted factors which distinguish patients with gastric ulcer from those with duodenal ulcers; namely, the latter have a greater secretory volume, greater concentration of acid and pepsin in the gastric juice, greater neuromuscular activity and greater intensity of pain. He also commented on differences in ages according to sex of the patient at the time of the onset of symptoms and on the relative sizes of gastric ulcer and duodenal ulcer, gastric ulcer being considerably larger. Hollander concluded that there is no fundamental difference in these two types of ulcer and that the different clinical manifestations must be considered to be the results of the location of the lesions.

Because subtotal or partial gastrectomy is considered to be the method of choice for the surgical treatment of peptic ulcer, unfavourable results are of great concern to physician and patient alike. Such results occur roughly in 15% of patients, and the resulting disturbances may be immediate or later after meals. When the disturbances are characterized by pain or haemorrhage or both, investigation usually discloses the presence of an ulcer at the place where the surgical joining of the tissues is done or around this site or diffuse inflammation of the stomach. In a second group, the disturbances in all probability are the direct result of rapid emptying of the stomach, giving rise, after meals, to early and late manifestations of a local as well as a systemic nature. Late manifestations are attributed to a reaction to insufficient sugar in the blood; early ones, to various causes. The conception of shock caused by too much sugar, by R. M. Zollinger and his associates, as the explanation for the immediate symptoms was challenged in some quarters, since there is no other condition known in which excess sugar would lead to similar symptoms of shock.

**Liver.**—Medical literature continued to be replete with reports of acute infectious hepatitis and similar conditions such as hepatitis resulting from serum transfusion and inoculation hepatitis. It had been freely predicted that an increasing number of the latter two types of hepatitis would occur in civilian life during the postwar period; consequently, it was urged that extra precautions be taken in the choice of blood donors and blood products, especially pooled ones, and in the sterilization of syringes and needles. The observations of I. H. Scheinberg and his associates, as well as those of L. T. Rosenthal, justified such predictions and the necessity for proper precautions.

Numerous articles on diseases of the liver dealt with infection by the Asiatic blood fluke, *Schistosoma japonicum,* because U.S. armed forces had been greatly exposed to this parasite during the campaign in Leyte. As high as 80% of U.S. army engineers engaged in the building and repairing of bridges were infected with the fluke. The liver, spleen, intestines and even the brain may become involved. Although this type of infection had not occurred on the North American continent, since the mollusc carrier of the flukes was absent, the disease might arise in the United States if the patient were to arrive by rapid air travel from endemic areas, or if the disease had been asymptomatic, undiagnosed or not completely cured by treatment. Earl Carroll Faust stated that the condition of more than 1,000 patients had been studied at army general hospitals in the United States a year after the first exposure, and this authority surmised that in a considerably larger group of patients the condition thus far had escaped diagnosis.

## Allergy.

The interest of investigators in the effectiveness of the antihistamine drugs was maintained in 1947. J. M. Rose, A. R. Feinberg, S. Friedlaender and S. M. Feinberg concluded from comparison of four different antihistaminic drugs that there was a similarity in their capacity to protect guinea pigs against a fatal dose of histamine and against a severe allergic reaction (anaphylaxis). As the dose of each drug was decreased, the protection of the animal was proportionately reduced.

The efficacy of benadryl for protecting human beings against hives produced experimentally by the injection of histamine into the skin was demonstrated by M. B. Cohen and his coworkers. When benadryl was injected before the histamine was given, the occurrence of a local wheal was prevented unless a high dose of histamine was used. This observation was partly confirmed in patients with spontaneous (nonexperimental) hives by F. W. Lynch, who used benadryl in patients with itching skin lesions of various types. Four of 10 patients with acute hives were relieved in 24 hr., while 21 of 23 patients with chronic hives had varying degrees of relief through use of benadryl. Itching from insect bites and severe itching of undetermined causes of the genitalia in the female was relieved in 60% of the cases. Patients with severe itching caused by such conditions as contact dermatitis and neurodermatitis were not relieved. These observations indicated that the effect of the antihistamine drugs is to relieve, not cure, symptoms of mild to moderate severity.

Hives caused by sensitivity to sunlight had heretofore been resistant to all measures except avoidance of exposure. L. Rubin, P. L. Beal and S. Rothman reported a sixfold increase in tolerance to sunlight in patients who received one of the antihistamine drugs (pyribenzamine) before exposure to the sun.

The antihistamine drugs were again found ineffective for the relief of asthma. In a study of 16 such patients L. Levy II and J. H. Seabury found these drugs less effective than such older remedies as aminophyllin and epinephrine.

In France, where the antihistamine drugs were first synthesized and tried, B. N. Halpern, one of the original investigators of these drugs, described a new group of compounds with similar properties. These were the thiodiphenylamine derivatives. They appeared to be more effective in guinea pigs than previous preparations. One of these was 400 times more potent than antergan, one of the older drugs, in its ability to protect the animals against histamine, and 5 times as potent in its protection of guinea pigs against anaphylaxis. It should be emphasized that these compounds were not tried on humans and that the response of allergy in humans is not necessarily in proportion to the response of animals to these drugs.

Unpleasant and occasionally dangerous effects may be produced by the antihistamine drugs. B. B. Wyndham and M. E. B. Owen, Jr., reported a serious reduction in white blood cells (agranulocytosis) associated with high fever in one patient who was given pyribenzamine. Recovery resulted after the withdrawal of the drug and the use of penicillin. J. Geiger, S. J. Rosenfeld and D. L. Hartman reported severe symptoms of palpitation, dimness of vision, malaise, drowsiness and finally unconsciousness with symptoms resembling shock in a patient who had received only 6 capsules (300 milligrams) of benadryl. Seven days after recovery the symptoms were reproduced when the drug was given again for relief of an itching skin.

Severe allergic reactions were again reported following the use of virus vaccines. The common method for preparing such vaccines is to grow them in the chicken egg embryo. The resulting product contains, as a contaminant, a variable amount of egg protein. Patients who are egg sensitive may have serious reactions following the injection of the vaccine. S. F. Hampton described two instances of severe, almost fatal, reactions following injections of typhus and cholera vaccines. Both patients gave a history of egg sensitivity and had positive skin reactions when tested with egg white. The danger from virus vaccines prepared in this manner was further emphasized by L. L. Engel and R. J. Randall. These workers found a high percentage of egg white proteins in various equine encephalomyelitis vaccines. Purified vaccines contained considerably less of these undesirable contaminants.

| Total | 867.5 | 1,128.7 | 1,548.1 | 2,145.1 | 1,914.7 | 977.8 | 827. |

**United States.**—Following the sale or lease of the various government-owned war facilities, there were in 1947 three producers, with production capacities divided as follows: Alcoa 51%, Reynolds 29% and Kaiser 20%, with a total of 649,000 short tons. In addition to the privately owned plants, the government still retained an unleased capacity of 234,000 tons.

Table II.—*Data of Aluminum Industry in U.S., 1940-45*

(Thousands of short tons)

| | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 |
|---|---|---|---|---|---|---|
| Production, primary | 206.3 | 309.1 | 521.1 | 920.2 | 776.4 | 496.5 |
| Imports | 17.4 | 13.4 | 112.1 | 135.6 | 100.9 | 334.1 |
| Exports | 26.9 | 7.4 | 38.7 | 117.6 | 188.1 | 5.7 |
| Producers' stocks | −30.2 | +12.2 | +5.5 | +60.8 | −55.3 | +28.8 |
| Available new supply | 227.0 | 302.8 | 589.0 | 877.4 | 744.6 | 796.1 |
| Secondary recovery | 80.4 | 106.9 | 196.5 | 314.0 | 325.6 | 298.4 |
| Total supply | 307.4 | 409.7 | 785.5 | 1,191.4 | 1,070.1 | 1,094.5 |

Following the close of the war, production dropped to a low point in the last quarter of 1945 and the first quarter of 1946, when production was only about 150,000 tons in the six months. During the last half of 1946 the production rate was stepped up to more than 500,000 tons a year, and in the first half of 1947 to more than 600,000 tons. There was some decline in output in the third quarter, and the total for the first three quarters of 1947 was 436,741 short tons, against 409,630 tons in the full year 1946. (*See* also METALLURGY.) (G. A. Ro.)

**Ambassadors and Envoys.** The following is a list of ambassadors and envoys to and from the United States and to and from Great Britain Jan. 1, 1948.

*To and From the United States*

| To the United States | Country | From the United States |

## American Citizens Abroad.

During the year 1947, the number of U.S. citizens residing abroad more or less for extended periods of time in the interests of American affairs or for family or other reasons amounted to about 325,000 people, exclusive of the civilian employees of the military forces. This was an increase of about 52,000 people over 1946. The number of passports issued during the fiscal year ended June 30, 1947, exceeded by more than 7,000 the largest number of passports ever issued in the U.S. during any fiscal year. There were shortages in transportation and also in food and general comforts for those persons permanently residing abroad as well as those travelling temporarily for pleasure or for business. Notwithstanding this, the records show that 65,000 temporary visitors from America went to the British Isles during 1947. From this number of Americans travelling temporarily, it was stated by one of the head officials of the British Travel agency that $85,000,000 was brought into the British economy. This figure undoubtedly covered a large sum spent on transatlantic travel, for the British shipping carried a high percentage of the travel to Europe and the continent and to the U.S. The American visitors were taken care of with a minimum of discomforts considering the privations and rationing of the previous several years and made, through their travel and expenditures, an important contribution in the betterment of economic conditions in Britain.

In the spring of 1947, tourist and pleasure travel to the continent of Europe as well as the British Isles, which had been barred insofar as U.S. citizens were concerned since the outbreak of World War II in 1939, was again permitted by the government. The department of state considered that benefits to Europe from dollar expenditures and the normal friendly intercourse afforded by pleasure travel would far outweigh the discomforts of limited menus, less pretentious hotel accommodations and general absence of luxuries for the travelling public. The Boy Scouts of America attended the Scout Jamboree in France and were welcomed in the adjacent countries for short friendly visits. The American Legion commander, accompanied by a token group of 500 veterans of World War I, made the third pilgrimage to France, the British Isles and Belgium. It is estimated that 10,000 students made low-cost travel trips to the continent and for the three vacation months of summer fraternized with students of the old world in study, reconstruction work and travel. More than 3,000 youths remained in Europe as students, some 2,000 of them being veterans studying under the G.I. Bill of Rights, undertaking serious courses of study in the universities abroad.

The peace treaties with Hungary, Bulgaria and Rumania became effective in Sept. 1947, and envoys, received by the U.S. in due course, exercised among other functions that of granting visas for travel to their respective countries, thus removing these three countries from the category of travel controlled by the Allied Control council. In July 1947, travel of Americans to Germany for compassionate reasons was inaugurated by the U.S. and British military authorities. Those persons who wished to visit ill relatives under 70 years of age, residing in the U.S. zone of Germany, were required to submit medical certificates from German doctors recertified by a local liaison and security officer in Germany. If the relatives were over 70 years of age and resided in the U.S. zone, no medical certificates were required. If the relatives resided in the British zone of Germany, medical certificates from German doctors which did not need to be recertified were required irrespective of the ages of the relatives. The French military attaché at Washington, D. C., handled directly many compassionate cases in the French zone. There was no travel for compassionate or other reasons authorized by the soviet authorities for the soviet zone. The Austrian authorities made arrangements for summer tourist travel to Austria, making special provision for adequate meals and accommodations at designated hotels. This enabled U.S. citizens long desirous of hearing the Austrian musical festivities to enjoy again some pleasant weeks in western Austria.

The headquarters of General MacArthur promoted the resumption of business relations between the Japanese and U.S. businessmen. A monthly quota of generous size was allocated to the bureau of international trade of the department of commerce to further essential and important commercial activities. Round the world cruises once more became possible and were being carried on in increasing numbers as shipping became available.

The visa and passport requirements of many foreign countries were simplified in an effort to induce travel and visits of Americans. Visas for U.S. citizens were abolished by Sweden, Norway, Denmark, Switzerland, Luxembourg and the Netherlands. Americans were welcomed and were required to have only a passport as evidence of U.S. citizenship. Members of the occupation forces were accorded entry into Switzerland without passports upon presentation of a simple card freely issued by the Swiss authorities.

The abolishment by the department of state on Aug. 28, 1945, of the requirement for citizens to bear passports to leave the U.S. for the western hemisphere and to return therefrom resulted during the year 1947 in the establishment of much more favourable travel requirements by the countries themselves, which in many cases abolished altogether the need for passports and in other cases simplified the requirements and accorded gratis visas. Those countries in the western hemisphere not requiring either passports or visas of U.S. citizens are as follows: Bahamas, Barbados, Bermuda, British West Indies, British Guiana, Canada, Canal Zone, Costa Rica, Cuba, El Salvador, Guatemala, Haiti, Honduras, Mexico, Newfoundland, Panamá and Venezuela.

The full figures covering U.S. citizens semipermanently residing abroad were not available, but the following general summation is given:

| | |
|---|---|
| South America | 26,638 |
| Mexico and Central America | 33,471 |
| Europe | 78,657 |
| Asia | 34.975 |
| Africa | 6,099 |
| Australia and New Zealand | 2,713 |
| West Indies and Bermuda | 16,361 |
| Canada and Newfoundland | 125,859 |
| Fiji Islands | 46 |

## American Dental Association.

In 1947 membership in the American Dental association reached an all-time high of 70,443, a gain of more than 4,000 from 1946. Membership in the association and its 445 affiliated state and local societies represented approximately seven-eighths of the practising dentists in the United States.

The association held a full scientific meeting at Boston, Aug. 4 to 8, marking resumption of annual sessions halted during World War II. At Boston, the association joined with the *Fédération Dentaire Internationale* in sponsoring the Tenth International Dental congress. Approximately 12,000 dentists from 42 nations attended. The 1948 annual meeting of the association was to be held in Chicago, Sept. 13 to 17.

During 1947, the association established a new division of dental health education as part of a long-range program to curb the prevalence of dental disease, particularly among children. It recommended to all dentists that topical (local) application of a solution of sodium fluoride be applied to the teeth of child patients during the course of routine dental treatments as a means of reducing dental caries. The association increased its support of dental research and renewed its sponsorship of a bill in congress for the establishment of a national dental research institute at Bethesda, Md. (The bill was passed by the senate but was not brought to a vote in the house of representatives.)

It sought reorganization of the army dental corps and requested revision in the dental service program of the Veterans' administration.

The association published the first complete directory of dentists in the United States to be issued in 19 years. It launched a nation-wide program of manual and aptitude testing of freshmen dental students at all 40 of the nation's dental schools. It approved standards for the establishment of examining boards in the dental specialties (oral surgery, orthodontics, prosthodontia, pedodontia, and periodontia) and for the accrediting of courses for training of dental hygienists and dental laboratory technicians. It continued publication of *The Journal of the American Dental Association* (semimonthly) and the *Journal of Oral Surgery* (quarterly).

Officers in 1947–48 were: president, Dr. H. B. Washburn; president-elect, Dr. Clyde E. Minges; vice-presidents, Dr. Philip E. Adams, Dr. Fred A. Richmond and Dr. A. M. Smith, Jr.; secretary, Dr. Harold Hillenbrand; treasurer, Dr. R. H. Volland.

(H. B. BN.)

**American Economic Association:** *see* SOCIETIES AND ASSOCIATIONS.

## American Federation of Labor.

The American Federation of Labor reached an all-time high in membership in 1947 with 7,577,716 paid-up members on Aug. 31, the close of the federation's fiscal year—a gain of almost 500,000 members. During that fiscal year charters were issued to 258 new affiliates, including 2 new international unions.

In 1947 the federation continued its activities for the advancement of the rights of the wage earners despite concerted legislative attacks on both a national and state level which threatened seriously to impair the effectiveness of the U.S. trade-union movement in the field of collective bargaining. In addition to legislative attacks, various administrative orders were effected which greatly hampered the work of the organized labour movement. One of the first steps which the American Federation of Labor insisted had to be taken to retrieve labour's losses in the administrative as well as in the legislative field was the rehabilitation of the federal department of labour. Labour felt it should have government recognition in keeping with the importance of the services it renders, and to enable workers to have services that would protect them and permit them to keep step with economic and social progress.

In its annual report, the executive council of the A.F. of L. placed strong emphasis on the critical international situation and the relationship between national and foreign policies. The federation continued activity in the international field through its official work with the I.L.O., the U.S. military governments in occupied countries and by official contacts with European and Latin-American trade-union movements.

The federation continued to press for revision of the Fair Labor Standards act in the light of postwar needs. Enforcement of this law, as well as of the Public Contracts act, was severely restricted during World War II but it had been expected that the year 1947 would witness a resumption of the enforcement standards which prevailed prior to the war. This, however, did not prove to be the case. The A.F. of L. planned, therefore, to direct renewed efforts toward greater enforcement of federal wage and hour laws.

The federation and its affiliates also planned to direct a concerted attack on the Taft-Hartley law in an effort to secure complete repeal of the measure. This activity was to be extended to the coming political campaigns in an effort to secure the election of members to national and state legislatures and to other national offices, who would be opposed to this and other similar labour laws.

Veterans' problems and welfare of particular concern to the organized labour movement were given continuing consideration by the federation. The A.F. of L. Veterans' committee was extending its work through state and local committees to cooperate with the various veterans' organizations. The federation also continued its efforts to secure needed revisions of the social insurance system.

Keen interest continued in the broad field of education: in proposals for a program for federal aid; in international educa-

LABOUR DAY RALLY in 1947 at Soldier field, Chicago, Ill., where showers failed to discourage a huge audience listening to an address by William Green, president of the A.F. of L.

tional problems; through representation on U.N.E.S.C.O.; in workers' service and education problems and through the Workers Education bureau.

The federation planned to continue, during the coming year, its activities in the interest of and for the advancement of free labour both in the U.S. and abroad, and to protect those gains which had been made in the past.

## American Legion.

Chief legislative accomplishment of the American Legion during 1947 was the securing of enactment by congress of a bill providing for immediate cashing of the terminal leave pay bonds of enlisted veterans of World War II. With the adjournment of the first session of the 80th congress, the American Legion had established a record of successfully sponsoring 188 federal laws after 1943 exclusively in the interests of World War II veterans. Under these laws World War II veterans had received financial benefits totalling $30,066,426,139.

Other accomplishments of 1947 included the development and presentation to congress of its Veterans' Homestead Act of 1948 designed to effect up to 20% savings for World War II veterans in the building of ownership and rental housing in co-operative projects financed with government-guaranteed bonds; re-organization of the internal structure of the American Legion into a framework of 11 new national basic commissions; and expansion of the world-wide network of Legion posts to a new high of 16,802 posts, a gain for the year of 995 new posts. Final 1947 membership reached 3,271,986, of whom approximately 70% were veterans of World War II.

The Legion held its 29th national convention in New York city, Aug. 28 to 31. Delegates adopted a 1948 program aimed at the paramount objectives of assuring the internal and external security of the United States. It called for the eradication of communistic influences and outlawing of the Communist party in the United States, and all-out effort to secure enactment by congress of universal military training legislation. In its foreign relations policy the Legion branded the U.S.S.R. as an aggressor nation, gave all-out backing to the Marshall plan for the rehabilitation of western Europe and sponsored its own plan

WEST POINT CONTINGENT of the American Legion parade marching up Fifth avenue during the legion's 1947 convention which opened in New York city on Aug. 28

for the strengthening of the United Nations organization by abolishing the veto in all matters dealing with aggression and by creation of a strong world police force. The legion also relaxed its opposition to the admission within certain limitations of displaced persons into the United States.

The New York city convention elected James F. O'Neil, police chief of Manchester, N.H., as national commander for 1947–48. The 30th national convention was scheduled to be held Oct. 18 to 21, 1948, in Miami, Fla. (*See* also HOUSING; VETERANS' ORGANIZATIONS.) (J. F. O'N.)

## American Library Association.

The oldest professional association in the world of librarians and others interested in the educational, social and cultural responsibilities of libraries, the American Library association (A.L.A.) is the official organization of librarians in the United States and Canada. Established on Oct. 6, 1876, in Philadelphia, the A.L.A. had a membership in 1947 of 16,000 in the United States and possessions, Canada and 50 foreign countries. It is affiliated with more than 60 other library associations throughout the world and works closely with organizations and government agencies concerned with education, recreation, research and public service. In 1947 its activities were carried on by a headquarters staff of 105, assisted by 600 volunteer persons on approximately 100 committees and boards.

Carl H. Milam was executive secretary with headquarters at 50 E. Huron street, Chicago 11, Ill. An International Relations office, financed by a Rockefeller grant, was located in the Library of Congress annex, Washington, D.C., with Frederick Cromwell, director. A National Relations office, operated by the A.L.A. and financed by funds contributed by librarians and friends of libraries, was operated at 1709 M street, N.W., Washington 6, D.C., with Paul Howard, director.

The 66th annual conference in San Francisco, Calif., in June 1947 was attended by 2,600 persons from the U.S., its possessions and 24 other countries. At San Francisco the following officers for 1947–48 were inaugurated: president, Paul North Rice, New York Public library; first vice-president and president elect, E. W. McDiarmid, University of Minnesota, Minneapolis; second vice-president, Elizabeth D. Briggs, Cleveland Public library, Cleveland, O., and treasurer, Harold F. Brigham, state library, Indianapolis, Ind.

At that time the annual A.L.A. citations for distinguished service as library trustees were awarded to Mary E. Frayser, Rockhill, S.C., chairman of the South Carolina State Library board, and Thomas H. McKaig, Hamburg, N.Y., president of the board of trustees of Erie County Library association. The A.L.A. awarded the 26th Newbery medal to Carolyn Sherwin Bailey for *Miss Hickory,* judged to be the outstanding contribution to children's literature during the preceding year. The 11th annual Caldecott medal for the most distinguished picture book was conferred upon Leonard Weisgard for his illustrations of *The Little Island* by Golden MacDonald. Frederic G. Melcher, publisher of the *Library Journal* and *Publishers' Weekly,* annually provides both medals.

The first *Letter* award ($100) for an outstanding example of progressive library service was presented to the Enoch Pratt Free library, Baltimore, Md., for its program of adult education in atomic energy. The *Letter* award ($100) to a librarian "for the humanizing of knowledge" was conferred on Natalie Mayo, head of the children's department, San Francisco Public library. Both awards were given by Mrs. Ada McCormick, editor and publisher of *Letter* magazine, Tucson, Ariz.

The 11th Oberly Memorial award (1945–46), presented every two years to that American citizen who compiles the best bibliography in the field of agriculture or the related sciences, went to Burch Hart Schneider for *Feeds of the World; Their Digestibility and Composition.*

Sponsored by the *Wilson Library Bulletin* and the A.L.A. Public Relations committee, the John Cotton Dana publicity awards were given to eight libraries for effective public relations programs.

The 1948 conference was scheduled for June 13–19 at Atlantic City, N.J. The annual midwinter conference was held at Chicago.

In 1946–47 the association's income was about $682,000. Approximately $103,000 came from membership dues, $140,600 from sales of books and periodical subscriptions and $73,500 from income on endowment funds. Receipts from group retirement annuity premiums amounted to $164,600; and $173,300 came from outside sources in the form of grants or payments for specific purposes. The A.L.A. endowment was approximately $2,100,000.

During the year, in addition to its regular periodicals, *A.L.A. Bulletin, Booklist, Subscription Books Bulletin, College and Research Libraries* and *Hospital Book Guide,* the association issued 29 new or reprinted publications from a total of more than 200 projects being considered.

Following years of study and work the "National Plan for Public Library Service," a 200-page report, was completed by the A.L.A. Postwar Planning committee and published. It emphasizes the fact that most public libraries in the U.S. are inadequate, understaffed, housed in out-moded buildings, lack sufficient books and in general do not meet the needs of their communities. The plan proposes that there should be 20 multistate reference centres, 48 effective state library agencies and a national bibliographic and library centre, in addition to about 1,200 large local library systems. All would be interlocking to form a federal system. Similar plans were made for various other library groups.

A two-year study of the American free public library was begun by the Social Science Research council through a Carnegie corporation grant of $175,000. Proposed by the A.L.A., this study, "the American Public Library Inquiry," was to include a comprehensive survey of the adequacy of the public library as a source of citizen information, and an analysis of its actual and potential contribution to American society.

Organized by A.L.A. and financed by a Carnegie corporation grant, a conference on International Cultural, Educational and Scientific Exchanges was held in Princeton, N.J., Nov. 1946. Plans and recommendations in this field were published by A.L.A. During 1947–48, plans of the A.L.A. Board of Education for Librarianship emphasized not only recruiting for the profession (it was estimated that 64,000 librarians would be needed from 1947–60) but also strengthening of accrediting procedures and a study of education and training needs for various levels of work.

With the appointment during the year of an executive secretary, with offices at A.L.A. headquarters, the Association of College and Reference Libraries (a division of A.L.A.) was able to accomplish more planning in that field.

Several A.L.A. contracts regarding international relations projects with the U.S. government and Rockefeller foundation terminated during the year. From its establishment in 1942, the A.L.A. International Relations office had expended grants totalling more than $1,800,000 to promote library interests throughout the world. Other international activities included: participation in the work of the United Nations Educational, Scientific and Cultural organization (U.N.E.S.C.O.) and attendance at its conferences; representation at meetings of the committee of the International Federation of Library Associations and of conferences of the International Federation of Documentation; participation in the Assembly of Librarians of the Americas at the Library of Congress and visits of United States librarians as consultants to Japan, Korea and Germany at the request of the U.S. government. At the invitation of American librarians, the International Federation of Library Associations scheduled its next international conference in the United States.

Through the A.L.A. National Relations office, library relations with congress were concerned during the year with the Library Demonstration bill (S. 48–H.R. 2,465); revision of the postal rates; federal aid to education; extension of social security and appropriations for the Library of Congress, army libraries, Library Service division of the office of education and for cultural relations with other countries.

The A.L.A. in conjunction with other groups organized a project late in 1947 to encourage reading on and discussion of the European Recovery program. This was an attempt to arouse the awareness of the people to the Marshall plan and its importance and was the beginning of a program to urge all libraries to emphasize the great issues of our times. (M. O. P.)

## American Literature.

If the year 1947 in American literature were judged by publishers' promotions, bookstore displays and quantity sales, it would seem to have been a year of interest in American history, American life and the place of the United States in world affairs. Starting Jan. 2 with Kenneth Roberts' historical novel of early 19th century America, *Lydia Bailey,* on which the publishers spent $30,000 in promotion between January and July, it produced record sales for John Gunther's *Inside U.S.A.* by September, and it published Roger Butterfield's *The American Past,* a $10.00 illustrated panorama of events from Concord to Hiroshima. Although book prices had taken their long expected inflationary jump, there seemed only a slight falling off of reader interest. Americans were trying to learn about themselves.

Second in interest were books which dealt with the meaning of life itself. With the atom bomb hovering overhead and with Europe, and U.S. relations with it, in a state of unrest to say the least, it seemed rather like the kind of clear day that farmers call a "weather breeder." Before the year was over, publishers were disinclined to publish G.I. books on World War II, and turned to the philosophers, historians, and serious romancers. *Peace of Mind* (1946) by Joshua L. Liebman, a skillful blending of religion with psychiatry for self-administered therapy, continued to hold the best-seller list for most of the year; the Englishman Arnold J. Toynbee's cyclical *Study of History* and the Frenchman Pierre Lecomte du Noüy's scientific theory of *Human Destiny* crowded less thoughtful books by American authors from the front tables of the book stores.

To call this interest in history, ideas and fantasy "escapism" is to give only a small part of its significance. Book readers will listen only momentarily to such Cassandras as Norman Cousins and Lewis Mumford who shouted in 1946 that man must act quickly for his time is running short. They prefer at such moments of crisis to lapse into introspection, memory and intellectual speculation. Such periods have, in the past, produced great literature, as they did in the United States in the 1850s and the 1920s, but we are too close to these current books to know how great or how ephemeral they are.

**The War and the World.**—When the year opened there was still much writing about the war at first hand in such personal records as James A. Michener's *Tales of the South Pacific,* Agnes N. Keith's *Three Came Home,* an account of life in a Japanese prison camp, and the fictional form of a successful play *Command Decision* by William Wister Haines. But action faded to memory in Lewis Mumford's biography of his soldier son *Green Memories* and in probably the last collection of Ernie Pyle, *Home Country;* while William Shirer wrote postscript to foreign war correspondence in *End of a Berlin Diary* and Robert Capa collected his *Life* photographs in *Slightly Out of Focus.*

As the flood of first hand narrative dwindled, more substantial and inventory-taking accounts took their place. Chief among these were the first of many volumes-to-be describing the actions of the navy, *History of United States Naval Operations in World War II,* edited by Samuel E. Morison, and of the army, edited by Kent Roberts Greenfield. These records were planned far in advance by official Washington and were executed by top-flight historians in the field and at base. These were followed by reports of official evaluating committees on the freedom of the press, on civil rights and on higher education. This is one way democracy has of issuing its encyclicals, and it sets the tone of the literature of the year down to studies of jazz music and cartoons.

Another aspect of this trend is revealed in the autobiographies and biographies of leading figures of the period of two wars. Arthur S. Link's *Wilson: The Road to the White House* was one. There were studies of Franklin Delano Roosevelt: James F. Byrnes's *Speaking Frankly,* Edward J. Flynn's *You're the Boss,* Roosevelt's boyhood letters and *The Roosevelt Era,* edited by Milton Crane. Among others who were memorialized were William Allen White, Benjamin Cardozo, Admiral Halsey and Generals Patton and Marshall. George Creel offered his *Rebel at Large* and John G. Winant *Letter from Grosvenor Square.*

There were of course books on the atom bomb and its consequences and on Palestine, Russia, China, India and Japan, but there was not as much interest in current developments in Europe as one might expect. The Nuernberg trials produced Victor H. Bernstein's reportorial *Final Judgment* and Lionel Shapiro's novel *The Sealed Verdict* and other reconstruction problems found expression in John H. Burns's bold tale *The Gallery* and Paul Murray's *Once There Was a Waltz.* Chiang Kai-shek's suppressed *China's Destiny* was finally published, and Pearl Buck added to her list of Chinese stories the collection *Far and Near.* Upton Sinclair carried his Lanny Budd series to one more volume in *Presidential Mission,* and Edmund Wilson reported a meditative tour in *Europe Without Baedecker.* Maurice Hindus studied the readjustment of Czechoslovakia in *The Bright Passage* and William L. Langer appraised *Our Vichy Gamble,* while among the many books on Russia were Joshua Kunitz' anthology of its literature and *Russia: The Giant that Came Last,* an appraisal of its culture.

**These United States.**—With an imaginary visit by Jefferson and Hamilton to the sessions of the United Nations in *Two Came to Town,* Simeon Strunsky brought the American tradition to bear on the present. While the vast projects of reediting the Jefferson and the Lincoln papers progressed and the journals of Francis Parkman were finally published, historians like Thomas J. Wertenbacker restudied *The Puritan Oligarchy,* and other historians the opening of the northwest, the Indian, the Negro and the culture of the south. The more general historians like Henry S. Commager, Ray Allen Billington, Otto Eisenschiml, and Allan Nevins issued documents and histories at an alarming rate. Meanwhile popular treatments of the American tradition, initiated several years ago in the "Rivers of America" series, were augmented by more substantial books like Townsend Scudder's *Concord: American Town,* and by a series on other U.S. towns, U.S. folkways, U.S. railroads, trails, colleges, national parks, U.S. maritime history, non-English racial groups in America, and American society—in such books as Cleveland Amory's *The Proper Bostonians.* The past was recorded pictorially in biographies of the sculptor Daniel Chester French, the painter Russell Cheyney and the two picture makers of the old west W. H. Jackson and Frederick Remington, as well as in Bernard de Voto's *Across the Wide Missouri* and James T. Flexner's history of colonial art, *American Art: First Flowers of Our Wilderness;* while the present continued to be illustrated in the "Look at America" series which during the year spread to the south, the northwest, and New England.

The mixture of nostalgia and re-evaluation of these subjects comes out more explicitly in Van Wyck Brooks's continuation of his history of the literary life in America, now in its fourth volume *The Times of Melville and Whitman.* Henry Seidel Canby collected his literary reminiscences in *American Memoir,* H. L. Mencken his in *Days of H. L. Mencken,* and Burton Rascoe carried his to New York with *We Were Interrupted;* from the literary Chicago memorialized in the life of Harriet Moody *A House in Chicago,* by Olivia H. Dunbar. Elliot Paul turned from Paris to the rural America of his childhood in *Linden on the Saugus Branch* while his beloved left bank was remembered in Samuel Putnam's *Paris Was Our Mistress* and Al Laney's *Paris Herald.* The days of the U.S. past came in for harsher reappraisal in Leo Gurko's *The Angry Decade* (the '30s), Lloyd Morris' *Postscript to Yesterday, America: the Last Fifty Years, I Remember Distinctly,* another "yesterday" book by Agnes Rogers and Frederick Lewis Allen, and the second volume of Maxwell D. Geismar's critique of the 20th century American novel *The Last of the Provincials* (the '20s). Individual writers were treated in the "Makers of Modern Literature" series while a new "American Men of Letters" series was being planned, in Percy Lubbock's *Portrait of Edith Wharton,* in F. O. Matthiessen's *The James Family,* accompanied by the publication of *The Notebooks of Henry James,* in Eleanor M. Tilton's biography of the elder Oliver Wendell Holmes, and in Harold D. Cater's collection of the more personal letters of Henry Adams. There were also biographies of Abigail Adams and of Carey Thomas of Bryn Mawr and studies of the criminal lawyers Howe and Hummel, of McGuffey's readers, of American etiquette books and of the explorers Lewis and Clark. Curiosity about the U.S. cultural past seemed virtually insatiable.

With *Grass Roots History* by Theodore C. Blegen this interest reached down to the folk levels of culture where collectors and anthologists like B. L. Botkin added to the "treasuries" one on New England folklore, and John A. Lomax told of *The Adventures of a Ballad Hunter.* The folk spirit also found expression in books on the cartoons of Bill Mauldin and Francis W. Dahl and in a collection of *The Best Cartoons of the Year 1947* by Lawrence Lariar; while Eddie Condon celebrated a generation of jazz in *We Call It Music.* The humourists S. J. Perelman in *Acres and Pains,* and Samuel Hoffenstein in *Pencil in the Air* maintained their eminence, while satire was provided by Ludwig Bemelmans in *Dirty Eddie* (motion pictures), Herman Wouk in *Aurora Dawn* (advertising) and Frederick Wakeman in *The Saxon Charm* (Broadway theatre).

**U.S. in Story.**—Fiction thus was keeping pace with nonfiction in the U.S. effort to know itself. The regional tale, the novel of social criticism, and the historical novel of the American past have existed for many years, but the year 1947 seemed to strike a new high in these forms. Roaring romances of other times and places headed the best-seller lists, but in *Proud Destiny* Lion Feuchtwanger pictured Ben Franklin in France and Frank Yerby placed his scene for *The Vixens* in the American Civil War while other somewhat less gaudy romances like *The Big Tide* by Rubylea Hall, *The Big Sky,* by A. B. Guthrie, Jr., and *Colorado* by Louis Bromfield covered the country from New Bedford to Florida to California. Quieter in tone was Walter D. Edmonds' tale of the Erie canal *The Wedding Journey,* Katherine Newlin Burt's story of early Williamstown *Close Pursuit* and H. L. Davis' western *Harp of a Thousand Strings.* The midwest is the scene of Herbert Krause's *The Thresher* and Feike Feikema's *This Is the Year;* New England that of Ann Petry's *Country Place,* Louise Field Cooper's *Summer Stranger* and Howard Breslin's fine study of the decline of a Vermont mountain town *Tamarack Tree.* Marcia Davenport's portrait of contemporary New York city *East Side, West Side* should probably not be taken too seriously, but many of these novels add at least a touch of social criticism to their pictures of American life, especially those of the south like Ben Ames Williams' massive family chronicle *House Divided.* Lillian Smith treated the south again in her second novel *Julia,* but now avoided the race problem, leaving it to Sinclair Lewis in *Kingsblood Royal.* The related theme of social anti-Semitism provided the theme for Laura Hobson's *Gentleman's Agreement;* the disillusionment of a labour leader that of David Davidson's swift-paced *The Steeper Cliff,* a promising first novel; life in an industrial town that of Howard Fast's *Clarkton;* and the lot of Norwegian immigrants that of *Big Ember* by Edward Havill.

**The World Within.**—There is an instinctive turning, after any great war, to religion, philosophy, psychology and art in a search for values and for answers to the eternal questions, but the current manifestations of this instinct seem to be a part of a 20th century movement rather than merely a reaction from war. The final adoption into U.S. literature of the British Alfred North Whitehead, signalized by the appearance of his *Essays in Science and Philosophy,* of the German Thomas Mann, with his *Essays of Three Decades,* and of the French Jacques Maritain with *The Person and the Common Good* seems to mark the reversal of a persistent tendency on the part of profound thinkers to flee America and its so-called materialism. The successful absorption of the 20th century intellectual immigration from Europe, particularly of the *émigrés* of World War II, is perhaps the most promising factor in the contemporary cultural pattern. America traded these men, together with the poets W. H. Auden and Christopher Isherwood, for Henry James and T. S. Eliot—so far something like an even exchange, but fraught with meaning for the future. Through them America was absorbing the best in European religion, philosophy and art; and had at the same time adopted the influences of André Gide with the translation of the first volume of his *Journals* by Justin O'Brien, of Søren Aabye Kierkegaard, of the existentialist Jean Paul Sartre with the translation by Eric Sutton of two of his novels *The Age of Reason* and *The Reprieve,* of Franz Kafka with a biography by Max Brod, a critical analysis *Kafka's Prayer* by Paul Goodman, and the continuation of a collected edition of his works in English, of Paul Valéry with a translation of his allegorical novel *Monsieur Teste* by Jackson Mathews and of James Joyce with a critical analysis *Fabulous Voyager: James Joyce's Ulysses* by Richard M. Kain. One might even add the migration of Henry Miller and his little band of nihilists to the mountain valleys of California as a final and extreme manifestation of this cultural movement, the return of an American who probably invented more things to say against American civilization than any man living or dead. Whether the answers be "no" as in Miller's cosmological distempers, or "yes" as in the religious impulse signalized by the republication of the prayers of Samuel Johnson and the essays of Jakob Boehme and Fénelon, the ultimate questions were being asked on American soil.

On the more popular level this impulse was evident in such books as Erwin Edman's *Philosopher's Quest,* a more serious discussion than was his *Philosopher's Holiday* of several years back, *Man Against Myth* by Barrows Dunham, *On Understanding Science* by James B. Conant, a facetious *Essay on Morals* by Philip Wylie and a more impressive *Rediscovery of Morals* by Henry C. Link, and the collected essays by various hands *Freedom and Experience* presented as a testimonial to Horace M. Kallen. Although the extraordinary Kinsey report *Sexual Behavior in the Human Male* was held over for 1948, Ferdinand Lundberg and Marynia F. Farnham published *Modern Woman: The Lost Sex.* To the many works on religion, of which Raymond Calkins' *The Modern Message of the Minor Prophets* and Robert M. McIver's collection of essays *Unity and Difference in American Life* are representative, should be added Batsell B. Baxter's selection *The Heart of the Yale Lectures,* Herschel Clay Baker's history of thought *The Dignity of Man,* and Louis K. Anspacher's investigation of the validity of psychic evidence *Challenge of the Unknown: Exploring the Psychic World.* The normal and the abnormal processes of the mind in its creative expressions were investigated in *The Works of the Mind,* edited by Robert B. Heywood and *The World Within* by Mary L. Aswell. Sidney Finkelstein attempted an application of the Marxist aesthetic in *Art and Society* while less doctrinaire criticism of literature and art appeared in Cleanth Brooks' *Well Wrought Urn,* James T. Farrell's *Literature and Morality,* Yvor Winters' *In Defense of Reason* and Leo Stein's *Appreciation: Painting, Poetry and Prose.*

In the fiction of the year, one reflection of this tendency was the return by established writers to earlier manners and away from contemporary problems. The work of the mystic and primitive Sherwood Anderson was collected in a *Reader* by Paul Rosenfeld; the third volume of Theodore Dreiser's Cowperwood trilogy *The Stoic* was finally published although still unfinished at its author's death; the short stories of Thomas Beer, Edna Ferber, James T. Farrell, John O'Hara and Bret Harte were collected; John Steinbeck offered a tale of primitive impulses in *The Wayward Bus* and, in more gentle mood, retold a moving Mexican folk tale in *The Pearl;* Thornton Wilder edited Gertrude Stein's posthumous tribute to great men *Four in America;* Robert Nathan did a further fantasy in *Mr. Whittle and the Morning Star;* Henry Morton Robinson analyzed the therapy of disaster in *The Great Snow;* Bernard de Voto contrasted the therapeutic effects of civilization and the still primitive west in *Mountain Time;* and Erskine Caldwell was back with his southern primitives in *The Sure Hand of God.* Such younger writers, however, as Alfred Hayes in *Shadow of Heaven,* Jean Stafford in a sensitive story of childish tensions *The Mountain Lion* and Richard Angell in *The Long Swim* made impressive efforts to come to grips with the mental and moral problems of modern man. Lionel Trilling's *The Middle of the Journey* was a more mature but less facile first novel of personal adjustment to a nonpersonal world by one of the most thoughtful literary critics; and the more violent ills of civilization were discussed by Calder Willingham in his angry study of evil *End as a Man,* by Willard Motley in his analysis of criminal degeneration *Knock on Any Door* and by Nathalie Anderson Scott in her study of alcoholism *The Story of Mrs. Murphy.* The same tendency was carried further into the problems of neuroses and beyond in the cartoon collections of Charles Addams and Abner Dean, in *Alexandra* by Gladys Schmitt, the short stories of Mark Schorer in *The State of Mind* and in *Spearhead,* an anthology of experimental writing, edited by James Laughlin. But the year produced no new voice as commanding as that of the Canadian Malcolm Lowry in *Under the Volcano* to presage a major movement among younger writers of fiction.

**Poetry.**—The dismay of modern man and his yearning for faith and security were even more eloquently stated in the poetry of the year than in the fiction. *The Age of Anxiety* by

ELEANOR CLARK, novelist, and Robert Lowell, poet, each of whom was awarded a Guggenheim fellowship in literature in 1947, as well as a $1,000 grant from the American Academy and National Institute of Arts and Letters

W. H. Auden, *The Trial of a Poet* by Karl Shapiro, *Hymn to Wreckage* by Robert McKinney, the second and less effective of Robert Frost's essays on the dealings of God and man *The Masque of Mercy* and Dunstan Thompson's *Lament for the Sleepwalker* variously treat aspects of this theme. In productivity as well as power Kenneth Patchen probably led the poets of the year with three volumes of verse and a critical essay on him by Henry Miller. Ezra Pound added ten more to his *Cantos,* Selden Rodman did a postwar diary in verse *The Amazing Year* and Conrad Aiken a narrative of early Boston *The Kid.* New volumes were offered by such well established poets as Mark Van Doren, William Rose Benét and Witter Bynner. Robert Hillyer, Raymond Holden and Oscar Williams made collections or selections of their earlier poems, Allen Tate edited *A Southern Vanguard* in memory of John Peale Bishop, and the poems of Joan Murray, Samuel Greenberg and Damon Runyon were collected by hands other than their authors'. Among the newer voices might be counted Martha Keller in *Brady's Bend and Other Ballads.* John Frederick Nims in *The Iron Pastoral,* Martha Bacon in *Things Visible and Invisible* and Louis O. Coxe in *The Sea Faring;* while older poets were revived in a collection of Herman Melville, a selection from Sidney Lanier, a translation of fifty poems of Hafiz by Arthur J. Arberry, and critical or biographical books on Robert Frost, E. A. Robinson and Emily Dickinson.

**Summary.**—Taken as a whole, therefore, the literature of the year 1947 seems escapist only at first glance; on closer examination it reveals an increasing seriousness of purpose, an eagerness to explore ideas and techniques and an interest in the meaning of America and of life itself. It might be noted that December closed with the announcement of a massive novel of one man's life in 19th century America, *Raintree County* by Ross Lockridge, Jr., which was greeted by the critics as containing all of these qualities. **American Mathematical Society:** *see* SOCIETIES AND ASSOCIATIONS.

## American Medical Association.

The American Medical association in 1947 included 135,700 physician members of 2,024 component medical societies, grouped in 53 state and territorial medical associations. The policies of the association are established by its house of delegates, a representative body chosen by the houses of delegates of the individual states. The association is administered by a board of trustees with nine members. Its activities are conducted by its headquarters office through the general manager, the editor and the secretaries, directors and personnel of councils, bureaus and committees.

Gross income of the association exceeded $2,000,000; property and equipment was valued at about $1,500,000, and securities at approximately $6,000,000.

The publications of the American Medical association in 1947 included the *Journal of the American Medical Association* with a circulation of more than 130,000 weekly; *Hygeia,* a health magazine for the public, with a circulation of approximately 250,000 monthly; nine medical journals for various medical specialties; a complete directory of the medical profession, medical schools, libraries and hospitals, and the *Quarterly Cumulative Index Medicus,* indexing regularly the contents of more than 1,500 medical periodicals. The association also continued to prepare and publish the *Standard Nomenclature of Disease and Standard Nomenclature of Operations.*

Through its bureaus of health education, information and investigation, the association continued to circulate millions of pamphlets and answer hundreds of thousands of questions, with the objectives of educating the public in health, preventing quackery and extending medical care. During 1947 the association had three programs on national broadcasting chains and circulated thousands of radio transcriptions to local radio stations. The library of the American Medical association maintained its services of supplying books and periodicals for references, developing bibliographies and indexes, and conducting a package library service for physicians on subjects of interest. The subjects most frequently requested during 1947 related to anaesthesia, undulant fever, arthritis, neostigmine therapy, infantile paralysis, penicillin and high blood pressure.

The Council on Medical Education and Hospitals continued to establish minimum standards for education in medical schools, hospitals, occupational therapy, physical therapy, record libraries and similar medical technologies; the Council on Pharmacy and Chemistry to investigate new remedies and control their advertising claims; the Council on Industrial Health to promote the care of workers in industry; the Council on Medical Service to investigate plans for medical care and encourage the growth of voluntary sickness insurance plans; the Bureau of Medical Economics to study problems related to the costs of medical care; the Bureau of Exhibits to prepare exhibit material for the profession and the public; the Council on Foods and Nutrition to investigate problems in this field and approve specialized preparations; and the Council on Physical Medicine to study physical devices used in the treatment of disease.

The association's printing establishment at its headquarters offices (535 N. Dearborn St., Chicago 10, Ill.) employed more than 700 people in 1947.

The American Medical association consistently opposed plans for compulsory sickness insurance such as those proposed by Senators Robert F. Wagner and James E. Murray and Representative John D. Dingell. It favoured, however, proposals for the extension and construction of hospitals and health centres throughout the U.S., the extension of preventive medicine through the Social Security act, the establishment of a national science foundation to encourage co-ordinated and intensified research, the widest possible development of public health facilities and encouragement to the individual states for the prepayment plans to provide medical care to the indigent and the medically indigent and for insurance against loss of wages caused by illness and against the costs of medical care.

The principal officers of the association in 1947 were: president, Edward L. Bortz, Philadelphia, Pa.; president-elect, R. L. Sensenich, South Bend, Ind.; secretary and general manager, George F. Lull, Chicago; treasurer, J. J. Moore, Chicago; editor of publications, Morris Fishbein, Chicago; business manager, Thomas R. Gardiner, Chicago.

The board of trustees included: William F. Braasch, Rochester, Minn.; Ernest E. Irons, Chicago; W. M. Johnson, Winston-Salem, N.C.; Louis H. Bauer, Hempstead, N.Y.; E. L. Henderson, Louisville, Ky.; John H. Fitzgibbon, Portland, Ore.; James R. Miller, Hartford, Conn.; Dwight H. Murray, Napa, Calif.; E. J. McCormick, Toledo, O.

## American Veterans Committee.

The American Veterans Committee (A.V.C.), an organization exclusively for veterans of World War II, achieved national stature in 1947 with recognition by the Veterans' administration as a major veterans' organization and expansion of its membership to all 48 states.

Founded late in 1944 by Charles G. Bolte and Gilbert Harrison as a veterans' organization devoted to the principle of "citizens first, veterans second," the A.V.C. claimed in 1947 a membership of 115,000. At its second annual convention held in Milwaukee, Wis., in June 1947, the A.V.C. reaffirmed its liberal program in the domestic, international and veterans' fields. Major planks in the platform included advocacy of the Taft-Ellender-Wagner bill as the long-range solution to the housing problem; support of the Marshall plan but opposition to the Truman doctrine; opposition to the Taft-Hartley bill but with recommendations that "union leadership recognize its obligation to foster standards of maximum efficiency"; opposition to a veterans' bonus; endorsement of the Fair Employment Practice committee, anti-lynching and anti-poll tax legislation; advocacy of increases in subsistence allowances for student veterans and in ceilings on on-the-job trainee payments; endorsement of General Omar N. Bradley's program in the Veterans' administration; support of a free enterprise system based on "intelligent planning"; opposition to totalitarianism of both the left and the right; and support of the Baruch plan for international control of atomic energy.

A.V.C. elected Chat Paterson of Ottumwa, Ia., as national chairman and Richard Bolling of Kansas City, Mo., as national vice-chairman, in June 1947. Among A.V.C.'s major campaigns during the year were drives for enactment of "comprehensive housing legislation," and for action by congress "to halt sky-rocketing prices." The organization also conducted community programs urging veterans to reinstate their National Service Life Insurance. Although nonpartisan, and forbidden by its constitution from endorsing or rejecting candidates, the A.V.C. announced as a major objective, as 1947 ended, an effort "to get out the veteran vote in the 1948 elections." (A. L. N.)

## American Veterans of World War II (Amvets).

Amvets traces its history back to the autumn of 1943, when a veteran-student, Elmo Keel, formed a veterans' club. Within a few months, this group combined with another (National Veterans of World War II) organized by Andrew Kenny, a U.S. government employee. The merger was named American Veterans of World War II. In Sept. 1944, nine different vet groups from as many states met in Kansas City, Mo., to lay the groundwork for a unified national organization. They voted to call the new outfit American Veterans of World War II; the short designation, Amvets, was coined by a reporter.

Delegates elected Keel as acting commander. In Nov. 1945, the first full convention, representing 132 posts, elected as first regular commander, Jack Hardy, a Los Angeles attorney. Ray Sawyer of Arlington, Va., was the second national commander (elected at St. Louis, Nov. 24, 1946). In Oct. 1947, the third national convention of Amvets, representing 1,385 posts, elected as national commander Edgar C. Corry, Jr., of Des Moines, Ia.

Fundamentally, Amvets was conceived by men who said, "We Served Together, Now Let's Build Together."

At the first national convention, delegates decreed that this should specifically be accomplished through 11 basic principles, adopted as "the aims and purposes" of Amvets and written into article II of the national constitution.

Amvets functions on a nationwide scale. It is organized with a national headquarters, located at 724 Ninth St., N.W., Washington, D.C., and departments in the various states, the territories and the District of Columbia.

Local posts are formed within these departments. Intermediate administrative groups, operated by the National Executive committee, national vice-commanders or the department executive committees, or both, function within their respective regions and jurisdictions.

Amvets, as an organization, has three major purposes: (1) to promote world peace; (2) to preserve the American way of life; (3) to help veterans help themselves.

Amvets supported the United Nations, military appropriations, strong air defense and universal military training, coupled with a revision of the military justice system.

In 1947 Amvets was sponsoring a "G.I." (Government Interest) program to educate teachers, school boards and others in the great need for teaching U.S. government and history in a manner to stimulate the interest of schoolchildren in government. On the theory that the best way to clear up juvenile delinquency is to provide juvenile opportunity, Amvets inaugurated in March 1947 an annual national teen-age basketball tournament.

In the field of veterans' legislation, Amvets pushed for low-rent housing, an increase in the subsistence allowances for students in school and on-the-job training, cash payment of terminal leave bonds and equitable treatment of the disabled; but avoided pressing for other so-called "hand-out" types of veterans' benefits. (*See* also VETERANS' ORGANIZATIONS.)

## Anaemia.

Extensive tests of folic acid on patients with pernicious and macrocytic anaemias were reported from the United States, England, India, France and other parts of the world during 1947. Adequate increases in the number of red blood cells followed the use of the medicine, but neurologic complications were not stopped or prevented in pernicious anaemia. In fact one observer argued that folic acid produced neurologic disturbances. A haematologic improvement was noted only in those patients with a megaloblastic marrow. Cases of macrocytic anaemia refractory to liver therapy, but responding well to folic acid, were reported.

Patients with pernicious or macrocytic anaemia following gastrectomy exhibited little or no erythrocyte regeneration when given hexaglutamyl congugate in a yeast concentrate containing strong conjugase-inhibiting activity, but a significant response was obtained when they were given synthetic pteroylglutamic acid.

Pernicious anaemia and tumours of the stomach developed in the same individuals more often than in the general population as a whole.

Duodenal fluid of swine produced a powerful reticulocyte response and a conversion of a megaloblastic to a normoblastic bone marrow in a patient with pernicious anaemia.

Thiamin produced aggravation of the symptoms of diarrhoea and pellagrous dermatitis in inadequately nourished patients with pernicious anaemia and transient increase in the changes in peripheral nerves.

A hypochromic macrocytic nonhaemolytic anaemia with increased haemolysis appeared in patients with hunger oedema. There was a rapid therapeutic response to liver extract and autolyzed yeast.

Methionine produced a haematopoietic remission in a patient with macrocytic anaemia which had been resistant to large doses of liver.

In dogs with anaemia of haemorrhage and protein depletion,

U OF I
LIBRARY

food proteins in adequate amounts produced a positive nitrogen balance, a maintenance of body weight, considerable amounts of new haemoglobin and plasma protein. A diet of pure amino acids essential for growth produced haemoglobin and plasma proteins but did not maintain body weight. Body or tissue protein was utilized when there was a deficiency to produce new haemoglobin and plasma protein.

Considerably more iron, injected intravenously, was required to maintain a normal plasma iron level in the presence of anaemia of chronic infection than in patients with iron deficiency anaemia. Intensive prolonged therapy with iron did not relieve the anaemia of chronic infection, and the anaemia was not the result of lack of iron but rather a defective capacity of the marrow cells to utilize the iron.

In children, 49% of the cases of anaemia were secondary to infection, 13% to deficient diet, 2% to immaturity, 28% to combinations of these factors and 8% to other causes.

Congenital haemolytic anaemia appeared to be a mild manifestation of erythroblastosis and occurred when the maternal antibody titer was low in cases both with univalent and with bivalent antibodies.

Congestive heart failure, secondary to anaemia, was more common in Africans than in the nonindigenous white population.

Hyperchromic macrocytic anaemia in two-year-old children was cured by fresh vegetables and fruits.

The leukopenia, granulocytopenia and anaemia of sulfanilamide, sulfathiazole and sulfadiazine poisoning were prevented or curtailed by feeding folic acid, liver extract or dried yeast extract.

Choline possessed no direct erythropoietic activity, but under certain circumstances it potentiated the effect of liver extracts in megaloblastic anaemias.

The anaemia produced in rats by the injection of turpentine was prevented by the simultaneous administration of cobalt salts.

In the treatment of anaemia, a definite species difference in the effect of food elements, vitamins and minerals was found.

Cases of hookworm disease sometimes failed to show anaemia, but others showed reversible microcytic hypochromic anaemia or an irreversible aplastic form.

The effective renal blood flow was reduced 31.8% to 46% in patients with chronic anaemia.

Rats fed a purified diet low in pantothenic acid or deficient in riboflavin developed anaemia.

Chronic thrombosis of the portal vein of exogenous origin was found in splenic anaemia and not related to a toxin liberated by the spleen.

Death from erythroblastosis foetalis was prevented by the replacement of about 63% to 75% of the infant's blood with a transfusion of compatible Rh negative blood after or during withdrawal of the patient's blood.

A new type of hereditary haemolytic jaundice with splenomegaly, macrocytic anaemia, reticulocytosis, normal cell fragility, but without spherocytosis, was described.

In the population exposed to atomic bomb explosions, in severe radiation injury, anaemia appeared in 7 to 28 days, while in the moderately severe cases, anaemia was noted in from 10 to 35 days.

**Anaesthesiology.** Progress in anaesthesiology during 1947 generally followed careful investigation of existing agents. Much effort was expended in investigating chloroform, and for the most part previous opinions regarding this anaesthetic agent were verified; the answer to chloroform had not yet been finally settled. Because of the large number of anaesthetics which are satisfactory when used alone or when supplemented with other agents or with curare, the older anaesthetic agents and methods had become less important than they were when fewer agents were available.

Myanesin was suggested as a substitute for curare, but did not appear likely to supplant the latter, especially in the form of d-tubocurarine. Investigation into the application of physics to the study of anaesthetics and in the control of their administration advanced considerably.

Electronic devices for measuring the oxygen content of various mixtures of gases (the oximeter) became available and furnished useful information regarding the important question of providing enough oxygen for the patient without wasting it. Another type of oximeter attached to the ear provided valuable information concerning the oxygen content of arterial blood. An electronic device was developed to indicate the ether content of an anaesthetic atmosphere quickly and continuously—information never readily available previously. Devices for recording pulse rate proved unsatisfactory for anaesthesiologists. Similar automatic devices for determining the blood pressure had not been perfected.

The study of pathology from the standpoint of the anaesthesiologist was begun. Anaesthesia records for the collection of important data for statistical study were still further developed.

The year 1947 saw the most advanced development of organizational effort by both the medical and nonmedical anaesthetist in efforts to increase the skill and knowledge of the anaesthetist through educational programs and standards for instruction. In the field of control of pain, a new agent, methadon (4,4-diphenyl-6-dimethylamino-hepanone-3-hydrochloride) was given a rather extensive trial and proved to be a valuable agent in the relief of pain.

During 1947 missions were conducted by several countries into the war-torn areas. The representatives included anaesthesiologists as well as members of the other specialties of medicine and surgery. These missions accomplished much in the spread of late developments in all fields of medicine. (*See* also SURGERY.)

BIBLIOGRAPHY.—A. R. McIntyre, *Curare; Its History, Nature and Clinical Use* (1947); G. P. Pitkin, in J. L. Southworth and R. A. Hingson, *Conduction Anesthesia; Clinical Studies* (1946). (J. S. L.)

**Anderson, Clinton Presba** (1895– ), U.S. government official, was born on Oct. 23 in Centerville, S.D. Ill health forced him to give up his studies at the University of Michigan in 1916, and he went to New Mexico where he worked as a newspaperman and insurance salesman. In 1940 he was elected on the Democratic ticket to the federal house of representatives and was twice re-elected. A conservative, Anderson supported President Franklin D. Roosevelt's foreign policy but frequently voted against the president's domestic reforms.

On May 23, 1945, about six weeks after Harry S. Truman became the country's chief executive, he named Anderson secretary of agriculture.

In 1946 Anderson went on record as opposing reimposition of food rationing in the U.S.; he also campaigned within the cabinet for lifting of price controls. In 1947 he advocated a national farm policy of "sustained abundance," and he submitted a proposal to congress to this effect on Oct. 6. However, the department of agriculture's determination to implement this program by maintaining high farm prices was at variance with the president's avowed policy of fighting inflation.

Toward the end of the year, disclosure that Edwin W. Pauley, special assistant to Secretary of Army Kenneth C. Royall, was a heavy trader in commodities brought a demand from Republican legislators that Anderson list all government officials engaged in commodities speculation. Anderson refused, asserting that a 1936 law specified that names of traders be kept confidential. However his suggestion that the law be rescinded in part to permit disclosure was acted upon by congress, which passed a resolution to that effect. The measure was signed by President Truman on Dec. 19, and three days later the agriculture department began publishing the names of all traders.

**Angling.** Returns for 1947 fishing licence sales were not available at the end of the year, but the 1946 tabulation placed a total figure at 11,068,717 licences sold in the United States at a total fee of $15,877,361. These figures cover the period from July 1, 1945, to June 30, 1946. The largest revenue was collected by the state of California, with $1,545,026, at a total licence sale of 764,557. The greatest licence sale was in the state of Michigan, with a total of 904,557. Officials estimated the increase for the year July 1, 1946, to June 30, 1947, at from 10% to 15%.

The 39th annual casting tournament was held at Long Beach, Calif., conducted by the National Association of Angling and Casting Clubs. Three new world records were set: Jimmie Green, of San Francisco, Calif., set a record with a 206-ft. cast in the distance salmon fly event for an average of $198\frac{2}{3}$ ft.; Dick Miller, of Huntington Beach, Calif., set a new world record in the $\frac{1}{2}$-oz. distance plug event with a long cast of 451 ft.; Cliff Wyatt, of Long Beach, Calif., set a record in the Skish fly accuracy event with a score of 95.

BLUEFIN TUNA, weighing 801 lb., the catch of Dr. Leon Storz, senior U.S. contestant in the international tuna matches held at Wedgeport, Nova Scotia, in Sept. 1947

Manufacture of fishing tackle was accelerated in the United States, and production on a small scale was resumed in England. Many new developments took place; the use of new metals such as beryllium, copper, magnesium and aluminum alloys, and glass fibre were used in making fishing rods. Top-quality rods were still scarce, as were silk fly lines, and reels were available in limited quantities.

"Spinning" or "thread-line fishing" made a national debut in the United States. This is a form of angling which employs the use of a stationary-spool reel. It originated in Europe.

Four world-record fish were caught by rod and reel during 1947. A 64-lb. 8-oz. muskellunge (length 58 in.; girth 24 in.) was caught in Favil lake, Wis., on May 17, by Alois Hanser. A 37-lb. rainbow trout (length $40\frac{1}{2}$ in.; girth 18 in.) was caught in Lake Pend Oreille, Ida., on Nov. 25, by Wes Hamlet. A 29-lb. 4-oz. Dolly Varden trout (length $36\frac{1}{4}$ in.; girth $24\frac{3}{4}$ in.), also from Lake Pend Oreille, was taken by R. C. Worst. A 4-lb. 4-oz. white perch (length $18\frac{1}{4}$ in.; girth $6\frac{1}{2}$ in.) was taken at Havana, Ill., on May 30, by George H. Brader.

A new caught-by-any-method record was officially accepted in the form of a 102-lb. muskellunge, taken in Minocqua lake, Wis. (A. J. Me.)

**Anglo-Egyptian Sudan.** A territory in northeast Africa under the joint sovereignty of Great Britain and Egypt. Area: 967,500 sq.mi.; pop. (est. 1942): 6,591,000. Chief towns: Khartoum (46,311); Omdurman (117,041); Wad Medani (5,429); El Obeid (33,328); Kassala (30,026); Berber (20,000); Port Sudan (26,255); Atbara (19,757). Languages: English, Arabic and various Nilotic and Negro tribal dialects in the south. Religion: Mohammedan; south Sudan 20% Christian. Governor-general in 1947: Sir Robert George Howe.

**History.**—Comparatively quiet progress was made in the Sudan in 1947 toward the declared end of independence and self-government. Anglo-Egyptian negotiations for the revision of the existing treaty had just broken down over the issue of the future of the Sudan when the year began. Egypt claimed that the Sudan was an essential part of the dominion of the Egyptian crown, both historically and on grounds of common religion and culture and, particularly, because of the importance of the Sudan in respect to the Nile, upon which Egypt's economy and life depended. The Egyptian demands for the total evacuation of British troops and the unification of the Nile valley were met by the refusal of the British government as expressed in the terms of its declaration transmitted to Egypt through the British embassy in Cairo on Jan. 25: that it could not "sign away a people's right to self-determination in a treaty with a third party." The Sudanese, declared the British government, might "at the proper moment of political maturity choose full independence from Egypt." This attitude was unacceptable to Egypt which claimed full and perpetual sovereignty over the Sudan, and the next day the Egyptian premier informed the press that his government was about to submit the whole question to the United Nations. When in August the question came before the Security council, only the Arab states, represented by the Syrian delegate, fully supported the Egyptian claims, although even he coupled his support with a plea for a gesture by the United Kingdom. The council, with some abstentions, recommended the resumption of direct negotiations between Britain and Egypt. There for the time the matter rested. (*See* EGYPT.)

Meanwhile, inside the Sudan there was progress toward the government's declared object of independence within 20 years. The Gordon Memorial college was being made ready to receive the university in which the future rulers of the Sudan were to be trained and, on July 29, it was announced that the government had approved the recommendations of a report which sought to increase the Sudanese share in the central government. This report provided for a central legislative body representative of the whole Sudan, the majority of whose members were to be elected. An executive council was to be set up composed of 12 members of this legislative assembly. In March Sir Hubert Huddleston, governor-general of the Sudan, resigned and was succeeded by Sir Robert Howe. (H. S. D.)

**Education.**—Elementary schools (1945) 117 (19,400 boy pupils); girls' schools 62 (6,700); technical schools 2 (221 boys); private schools 52 (6,900 boys and 3,300 girls); sub-grade and Koran schools 345 (23,000). Gordon Memorial college, students 134, excluding Kitchener school of medicine.

**Finance.**—Revenue (est. 1947) £E9,208,000; expenditure £E9,148,341; public debt (liability at Dec. 31, 1946) £E13,433,126. Currency: Egyptian pound (£E) = 413.33 U.S. cents.

**Trade and Communication.**—Foreign trade (1946): imports £E11,467,962; exports £E9,267,831. The principal government imports were 22,635 short tons of sugar valued at £E572,587 and 49,160 short tons of coal and coke valued at £E186,120. Great Britain contributed 23.9% of the imports and received 36.6% of the exports. India came next with 22% and 25.6% respectively, followed by Egypt with 19.1% imports and 18.4% exports. Communications: (1947) roads for motor traffic *c.* 1,000 mi.; railways 2,056 mi.; steamer services 2,325 mi.; motor vehicles licensed (1944) 3,399 cars, commercial vehicles and cycles; telephone subscribers (1945) 3,546; exchanges (1946) 46. Telephone communication with Great Britain was re-established at the end of 1945.

**Agricultural and Mineral Production.**—Exported production (1946), in short tons: raw Egyptian cotton 56,339; cotton seed (Egyptian) 80,562; gum arabic 34,082. Cattle and sheep, numbering 30,314 and 62,744 respectively, were also exported.

## Anthropology.

One of the most significant developments in anthropology in 1947 was the marked expansion of activities of an international character. This tendency was illustrated by the establishment or reorganization of international anthropological congresses and societies, of large scale co-operative research projects and in the United States, by the increasing emphasis on foreign area programs in the universities.

The 28th International Congress of Americanists met in Paris Aug. 24–31, attended by approximately 200 persons from 22 countries. Under sponsorship of the International African institute the Conference on African Anthropological and Linguistic Research was held in London in July. Problems of anthropological research and the progress of colonial government in Africa were discussed by British scholars and colonial officials and by anthropologists from France, Belgium, the Netherlands, Italy, Sweden and Portugal. The first session of the Pan-African Congress on Prehistory, organized by L. S. B. Leakey, met at Nairobi, Kenya, British East Africa, from Jan. 14 to 23, with Abbé H. Breuil as president and R. Broom, vice-president. The congress was successful in bringing together more than 60 archaeologists, palaeontologists and geologists from Africa and Europe for discussion of fundamental problems of human evolution and the development of early cultures arising from recent discoveries in Africa. Plans were made for co-ordinated research in the future, and a permanent organization was set up to arrange for regular sessions every four years.

The International Hylean Amazon institute, with headquarters at Belém, Brazil, was established by U.N.E.S.C.O. (United Nations Educational, Scientific and Cultural Organization) for biological, geological and anthropological exploration and study of the Amazon basin. In the social sciences the project would include a study of the anthropological background and studies of housing and town planning for an equatorial region. This part of the project was being organized by Alfred Metraux, senior social officer in the department of social affairs, United Nations.

In order to encourage full participation of American scientists in the affairs of U.N.E.S.C.O. the National Research council established a special committee on U.N.E.S.C.O., on which Gene Weltfish represented anthropology. The new committee was to act as a clearing house for suggestions and inquiries concerning U.N.E.S.C.O. and would work to promote the exchange of scientists under auspices of U.N.E.S.C.O. The National Research council also set up a new committee on Asiatic anthropology, under the chairmanship of Lauriston Sharp. The council's committee on international co-operation in anthropology (M. J. Herskovits, chairman) completed plans for issuing a new edition of the *International Directory of Anthropologists.*

An important trend at U.S. universities was the development of area programs, in which anthropology joined with other disciplines in the integrated study of particular areas. The largest of such programs were those established at Cornell university, Ithaca, N.Y., Harvard university, the University of Pennsylvania, Philadelphia, Pa., and Yale university, each supported by substantial grants from the Carnegie corporation. The Harvard Russian Research centre was to be directed by Clyde Kluckhohn, with a staff of historians, political scientists, psychologists and anthropologists. The Yale Southeast Asia program was headed by Raymond Kennedy, who was to be joined by Karl Pelzer, geographer, John F. Embree and other anthropologists. At the University of Pennsylvania, W. Norman Brown was to direct a teaching and research program devoted to the study of India, Pakistan and adjacent countries. The place of area studies in the colleges and universities and the rôle of anthropology and the other social sciences in such studies were discussed in four reports which appeared during the year: *The Ethnogeographic Board,* by W. C. Bennett; *Area Studies in American Universities,* by William N. Fenton (presenting results of the Ethnogeographic board's survey of army area and language-training courses); *Language and Area Studies in the Armed Services: Their Future Significance,* by R. J. Matthew; and *Area Studies: With Special Reference to their Implications for Research in the Social Sciences,* by R. B. Hall.

Indicative of postwar growth of anthropology in England was the formation of an Association of Social Anthropologists (A. R. Radcliffe-Brown, president, E. E. Evans-Pritchard, hon. secretary), for the purpose of promoting the study and teaching of social anthropology. In Oslo, Norway, two new organizations were formed, the Norwegian Ethnological society, with Nils Lid as chairman, and the Norwegian Ethnological institute, under direction of Mrs. Marta Hoffman, and later, Hilmar Stigum.

The Institut International d'Archéocivilization was established at the Centre International de Synthèse, Paris, by delegates from eight European and American countries. André Varagnac was permanent secretary of the new society, which has as its purpose the development and improvement of techniques for comparative research in the fields of archaeology, folklore and the history of religion. Another new French society (Société d'Ethnographie Française) was established at the Musée National des Arts et Traditions Populaires, Paris. First president of the society was Michel de Bouard.

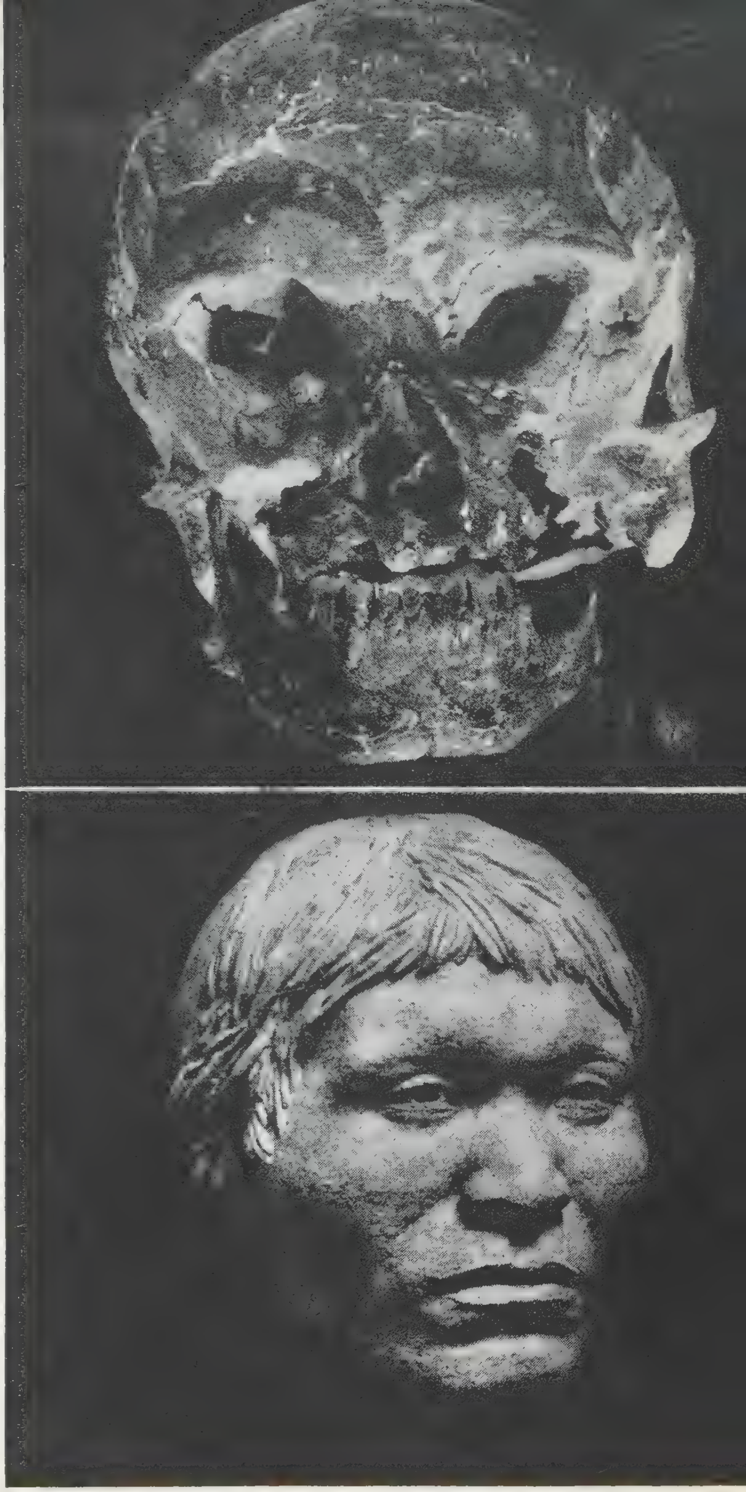
Also of anthropological interest was the inauguration of a new quarterly journal, *Human Relations,* devoted to integration of the social sciences and published jointly by the Tavistock Institute of Human Relations, London, and the Research Center for Group Dynamics, Massachusetts Institute of Technology, Cambridge, Mass.

In Norway Dr. Gutorm Gjessing was appointed professor of ethnography and director of the Ethnographical museum, University of Oslo. C. F. Voegelin assumed chairmanship of the newly created department of anthropology at Indiana university, Bloomington, Ind. A school of naval administration to train naval officer personnel for administering civilian populations in the U.S.-held Pacific islands was organized at Stanford university, Stanford University, Calif., by Felix Keesing. At Santa Fe, N.M., the Laboratory of Anthropology, the Museum of New Mexico and the school of American research were consolidated, with S. G. Morley as director. F. G. Rainey was named director of the University museum, Philadelphia, and the department of anthropology at the University of Pennsylvania was enlarged by the appointment of A. I. Hallowell, L. C. Eiseley, and W. M. Krogman. Alexander Lesser became executive director of the Association on American Indian Affairs, New York, N.Y. Clyde Kluckhohn was elected president of the American Anthropological association and E. A. Hoebel was made president of the American Ethnological society.

In the first year of operation since its reorganization, the American Anthropological association instituted a number of new procedures aimed at making it an effective force in stimulating and synthesizing activities in the various fields of anthropology. A full-time secretariat was established to carry out the policies and directives of the council and the executive board. Erminie W. Voegelin was appointed to this post, with the title of executive secretary.

The largest anthropological research program of 1947 or of any recent year was the series of co-ordinated investigations in Micronesia under the auspices of the Pacific Science board of the National Research council. Forty-four anthropologists, linguists and geographers, representing 22 institutions, joined in the project, which was supported by the Pacific Science board, the office of naval research and the participating organizations. The object of the work was to provide basic scientific information on the Marshall, Caroline and Marianas Islands, which had been closed to western scientists since their occupation by the Japanese. Particular attention was given to problems of rehabilitation, health and welfare of the inhabitants. Harold J. Coolidge was executive secretary of the board and G. P. Murdock co-ordinator of the anthropological program. Anthropologists working on the project include H. G. Barnett, Sir Peter Buck, E. G. Burrows, Isadore Dyen, Kenneth P. Emory, W. W. Gruelich, W. A. Lessa, G. P. Murdock, Alexander Spoehr, John Useem and J. E. Weckler.

In South Africa the excavations of R. Broom and J. T. Robinson resulted in discoveries that might have a crucial bearing on the question of the origin of man. At Sterkfontein, embedded in breccia of Pliocene age, they found the bones of a number of individuals of the South African ape-man, *Plesianthropus transvaalensis.* Among the finds were a complete skull, a well preserved lower jaw, various limb bones and teeth and a perfect pelvis. Though possessing some hominid features, the skull and jaw were essentially apelike. The limb bones and teeth were more like those of man, and the pelvis was remarkably human in appearance, being scarcely distinguishable from that of a Bushman. These latest finds reinforced Dr. Broom's view, shared by Le Gros Clark, that *Plesianthropus* and the other *Australopithecinae* were a group of higher primates closely related to man, and the group from which man may have evolved. A geological and palaeontological expedition sent out by the University of California, organized by Wendell Phillips, also began to search for the early forerunners of man in South Africa. In connection with this expedition E. M. Loeb made



FOSSILIZED SKULL (above) dating back an estimated 8,000 to 10,000 years, which was unearthed at Tepexpan, Mex., on Feb. 22, 1947. Below it is a reconstructed head of Tepexpan man modelled by Leo Steppat over a cast of the skull ethnological studies among the Bushmen and Ovambo, while Henry Field went to northeastern Egypt for archaeological and anthropometric studies.

A skeleton discovered by Helmut de Terra in an Upper Pleistocene formation at Tepexpan, Mexico, provided the first apparently indubitable evidence of human remains of Quaternary age in North America. The skull was mesocranic and high-vaulted, resembling late prehistoric Indian types from the eastern United States and Mexico. Other American field research included T. D. Stewart's anthropometric and physiological studies of the Cakchiqul, or "Highland Maya," of Guatemala, and Isabel Kelly's ethnographic work among the lowland Totonac of Veracruz. John C. Ewers worked among the Blackfeet in Montana and Alberta, and Richard Slobodin, with a grant from the Arctic Institute of North America, made acculturation studies in the Mackenzie valley.

Robert H. Lowie received the Viking fund gold medal and $1,000 prize in 1947 for his outstanding contributions to ethnology. The $10,000 prize offered by McGraw-Hill for the best book on a scientific subject written for laymen was awarded to Clyde Kluckhohn for his manuscript, *Anthropology and the World Today*. Harold S. Gladwin's *Men Out of Asia* won a $1,000 prize in the same contest.

The final volume of Kristian E. Schreiner's monumental work, *Crania Norwegica*, was published by the Institute for Comparative Research in Human Culture, Oslo. In an article in *Fornvännen*, Elias Dahr described skulls from a Neolithic site at Visby, on the Island of Gotland, as representing probably the purest prototype of the Nordic race. Publications in anthropometry included the first two reports of the quartermaster corps research project, *Survey of Body Size of Army Personnel, Male and Female*, by Francis E. Randell. The reports described techniques and procedures used in measuring 113,921 service men and women. Franz Weidenreich's paper, "Facts and Speculations Concerning the Origin of *Homo Sapiens*," postulated ten evolutionary phases through which the hominids passed. In a paper in the *American Journal of Physical Anthropology*, A. H. Schultz contested M. F. A. Montagu's claim that man is the most variable of all primates. Other important works in physical anthropology were *Anthropologica Helvetica*, by O. Schlaginhaufen, and *Indian Skeletal Material from the Central Coast of Peru*, by M. T. Newman.

The American Museum of Natural History issued W. D. Wallis' monograph on the Canadian Dakota and the third volume of Margaret Mead's ethnological studies of the Mountain Arapesh of New Guinea. In *Trinidad Village*, M. J. and Frances S. Herskovits continued their investigations of cultural adaptations of transplanted Negro groups in the new world. The *Journal of the Washington Academy of Sciences*, the *American Anthropologist* and the *Southwestern Journal of Anthropology* carried articles by Leslie White defending the concept of cultural evolution and opposing the present tendency to emphasize the role of the individual in society and to regard culture as essentially a psychological phenomenon. Opposing viewpoints were presented by David Bidney, R. H. Lowie, and A. R. Radcliffe-Brown. Other significant ethnological publications of 1947 included *Guam and its People*, by Laura Thompson; *The Navaho* and *Children of the People*, by Clyde Kluckhohn and Dorothea Leighton; *A Navaho Autobiography*, by Walter Dyk; *Chippewa Village*, by W. Vernon Kinietz; *Moche, a Peruvian Coastal Community*, by John Gillin; *San Blas Acculturation*, by D. B. Stout; *Tuamotuan Religious Structures and Ceremonies*, by Kenneth P. Emory. (H. B. Cs.)

## Antimony.

The recoverable metal content of antimony ores mined in the major producing countries during late years was as follows:

Table I.—*World Production of Antimony*

(Short tons)

| | 1937 | 1939 | 1941 | 1943 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| Algeria | 858 | 247 | 438 | 994 | 95 | — |
| Australia | 444 | 461 | 460 | 586 | 190 | ? |
| Bolivia | 7,238 | 10,202 | 15,080 | 18,228 | 5,614 | 7,063 |
| Canada | 20 | 600 | 1,465 | 513 | 767 | 315 |
| China | 16,206 | 13,246 | 8,806 | 472 | — | ? |
| Czechoslovakia | 1,099 | 1,116 | 1,813 | ? | ? | ? |
| Italy | 456 | 743 | 903 | ? | 298 | ? |
| Mexico | 10,789 | 7,984 | 11,289 | 13,873 | 8,877 | 6,665 |
| Peru | 1,429 | 854 | 1,587 | 2,725 | 2,250 | 1,068 |
| South Africa | — | 7 | 491 | 1,720 | 2,480 | 2,368 |
| Turkey | 591 | 507 | 6 | 9 | — | ? |
| United States | 1,266 | 361 | 1,117 | 5,113 | 1,776 | 2,305 |
| Yugoslavia | 1,595 | 3,678 | ? | ? | ? | ? |
| Total | 42,550 | 41,000 | 52,100 | 55,000 | 29,200 | 27,400 |

Production dropped so much at the close of World War II that the postwar supply situation was almost as stringent as at any time during the war.

**United States.**—The trend of the antimony industry in the United States is as follows:

Table II.—*Data of Antimony Industry in the U.S., 1941-46*

(Short tons)

| | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|
| Production | | | | | | |
| In ore | 1,214 | 2,944 | 5,556 | 4,735 | 1,930 | 2,505 |
| In alloys* | 2,958 | 3,267 | 2,085 | 2,857 | 1,992 | 1,457 |
| Imports | 27,504 | 21,474 | 29,969 | 17,761 | 24,649 | 8,742 |
| In ore | 19,386 | 20,946 | 28,755 | 17,080 | 22,643 | 5,903 |
| Metal | 7,469 | 127 | 932 | 293 | 627 | 2,593 |
| Other forms† | 649 | 401 | 282 | 388 | 1,379 | 246 |
| Consumption, primary | 29,994 | 23,852 | 19,508 | 23,756 | 25,761 | 17,515 |
| Secondary recovery | 21,629 | 18,200 | 15,483 | 15,886 | 17,148 | 19,115 |
| Smelter output | ? | ? | 20,624 | 20,000 | 21,000 | 12,457 |

*Antimony content of antimonial lead produced from foreign and domestic ores.
†Estimated antimony content of alloys, oxide and liquated sulphide.

Domestic mine production increased somewhat above the low level of 1945, but with the 1946 imports at the lowest level after 1935, the supply was short. Antimony used as metal dropped from 12,606 short tons in 1945 to 11,662 tons in 1946, but consumption in compound form dropped from 13,155 tons to 5,853 tons.

After price control was abandoned in Nov. 1946 antimony increased in price from 15.84 cents per pound to 24.875 cents to 29.625 cents in December, 31.19 cents on Feb. 1, 1947, 35.94 cents on March 15, and 36.03 cents on Oct. 14. (G. A. Ro.)

## Anti-Semitism.

Whether anti-Semitism increased or decreased in 1947 is difficult to ascertain. For the most part, men everywhere were preoccupied with the still uncompleted task of meeting the more general and fundamental problems of reconstruction and peace. Although the difficulties encountered were discouraging, there were no serious incidents of disabilities against, or persecution of, Jews. This fact, in itself, warranted cautious hope. That a year of such general unrest and confusion was not replete with anti-Semitic movements and demonstrations might have indicated some progress over the comparable period at the end of World War I. Since organized anti-Semitism is always a symptom of widespread frustration and disillusionment, the guess might be ventured that, despite the difficulties encountered in finding a formula for the peace in 1947, men had not despaired of success.

Objective observers were practically unanimous in reporting that in a hungry and anaemic Europe, people of Jewish faith were rebuilding their lives, on a basis of equality with their fellow citizens, in the traditionally liberal countries of the west-

ANTI-SEMITIC RIOTING broke out in Liverpool, Manchester and other English cities on Aug. 1, 1947, after the slaying of two British sergeants in Palestine. A workman is shown clearing broken glass from a vandalized shop window in Liverpool

ern part of the continent. This same condition prevailed in the Scandinavian nations. Norway went to the displacement centres of the continent to offer new homes to displaced persons of Jewish faith, in a number equal to those who had been lost during the German occupation and the war. In France, Léon Blum again emerged as an important political figure.

Naziism seemed to have left a more enduring mark upon the country of its origin. Most responsible observers felt that, in 1947, Germany was still an unhealthful place for people of Jewish faith.

The eastern and central parts of the continent were closed in by the "iron curtain." It was almost impossible, therefore, to learn the true condition of people of Jewish faith in those areas. But unless there had been a radical and unannounced change of soviet policy, these people were unquestionably better off than they had been either during the war or in the years immediately preceding it. Officially, anti-Semitism was a crime against the state in soviet Russia. The one exception seemed to be Poland. There neither the "iron-curtain" nor a soviet-dominated government seemed successful either in ending anti-Semitism or preventing the world from knowing it. The Polish government seemed to be making extraordinary and successful efforts to eradicate official anti-Semitism, but it was compelled to admit that, in 1947, it had not successfully eliminated it from the masses of a people so long indoctrinated with prejudice.

In the United States, one new phenomenon was apparent. Anti-Semitism was no longer discussed only by people of Jewish faith, the clergy and sociological academicians. Two motion pictures and one best-seller novel indicated that there was at least a superficial interest in the problem among large numbers of people. Authorities in the fields of activities to counteract anti-Semitism were divided in their opinions as to the benefits of this new phenomenon. Some felt that it was healthy to have the whole subject fully aired; others held that such popularization would serve only to bring the problem to the attention of millions who had never been conscious of its existence. The success of these popularizations seemed to indicate that the first school of thought would prevail. At least the United States would meet the problem, in whatever dimensions it might exist, aware of its many-headed character.

One new element was injected into the entire problem, on a world basis. In November the United Nations voted to partition Palestine into Jewish and Arab states. This plan represented a yielding to Zionist political pressures. As a political movement, it was inevitable that Zionism should divide the world, as it had divided Jews, into "pros" and "antis." Anti-Zionism had appeared in vigorous fashion in England in 1946 and continued through 1947. The United Nations' decision solidified anti-Zionist opinion in the Arab states. Jews appeared in grave jeopardy throughout the Arab world and Zionists and Arabs were fighting each other in Palestine.

This United Nations proposal made an evaluation of anti-Semitism difficult, unless one now made the necessary and legitimate distinction between Jew and Zionist. Discrimination against human beings of Jewish faith was one thing—and indefensible; opposition to a political theory (Zionism) was another—and legitimate. Not all Jews are Zionists. Unless the world learned and remembered that, the divisiveness of pro- and anti-"Jewish" feeling, which would really be pro- and anti-Zionist, might wreak havoc wherever Jews lived, for themselves and the countries of which they were integral citizens. This distinction held the answer to anti-Semitism in the foreseeable future. (*See* also FASCISM: JEWISH RELIGIOUS LIFE; REFUGEES.)

## Appleton, Sir Edward Victor

(1892– ), British physicist, was born on Sept. 6 and was educated at St. John's college, Cambridge. He started his academic career as an assistant demonstrator in experimental physics. Later, he was physics professor at the University of London (1924–36) and professor of natural philosophy at Cambridge (1936–39). Appleton became secretary of Britain's department of scientific and industrial research in 1939.

He began the study of radio fading while serving with the British army during World War I as a signal officer. These studies led to his research in the ionosphere and experimentation with reflected radio waves to measure the distance of unseen objects. His discoveries in this field were important in the development of radar during World War II.

He was awarded the Nobel prize in physics on Nov. 13, 1947, for his contributions to ionospheric research. Upon being notified of the honour, Sir Edward said that much of the credit for his discoveries belonged to J. H. Dellinger, a U.S. scientist with whom he collaborated in studying the radar problem and to the research students who had worked with him.

**Appropriations and Expenditures:** *see* BUDGET, NATIONAL.
**Apricots:** *see* FRUIT.

## Aquariums.

The movement to re-establish public aquariums, closed during World War II, continued during 1947; those in Paris, Naples and Copenhagen were reopened.

Plans to build new institutions exhibiting aquatic life—as commercial, self-sufficient businesses, as public exhibitions supported wholly or in part by public funds, or as adjuncts to institutions of learning—were underway in several parts of the world, including Suez, Buenos Aires, Acapulco, Quebec, New York city, Jerusalem, Bombay and La Jolla and Hermosa Beach, Calif. At the latter four cities new buildings were actually under construction, or structures originally built for other purposes were being remodelled.

The collections of the great majority of aquariums were still below prewar levels because the necessary collecting stations and shipping lines had yet to be re-established.

Fishes for home aquaria were receiving attention from the commercial interests involved, and collecting stations for fresh-water tropical species were reopened in several far eastern areas and in West Africa. (C. W. C.)

**Aqueducts.** Up to 1947, the bureau of reclamation in the U.S. department of the interior had developed, designed and constructed many projects to conserve and utilize the rivers and water resources in the 17 western states. It had built many thousands of miles of canals, tunnels, siphons and pipelines to make possible the irrigation of more than 5,000,000 ac. of arid or semiarid farm lands.

The 71-mi. San Diego aqueduct, branching from the Colorado River aqueduct near San Jacinto, Calif., was to carry about 50,000,000 gal. of water daily to the San Diego area. Designed by the bureau of reclamation, it was built under the supervision of the bureau of yards and docks of the U.S. department of the navy. Construction was essentially completed in 1947.

The 41-mi. Salt Lake aqueduct under construction by the bureau of reclamation on the Provo River project in Utah, was about two-thirds complete at the end of 1947. It was built to transport nearly 100,000,000 gal. of water daily from Deer Creek reservoir, located northeast of Provo, to the vicinity of Salt Lake City, for industrial, domestic and irrigation purposes.

Aqueduct construction during 1947 on the bureau's Colorado-Big Thompson project included the completion and start of emergency operation of the 13-mi. Alva B. Adams tunnel; completion of the Rams Horn tunnel; and the placement of concrete lining in the Prospect Mountain tunnel and the $10\frac{3}{4}$-ft.-diameter Aspen Creek siphon. These structures were built to convey Colorado river water from the western slope of the Rocky mountains under the continental divide to the Big Thompson canyon on the eastern slope for power production and the supplemental irrigation of 615,000 ac. of fertile farm land in northeastern Colorado.

The first 107 mi. of the 125-mi. Coachella canal in southern California was complete, while another 8-mi. section was under construction. This canal, branching from the All-American canal west of Yuma, Ariz., was to extend northwest as far as Indio, Calif., and water some of the most fertile land in the southwest.

On the 2,000,000-ac. Central Valley project in California, under construction by the bureau of reclamation, work continued on several large irrigation canals. The first 73 mi. of the 160-mi. Friant-Kern canal were complete or under construction. This huge canal was to convey San Joaquin river water from back of Friant dam to rich farm lands as far south as the Kern river. Construction was underway on a 24-mi. section of the Delta-Mendota canal, to carry Sacramento river water from the San Francisco bay area southward 120 mi. along the San Joaquin river and discharge it into the San Joaquin at Mendota, Calif., thereby providing water for irrigation purposes along the San Joaquin, in lieu of that diverted by the Friant-Kern canal.

Construction of major irrigation canals, initiated in 1946 by the bureau, continued on the Columbia Basin project in Washington. Columbia river water stored in Lake Roosevelt behind Grand Coulee dam was to pass through these river-size canals and be used for the irrigation of more than 1,000,000 ac. in central Washington. The 14-mi. Main canal, with a capacity sufficient to irrigate most of this vast acreage, was to be the largest irrigation canal in the northwest. Other canals under construction in this area included the 80-mi. West canal and the 130-mi. East Low canal. These latter canals were to branch from the Main canal and serve a total of over 530,000 ac. (*See* also CANALS AND INLAND WATERWAYS; DAMS; TUNNELS.)

(M. W. Ss.)

**ARA:** *see* AGRICULTURAL RESEARCH ADMINISTRATION.

**Arabia.** A peninsula of *c.* 927,000 sq.mi.; pop. (1941 est.) 7,756,000. It consists politically of two independent Arab states, Saudi Arabia and Yemen, of the following nominally independent territories: the sultanate of Oman and Masqat (Muscat), the territories of the Trucial sheikhdoms of Oman and Qatar, the sheikhdoms of Kuwait and of Bahrein,

KING IBN SA'UD (right) being entertained by U.S. executives of the Arabian-American Oil company in Jan. 1947, during the royal tour of inspection at Dhahran, site of a huge new oil development

an archipelago in the Persian gulf; and of the colony and protectorate of Aden (*q.v.*). Language: Arabic; religion: Moslem. Rulers: Saudi Arabia, King Abdul-Aziz ibn Abdurrahman al-Faisal al-Sa'ud; Yemen, Zaidi Imam Yahya ben Muhammed ben Hamid ed Din; Oman and Masqat, Sultan Sayyid Said bin Taimur; Kuwait, Sheikh Sir Ahmed ibn Jabir al-Subah; Bahrein, Sheikh Sir Sulman ibn Hamad al Khalifah.

**History.**—The main developments in Arabia during 1947 were connected with oil. Two new pipe lines, to carry the oil of the peninsula to the Mediterranean, were planned, one from Kuwait (a branch of which would go to Abadan, and would transport Persian oil to the Mediterranean), the other from Dammam to Sidon. In the sheikhdom of Kuwait work on the rich wells in the south of the territory, suspended during World War II, was resumed. The presence of oil-drilling machinery made possible the sinking of deep bore water wells, which might result in the irrigation of an area in the east of King Ibn Sa'ud's dominions hitherto regarded as irredeemably sterile. A railroad, to run from Dammam to Riyadh, and to be operated by diesel-electric locomotives, was being planned by U.S. engineers at the king's request.

King Ibn Sa'ud continued to harbour Rashid Ali, the Iraqi who organized the rebellion in 1941; and publicly protested against the activities of King Abdullah of Trans-Jordan in regard to Greater Syria (*see* Trans-Jordan); but tranquillity remained unbroken throughout the peninsula. Saudi Arabia and also Yemen, in common with all other Arabic-speaking powers, sent delegates to the United Nations during September to support the cause of the Palestine Arabs.

Yemen was admitted as a member of the United Nations on Sept. 30.

Arabia, that is, the kingdom of Saudi Arabia and the sheikhdoms of Kuwait and Bahrein, formed one of the most important oil-producing areas in the world. Its proximity to Palestine and the fact that its development was almost entirely in U.S. and British hands gave it a special political importance.

(F. St.)

**Finance.**—The monetary unit in Saudi Arabia is the Saudian rial. Exchange rate, 1942: 1 rial = Rs. 1 (Indian) = 30.12 U.S. cents.

**Trade.**—With Great Britain: (1947, first eight months) Saudi Arabia and Yemen: imports £564,017; exports £484,014. Bahrein, Kuwait and Trucial sheikhdoms of Oman and Qatar: imports £1,910,425; exports £1,704,665. Masqat and Oman: imports £20,201; exports nil. Saudi Arabia: exports petroleum, skins, wool, gold, charcoal, cattle, dates, clarified butter and gum.

**Arab League:** *see* Arabia; Egypt; Iraq; Palestine; Syria and Lebanon; Trans-Jordan.

## Aranha, Oswaldo

(1894– ), Brazilian diplomat, was born on Feb. 15 in Alegrete, in the state of Rio Grande do Sul. He studied law and social sciences and his first political office was as prefect of Alegrete (1926). He held various important posts in his native state and in 1930 became leader of the liberal movement. He held several cabinet and assembly posts, and in 1934 was appointed ambassador to the U.S.

In 1937, he returned to Rio de Janeiro and became minister for foreign affairs in the following year. In this post, Aranha was said to have laboured strenuously to cement genuine amicable relations between the Vargas dictatorship and the North American "colossus," to the extent of jeopardizing his political career, as Vargas at the time was not overfriendly toward Washington.

He played a leading role in the major hemispheric conferences between 1938 and 1944, and succeeded Pedro Leao Velloso as Brazil's permanent delegate on the United Nations security council in 1946. In the spring of 1947, he presided over the special session of the U.N. general assembly on the Palestine question, and in the subsequent autumn session he was elected president of that body on Sept. 16.

In a statement Oct. 17 at the annual Lafayette college alumni dinner, Aranha contended that there was no reason to be pessimistic over war talk, arguing that those "who want war cannot make war and those who can make it do not want war."

## Archaeology.

**Western Hemisphere.**—*Arctic North America.*—J. L. Giddings of the University of Alaska undertook dendrochronological and archaeological investigations in the Kotzebue area of Alaska. Ivar Skarland of the University of Alaska made an archaeological survey of the Bering Sea region of Alaska. Frank H. H. Roberts reported that a fluted point found in northern Alaska was a true Folsom type of the kind found at the Lindenmeier site in Colorado. This was the first instance of a fluted Folsom point's having been found in Alaska.

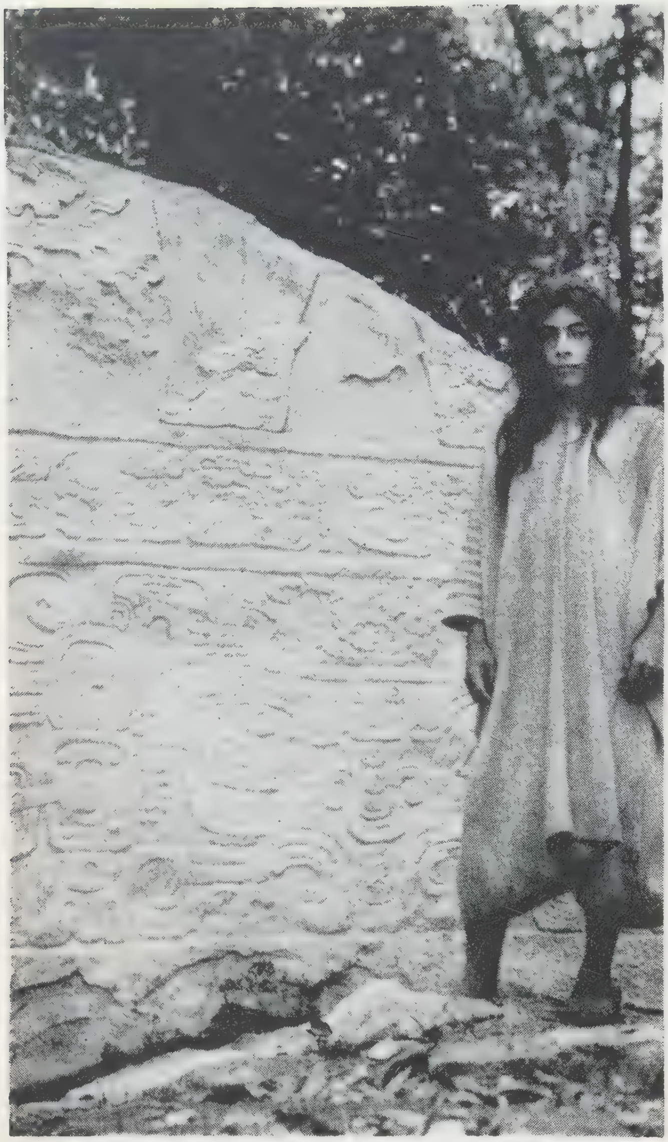
*Eastern North America.*—Under the sponsorship of the Massachusetts Archaeological society and the R. S. Peabody foundation of Andover, archaeological excavations were undertaken at the Titicut site near Bridgewater, Massachusetts. Three or four cultural horizons were discovered at this site. The uppermost and most recent horizon which was examined by Maurice Robbins of the Massachusetts Archaeological society contained protohistoric or historic materials. The earliest horizon of the site was investigated by Frederick Johnson of the Peabody foundation. He found a chipped stone complex of possible great antiquity lying upon wind-blown glacial sand.

Douglas S. Byers of the R. S. Peabody foundation excavated a site on an island in the Union river near Ellsworth, Me. The site was a stratified village. Among the significant discoveries was the presence of pottery accompanied by artifacts indicative of the Red Paint culture.

In Massachusetts, a protohistoric village site near Westfield was excavated by Harold Mohrman. Near Kingston, Charles E. Sherman excavated a shell midden; the upper level of this site belonged to the historic period. Near Brookfield, a village site excavated by George L. Carey produced gouges, bannerstones, semilunar knives and other artifacts indicative of the Laurentian Aspect. Howard Torrey, investigating a small shell midden near Ipswich, discovered burial traits that associated it with the Point Peninsula Focus of New York. Ripley P. Bullen excavated a site near Marshfield. Beneath a Colonial period dump he found a shell midden containing stone gouges, steatite vessel fragments and pottery sherds. Early in the year remains of an ancient fish trap were found in Boston during the excavation of a building 800 ft. from the site of the famous Boylston street fishweir.

A number of archaeologists and institutions investigated Delaware sites in the east. Richard MacNeish and John Witthoff of the University of Michigan excavated two sites near Easton, Pennsylvania. One of the sites historically identified as Unami Delaware produced Mohawklike remains with contact materials; the other was stratified. The upper level produced a Mohawklike complex with late Owasco connections. The middle level contained early Owasco materials plus a ceramic complex of cord-marked pottery with incised decoration. The bottom level, unrelated to the upper levels, produced an early Woodland complex.

William A. Ritchie of the Rochester museum excavated an historically identified Munsee Delaware site south of Port Jervis, New York. The top level of the site produced Mohawk cultural remains, the intermediate level contained "epigonal Iroquois" remains, and the bottom level was early Owasco (Castle Creek). Ritchie also excavated an early Point Peninsula site at Jacks Reef in central New York.



A LACANDONE, contemporary Maya Indian, standing before part of a stele, or basic date glyph, found by archaeologists of the Carnegie institution at the ruins of Bonampak, Mex., in 1947

Richard MacNeish made an analytical survey of Iroquois collections in the eastern U.S. in an attempt to differentiate the tribes of the period from 1550 to 1700, and to obtain relationships between prehistoric Iroquois complexes and the historic groupings.

T. F. McIlwraith, Norman Emerson and Margaret Thompson of the Royal Ontario museum excavated a historic Huron site near Warminster, Ont.

Wilfred Jurey of the University of Western Ontario excavated a historic Huron site near Lake Simcoe and a Neutral site near London, Ont. Frederica de Laguna of Bryn Mawr college and Douglas Leechman of the National museum of Canada made an archaeological survey of the upper St. Lawrence river valley in Ontario. Emerson F. Greenman of the University of Michigan continued his research program in the Manitoulin district of Ontario.

Richard Morgan and Raymond Baby of the Ohio State museum directed the excavation of a late Woodland village site in Delaware county, north of Columbus.

A joint expedition of the University of Chicago and the Illinois State museum excavated historic village sites on the Illinois river near Ottawa. John McGregor and Kenneth Orr directed the work of exploration. European trade materials were associated with the following complexes: Fisher, Fort Ancient, Oneota and late Woodland. It was tentatively considered that the Fisher unit represents the Kaskaskia Illinois and the Fort Ancient unit the Shawnee.

A field party from the University of Michigan made stratigraphic tests of a Hopewellian village site in Calhoun county, Ill. Tremendous quantities of sherds were obtained from a thick midden deposit.

William G. Haag of the University of Kentucky made an archaeological survey of the Wolf Creek dam reservoir in southern Kentucky. A wealth of material, much of it new in Kentucky, was found in the course of the survey. Gordon R. Willey of the bureau of American ethnology made an archaeological survey of the Caney Fork river basin in central Tennessee. Thirty new sites were recorded.

An archaeological survey of the Chattahoochee river valley in Alabama was conducted by Wesley Hurt for the Alabama Museum of Natural History. John W. Griffin and G. Hale Smith of the Florida park service investigated a number of sites in coastal Volusia county. The sites tested by excavation were representative of all periods from the earliest fibre tempered pottery complexes to historic Timucua.

Under the auspices of the Smithsonian institution Robert L. Stephenson made an archaeological survey of the Whitney reservoir area on the Brazos river between Hill and Bosque counties in Texas. As part of the Smithsonian Institution River Valley project, Joe Ben Wheat surveyed parts of coastal Texas.

*Plains Area.*—Most of the archaeological research in the Plains area continued to be focused on proposed reservoir areas that would become inaccessible after construction of dams.

In collaboration with the Smithsonian institution, Carl Chapman of the University of Missouri tested a number of important sites on the White river in Missouri. Robert E. Bell of the University of Oklahoma made an archaeological survey of several reservoir areas in Oklahoma. Certain sites along the Faurche Maline produce a culture resembling the Archaic cultures of eastern North America.

Wesley L. Bliss of the Smithsonian River Basin project, during an archaeological survey of reservoir areas in Montana and Wyoming, discovered numerous sites, some giving evidence of great antiquity. Elmer E. Meleen of the University of South Dakota excavated a number of sites in the vicinity of Pierre, S.D.

Paul L. Cooper of the Smithsonian River Basin survey made a reconnaissance of the Fort Randall reservoir in South Dakota. His excavations at the Pease creek site revealed two occupations separated by sterile layers of soil. Gordon W. Hewes of the University of North Dakota tested a number of sites in the Heart Butte reservoir. One of these sites, containing a large rectangular earth lodge, was Archaic Mandan. Marvin F. Kivett of the Smithsonian River Basin survey discovered numerous occupation sites in the Garrison reservoir, N.D.

Walter M. Hlady of the Manitoba museum, Winnipeg, made an archaeological survey along the Red river of the north in eastern Manitoba. Chris Vickers of the Manitoba Historical society examined a number of pottery producing sites of the historic period in western Manitoba.

*Pacific Slope.*—L. S. Cressman of the University of Oregon undertook archaeological explorations on the Klamath Indian reservation in an attempt to determine the prehistoric affiliation of the Klamath Indians.

Archaeological field parties from the University of California excavated an early site near Thornton; a historic Nisenan site near Sacramento; and a San Dieguito-Lake Mohave site near Los Angeles. Franklin Fenenga made an archaeological survey of reservoir areas in central California under the direction of the Smithsonian institution.

*Southwest.*—Deric O'Bryan of Gila pueblo made an archaeological survey of the Tularosa valley in New Mexico. O'Bryan excavated developmental pueblo ruins at Mesa Verde in Colorado. The Chicago Natural History museum expedition undertook archaeological investigations in the Pine Lawn valley of New Mexico. John Rinaldo and E. B. Sayles made an archaeological survey of the Pine Lawn valley. Strategic sites were excavated under the direction of Paul S. Martin assisted by George I. Quimby and John Rinaldo. Ernst Antevs studied the geology of the Pine Lawn valley in relation to the Indian occupancy and the dating of early sites. The sites investigated were as follows: a Chiricahua stage Cochise site; a Pine Lawn phase Mogollon site; two Three-circle phase Mogollon sites; and a Reserve phase pueblo site.

The University of New Mexico summer field school under the direction of Dr. Paul Reiter investigated sites in Chaco canyon, N.M. The University of Arizona conducted its Archaeological Field school at Point of Pines in the San Carlos Indian reservation under the direction of Emil W. Haury and E. B. Sayles.

J. O. Brew of the Peabody museum, Harvard university, made an archaeological survey of some 10,000 sq.mi. on the Arizona-New Mexico border. Alfred K. Guthe of the University of Chicago excavated a pueblo ruin near Cahone, Colorado in association with Ansel F. Hall's Explorer's club.

*Middle America.*—Fossil skeletal remains were discovered in Feb. 1947 near Tepexpan, Mexico by Helmut de Terra and Hans Lundberg. The find was made by means of geophysical techniques and apparatus developed by Lundberg. The search for Palaeo-Indian remains was made in an area that De Terra previously had determined would meet the geological requirements for such a find.

The skeletal remains at Tepexpan were found in an alluvial deposition of post-Wisconsin pluvial times, dating back 8,000 to 10,000 years. The possibly related artifacts were scanty, but seemed to belong to the San Juan lithic industry discovered by De Terra in 1946. The skeletal remains consisted of a cranium, broken femurs and tibias, and other bones. The skull was almost brachycranial and possessed some primitive characteristics.

One of the most spectacular events of the year was the investigation of Bonampak, by a Carnegie institution expedition. Bonampak, an ancient Maya ceremonial centre, includes a group of eight standing temples in Chiapas, Mexico, near the Guatemalan border. In one of the temples were three rooms containing brightly painted murals depicting processions of nearly life-size figures, battle scenes and elaborate ceremonies of the Maya. These were the most extensive and complete murals ever found in the Maya region, and provided a wealth of information about art, costumes, ornaments, musical instruments and other categories. They were painted on stucco plastered over the limestone walls of the temple. Other significant remains found at Bonampak included some elaborately carved altarstones and stelae. The largest stela was about 21 ft. high, 8 ft. wide and weighed at least 4 tons. According to the calendrical glyphs carved on the stelae, Bonampak was in its prime in the 7th century A.D., although it may have been founded earlier.

Early in the year Gordon F. Ekholm of the American Museum of Natural History undertook further archaeological reconnaissance of coastal Mexico south of the Huastec area.

Some significant discoveries were made by a Smithsonian institution-National Geographic society expedition to Chiapas, Mexico, in the summer of 1947. Excavation of a deep midden deposit under the supervision of Phillip Drucker revealed two ancient cultural levels. The lowermost level of the midden produced the remains of a preceramic culture whereas the uppermost level presented evidence of people who used crude pottery. The ceramic level was believed to have been pre-Olmec and pre-Zapotec. This find seemed to offer the first concrete evidence of a real "archaic" horizon in Mexico.

Excavations were continued at Zaculeu, a well preserved site near Huehuetenango, Guatemala. Directed by Stanley H. Boggs, John Dimick, Aubrey Trik, and Gus Stromsvik, the excavations produced quantities of stratified material and a large tomb whose contents seemed to be no later than the 6th or 7th centuries A.D. A large amount of the pottery from Zaculeu could be cross-dated with pottery from Kaminaljuyu, northern Guatemalan finds and sites in central Mexico.

The Carnegie institution of Washington continued its program of archaeological research in Guatemala. Edwin Shook directed the excavation of a site at Finca Paraiso. Investigation of the site revealed a very productive mound and an unusual, circular communal sweat bath. At Nebaj Ledyard Smith of the Carnegie staff excavated a series of tombs dating from Early to Post-Classic times.

President Carey Croneis of Beloit college and Andrew Whiteford and Moreau Maxwell made a brief survey of sites and archaeological collections in Mexico, Guatemala, Costa Rica,

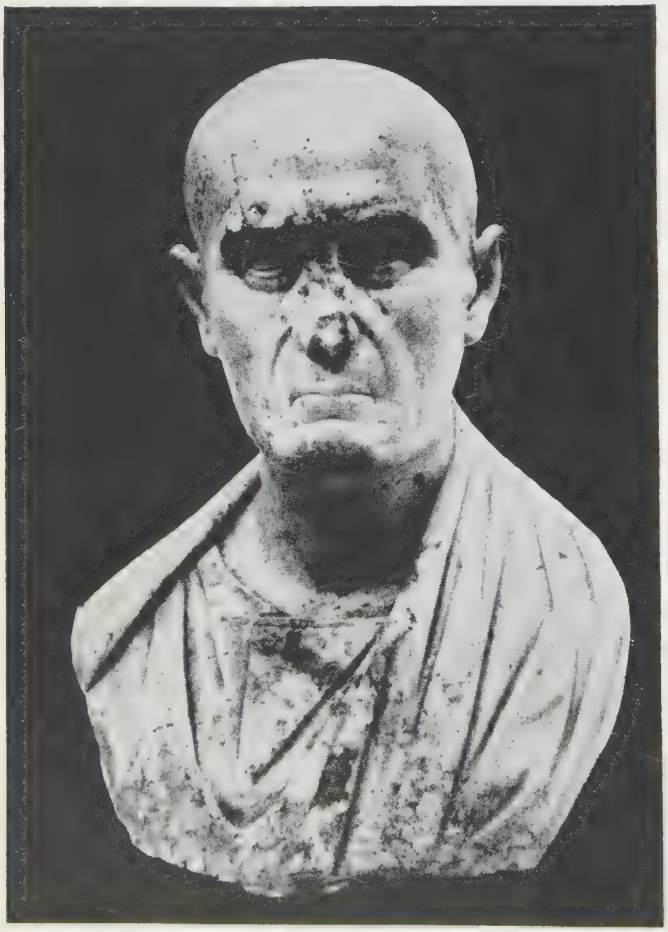
EXCAVATIONS of temples VI and VII at Eridu, in southern Iraq, reported on in 1947

Panamá and Colombia. The survey was undertaken as a preparatory step in the planning of an archaeological program in Middle America and South America by Beloit college.

*South America.*—In Colombia, Luis Duque Gomez, director of the Instituto Nacional, continued his excavations of graves near San Augustin. Gregorio Hernandez de Alba made a survey of the Tierra Dentro region. Gerardo Reichel-Dolmatoff of the Instituto de Arqueologia y Etnologia del Magdalena excavated at the well-known Tiarona site of Pueblito. Preston Holder of the University of Buffalo excavated a burial cave near Convencion, probably a Motilon burial site.

BIBLIOGRAPHY.—Among significant publications of 1947 were the following: *Man in Northeastern North America,* edited by Frederick Johnson; J. O. Brew, *The Archaeology of Alkali Ridge, Southeastern Utah;* Alex D. Krieger, *Culture Complexes and Chronology in Northern Texas;* Alfred V. Kidder, Jesse D. Jennings and Edwin M. Shook, *Excavations at Kaminaljuyu, Guatemala;* Paul S. Martin, George I. Quimby and Donald Collier, *Indians Before Columbus, 20,000 Years of North American History Revealed by Archaeology.* (G. I. Q.)

**Eastern Hemisphere.**—In 1947, for the first time after World War II archaeological field parties from western Europe and the United States began to resume programs of excavation comparable to prewar activities. This was so particularly in the near east and in European countries where reconstruction had gone forward, less so in eastern Europe, Italy, Greece and the far east. In Greece, the government's decision that no digging might be resumed until the national museums were in order, had kept proper excavation at a virtual standstill, with only minor clearances being allowed. As 1947 ended, the reaction of the countries of the Arab nations to the United Nations' decision for partitioning of Palestine had compromised the position of many foreign archaeologists in the Arab near east. Nevertheless, there were increasing signs of field activity on every hand.



MARBLE BUST OF A ROMAN, dating from the 1st century A.D., excavated in the ancient agora at Athens, in 1947, by archaeologists of the American School of Classical Studies

So far as reported, the important finds of the year came in the near east. Several expeditions were at work in the early dynastic pyramid—cemetery fields in the Sakkara district in Egypt. The fine work of the Iraq government's Directorate of Antiquities was continued with the opening of work on the site of ancient Eridu, and the exposure of an Ubaid period temple on the site. In Turkey, several important finds were made by both Turkish and foreign archaeologists; perhaps the most spectacular of these was the work done on a late "Syro-Hittite" site at Kara Tepe by the University of Istanbul.

There was also news during the year with possible important bearing on archaeological chronology. In Nov. 1947 Robert Redfield, chairman of the department of anthropology of the University of Chicago, announced the result of conferences held by his staff with Profs. H. S. Brown, W. F. Libby and H. C. Urey of the university's department of chemistry, concerning the use of the radium or the carbon 14 isotope content of certain archaeological materials for the purpose of fixing chronology. Robert Merrill, a graduate student in anthropology at Chicago, prepared (in consultation with Professors Libby and Brown) a report on the literature, status and possible potentialities of the two phenomena and their application to archaeological chronology. Essentially both phenomena concern the gradual and predictable decline of the radium or carbon 14 content in organic matter—radium with a half-life of about 2,000 years, and carbon 14 with a half-life of about 5,000 years. The possibility of using carbon 14 seemed perhaps more promising (theoretically its accuracy for dating at the half-life would be within 2% and its range might go back at least 40,000 years), but both methods were subject to experimental error and insufficient theoretical interpretation.

**Pleistocene Prehistory.**—The American School of Prehistoric Research returned to the cave in Tangier which C. S. Coon of Harvard had examined before the war. A report on this cave, the Mugharet el 'Aliya, was published by Bruce Howe and H. L. Movius, Jr. (vol. XXVIII—1, *Papers Peabody Museum,* Harvard, 1947), in which the Mousterian and also the important Upper Palaeolithic finds were described. The implements found in the Upper Palaeolithic layers were of great significance, bearing on the question of relationships between the Aterian and Solutrean type tools and the possibility of a North African centre of origin of the Solutrean.

A preliminary note was published on the excavations at the cave of Ksar 'Akil near Beirut, Lebanon, at which cave J. G. Doherty, J. F. Ewing and J. W. Murphy, of Boston college and Fordham university again resumed work. The cave contained some 3 metres of Gravettian deposit overlaying 4 metres of Middle Aurignacian, then 5 metres of Chatelperronian, then a "mixed zone" of some 3 metres, and a basal 4 to 5 metres of Upper Levalloiso—Mousterian.

In Turkey, the task of finding, recording, and testing the various open and cave sites of prehistoric Anatolia, instituted by S. A. Kansu, rector of the University of Ankara, was carried forward. İ. Kiliç Kökten published a map of the sites so far surveyed in reports of Ankara university. Certain fine examples of early Acheulean bifaces were discovered near Gazi Antep, and it became even more than ever certain that the Pleistocene prehistory of Anatolia followed a pattern much like that of Syria and Palestine.

From farther Asia, H. R. van Heekeren illustrated examples of the middle Pleistocene chopper-tool type of artifact from Siam, an area from which tools of this tradition of manufacture had not yet been known.

**The Near East.**—Excavation in Egypt was confined for the most part to the region about Cairo,—at Sakkara (12 mi. south of the pyramids at Giza) and at Helwan on the opposite side of the Nile. At Sakkara, Walter Emery found a mastaba-tomb of considerable size which contained the name of Queen Merneith—either the wife or daughter of King Zer, an early king of the first dynasty. The tomb had been burnt and badly destroyed by robbers and contained the charred remains of a large wooden coffin. Within the enclosure were also tombs of retainers, apparently buried at the time of the funeral of the royal owner. Emery's discovery posed two questions: (1) whether the so-called tombs at Abydos (which included a tomb of Merneith) were really only cenotaphs and (2) whether the buried retainers were in fact slaves killed to accompany and aid their great owner in the next world.

At Helwan, the Egyptian government's Service des Antiquités carried out a new campaign on the huge first-second dynasty necropolis. The finds were mainly small objects, but these included symbols of Osiris and Isis (hitherto unsuspected at so early a stage). There was also some use of stone slabs in the construction of the tombs, which also represented an earlier instance of this usage than had been suspected. Another interesting aspect of the work done by the Egyptian Service des Antiquités was the identification of the "south" or "bent" pyramid of Dahshur with King Snefru of the fourth dynasty. Clearances within this pyramid seemed to indicate that it had never been successfully robbed and that an intact royal burial might yet be concealed in it.

In Mesopotamia, the spectacular find of the year concerned the protohistoric Ubaid period, the earliest cultural manifestation in southern Iraq. There, at the site of ancient Eridu, the Iraq Directorate of Antiquities' expedition under Seton Lloyd and Fuad Safar exposed a succession of temple structures which had been in part overlaid by the ziggurat of the third Ur dynasty period. Five successive levels, sealed by the ziggurat, were represented only by mud-brick platforms on which temples must once have stood. At the sixth and seventh levels, the Iraqi archaeologists came upon traces of the temple structures proper, as well as the platforms on which the temples had stood. Soundings made below the seventh level revealed at least five even deeper strata. The temple of the seventh level was best preserved; it was of the recumbent ⊢⊣ type of plan, known already in the late Ubaid stage in northern Iraq, and antecedent in form and in its niched decoration to the typical Mesopotamian temple of later historical times. The broad central room of the temple was provided with an altarlike structure against one end-wall, and with a central bench which may have been an offering table. Large quantities of fish bones were found about it, indicating that the temple may have been a shrine to the god Enki, lord of the deep. The temples of both the sixth and seventh layers were unequivocally dated by their painted pottery content to the Ubaid period. It had once been postulated that one or more ethnic changes took place in southern Mesopotamia between the flourish of the Ubaid assemblage and the early dynastic Sumerian period. Other evidence pointed to at least a cultural continuity. The appearance of the characteristic temple plan already in the Ubaid period added considerable weight to the continuity theory.

The Directorate of Antiquities also reported the discovery of two hitherto unrecorded rock-reliefs in north Iraq, one Sassanian and the other Assyrian.

In Palestine, I. Ben-Dor worked for two months on a Middle Bronze Age temple in Nahariyeh. The work of the Hebrew university at Khirbet Kerak, at the southern end of the Sea of Galilee, was reported; more of the spectacular red-black burnished pottery of the end of the Early Bronze Age was recovered and also a stone-founded and paved building of some size and complexity of plan.

SLAB-BUILT cist graves in an ancient cemetery in the Samtavro area which were discovered in 1947 by soviet archaeologists of the Georgian Academy of Sciences

Dr. R. Ghirshmann returned to the site of Susa in Iran, long the scene of a French archaeological mission. It was planned to completely retest the site in a stratigraphic sense; efforts so far had been confined to the uppermost (Islamic, *et al.*) levels. Daniel Schlumberger, director of the French Archaeological Mission at Kabul, was continuing the clearance of the Greco-Oriental site of Balkh in Afghanistan. From India, R. E. M. Wheeler reported on studies made by the government archaeological survey on the numerous megalithic tomb structures of the Deccan plateau and the south. Certain detailed similarities between these structures and the megaliths of Iran, the Caucasus, France and England could be cited. In fact, the Indian megaliths covered a broad range of time, from the latter part of the third millennium to the beginning of the Christian era or even later. In 1947 simultaneous excavations were undertaken on a site equated with the Isila of King Asoka's edicts, and the megalithic cists and stone circles adjacent to the site. Clear evidence for dating both the site and the megaliths to not later than the 1st and 2nd centuries A.D. was obtained.

There was considerable archaeological activity in Turkey during 1947. The year saw the final campaigns of two great British archaeologists, John Garstang at his site of Mersin in Cilicia, and Sir Leonard Woolley at Atchana in Hatay (both sites in southern Turkey). At Mersin Garstang completed a long stratigraphic sequence with a succession of 26 occupational levels covering a range from Islamic to earliest village times (some 6,000 or more years). At Atchana-Alalakh, Woolley's final campaign revealed an underground tomb structure attributed to Yarim-Lim, a king of ancient Alalakh in the 18th century B.C. Unfortunately the burial itself was much deeper than the modern ground-water level, and hence was not reached. From pottery recovered in other deeper operations, Woolley assessed the founding of the town to have taken place within the fourth millennium B.C. Others judged this pottery to be at least 1,000 years later in date. The Atchana expedition also opened a small trench in Tell esh Sheikh, a low mound nearby, and exposed materials of the period of Ubaid influence in Hatay.

On the Anatolian plateau proper, the important work at Alaca was continued under Hamit Kosay, and the French under Claude Schaeffer carried on a stratigraphic rechecking of their earlier work in Malatya. A brilliant short season's work was carried out for the Turkish Historical society at two mounds near Elbistan, by Tahsin Özgüc and his wife Nimet Özgüc. On a large mound called Karahüyük they exposed a sequence of classical, Phrygian, Hittite and "Early Bronze" materials. This sequence would not only serve to check the key site of Alishar, but seemed to yield antiquities of considerably finer quality than Alishar. At a smaller mound, nearby, the Özgücs also exposed a rich Hittite layer, and in one room came upon Egyptian scarabs, a Babylonian seal of the time of Hammurabi and a Mycenaean vase. The most spectacular excavations in Turkey, however, were those of the Istanbul university under A. Bahadir, H. Cambel, and H. Th. Bossert at Kara Tepe, near Gaziantep. This site contained the architectural, sculptural and epigraphic remains of a mountain fortress of "Syro-Hittite" times (early first millennium B.C.). Inscriptions in both Aramaic and Hittite were found which, when studied, would doubtless be of great historical importance.

From the U.S.S.R. there were reports of archaeological activity in Georgia, where the Georgian Academy of Sciences and the Dzhavakishvili Institute of History staffs excavated in cemeteries and town sites of the Samtavro and Armazi districts. Armazi was the seat of Georgian governors in the 2nd–3rd centuries A.D. Clearances of ancient monuments were also carried out in Moscow, in celebration of that city's eighth centenary.

In Greece the major clearances were those made by the American School of Classical Studies in ancient Corinth and in the Athenian Agora. The major effort in the Agora excavations was the removal of architectural remains of Roman houses and earlier Greek houses and shops, in the area where the new permanent museum was to be built. A marble head of Heracles, a portrait bust of an elderly bald-headed man, and a number of marble inscriptions were found. There was also a report on work finished late in 1946 by the French school at Athens working on the island of Delos. Objects of gold, ivory and bronze, of the Mycenaean and Cycladic Geometric periods were recovered. The National Museum of Athens reopened, to the extent of three fine rooms in its new wing.

P. Dikaios, curator of the Cyprus museum, made trial excavations at Sotira near Kourion, Cyprus, for the University Museum of Philadelphia. The site yielded materials called "neolithic" and assigned to the fourth millennium, B.C.; it was described as containing intact tholoi houses, streets and a massive wall on one flank of a hill.

The excavation of the 8th century A.D. Carolingian basilica at St.-Denis, near Paris, was continued by S. M. Crosby. Various interesting architectural details were recovered, also some burials (including that of a 13th century bishop, still in his vestments and gloves and with his pastoral cross). The most valuable discovery was a six-foot slab of stone bearing a bas-relief of the 12 apostles. Stylistically, this bas-relief would be of great importance in understanding the artistic changes from late Romanesque to early Gothic sculpture. The slab was dated at approximately 1140 A.D.

J. B.)

## Archery.

**Archery.** The 63rd championship tournament of the National Archery association was held at Amherst Mass., with 378 archers participating, a new record. Twenty new records were established. Archers came from Canada Sweden and 25 states. The championship winners were:

| | | | |
|---|---|---|---|
| | Senior Division | | |
| Women's Championship | | Ann M. Weber, Bloomfield, N.J. | |
| | Scores: Double National Round | 144– 980 | |
| | Double Columbia Round | 144–1096 | |
| | Double American Round | 179–1307 | 3383 |
| Men's Championship | | Jack K. Wilson, Springfield, Mo. | |
| | Scores: Double York Round | 280–1698 | |
| | Double American Round | 180–1386 | 3084 |
| | Junior Division | | |
| Boy Champion | | Jerome J. Moga, Niagara Falls, N.Y. | |
| | Scores: Quadruple Junior American Round | 360–2868 | |
| Girl Champion | | Lorraine Avery, Saginaw, Mich. | |
| | Scores: Double Columbia Round | 140– 870 | |
| | Double American Round | 172–1086 | 1956 |
| | Flight Shooting | | |
| | Women | | |
| Regular Style | Millie Hill, Dayton, O. | 401 yd. 2 ft. 4 in. | |
| | Men | | |
| Regular Style | Irving Baker, Westfield, N.J. | 575 yd. 2 ft. 3 in. | |
| Free Style | Paul J. Berry, Middletown, O. | 589 yd. 2 ft. 10 in. | |
| | Junior Division | | |
| | Boys | | |
| Regular Style | Richard E. Finke, Covington, Ky. | 319 yd. 2 ft. 5 in. | |
| | Girls | | |
| Regular Style | Virginia Hersh, Dayton, O. | 308 yd. 2 ft. 8 in. | |

New records established: Single York, 141–881 by Jack Wilson; Double York, 280–1698, Jack Wilson; Junior American, 90–740, Richard E. Finke; Double Junior American, 180–1428, Jerome J. Moga; Single American (girl), 88–558, Lorraine M. Avery; Double American (girl), 172–1086, Lorraine M. Avery; 65 lb. flight, 547–2–2, Herb Henderson; all weights flight, 523–2–6, Don Gourley; 50 lb. flight, 575–2–3, Irving Baker; 100 yd. range, 70–392, Jack Wilson; 50 yd. range, 30–288, Jack Wilson; 40 yd. range, 30–262, Russ Reynolds; tied clout record, 36–276, Ann M. Weber.

**CONTESTANTS** in the women's national archery tournament held at Amherst, Mass., in Aug. 1947

An important event took place during February when the Olympic Bowman league held its 20th anniversary indoor tournament in which there were almost 1,400 contestants—the largest number ever to shoot in a mail match. Eleanore Hamilton had the highest average score for the five matches in the Olympic round with 774.0; while Marie Krohmann led the Chicago round with an average of 763.6. W. J. Burton of New Zealand won first place among the men in the Olympic round with 799.6; Ralph Gargiulo was first in the Chicago round with 775.6. Cleveland Archery club placed first for both men and women for team honours.

The 2nd championship tournament of the National Field Archery association was held at Salt Lake City, Utah, with 266 archers from 28 states, the District of Columbia and Canada attending. The championship winners were: (men) Erwin C. Pletscher, Bakersfield, Calif., 2345; (women) H. A. "Babe" Bitzenburger, Los Angeles, Calif., 1608; (junior boy) David Webb, Wichita, Kan., 1045; (junior girl) Kathleen Powell, Portland, Ore., 593.

Louis Carter Smith retired after 26 years service as secretary-treasurer of the National Archery association; his place was filled by Henry S. C. Cummings. The 1948 National tournament was to be held at Reno, Nev., during the first week in August. (H. S. C. C.)

## Architecture.

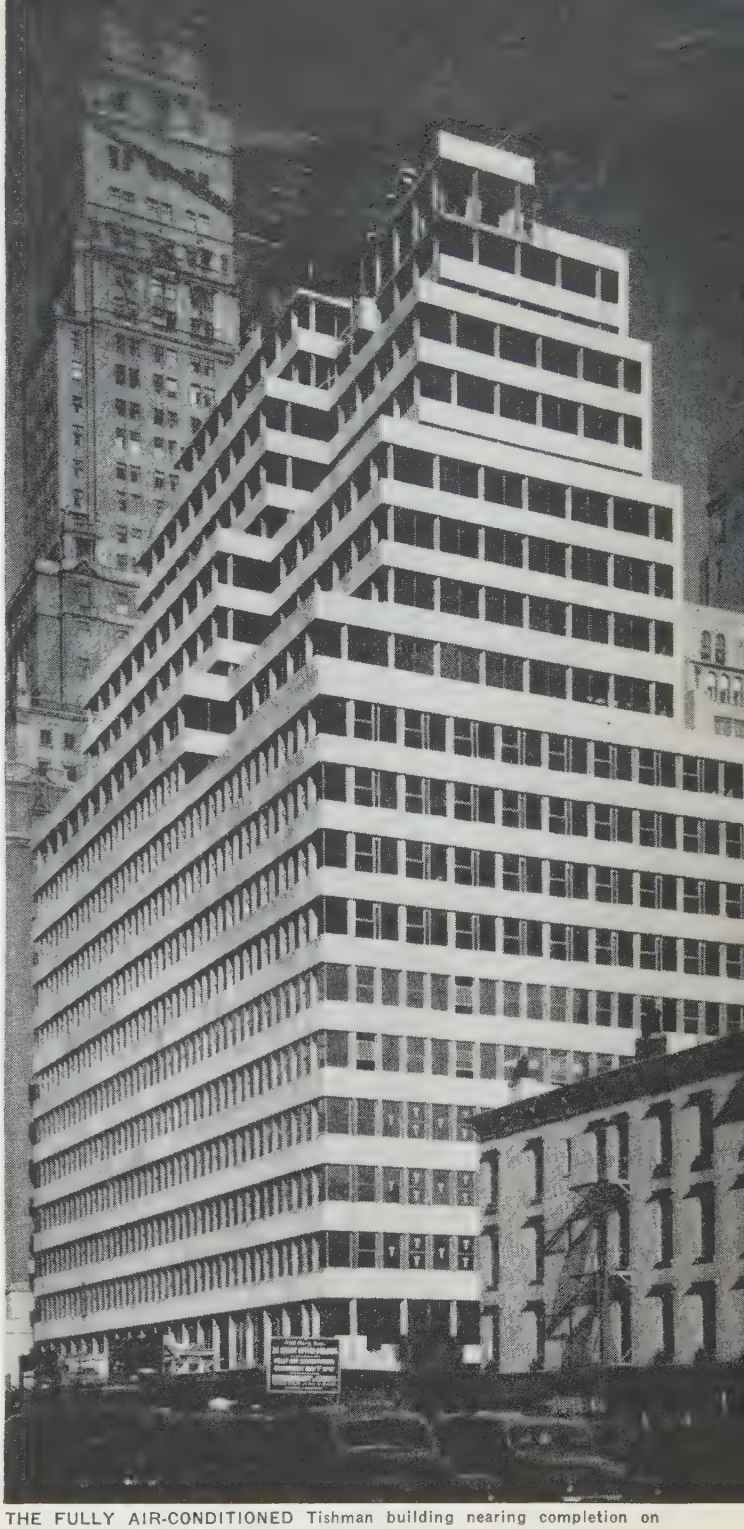
A considerable increase in the total volume of civil building took place during 1947, and in the United States housing reached the volume of the great boom of 1925. Elsewhere the end of the year saw appreciable gains in spite of strikes, shortages and such setbacks as the blizzard in Great Britain. Materials and construction benefitted by new inventions; housing by increased mass production. The degree of recovery from World War II was highlighted by the preoccupation of architects and planners with values, such as arose out of the consideration of the designs for the permanent headquarters of the United Nations.

**Materials and Construction.**—Technological innovations poured forth, although some were announced before they had been thoroughly tested. Among them were Flexicore, a hollow precast panel for floors and walls, with rigidity and light weight; Alfred Poor's Hexadrome, based on a system of four-inch triangles, with a high weight-strength ratio; Higgen's Thermo-Namel system, a prefabricated panel with a patented foamy core surfaced with metal, later modified to omit the metal, and called Thermo-Con. The John B. Pierce foundation announced a resilient concrete, made with asphalt which was as comfortable as wood flooring, but more durable and more economical.

In Great Britain, a war product, Holoplast, was adapted for structural purposes. Made of plastic-impregnated paper tubes with a variety of surfaces, it was found light, durable, impervious to damp, vermin and fireproof. William Lescaze and Robert Davison offered a metal-clad, insulated wall panel. Rigidized sheet metals permitted many possibilities for new expression, particularly in returning curves.

Shell-concrete construction for long spans continued to be studied, notably in the Jewish centre for Cleveland by Eric Mendelsohn. Such developments also pointed up a trend toward reducing the weight and bulk of architecture, both in fact and in appearance; a closer approach toward the aesthetic of aeroplane and boat design. Prefabricated structural units in concrete were tried with some success in small office buildings and seemed to be more economical for such purposes than fireproofed steel.

One of the goals of low cost architecture, unification of the roof and the wall, seemed nearer at hand. Kenneth N. Lind's system of a single truss for this purpose was in production by Production Line Structures. Many designers, notably J. C. Campbell and W. K. Wong, were adapting the quonset hut with great success to houses, farm buildings, factories, banks and a motel. Manuel Flores' system "DC" of lowering the forms for concrete floors from the top of skeleton buildings was introduced into Texas from Mexico.



THE FULLY AIR-CONDITIONED Tishman building nearing completion on Park avenue, Manhattan, early in 1947. Slender outside vertical columns permitted continuous fenestration

Interest in cavity-wall construction was growing. It was believed to offer great strength, good insulation and an effective barrier to infiltration. Welding for steel frame buildings was becoming recognized as potentially superior to riveting. For bridges, a return to the tubular members, proved to be economical in the Ead's and Firth of Forth bridges of the 19th century, was proposed. Air cleaning by electronic precipitation increased; its advantages to health and its savings in time and money for laboratories and department stores were acknowledged.

**Heating.**—Heat pumps for house heating were in production by four companies. In radiant heating, methods of cold bending the pipes were improved, preformed tubing panels were announced, and a tube with integral fins became available. Research in solar housing was continued at the Massachusetts Institute of Technology and at Purdue university, Lafayette, Ind. More study was still required to evaluate all the factors contributing to the initial and long run economies expected of this system. Short-period storage of solar heat seemed to promise great economies; one method used a filler of Glaubers salts.

**Housing and Research.**—Throughout the world housing continued to be the primary architectural problem. Rising costs of labour and materials, together with shortages of materials delayed the programs envisaged by thoughtful people and governments. In the U.S., the building construction research board of the National Academy of Sciences had not gotten far; nor had the research program of the American Institute of Architects. The Committee of the Hygiene of Housing of the American Public Health association was doing the best work in that country. Helmut Landsberg's work in microclimatology, published in 1947, indicated the values to be derived from intensive local studies. A hopeful sign was the developing acceptance of modular co-ordination by industry and the recognition by the producer's council of the need for co-ordinated research.

Two stumbling blocks to mass production and increased volume of building were lifted when the American Federation of Labor in the Chicago area signed an agreement to remove some of the jurisdictional barriers to new methods of construction, and in the New York area when an agreement stabilizing labour costs was signed, thus enabling estimates to be made on a firmer basis over a long period. There were other signs of increasing stability in building costs at the end of the year such as upset price contracts and voluntary lowering of prices on some items of house equipment.

Nearly three-quarters of the housing built in the U.S. during 1947 was found to be in the hands of large-scale operators, who by mass production methods could bring the cost of small houses closer to the incomes of those for whom they were intended. Even so, the average price of a small house, about $8,000, was still $1,000 more than could be afforded.

Brazilian buildings continued to be widely publicized in 1947. Architecture in South America seemed to employ the clichés of the international style, with particular attention to sun-control devices. Although many of the projects were still in the design stage it could be concluded that the bulk of the work lacked the humanity, intimacy and variety characteristic of the best work of the northern hemisphere. In housing it was reported that 1,000 units were being built according to Walter Neff's "Airform" method (blowing concrete over an inflated balloon), another instance of the wide interest in continuous wall and roof systems and in curved forms.

The enormous problem of reconstruction in the U.S.S.R. was proceeding under the close control of the state, and to non-Russian eyes the results seemed to lack originality and distinction. The Russian policy was to win public acceptance by employing familiar understandable symbolism. Because of shortages of transportation, local building materials were being extensively employed, with constant experimentation toward developing new techniques to make use of them.

The village of Fournah in Egypt, the work of Hassan Fathy Bey, illustrated that sensitive and elegant architectural expression was possible within a rigid economy and within a strong local tradition.

**Events.**—In 1947 the American Institute of Architects, for the first time, held seminars for the exchange of information on hospitals, schools and town planning. Princeton university was host to a conference of architects and planners, at which a very distinguished international group discussed the problems of the profession in an informal atmosphere. The discussions were to be published. The International Congress of Modern Architecture met, at Bridgewater in England (for the first time since 1937), and exchanged data on city planning on a world-wide basis.

**Planning.**—Large scale planning projects were under discussion during 1947 including the Cidade dos Motores in Brazil, La Rochelle-Pallice in France, and numerous projects in the U.S.S.R. and Great Britain. In the U.S. the replanning of large cities, such as Pittsburgh and Philadelphia, focused toward huge exhibitions, strategically installed in department stores, where they would receive more attention from the public than if they had been in the usual museum. Modern techniques of publicity, and striking installations were also effectively employed. Good progress was made in Los Angeles under the Regional Zoning act. A book, *Communitas,* by Paul and Percival Goodman, was received with unusual approval, since it contained a fresh and inspiring approach to the problems of city planning in terms of durable human values.

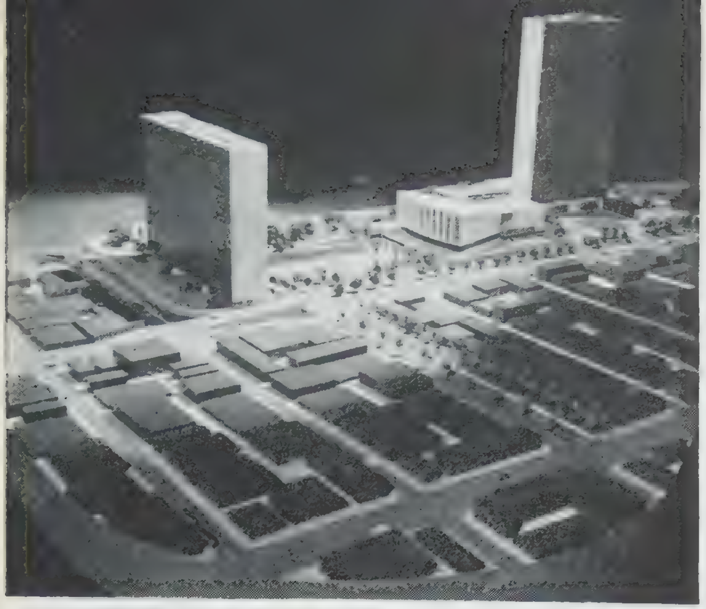
**Hospitals.**—The largest class of building, after housing, was the Veterans Hospital program for which about $1,000,000,000 would be spent. While still in the planning stage, the program became badly snarled in red tape but toward the end of the year was moving again. Local architects were employed, and the designs were correspondingly varied; they included conventional and progressive schemes.

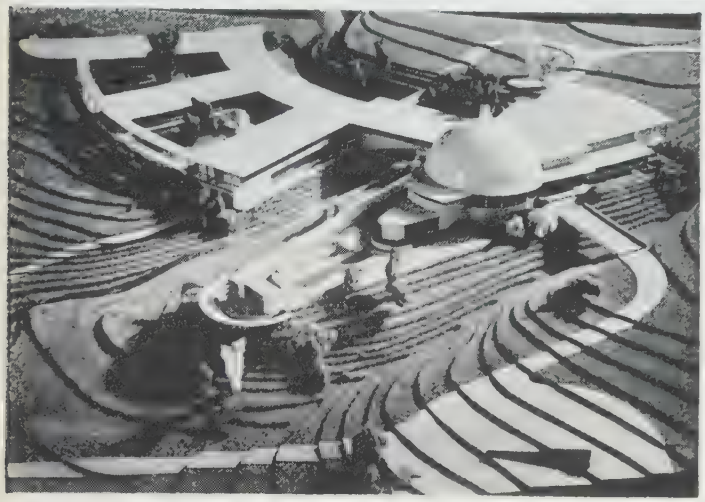
**Important Buildings.**—Palm Springs, Calif., saw the completion of three distinguished buildings—houses by Richard Neutra and Raymond Loewy and a tennis club by Paul Williams and A. Q. Jones, Jr. This luxury resort in the desert seemed to stimulate original, imaginative design, characterized by lightheartedness and exceptional freedom. Since resorts had, in the past, often been laboratories for new architectural growth as at Frascati, Italy, and Newport, R.I., this work might prove to be highly significant.

At Lincoln, Mass., Carl Koch built a house which carried the current romantic trend in domestic architecture to a new point, by the inclusion of a greenhouse in the main mass of the house with resulting dramatic spatial and textural contrasts. Two houses by Robert Paul Schweikher and Winston Elting belonged to another current of modern practice. Their work was strongly individual but was dominated by a note of austerity and a more rigidly formal organization of mass and space. Gordon Drake of Los Angeles was another architect whose personal handling of the modern idiom indicated that architecture was reaching a level of maturity which permitted sophisticated refinement.

At Cambridge, Mass., Alvar Aalto, the Finnish architect, was beginning the erection of a dormitory which promised to introduce new qualities into the field of collegiate architecture. The King County Central Blood bank, in Seattle, Wash., combined the almost irreconcilable qualities of inviting casualness and significant dignity. A feature of the planning was the circulation of the blood donors in, through, and out of the building. A model was photographed at each stage in the process, thus graphically illustrating the functional character of the plan. The new TVA dam at Fontana was considered by some to be an admirable solution to the problem of monumental design.

The first great architectural competition in many years was begun in 1947—the Jefferson National Expansion Memorial competition for an 80 ac. site in St. Louis, Mo. The first stage of the competition was judged in the fall and five winners, anonymous until judging of the second stage in 1948, were se-



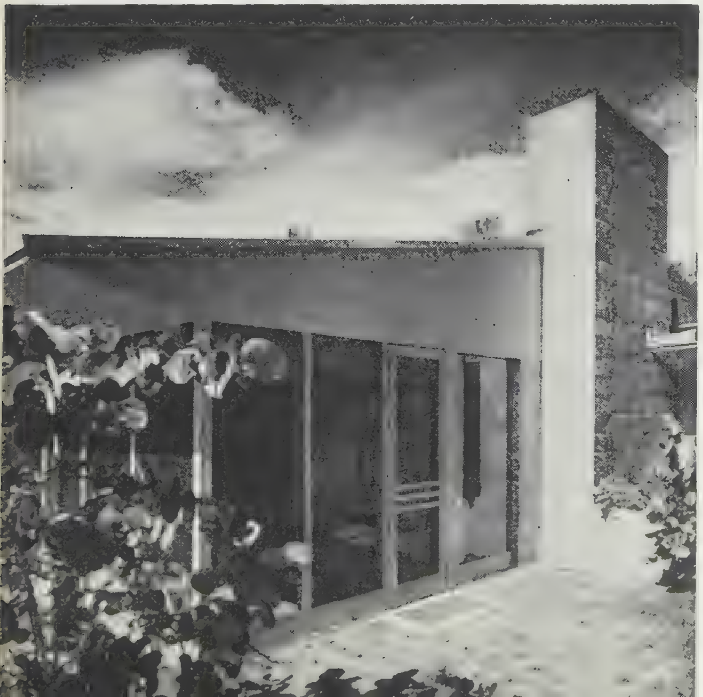


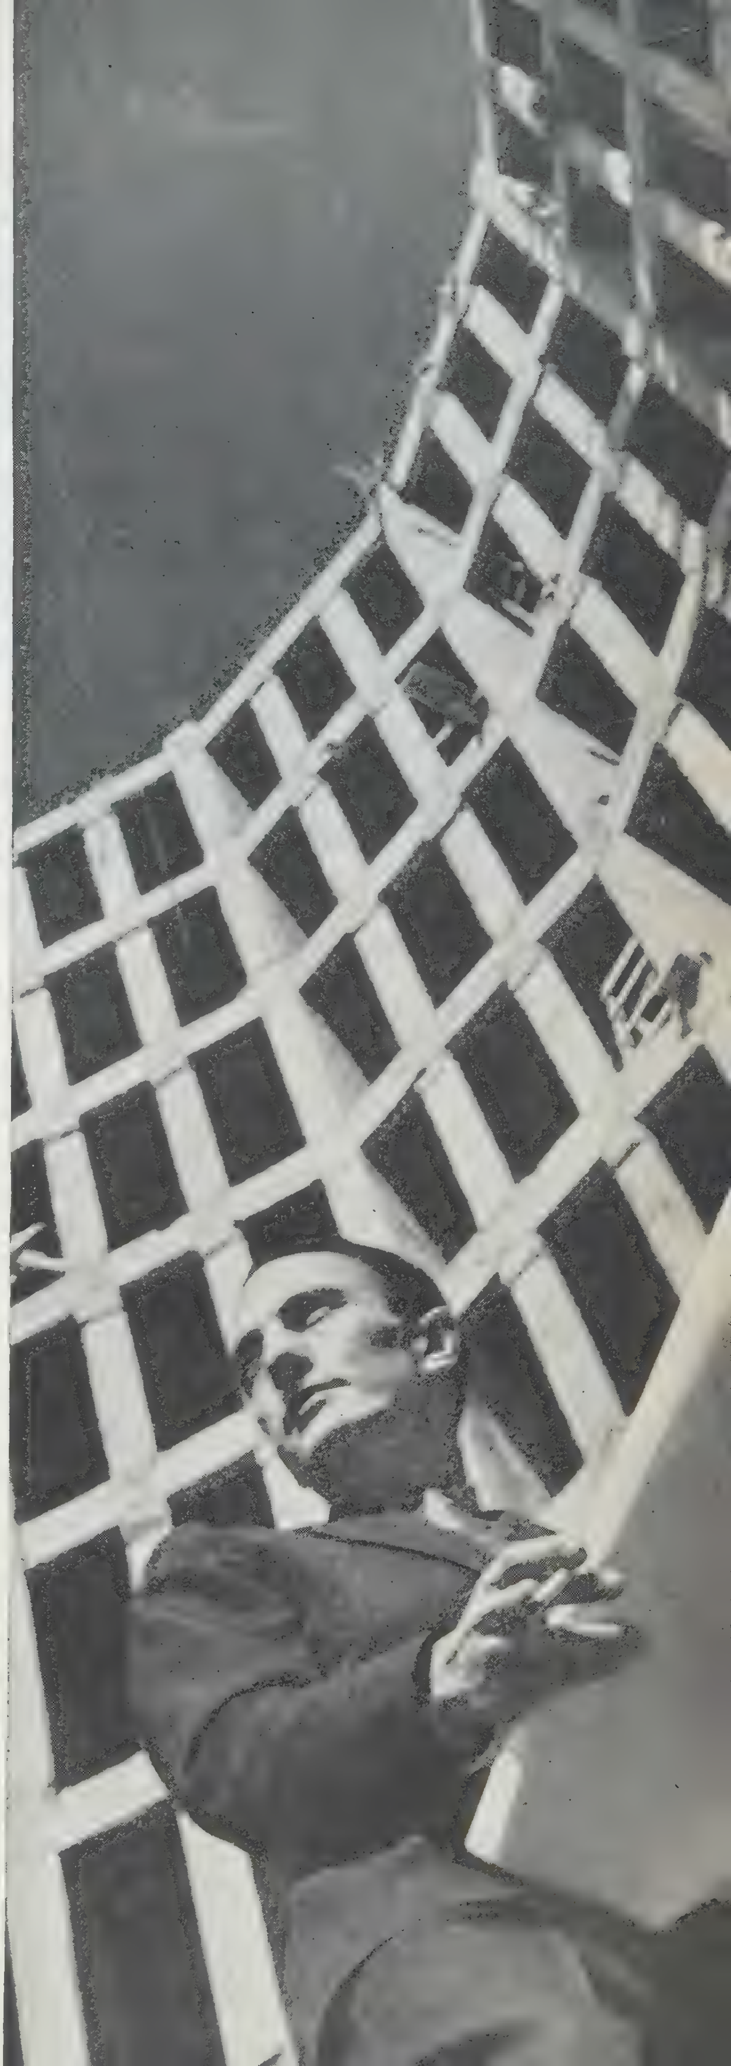
Top: U.N. PERMANENT HEADQUARTERS, a scale model of the proposed design for buildings to be erected in midtown Manhattan, as submitted to the general assembly by the U.N. Headquarters Planning office in 1947

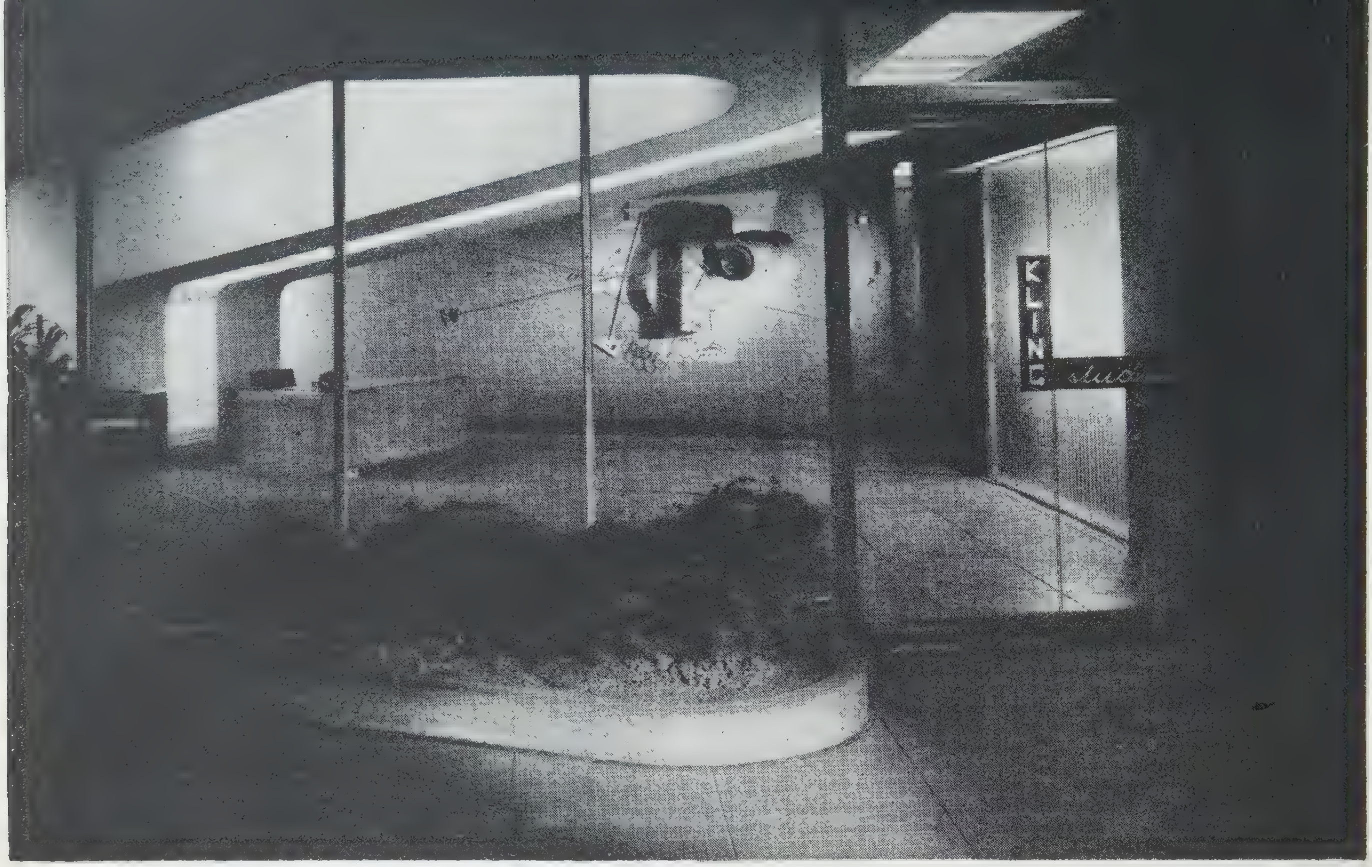
Above: ERIC MENDELSOHN'S design for the Cleveland Jewish centre, on which construction was begun in 1947. The circular temple was designed to seat 1,000 persons

Right: SEMICIRCULAR PLAZA HOTEL, under construction in Mexico City during 1947. The building was designed by Mario Pani (foreground) to contain outside rooms only

Below: PRIVATE HOME in Sarasota, Fla., designed by Ralph Twitchell and completed in 1947, featured wide, up-tilted overhangs for maximum shade and light







GLASS-WALLED ENTRANCE to the reception room of the Kling studios for commercial art. Designed by Henry P. Glass, the building was completed in Chicago in 1947

lected. The prizes, $10,000 each, were in proportion to the significance of the problem, which was to find suitable expression for monumental and symbolic ideas.

The outstanding architectural event of 1947, both for the wide interest taken in it and its significance in world events, was the design for the United Nations headquarters building in New York. The ten architects, pressed for time, decided to concentrate on a workshop for peace, intending to raise the quality of the final solution by further study after a satisfactory basic scheme had been approved. (C. L. V. M.)

**Great Britain and Europe.**—The development of European architecture was handicapped by shortages of labour and materials. Shortages were reflected in a concentration on those building techniques which made best use of the materials available and on labour-saving methods for the fabrication and assembly of buildings.

The technique of prestressing concrete, although not a new one, received much wider recognition. In France, where its advantages had been exploited for some time, there were numerous constructional works in progress that employed its principles. In Britain, owing to the shortage of mild steel, the technique had been applied only in the production of railway sleepers (ties). Its implications were undoubtedly of importance to architecture, although they still awaited the opportunity (and the architect) for their realization.

An outstanding steel building of 1947 was the aircraft assembly hall at Filton, near Bristol, built to house the Brabazon Mark I. Its designers were Eric Ross, David du R. Aberdeen, F. and P. N. Taylor and Brian H. Colquhoun and Partners. Covering an area of 7½ ac., with roof trusses spanning 331 ft. clear, its scale and simplicity had a magnificence seldom achieved even in less utilitarian structures.

In Denmark the new central building of Aarhus university (built just before World War II, and partially bombed) was completed by its original architect, C. F. Mueller. It was in direct line with Denmark's tradition of good brick building.

The eighth (first post-war) triennial exhibition of architecture was held in Milan during the months of June to October. A central feature was the plan for an experimental garden city at San Siro by a group of Italian architect-planners. The theme of the exhibition was "A home for everyone," and exhibits in the form of specimen furnished rooms and reconstruction projects came from Austria, Belgium, Czechoslovakia, Sweden and Switzerland. These exhibits, with their emphasis on mass-production and utility, were in sharp contrast with those of the earlier triennials where luxury had been the keynote. The exhibition clearly showed Europe's urgent preoccupation with emergency housing and house equipment. (*See* also BUILDING AND CONSTRUCTION INDUSTRY; HOUSING; TOWN AND REGIONAL PLANNING.) (I. R. M. M.)

## Archives, National.

Established by congress in 1934, the National Archives preserves the valuable noncurrent records of the United States government and makes them available to the government and the people.

By the close of 1947 there were more than 833,000 cu.ft. of such records in the custody of the archivist. Ranging in date from the Revolutionary War to 1947, they came from almost every federal agency. Notable among records received in 1947 were several bodies of older records, including letterbooks, 1789–1902, and journals, 1879–1940, of the postmaster general; the records of the United States mint at Philadelphia, Pa., 1793–1899; and selected records from 52 customhouses in the United States and Alaska. Large quantities of records were also received from certain World War II agencies.

Recording as they do the growth of democracy in the United States, a number of documents from the National Archives were installed on the Freedom Train, which began a year-long tour to carry the story of their heritage to the people in more than 300 communities throughout the land. Among the documents selected were the Treaty of Paris of 1783, the Bill of

Rights, the Emancipation Proclamation and the World War II surrender papers.

To facilitate the use of records in the archivist's custody, a comprehensive guide to them was prepared and sent to press. *The National Archives—What It Is and What It Does* and *A Brief Guide to the Museum Collections in the Franklin D. Roosevelt Library* were among the year's publications.

Current government regulations that have general applicability and legal effect and descriptions of the organization and procedures of federal agencies are published by the National Archives in the *Federal Register.* The archivist of the U.S. is also responsible for the Franklin D. Roosevelt library at Hyde Park, N.Y. The papers of President Roosevelt that were in the White House at the time of his death are the property of the library by virtue of a court ruling. (S. J. Bu.)

## Areas and Populations of the Countries of the World.

The political entities of the world are listed here with their areas, populations and number of persons per square mile. The latest census or official estimates are given for each country. Areas in square miles, including inland water areas, are in accordance with the boundaries for the year of the population figure. Some of the later boundary adjustments had not been recognized at the end of 1947 by the U.S. government. The subtotals for colonial groupings within continents do not carry density figures. Where two figures are given for a country, the most recent is used in the continental and world totals. This table provides a fundamental basis for country comparisons.

*Areas and Populations of the Countries of the World*

(For statistical details and dates see separate country and empire articles)

| Name of continent and state | Area (In sq.mi.) | Population (In thousands) | Persons per sq.mi. |
|---|---|---|---|
| World total | 57,566,335 | 2,247,361 | 42.8* |
| AFRICA | 11,610,615 | 169,777 | 14.6 |
| Belgian colony and trusteeship | 925,000 | 14,088 | |
| †British colonies, dependencies, protectorates and trusteeships | 3,917,896 | 58,978 | |
| Egypt | 383,000 | 19,090 | 49.8 |
| Ethiopia | 350,000 | 7,000 | 20.0 |
| French colonies, trusteeships, protectorates, department and metropolitan area | 4,271,490 | 46,000 | |
| Liberia | 43,000 | 2,000 | 46.5 |

*In computing the world density the area of Antarctica is omitted.

†Includes as military trustee areas Libya, Eritrea and Italian Somaliland.

‡Areas and populations of Baltic republics included in 1947 U.S.S.R. totals.

## Argentina.

A federal republic in southeastern South America, the second largest on the continent. Area: 1,079,965 sq.mi.; pop. (1947 census): 8,243,659 men and 7,864,914 women, a total of 16,108,573. The population is estimated to be 97% of European (mostly Spanish and Italian) descent; the total of foreign-born population in 1940 was 2,355,900, the largest proportion of foreign-born population of any new world state. Urban population is approximately 75%. Population density at the beginning of 1944 was 12.96 per square mile. The capital and chief port is Buenos Aires (pop., 1947 census, preliminary figures, 3,150,000). Other important cities (with latest official pop. estimates) are Rosario (521,210), Avellaneda, a Buenos Aires suburb (399,021), Córdoba (339,375), La Plata (256,378), Tucumán (169,556), Santa Fé (149,926), Bahía Blanca (121,055), Mendoza (100,429) and Lomas de Zamora (100,000). Under the constitution of 1853 (the oldest in any Latin American state) Argentina includes 14 provinces and 9 territories. The government is headed by a president chosen by

JUAN PERÓN, president of Argentina (right) and Eurico Dutra, president of Brazil, are shown on May 21, 1947, as they opened an international bridge uniting their countries

an electoral college for a six-year term. The bicameral congress includes a senate of 30 and a chamber of deputies of 158 members. President in 1947: Gen. Juan Domingo Perón.

**History.**—Foreign Minister Juan Atilio Bramuglia on Jan. 13 denied a statement by U.S. Secy. of State James F. Byrnes that the Argentine government was not ridding the country of nazis; he called on U.S. Ambassador George Messersmith for evidence that action was being taken. A government decree on Jan. 24 authorized the buying of all businesses of former axis nationals, involving about 60 firms. Messersmith in a statement at Rio de Janeiro, Brazil, on Jan. 31, while en route to Buenos Aires, said that the Argentine government had gone a long way toward eliminating former nazis. The comprehensive five-year plan for Argentine economic development, presented to congress by President Perón in Nov. 1946, continued to attract much attention in 1947. Perón on Jan. 23 announced the retention of the Worldwide Development company of New York city to aid in effecting the plan. In an important anniversary address at the Colón Opera house on Feb. 24, he attacked communism and outlined ten essential rights for workers, including the right to jobs, adequate pay and safe working conditions. A few minutes after the broadcast of the president's address, a bomb wrecked the progovernment station Radio Libertad. President Perón on March 8 again attacked Argentine communists as well as the American Federation of Labor, a commission of which had severely criticized the Argentine government, and called for a boycott of the newspapers opposed to his regime. The following day members of the A.F. of L. delegation surveying Argentine labour conditions accused the government of using tricks, bribery, force and favouritism to make the Argentine General Labour confederation its political tool; the A.F. of L. International Labour committee rejected a proposal for collaboration with the Argentine confederation. The chamber of deputies on March 28 passed the basic features of the government's five-year plan without debate. On April 1, *La Prensa,* one of the leading Buenos Aires papers, rejected demands made by the news vendors' and distributors' union and charged it with conspiracy in the government's campaign against the paper.

The ministry of marine on April 2 announced an Argentine claim, on the basis of an expedition then in the far south, to the Melchior archipelago in the antarctic region. President Perón on April 23 led in the festive welcome to the returning antarctic expedition. Argentina took its first census in 33 years in April and May; preliminary reports indicated about 250,000 commercial and 100,000 industrial establishments. The government announced on April 24 that all of its Central American diplomatic missions would be raised to embassy rank. President Perón opened a congressional session on May 1 and announced a program of army modernization. Congress voted Perón drastic powers to reduce the high cost of living and the senate sustained the previous impeachment of three opposition members of the supreme court and the attorney general, thus removing the last remaining judicial obstacles to the Perón regime and leaving the president free to appoint others who would presumably not attempt to maintain the previous independence of the judiciary. Perón and Pres. Eurico Gaspar Dutra of Brazil met at Uruguaiana, Brazil, on May 21 to dedicate a new international bridge. On the same day 8 more former nazi agents were deported; 69 other cases remained under study at the same time. Several persons were wounded by gunfire on May 25 in Buenos Aires clashes between nationalists and communists during Liberty day celebrations. Gen. Filomeno J. Velazco resigned on June 5 as federal and Buenos Aires police chief and was succeeded by Gen. Arturo Bertollo, who had earlier been decorated by the United States for service on the Inter-American Defense board. Perón on the same day spoke on a nationwide network in celebrations as his wife, Sra. Eva Duarte de Perón, left for Spain as the first stop on a widely publicized European tour; during Perón's broadcast he was interrupted by a mysterious radio voice calling "Death to Perón." Señora Perón on June 9 received a high Spanish decoration from Gen. Francisco Franco.

The Argentine government on June 11 denied rumoured plans to attack Brazil. On June 12 the government seized factory stocks of clothing and shoes and began application of a retail-price-fixing policy. Perón on June 18 conferred a high Argentine decoration on Ambassador Messersmith; other Argentine decorations were on July 2 conferred on the presidents of Peru, Ecuador, Haiti, Panamá and the Dominican Republic. Communists demonstrated on June 27 outside the Argentine embassy in Rome protesting Señora Perón's visit there; she was at the same time received by Pope Pius XII.

A bomb thrown in a socialist meeting in Buenos Aires on June 29 killed 1 and injured 30 persons. Police on July 1 confiscated copies of the socialist paper *La Vanguardia* for editorially criticizing the Perón regime. The following day Rodolfo Katz, an opposition editor, was kidnapped and beaten in Buenos Aires. Gunmen at La Plata failed on July 4 in an effort to kill Cipriano Reyes, leader of the anti-Perón labour bloc in the chamber of deputies. President Perón on July 6 broadcast an important speech pledging co-operation with all peace-loving nations and economic aid to wartorn countries; despite army modernization, he said, Argentina would not enter an armaments race. Foreign Minister Juan Atilio Bramuglia on June 7 addressed the Vatican and the other American foreign offices asking co-operation for peace and reconstruction. A nationalist Buenos Aires editor fled to Uruguay July 10. Señora Perón on July 23 was made a knight of the French Legion of Honour. On Aug. 5 the Swiss federal council expressed regret to Señora Perón for a stone- and tomato-throwing incident at Berne. The senate on July 25 confirmed four new supreme court appointments. A 7-day strike of 35,000 bakery workers at Buenos Aires ended Aug. 7. The Vatican on Aug. 8 denied any political significance attached to giving Señora Perón a decoration for relief work. The government on Aug. 20 suspended a Peasants' party weekly paper for attacking the United States, Señora Perón and the government. Señora Perón received a huge welcome on her return from Europe on Aug. 23. Buenos Aires police on Aug. 28 closed *La Vanguardia* for minor safety violations, but the paper went on sale on Sept. 16 in an underground edition. Two opposition weeklies were suspended on Sept. 1 and 2 because printing plants, after police warnings, refused to print them. The *New York Herald Tribune* reported on Sept. 18 that Argentina was charging needy European countries $5.90 per bushel (payable in dollars) for wheat which it bought from Argentine farmers for $1.35. Buenos Aires police on Sept. 20 seized 11 in a suspected bombing plot against Señora Perón. The president signed a woman-suffrage law on Sept. 23.

Buenos Aires police on Sept. 26 reported the closing of the underground *La Vanguardia*. More than 150,000 textile workers went out on strike on Oct. 2. Argentine Ambassador Oscar Ivanissevich announced at Washington, D.C., on Oct. 8 that his government had set up a "Marshall plan" to aid its South American neighbours. The Argentine press office simultaneously criticized the United States in its announcement that Argentina had been forced to burn more than 2,000,000,000 pesos of crops because of lack of shipping amounting to an "economic blockade." The government on Nov. 8 authorized a 20,000,000-peso fund for fighting infectious and contagious diseases. About 140,000 metal workers struck for higher wages on Nov. 13. The national economic council stated at Buenos Aires Nov. 15 that Argentina would reduce cereal prices to the world level if it could buy all its U.S. needs at factory prices. The government on Dec. 1 banned the Italian antifascist film *Open City*. Diego Luis Molinari, head of the Argentine delegation to the U.N. Trade conference, stated at Havana, Cuba, on Dec. 16 that his country was prepared to offer $5,000,000,000 in loans to "deserving" nations; the plan would involve credits repayable in up to 50 years.

**Education and Religion.**—Many educators were reported on Jan. 24 to be fleeing to Mexico because of the government's interference with university freedom. The government took steps to complete its intervention in the nation's universities beginning Jan. 1, 1948. School enrolment in 1946 was about 2,000,000. The literacy rate was estimated at 85%.

**Finance.**—The monetary unit is the peso, valued on Nov. 6, 1947, at from 20.24 cents to 26.81 cents, U.S. currency, depending on the type of exchange. The 1948 budget, as proposed originally early in 1947, involved ordinary budgetary expenditures of 3,092,000,000 pesos and extraordinary expenditures of 1,146,000,000 pesos. When the deputies finally voted it on Sept. 29 it had been increased, including sums for autonomous agencies, to the record figure of 6,400,000,000 pesos. Central bank holdings on April 30 were $1,472,000,000 as against $1,729,000,000 on Dec. 31, 1946. President Perón stated on Aug. 20 that the per capita debt was only 22 pesos and the gold reserve totalled 1,000 tons. A growing shortage of dollar exchange developed in midyear; the government on July 15 suspended credit permits for import of luxury goods in order to conserve foreign exchange. The government in May and June began a campaign against inflation; an antispeculation law was passed May 3 and the central bank on Aug. 9 restricted credit on speculative ventures as an inflationary curb. Early in June congress created a mixed capital institute for securities investment, gave it a capital of 100,000,000 pesos and authorized it to engage in all kinds of transactions in bonds and shares to "regulate, order, and strengthen the securities market." On June 13 congress approved a bill for creation of a mixed Argentine reinsurance institute to promote Argentine over foreign insurance companies. The stock market index reached a record high of 382 in April as against 100 in 1943. All bans on foreign investments were lifted July 6. The government on July 25 prohibited further use of foreign exchange for imports of newsprint, although this was interpreted to have political as much as economic motivation. It was reported on Aug. 10 that the exchange value of the peso had dropped more than 10% in relation to the dollar. The central bank on Aug. 21 halted all new imports pending a study of British suspension of sterling conversion; Argentina resumed trade in sterling on Sept. 3. The government created a national economic council on Sept. 3 to co-ordinate economic planning, partially in connection with the five-year plan. The government on Oct. 10 signed a pact giving Rumania a $25,000,000 credit, and 3 days later Italy was granted

**SEÑORA PERÓN**, wife of the Argentine president, is shown leaving St. Peter's cathedral in Rome, Italy, with a Vatican dignitary during her European visit in the summer of 1947. Señora Perón was granted a papal audience on June 27

a 700,000,000-peso credit for purchase of food and raw materials.

**Trade and Communications.**—Trade in 1947 was characterized by an increasing degree of governmental control, especially through the I.A.P.I. (Instituto Autónomo de Producción y Industrialización), and a tendency for lowered production to have a delayed effect on trade. Quebracho extract exports in the first 4 months of 1947 were 71,691 metric tons (same period in 1946: 90,414 tons). Wool exports from Oct. 1, 1946, to March 31, 1947, were 72,008 metric tons (same period in 1945–46: 125,671 tons); of the 1946–47 exports, the United States took 37,256 tons. Cotton exports in the first 5 months of 1947 were 5,864 metric tons (same period in 1946: 18,174 tons); the chief markets were the United Kingdom 2,094 metric tons (same period in 1946: 14,592 tons); the Netherlands 1,912 tons (1946: none); Bolivia 1,021 tons (1946: 541 tons). Total foreign trade in Sept. 1947 reached a record figure of 1,029,000,000 pesos. Hide and skin exports in 1946 showed general increases over those for 1945; they were partially itemized as follows (with 1945 figures in parentheses): cattle 6,890,249 (4,443,257); horse 433,698 (344,906); goat 3,114 bales of 815 lb. (2,178 bales); kid 550 bales (212 bales); sheep 53,607 bales of 880 lb. (27,057 bales); pickled hog 231 short tons (795 short tons); other pickled skins 4,738 short tons (6,638 tons); tanned hides 14,959 short tons (15,284 tons). Imports of petroleum and products in 1946 were 22,547,100 bbl. (1945: 3,658,168 bbl.), 7,232,000 bbl. of crude oil and 14,451.800 bbl. of residual fuel oil; the chief sources were the Netherlands West Indies (11,132,900 bbl.), Venezuela (8,638,400 bbl.) and the United States (1,018,800 bbl.). Imports of rubber in the first 3 months of 1947 were 8,007 long tons.

The year was an active one as far as trade agreements of various kinds were concerned. Argentina and Chile concluded an important one on Dec. 13, 1946, which did not take effect until 1947. It provided for an Argentine investment of $80,430,000 in industrialization projects in Chile, especially those affecting copper, nitrates, iron and steel, coal and wood and electric power; Chile guaranteed the sale of the excess of such products, after supplying its own needs, to Argentina. A like sum of $80,430,000 was pledged as a loan for Chilean public works construction, chiefly railways and roads, of kinds which would promote Argentine-Chilean commercial exchange. The agreement also established a revolving credit of $26,800,000 to aid Chile in financing its unfavourable trade balance with Argentina. It further provided for elimination of tariffs between the two countries except on competitive items. Argentina later (March 8) negotiated a similar but smaller-scale pact with Bolivia. A second agreement with Chile, July 12, provided for Argentine purchase of Chilean nitrates and abandonment of Argentine manufacture of synthetic nitrate. An agreement was concluded in May to exchange 9,000 metric tons of linseed oil for Canadian newsprint. The Anglo-Argentine trade agreement (commonly called the Roca-Runciman agreement) expired at the end of 1946 after 14 years; it was extended indefinitely from Jan. 1, 1947. A commercial and financial agreement with France was signed at Paris on Aug. 23; by its terms Argentina set up a 600,000,000-peso rotating fund against which France could buy Argentine products for 3 years. A Venezuelan agreement for purchase of Argentine foodstuffs was signed late in 1947. The establishment early in 1947 of the policy of concentrating all exports of agricultural products in the government's Argentine Trade Promotion institute gave the government much more control over trade policies; it affected such exports as corn, wheat, meat, vegetable oils, birdseed, oats, barley, rye, sorghum, cattle hides, pigskins and sheepskins; profits were intended to help finance the five-year plan. The chamber of exporters reported on Sept. 26, however, that Argentina had been ousted from many foreign markets because the government had entered the export trade. The government on Sept. 3 resumed the licensing of some chemical, medical and industrial imports and on Sept. 18 it resumed the shipment of canned beef to Great Britain and relaxed some earlier curbs on Spanish, Belgian and French imports. Port congestion was a problem at Buenos Aires in the second quarter of the year and the port was tied up on Sept. 27 by a strike of 10,000 dock workers asking higher wages. The Argentine delegation to the U.N. Trade conference at Havana, Cuba, in December took a generally critical position toward U.S. proposals there.

Argentina continued in 1947 its policy of repatriating foreign capital invested in Argentine transportation. The government on Dec. 17, 1946, purchased 3 French-owned railways, totalling 2,648 mi., for 182,796,174 pesos. A development of consummate importance was the government's purchase on Feb. 12 of the extensive British-owned share of the Argentine railway network, plus associated companies, for £150,000,000. The price included £135,500,000 for 16,000 mi. of railway and £14,500,000 for related properties; the total represented only about one-third of the original investment, but there had been no return on the bulk of the capital for about 20 years. These properties were the largest block of foreign investment in Argentina. The payment was made largely with blocked sterling and was expected to wipe out the Argentine sterling balance in London. The government stated it would make no immediate changes in management. The government planned to increase the railway construction budget from 80,000,000 pesos to 110,000,000 pesos annually under the five-year plan.

**Agriculture.**—Estimates of production of various agricultural crops and products in 1946–47 (in metric tons) included: wheat 6,024,000; oats 684.500; rye 522,200; barley 1,171,400; linseed 1,034,300 (1945–46: 964,100); cotton fibre 67,800 (1945–46: 61,687); sugar cane 7,452,800 (down 7.3% from 1945–46); sugar 600,000; wine grapes 1,258,700 (up 14.5% from 1945–46, but just enough to supply domestic demands); sunflower seed 894,000; peanuts 115,600 (down 17% from 1945–46); potatoes 852,000 (down 30% from the preceding 5-year average); rice 160,500 (up slightly from 1945–46); oranges 257,500 (1945–46: 211,700); tangerines 83,000 (1945–46: 77,000); lemons 44,000 (1945–46: 35,200); grapefruit 6,100 (1945–46: 3,600). The government concluded an agreement with Italy on Feb. 21 for stimulation of agricultural immigration by which it hoped to obtain 5,000 farm workers monthly. On March 19 Argentina refused to join the United States, Canada and Australia in setting a $1.25–$1.80 price scale for exported wheat. The government early in the year undertook to acquire 2,317 sq.mi. of land in the main cropping zones for early subdivision; it also planned to impound water to irrigate an additional 618 sq.mi. in the Rio Negro valley. Seedlings for 500,000 mulberry trees were planted in 1947. President Peró on Oct. 11 launched a campaign against locust pests.

**Manufacturing and Mining.**—President Perón stated on Aug. 20 that industry had increased 500% from the time he took office, but *La Nación*, prominent Buenos Aires paper, reported Aug. 25 that production ha dropped 40% in the preceding few months, partly the result of higher wages and salaries which made absences possible. Perón on Aug. 23 outlined a program to penalize absences and output drops and at the same time stabilize prices and adjust wages to living costs. It was planned in 1947 to begin manufacture of railway tires and axles at Córdoba; realization of the five-year plan was reported to be somewhat slowed because of a shortage of freight cars in which to haul cement. Sulphuric acid production in 1946 was 66,840 metric tons. Production of yarn in 1946 included 61,619 metric tons of carded and 2,758 tons of combed; cotton yarn production in the first 3 months of 1947 was 14,071 tons. Hosiery manufacture in 1946 totalled 76,709,340 pairs. The national corporation for production of rubber began operations in 1947; it hoped by 1951 to produce from 15% to 25% of Argentina's rubber needs, chiefly from guayule. Argentina concluded an important agreement with Uruguay on Dec. 30, 1946 for a large-scale hydroelectric project on the Uruguay river at the Salto Grande falls designed to assure low-cost electricity and also water fo irrigation for both countries; a joint technical commission was to supervise the project. The city of Rosario announced plans to expropriate one of Argentina's largest power plants when its concession expired in 1952 On Nov. 3 the government bought the British-owned Smithfield Argentine Meat company's packing plant at Zarate for 25,000,000 pesos.

Production of crude oil in 1946 was 20,924,246 bbl. (1945: 23,816,34 bbl.). Crude-oil runs to stills in 1946 totalled 27,673,000 bbl., of which 20,808,000 bbl. were Argentine oil and the rest foreign. Production of petroleum by-products (in barrels) in 1946 included: aviation gasoline 101,000; motor fuel 8,366,000; kerosene 3,345,000; distillates 2,511,000; residual fuel oil 9,673,000; others 3,055,000. On Feb. 2 uranium was reported discovered in Mendoza and San Luis provinces. (*See* also FASCISM.)

(R. H. FN.)

**Arizona.** The "Grand Canyon state" lies in the southwestern part of the United States; the Colorado river forms most of the western boundary. Area, 113,909 sq.mi. The provisional census of July 1947 estimated the population at 637,000. The 1940 census gave rural population 65.2%; urban 34.8%; native-born whites 78.1%; foreign-born whites (including Mexicans) 7.3%; Negroes 2.9%; other races (mostly Indians) 11.5%. The capital is Phoenix with an estimated population (1947) of 90,000 (metropolitan area 200,000); chief cities with their estimated population: Tucson 50,000 (metropolitan area 100,000); Yuma 11,500; Mesa 11,000; Douglas 10,000; Flagstaff 9,000; Prescott 9,000; Winslow 8,000; Glendale 7,500; Globe 7,000.

**History.**—The state officials (1947) were: chief justice, Rawghlie C. Stanford; governor, Sidney P. Osborn; secretary of state, Dan E. Garvey; treasurer, William T. Brooks; attorney general, John L. Sullivan and Evo de Conceni (appointed Dec. 13); superintendent of public instruction, Nolan D. Pulliam and L. D. Klemmedson. The regular session of the 18th legislature met in Jan. 1947 and two special sessions in June and July. Instead of two congressmen-at-large, Arizona was divided into two congressional districts with definite provision for a third when population required. Attempted legislation to control ground water for irrigation was defeated by various interested groups to the great concern of those fearing the constantly lowering water level. On Dec. 2, 1947, Governor Osborn announced three special sessions for early in 1948, the second to consider a ground water code, since previous attempts during the year never emerged from committees. The governor's message of Jan. 13, 1947, charged the power interests with responsibility for power deficiencies, and one special session (call of Dec. 2, 1947) was to deal with possible better protection of consumers' interests. Social security was another controversial issue, there being an appropriation of $10,000 in the regular session, increased to $40,000 in one special session, for an investigation of local and state administration. The special session (called Dec. 1947) was to secure more satisfactory legislation on the issue.

**Education.**—The net enrolment and the number of teachers in the public schools for 1946–47 stood respectively as follows: elementary schools 102,192 and 2,739; high schools 26,961 and 936. There were about 50 private and parochial schools.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—In Sept. 1947 the state department of social security and welfare aided 19,382 persons, and the state appropriation was $5,650,193. Other appropriations for 1947 were: industrial school $174,300; juvenile girl offenders $97,630; prison $276,315; state hospital for insane $1,086,900; pioneer home $103,150. An appropriation was made to organize a colony for defective children.

**Communications.**—Arizona highways in 1947 were as follows: state highway mileage 3,765; county roads 15,543; forest, Indian reservation and military roads 9,795. Railroad mileage was 2,651; number of air bases for interstate travel 5; number of telephones 108,511.

**Banking and Finance.**—National banks in Oct. 1947 had deposits of $283,478,162; loans and discounts $113,329,172; U.S. government securities $105,936,274. State banks had deposits of $107,959,748; loans and discounts $24,733,060; U.S. government securities $59,961,463.

**Agriculture.**—The year 1947 was the driest in 50 years, the irrigation reservoirs being empty and the ground water level lowered.

Table I.—*Leading Agricultural Products of Arizona, 1947 and 1946*

| Crop | 1947 (est.) | 1946 |
|---|---|---|
| Wheat, bu. | 588,000 | 567,000 |
| Oats, bu. | 392,000 | 336,000 |
| Sorghum grain, bu. | 1,750,000 | 1,872,000 |
| Corn, bu. | 352,000 | 352,000 |
| Cotton lint, bales | 210,000 | 158,000 |
| Grapefruit, boxes* | 4,100,000 | 4,100,000 |
| Oranges, boxes* | 1,210,000 | 1,200,000 |
| Horses and colts, head† | 71,000 | 72,000 |
| Cattle and calves, head† | 921,000 | 949,000 |
| Sheep and lambs, head† | 462,000 | 515,000 |

*Year ended July 31, 1947.
†Number on farms and ranches, Jan. 1, 1947.

**Manufacturing.**—Less than 9% of the population of Arizona were engaged in manufacturing during 1947, there being fewer than 400 establishments, these being mostly lumber mills and producers of food articles.

Table II.—*Mineral Production of Arizona, 1946*

| Products | Weight | Value |
|---|---|---|
| Copper, lb. | 578,446,000 | $93,708,252 |
| Gold, oz. | 79,024 | 2,765,840 |
| Silver, oz. | 3,268,765 | 2,641,162 |
| Zinc, lb. | 87,330,000 | 10,654,260 |
| Lead, lb. | 47,860,000 | 5,216,740 |

**Mineral Production.**—Arizona ranks first of the states in the production of copper, third in silver, and fifth in gold. It was estimated that the mineral production for 1947 would exceed all records. (H. A. H.)

## Arkansas.

Arkansas is an inland state in the south central United States, admitted to the union in 1836. Area 53,102 sq.mi., 377 of which are normally under water.

The population (1940) of 1,949,387 was an increase of 5.1% over that of 1930. The state lost 262,609 in population during World War II (U.S. census estimates) because of migration to other areas for war work. The population had recovered to 1,903,000 by July 1, 1947 (U.S. census estimates). Most returning people did not go back to farms, but stayed in towns and cities, finding jobs in new and expanded industries. The census of 1940 shows 53 towns and cities, 431,910 urban and 1,517,477 rural population. The Negro population, 506,550, was chiefly in the southeast half of state. Capital: Little Rock (pop. 1940, 88,039). Other cities with populations (1940 census): Fort Smith, 36,584; Hot Springs, 21,370; Pine Bluff, 21,290; North Little Rock, 21,137.

**History.**—The principal state officers during 1947 were Ben T. Laney, governor; Nathan Gordon, lieutenant governor; C. G. Hall, secretary of state; J. C. Humphry, auditor; J. V. Clayton, treasurer; Guy E. Williams, attorney general; C. A. Rankin, land commissioner.

The year 1947 was marked by a 21% increase in state tax revenues, reflecting increased per capita income, larger business volume and higher prices. Appropriations for public service were increased by the 1947 legislature. Provision was made for broader programs of resource protection and development, public schools, buildings and operating budgets for state educational and charitable institutions.

**Education.**—Total expenditures, state and local, for public schools in the school year 1946–47 were approximately $27,000,000. Estimated expenditures for 1947–48 were $30,000,000. Total attendance in the 1946–47 school year was (approximately) 325,500 of which 248,000 were white and 77,500 Negro. The per capita expenditure for current expenses was approximately $71.61. Teachers numbered 10,390 white and 2,612 Negro for a total of 13,002. The commissioner of education was Ralph B. Jones, beginning his eighth year Jan. 1, 1948.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The state in 1947 maintained 30 charitable and correctional institutions, including state penitentiary farms, state farm for women, girls' industrial school, boys' industrial school, Negro boys' industrial school, state hospital for nervous diseases, tuberculosis sanatoriums, school for the blind, school for the deaf, Confederate veterans' home and children's home and hospital. All these agencies received increased operating budgets for 1947 and 1948. The 1947 legislature appropriated approximately $7,000,000 per year of state funds for welfare grants and operating costs.

**Communications.**—Highways, local and state, totalled about 75,000 mi. in 1947. Construction contracts let for state highways in 1947 totalled $16,740,783. The paved and gravelled mileage on the state system at the end of the year was 9,269 mi.; unimproved 81 mi. Total highway revenues were about $23,500,000, a new high record. Aid to county roads and city streets from state sources was increased $3,000,000 per year. Railway mileage remained the same, about 5,000 mi. Plans for expanded airport facilities were perfected and were ready for construction in 1948. Flood control projects on the principal rivers were active during the year, with the largest funds in history available from federal sources.

**Banking and Finance.**—There were 221 state and national banks, with combined assets as of Dec. 31, 1946, of $829,000,000 (compared with $227,000,000 on Dec. 31, 1939). Deposits totalled $783,000,000.

The state treasurer reported a net bonded debt Dec. 31, 1947, of $123,279,650, a reduction of $5,415,158.54 in principal during the year. The treasury balance at the end of 1947, including trust and sinking funds, was $51,500,000.

**Agriculture.**—The total value of agricultural production for 1947 was estimated at $500,000,000 to $525,000,000. Production is widely diversified. The chief products are cotton, livestock, rice, corn, soybeans, peaches, chickens, berries, truck and dairy products. During the year the canning industry attracted two can factories to supply the canneries.

**Manufactures.**—The total manufacturing output for 1947 was estimated at $650,000,000. A three-year gain in new industries and important expansions, reported by the Arkansas Economic Council-State Chamber of Commerce, included 1,500 new plants, with a capital investment of $100,000,000, providing 30,000 jobs, with an annual payroll of $50,000,000. Lumber production for 1947 was estimated at 1,600,000,000 board feet. The value of the forest products industry was estimated at $159,000,000.

**Minerals.**—The value of mineral production for 1946 was $64,955,000 (severance tax figures). It included: barite, 288,963 short tons; bauxite, 1,199,003 long wet tons; cement, 284,865 barrels; chert, 17,990 short tons; raw clay, 263,812 short tons; coal, 1,365,147 short tons; dolomite, 48,709 short tons; gravel, 1,704,040 short tons; gypsum, 27,624 short tons; manganese and manganiferous ore, 2,384 short tons; natural gas marketed, 48,000,000,000 cu.ft.; natural gasoline, 1,098,353 bbl.; condensate, 39,337 bbl.; butane and propane, 826,317 bbl.; novaculite, 1,711,705 lbs.; petroleum, 28,367,496 bbl.; glass sand, 191,780 short tons; construction sand, 1,234,457 short tons; limestone dimension stone, 852 short tons; crushed sandstone, 656,112 short tons; novaculite for ballast, 77,352 short tons; tripoli, 830 short tons. (C. F. Bs.)

## Armies of the World.

In the second year after the end of World War II, more than 15,000,000 men remained mobilized in the armies of the world. Two factors contributed to the maintenance of land forces of extraordinary size in 1947. Tension between the Soviet Union and the United States accounted for the maintenance of large

"GUINEA PIG" testing a gas mask for U.S. army Task Force "Furnace" near Yuma, Ariz., in 1947. Twelve such volunteers wore various types of masks at their regular duties for an hour each day in 120° heat and then reported on their feasibility armies by Turkey, Great Britain and the United States that otherwise would have been greatly reduced in size. Internal unrest and colonial troubles, or the threat thereof, were responsible for the size of the armies of China, Spain, India, Pakistan, the Netherlands and France.

With the armies of Germany dispersed, the land power of the Soviet Union assumed undisputed supremacy on the landmass of Europe-Asia. The number of men under arms in China exceeded that of Russia, but the Chinese forces were split by the civil war between the communists and Kuomintang. Even a united Chinese army, although possibly superior in numbers, would have been no match for soviet experience, equipment and training.

The following table gives the comparative strength of the armies of the great powers in 1947:

| Country | Divisions | Active Force | Reserves |
|---|---|---|---|
| U.S.S.R. | 200 | 3,800,000 | 7,000,000 |
| United States | 13 | 670,000 | 6,000,000 |
| China | 350 | 5,750,000 | |
| Great Britain | 20 | 650,000 | 2,000,000 |
| France | 15 | 430,000 | 2,000,000 |

**Disposition.**—With the exception of China, whose forces were engaged in civil war, all of the great land powers had the bulk of their troops committed to duties outside the homeland. The Soviet Union had 1,500,000 to 2,000,000 men on occupation duties in Europe and the far east. The United States, with a system of voluntary enlistment, was fully extended to keep its occupation forces in Germany, Austria, Italy, Japan and Korea and its garrisons in the Caribbean and the Pacific Islands up to strength. Great Britain, although in the course of withdrawing its forces from Italy, India, Egypt and Palestine, maintained a large force in Germany with smaller groups in Austria and Italy. The French army was committed to occupation duties in Germany and Austria or occupied with colonial difficulties in Madagascar, Indo-China and Morocco. During the course of 1947, the French were forced to call up about 200,000 reserves because of internal troubles in metropolitan France.

**Training.**—During 1947 only the Soviet Union was able to place in operation an effective peacetime system of military training. China's forces had the costly but practical training of civil war. Great Britain, France and the United States were forced to suspend normal training activities as the bulk of their forces were committed to occupation or colonial duties.

**Equipment.**—A considerable proportion of the military expenditures of the great powers in 1947 was allocated to the development of new equipment. The atom bomb, guided missiles and supersonic aircraft interposed new factors to be reckoned with in developing land armies. Firepower of infantry units was greatly increased by the development of recoilless, light artillery weapons. Larger, faster and more heavily armed tanks were under development by all powers. The Soviet Union and the United States experimented in arctic equipment since that was the area commonly contiguous.

**Organization.**—All the major powers showed concern with the development of land forces transportable by air. This conception was combined with an emphasis on armoured striking forces of high speed and considerable firepower designed for quick break-through thrusts. In most armies, as a result of experience in World War II showing the necessity for the close integration of infantry with armour, the infantry division was strengthened by the addition of component armoured units as well as organic anti-aircraft units. The rifle platoon's firepower was increased by the addition of more man-carried automatic weapons. The squad reverted to its prewar size.

**United States.**—The wartime peak strength of 89 divisions and some 4,500,000 men of the United States army had dropped by 1947 to the equivalent of 13 divisions and 670,000 men. As the only major power without peacetime conscription, the United States was hard pressed to keep its units manned through voluntary enlistments. Occupation commitments delayed the army from completing its peacetime organization which called for 11 regular fully equipped combat divisions. This small regular force "on paper" was to be backed by 24 national guard and 23 reserve divisions, all of which could be mobilized in a year, giving the army a strength of 58 divisions one year after M-day. At the year's end this program was still largely in the recruiting stage.

*Disposition.*—During 1947 the evacuation of Italy, in accordance with the peace treaty, reduced the overseas commitments of the United States to 5,000 troops in Trieste, 10,000 in Austria, 105,000 in Germany and 150,000 in Japan and Korea. In the United States, two understrength regular army divisions, the 82nd airborne at Fort Bragg, N.C., the 2nd infantry division and elements of 2nd armoured at Camp Hood, Tex., were supplemented by four units that existed primarily on paper: the 3rd, 4th and 9th infantry and 3rd armoured divisions.

The organization of the national guard and the reserve divisions began to take the following planned disposition:

*1st army—Governors Island, N.Y.*

National guard—76th, 77th, 94th and 97th infantry and 98th airborne divisions

Reserve—26th, 27th and 43rd infantry and 50th armoured divisions plus one undesignated

*2nd army—Baltimore, Md.*

National guard—28th, 29th and 37th infantry divisions

Reserve—79th and 83rd infantry and 80th and 100th airborne divisions

*3rd army—Atlanta, Ga.*

National guard—30th, 31st and 48th infantry divisions

Reserve—81st and 87th infantry and 108th airborne divisions

*4th army—San Antonio, Tex.*

National guard—36th, 39th and 45th infantry and 49th armoured divisions

Reserve—90th and 95th infantry and 22nd armoured divisions

*5th army—Chicago, Ill.*

National guard—32nd, 33rd, 34th, 35th, 38th, 46th and 47th infantry divisions

Reserve—85th, 89th, 102nd and 103rd infantry divisions and 21st armoured and 84th airborne divisions

*6th army, San Francisco, Calif.*

National guard—40th and 41st infantry divisions

Reserve—91st, 96th, 104th infantry and 19th armoured divisions

*Training.*—During 1947 training in the United States army was devoted almost entirely to basic training and the schooling of enlistees for occupation duties. Comprehensive training programs were being developed for the reserve and national guard, and the army developed its plans in the event that the congress might authorize and implement universal military training.

*Equipment.*—Like the Soviet Union and Great Britain, the United States devoted a considerable amount of money to the development of guided missiles. Equipment for the ground forces under development included new types of amphibious vehicles, a new heavy tank to replace the General Pershing (which was to become the medium tank of the future), recoilless artillery and heavier self-propelled artillery.

*Organization.*—The departments of the army, navy and air force were created in 1947 as separate entities but subordinate to a common department of national defense. During the year the United States army made known its plans to reorganize both the infantry and armoured divisions. The new infantry division numbered more than 17,000 men, an increase of 3,000 over the World War II division. A tank battalion and an anti-aircraft artillery battalion were included as organic parts of the division. The firepower of the divisional artillery was increased 50% by the addition of 2 more howitzers to each of the 12 firing batteries. The infantry squad was reduced from 12 to 9 men. A 4th company and a bridge platoon was added to the engineer battalion.

The new-type armoured division included three equal-strength combat commands instead of the former organization of two

U.S. ARMY'S TASK FORCE "FRIGID" using a dog team to haul a "casualty" to a helicopter for evacuation during a mock rescue party in Alaska early in 1947

commands with an understrength reserve command. An entire battalion of infantry was added to the division as well as a heavy tank battalion. A new artillery battalion added 18 self-propelled 155-mm. howitzers to the firepower of the division. An anti-aircraft artillery battalion was added, composed of 32 self-propelled quadruple .50-calibre machine guns and 32 self-propelled dual 40-mm. guns. The tank-destroyer battalion was dropped. The half-track personnel carriers were eliminated, and 530 full-track personnel carriers became standard. The new-type division would have 325 medium tanks plus the battalion of heavy tanks.

**Great Britain.**—The strength of the British ground forces declined during the year to approximately 650,000, of which more than half were located outside the United Kingdom. The serious economic crisis of the country forced a continued attrition of military manpower in order to obtain essential labour for industry. The British government was under constant pressure to make even more drastic cuts in the armed services. Great Britain continued conscription and inducted approximately 190,000 men into the army during the year for a service of 18 months. After compulsory service each man was required to serve six years in the reserves.

*Disposition.*—During 1947 Great Britain continued to withdraw more troops from overseas commitments, although a large proportion remained on occupation duties at the end of the year. British forces in Germany were reduced to approximately 125,000 men. The 20,000 in Italy completed withdrawal in December in accordance with the terms of the Italian peace treaty, although some 5,000 remained in Trieste in conjunction with U.S. forces. Another 5,000 troops remained in Greece but were scheduled for early withdrawal, and the 70,000 in Palestine and the 75,000 in India were scheduled to be completely withdrawn during the first half of 1948.

*Training.*—Training, to a large part, was carried on by the army of the Rhine in Germany, although the first postwar manoeuvres were held in Great Britain. Emphasis was placed on airborne operations and armoured penetrations. Exercise "Longstop," held in the fall of 1947, posed the problem of capturing an airfield with two battalions of paratroops reinforced by one battalion of air-transported infantry.

*Equipment.*—Like the other great powers, Great Britain concentrated on the development of equipment necessitated by the advent of atomic power and guided missiles. Most of this work was carried on in close co-operation with the United States, and steps were taken to standardize the ground force equipment of the two countries.

*Organization.*—On the top level, Great Britain instituted an organizational change similar to unification in the United States. The three service ministers were subordinated to a minister of defense, and a defense committee was created similar to the U.S. national security council.

**U.S.S.R.**—Although the Soviet Union demobilized at least 30 classes of conscripts after the end of World War II, the red army still maintained up to 3,800,000 men under arms in 1947. Demobilization of the red army was carried forward on a systematic and selective basis, with basic infantrymen quickly released while technicians and armoured force troops were retained. The result gave the Soviet Union an army with special skill in armoured warfare. Of the ground forces 2,000,000 were in the Soviet Union, with the remainder on occupation duties. This level of strength would probably diminish slightly as occupation forces were reduced. One of the cardinal points of the latest soviet five-year plan provided for the strengthening and maintaining of the armed forces.

The red army maintained a professional cadre of approximately 2,000,000 officers and men. In addition, 800,000 to 1,000,000 men were being conscripted into the army each year for a two-year period of service after which they reverted into the reserve. By this method the Soviet Union was building up a trained reserve which by 1955 would amount to 15,000,000–20,000,000 men.

*Disposition.*—The actual disposition of the soviet armies was one of the secrets most carefully guarded by the Kremlin. During 1947 the red army completed the replacement of the bulk of its combat veterans on occupation duties with new conscripts (called by the Germans "Stalin Youth") who had been rigorously indoctrinated with Marxist philosophy so as not to be contaminated by contact with the outside world. The combat veterans, upon returning to the U.S.S.R., were reindoctrinated and screened before being discharged or placed in the professional cadre.

From 1,000,000 to 1,500,000 troops, 75–80 divisions, were engaged in occupation duties in Europe, located in eastern Germany, Poland, Rumania, Bulgaria, Austria and Hungary. Another 250,000, approximating 12–15 divisions, were on duty in northern Korea. Instructional groups remained in Yugoslavia, and many officers in Polish uniform were in reality Russians. Hundreds of thousands of discharged soldiers put on civilian clothes and became part of the civilian communities of the satellite countries.

Probably the most accurate disposition of the soviet forces in the U.S.S.R. was reported by a dissident soviet general officer to the North American Newspaper alliance in Paris. This placed 6 soviet army commands of 20 or more divisions each, in the following locations:

| Army | Headquarters | Commander |
|---|---|---|
| Army of the north | Leningrad | Marshal Klementiy Voroshilov |
| Western army | Minsk | Marshal Konstantin Rokossovsky |
| Army of the south | Odessa | Marshal Georgi K. Zhukov |
| Caucasian army | Tiflis | Marshal Ivan C. Bagramyan |
| Turkestan army | Tashkent | Marshal Semyon K. Timoshenko |
| Far eastern army | Vladivostok | Marshal Rodion Y. Malinovsky |

*Training.*—By virtue of the size of the occupation forces maintained by the Soviet Union, the red army was able to conduct training exercises in the occupied areas in divisional and corps strength. These exercises featured the use of massed armour and stressed individual initiative. The basic training of the Russian infantryman was expanded. The training of the Russian soldier had heretofore been more narrow than that of the British Tommy or the American G.I. The soviet wartime infantryman learned only discipline, political ideology, his weapon (usually the Russian tommy gun) and squad and platoon tactics. Only a smattering of other subjects such as gas defense and first aid was taught. This narrow training, along with a lack of general culture, was manifest when soviet troops assumed the role of occupying forces in Europe. Continuing a trend started before World War II and accentuated by experience in the war, the Soviet Union devoted considerable attention to the development of a professional corps of officers. Officers were given new privileges, higher pay and great authority. The uniform and traditions of the tsarist officer class were gradually revived. During the war Alexander Suvarov and Mikhail Kutusov became recognized historical heroes, ranking only below Lenin himself. Thus was pitched a new keynote for the 1947 soviet armies.

*Equipment.*—The Soviet Union spent more than $1,225,000,000 in 1947 on military research. An additional $9,000,000,000 to $10,000,000,000 was spent on new equipment. A considerable proportion of the allotment to research was spent on atom bomb development. More than 500 German scientists worked on the development of new and improved weapons, particularly guided missiles, tanks and aircraft. A new tank, probably the largest in the world, was developed.

*Organization.*—During 1947 the soviet tendency to develop elite infantry units for break-through operations continued. The guards rifle divisions were strengthened by the addition of one or more regiments of tanks. These units were designed for break-through of enemy lines and striking at key industrial and transportation centres. Additional firepower was given to armoured units.

**France.**—The ground forces of the French army numbered approximately 430,000 men in 1947. This number was increased somewhat during the year by the call-up of reserves during the general strike crisis in November. France conscripted 150,000 19-year olds for compulsory service. These conscriptees were required to serve in the reserves for 20 years.

*Disposition.*—Only about a quarter of the active ground forces were in metropolitan France. Some 110,000 French troops were on occupation duties in Germany and Austria, another 100,000 were in North Africa, and about 110,000 were in the colonies and the far east. It was necessary for France to maintain abnormally large forces in Madagascar and Indo-China because of insurgent activities in those areas. Perhaps by some design, the November crisis found metropolitan France almost denuded of troops. At that time it was necessary to call up 200,000 reserves.

*Strength of the Armies of the World*

| Country | Number of men | Per cent of budget for military | Number of civilians per soldier* | World ran on basi of numbe of men in the army |
|---|---|---|---|---|
| Afghanistan | 100,000 | | 120 | 19 |
| Albania | 60,000 | | 17 | 23 |
| Argentina | 100,000 | 38 | 140 | 17 |
| Australia | 35,000 | 30 | 206 | 27 |
| Belgium | 85,000 | 10 | 99 | 20 |
| Bolivia | 30,000 | 30 | 118 | 29 |
| Brazil | 110,000 | 42 | 404 | 16 |
| Bulgaria | 60,000 | | 109 | 21 |
| Canada | 25,000 | 12 | 460 | 30 |
| Chile | 25,000 | 19 | 209 | 31 |
| China | 5,750,000 | 80 | 91 | 1 |
| Colombia | 14,000 | 10 | 678 | 36 |
| Cuba | 15,000 | 18 | 320 | 35 |
| Czechoslovakia | 105,000 | 20 | 138 | 18 |
| Denmark | 14,000 | 14 | 271 | 37 |
| Ecuador | 10,000 | 20 | 308 | 41 |
| Egypt | 160,000 | | 108 | 14 |
| Eire | 11,000 | 6 | 273 | 38 |
| Finland | 34,000 | | 114 | 28 |
| France | 430,000 | 32 | 93 | 7 |
| Great Britain | 650,000 | 28 | 72 | 5 |
| Greece | 145,000 | | 49 | 15 |
| Hungary | 50,000 | | 182 | 24 |
| India | 375,000 | | 736 | 8 |
| Italy | 200,000 | | 229 | 12 |
| Mexico | 50,000 | 22 | 412 | 25 |
| Netherlands | 175,000 | 26 | 51 | 13 |
| New Zealand | 11,000 | | 145 | 39 |
| Norway | 15,000 | | 193 | 34 |
| Pakistan | 250,000 | | 460 | 10 |
| Peru | 25,000 | 21 | 280 | 32 |
| Poland | 250,000 | 25 | 179 | 11 |
| Portugal | 18,000 | | 444 | 33 |
| Rumania | 45,000 | | 349 | 26 |
| South Africa | 10,000 | | 1,070 | 40 |
| Spain | 450,000 | 33 | 60 | 6 |
| Sweden | 60,000 | | 109 | 22 |
| Switzerland | 10,000 | | 426 | 42 |
| Turkey | 675,000 | 19 | 28 | 3 |
| United States | 670,000 | 34 | 209 | 4 |
| U.S.S.R. | 3,800,000 | 18 | 51 | 2 |
| Uruguay | 10,000 | | 218 | 43 |
| Venezuela | 10,000 | 9 | 383 | 44 |
| Yugoslavia | 300,000 | 22 | 54 | 9 |

*Indicates the degree of mobilization, the lowest figures indicating the highest state o mobilization.

¶Information for Paraguay not available because of 1947 revolution.

*Equipment.*—During 1947 the French army found that most of the equipment it had received during World War II from the United States was wearing out. New equipment for one airborne division was obtained from Great Britain, and some surplus equipment, particularly transport, was obtained from the United States. Only a relatively small amount of equipment was available domestically, as French armament production was subordinated to commercial production for export.

*Organization.*—The postwar French army was organized on the principle of a small highly-mobile striking force supported by a large trained reserve. In contrast with the Maginot concept of fixed defense which prevailed in 1939, French military thinking now stressed war of movement. The French army had approximately three armoured and one airborne divisions under organization in 1947.

**China.**—Little accurate information was available on the Chinese armed forces. On the Kuomintang side there were approximately 3,500,000 men, of whom about half were combat effectives. Of some 200 divisions which the Kuomintang tried to keep in action, approximately 20 were partially American-trained and an additional 30–40 had some surplus equipment purchased from the United States.

On the communist side a fluctuating force of from 1,500,000 to 2,000,000 men were equipped with American material captured from the Kuomintang as well as some Russian equipment.

**British Commonwealth.**—*Australia.*—During 1947 the Australian army was rapidly demobilized toward a peacetime goal of 35,000 men. Occupation duties in Japan were the principal commitment abroad.

*Canada.*—Canada's wartime army of 495,000 was almost completely demobilized by 1947, and the peacetime cadre of 25,000 volunteers was in the process of formation. The regular force was supported by a reserve of 180,000 organized into two armoured and four infantry divisions.

All military exercises were closely linked with those of the United States. Emphasis was placed on the defense of Canada's northern frontier against possible attack across the arctic.

*India.*—In the split-up of the Indian forces which served under the British, the dominion of India received 45 regiments approximating 250,000 men. In addition, 25,000 Gurkha troops from Nepal were serving in the forces of the new dominion. Total land strength was between 375,000 and 400,000 men.

*New Zealand.*—Armed forces of New Zealand were stabilized at 11,000 volunteers for peacetime.

*Pakistan.*—The division of the former British Indian army gave to the new dominion of Pakistan some 20 regiments. This, together with levies and contributions of native princes, gave the new army a strength of about 250,000 men.

**European Powers.**—*Belgium.*—During 1947 Belgium continued the slow rebuilding of its army, reaching a strength of about 85,000 men. The Belgian army had two divisions, each composed of two infantry brigades and a reinforced reconnaissance regiment. Part of the Belgian army was committed to occupation duties in the Aachen-Cologne area of Germany.

*Bulgaria.*—Under reorganization to conform to the soviet pattern, Bulgaria's army numbered about 60,000 men in 1947.

*Czechoslovakia.*—With about 20% of the country's budget allocated to military expenditures, the once crack Czech army had been reorganized along soviet lines. With approximately 105,000 men in the army in 1947, the Czechs stressed mechanization and mobility. Russian equipment and methods were used.

*Denmark.*—The Danes had about 14,000 men under arms in 1947. One Danish brigade participated in the occupation of Germany.

*Finland.*—Under the peace treaty between Finland and the Soviet Union, an army of 34,000 professional soldiers was permitted. Approximately 18,000 recruits were trained for the reserve.

*Germany.*—Although Hitler's legions were disbanded after the defeat of 1945, there was some evidence of a German army in Russia. While difficult to assess, the most alarmist reports, if true, would indicate that this force was organized by the soviets to take over in eastern Germany after the red army withdrew and consisted of 36 divisions of former German soldiers whom the Russians considered good communists. Of the divisions, 18 were reported to be armoured and another 7 motorized, using German, Russian, British and U.S. equipment. The German force was alleged to be concentrated in three places: in the Crimea, near Lake Ladoga and near Minsk. The existence of the red German armies, however, remained unconfirmed.

*Greece.*—A Greek army of about 145,000 men was engaged in constant operations against a guerrilla force numbering between 10,000–15,000 men. The Greek army, consisting of four mountain and three mechanized divisions, was dispersed throughout the country in units ranging from company to regimental size in an effort to hold territory against the guerrillas and keep communications open. This left few troops for offensive operations.

*Hungary.*—Under soviet occupation, Hungary's ground force of 50,000 was reorganized along Russian lines and under Russian tutelage.

*Italy.*—Italy's army, reorganized as an associate of the Allied powers during World War II, totalled some 200,000 men, equipped with British and U.S. equipment.

*The Netherlands.*—The Netherlands' army consisted of 175,000 men in the ground forces, of which over 100,000 were in the Netherlands Indies. There was sufficient equipment for three divisions. Conscription brought 28,000 men into the army in 1947.

*Norway.*—The ground forces totalled 15,000 and were organized into mountain and coastal battalions. The equipment was British.

*Poland.*—A total of 250,000 in the ground forces was supported by 100,000 militia. The Polish army had three armoured and ten infantry divisions and was being reorganized along soviet lines.

*Portugal.*—Ground forces totalled 18,000.

*Rumania.*—Reorganized along soviet lines with the bulk of its troops specially indoctrinated in Russia, the Rumanian army totalled 45,000.

*Spain.*—Ground forces in Spain totalled 450,000, organized into 16 infantry, 4 mountain, 1 armoured and 1 cavalry divisions. Four divisions were in Spanish Morocco.

*Sweden.*—Sweden maintained 60,000 men in the ground forces in 1947. These were augmented by a trained reserve of 600,000 men, built up by compulsory military service of 12 months' term. Excellently equipped, the army was specially skilled in mountain warfare although untested in modern combat.

*Switzerland.*—About 10,000 regulars were in the ground forces in 1947. This force was augmented by a trained reserve of 500,000 which could be mobilized in four days for defense of the national redoubt in the Alps. The Swiss were excellently equipped for mountain warfare.

*Turkey.*—Turkey maintained 675,000 men in the ground forces in 1947 as a show of strength against pressure from the Soviet Union. These forces were organized into three field armies, with seven fortification commands and four military regions. There were 35 active divisions of which 4 were mechanized, 2 armoured and 4 mountain. Heterogeneously equipped with material from nearly every European country, Turkey was scheduled to be re-equipped by the United States.

*Yugoslavia.*—Ground forces of 300,000 were maintained in 1947 with principal concentrations on the Italian and Greek frontiers. These forces were organized into 3 armies with approximately 35 infantry and 2 armoured divisions. World War II equipment was being replaced by soviet equipment.

**Middle Eastern Powers.**—Few accurate figures were available on the ground strength of the middle eastern powers. Egypt had an army of approximately 160,000 men with considerable British equipment. The constabulary force of Iran was organized and schooled along U.S. lines, while those of Iraq and Trans-Jordan showed British influence, and those of Syria and Lebanon showed French influence. The middle eastern powers were mobilizing their strength at the close of 1947 as the possibility of a holy war over Palestine developed. (*See* also AVIATION, MILITARY; MUNITIONS OF WAR; SELECTIVE SERVICE.) (E. L. S.)

## Arsenic.

The output of white arsenic (arsenous oxide) in the major producing countries in late years was as follows:

*World Production of Arsenic*

(Thousands of short tons)

| | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|---|---|
| Australia . . . . . | 1.59 | 3.73 | 3.78 | 3.05 | 2.56 | 2.58 | 2.23 | 1.82 |
| Belgium (exp.) . . . | 3.67 | ? | ? | ? | ? | ? | ? | ? |
| Brazil . . . . . . | 0.78 | 1.19 | 1.29 | 0.99 | 1.07 | 0.93 | 1.06 | 1.0 |
| Canada . . . . . | 0.87 | 1.05 | 1.77 | 3.92 | 1.58 | 1.31 | 1.02 | 0.37 |
| France . . . . . . | 6.61 | 7.75 | 5.28 | 5.38 | 5.33 | 1.98 | ? | ? |
| Germany (exp.) . . | 1.96 | ? | ? | 3.95 | 6.18 | ? | ? | ? |
| Italy . . . . . . . | 1.27 | 1.41 | 0.60 | ? | ? | ? | ? | ? |
| Mexico. . . . . . | 7.79 | 10.22 | 14.16 | 20.41 | 22.39 | 16.87 | 16.55 | 10.64 |
| United States . . . | 22.34 | 24.98 | 32.48 | 28.68 | 31.20 | 36.09 | 24.35 | 10.24 |
| Total. . . . . . | 51.2 | 58.8 | 66.9 | 69.5 | 78.9 | 73.0 | 56.9 | 36.1 |

Normally Belgium and Italy would appear in the table, but no late data were available. Sweden has a larger potential arsenic output than the United States, but the available market is small, and output is kept low.

**United States.**—Because of strikes in the smelting plants producing arsenic, the 1946 output was the lowest in 20 years. The shortage of supply forced the exhaustion of a government stock of almost 2,000 tons by the end of the first quarter, and before the year was over industry stocks had been depleted 80%. (G. A. Ro.)

## Art Exhibitions.

Museums, art organizations and sales galleries of the U.S. continued in 1947 the same full schedule of exhibitions which had been increasing during the past few years.

The oldest annual in the U.S. is held at the Pennsylvania Academy of the Fine Arts, and in 1947 reached its 142nd year. Arthur Osver won the much coveted Temple gold medal for "Majestic Tenement."

New York's National Academy of Design held its 121st annual in two sections, the first of which included a few nonmembers by special invitation. Philip Guston was awarded the $1,200 Altman prize for "Holiday." In the second section of the exhibition Eugene Speicher and Paul Sample (both painters) and Marion Sanford and Peter Dalton (both sculptors) all won $1,000 prizes.

In Pittsburgh, Carnegie institute, formerly well-known for its international exhibitions, continued to hold an all-invited American annual. Presumably the international art scene was not yet bright enough to warrant including European artists. Zoltan Sepeshy won the top prize of $1,500 for "Marine Still Life" and Joseph Hirsch carried off the $1,000 second prize for "The Iceman."

Chicago's Art institute made its 58th American annual into a theme show and limited it to two modern trends, abstraction and surrealism. The much-discussed $1,000 Campana purchase prize went to William Baziotes for "Cyclops" while Rico Lebrun was awarded the $500 Harris prize for "Vertical Composition."

Pepsi-Cola, sponsor of industry's largest annual, held its

ANNUAL GREENWICH VILLAGE outdoor art exhibit. Passersby are shown viewing 1947 entries by N.Y. city residents which lined the walls of buildings at Washington Square park early in June

fourth exhibition for American artists and awarded $35,960 in prizes. Top prize of $2,500 went to Henry Kallem, a scarcely known artist, for "Country Tenement" and the $2,000 second prize to Lamar Dodd for "The Breaker."

An unusual exhibition was held at the Philbrook Art Center in Tulsa, Okla., which sponsored its second annual open only to Indians of the U.S. and Alaska. Though many state fairs had held art exhibitions, nothing so impressive was ever assembled as the Old Northwest Territory exhibition held at the Illinois State fair in Springfield.

Prizes of $2,900 were distributed and the intention was expressed of making this an annual event.

Numerous one-man exhibitions dotted the year's calendar. The Museum of Fine Arts, Boston, and the Detroit Institute of Arts collaborated on a comprehensive exhibition of the work of the early 19th century American romanticist, Washington Allston (1779–1843). The Suffolk museum at Stone Brook, Long Island, assembled a remarkably interesting group of paintings by the three Mount brothers, famed in the mid-19th century both for portraits and genre work. Ben Shahn was given a retrospective exhibition at the Museum of Modern Art in New York where his social commentaries and symbolic themes showed to advantage. Gaston Lachaise, the French born U.S. sculptor who died in 1935, was given an impressive showing of both sculpture and drawings at the Knoedler gallery in New York.

The Whitney museum in New York departed from its usual policy of showing only American art and assembled an exhibition "Painting in France 1939–1946." This included 117 paintings by 67 artists. Georges Braque's "The Studio" was perhaps the most distinguished painting in the exhibition. Much of the work was not of the best and there appeared to be little stylistic development from French art before World War II.

An exhibition of the work of the three Le Nain brothers was assembled at the Toledo museum and centred around "The Family Dinner," a painting by Mathieu le Nain which the museum had acquired. These painters, who often combined on the same canvas, depicted with sensitivity and charm the daily life of humble people in 17th century France.

The Cleveland Museum of Art staged an imposing exhibition of paintings, pastels, drawings and sculpture by Edgar Degas, the great French painter of horse races and ballet girls. During the summer the Philadelphia museum showed an impressive array of top-flight pictures borrowed from local collectors. In the group were such famous items as Edouard Manet's "Le Bon Bock" (Carroll S. Tyson collection), Toulouse-Lautrec's "At the Moulin Rouge" (Henry P. McIlhenny collection), Henri Rousseau's "Storm in the Jungle" (Henry Clifford collection). Two other collectors, R. Sturgis Ingersoll and Rodolphe M. de Schauensee, also lent paintings.

More than 1,000 objects were included in the magnificent exhibition of Byzantine art held at the Walters gallery in Baltimore, Md. Ivories, manuscripts, textiles, sculpture and metalwork were combined in examples of superlative quality to form a rich and varied exhibition.

Mary Cassatt, the U.S. painter who went to France and became a member of the impressionists group, was given a full-scale showing at the Wildenstein galleries in New York.

Adolphe Monticelli, whose popularity had been somewhat dimmed in late years, was revived in a well-selected exhibition at the Vose gallery in Boston. Albert Pinkham Ryder, the 19th century U.S. romantic-mystic, was given an important exhibition at the Whitney museum.

New York's Museum of Non-Objective Paintings arranged a memorial exhibition of the work of Lazlo Moholy-Nagy, member of the German Bauhaus who was the head of the Institute of Design in Chicago. A more selective exhibition featuring work done in Chicago was subsequently shown at the Art institute.

Alfred Stieglitz, noted photographer, collector and pioneer dealer in modern art, was given a memorial exhibition at the Museum of Modern Art. This not only included a selection of his photographs but also items which he had collected such as African Negro sculpture, Toulouse-Lautrec lithographs and paintings by Arthur Dove, Marsden Hartley, John Marin and Georgia O'Keeffe. At the Cleveland Museum of Art a fabulous exhibition of gold objects was assembled. Jewellery, ritual vessels and previous objects of all sorts from all periods combined in a unique and impressive display.

Probably the most important exhibition of the year was the French tapestry exhibition sent to the Metropolitan museum in New York by the French government. This included 200 items ranging from the Angers tapestries of the late 14th century, the famous 15th century Cluny tapestries, a great set depicting the life of Louis XIV, a group of the Louis XV period designed by François Boucher, and finally a group of modern tapestries. This was the most important exhibition of the kind ever assembled. (*See* also Art Sales; Museums.)

(F. A. Sw.)

**Arthritis.** The incidence of infectious arthritis caused by identifiable or recoverable specific germs decreased notably, as the articular complications were largely prevented by such chemotherapeutic agents as penicillin and sulfonamides. Thus the incidence of gonorrhoeal arthritis in the United States during 1947 was only about 10% of what it was a few years before. Other forms of bacterial arthritis, such as those from staphylococci, haemolytic streptococci or pneumococci, formerly so destructive and crippling, were found to be curable promptly when treated adequately with penicillin. Reports indicated that suppurative arthritis from war wounds, which in previous wars often caused loss of limb or life, was largely prevented by the improved methods of treatment used in World War II. This new method of treatment consisted of early and adequate surgical treatment of the wound, closure of the synovial cavity and articular capsule and then adequate immobilization. When suppurative arthritis did occur, it was generally controlled by penicillin administered systematically and intra-articularly, with or without the supplementary use of secondary reparative surgery. The amount of permanent disability among soldiers of World War II prevented by these means was incalculable.

The newer antibiotic, streptomycin, had not yet found an established place in the treatment of arthritis, but a few patients with tuberculous arthritis who were treated thereby were notably improved, and the articular and other manifestations of Haverhill fever (epidemic arthritic erythema, one form of rat-bite fever) were thought to be amenable to therapy by streptomycin.

The cause of rheumatoid arthritis remained unknown. Further evidence was reported indicating that the disease is a systemic one and that many bodily tissues other than those of joints are affected. Although lesions in hearts were rarely detected during life, post-mortem studies on rheumatoid patients revealed the common presence of lesions in cardiac muscles or valves which were indistinguishable from those found in the hearts of patients dead of rheumatic fever. Inflammatory and degenerative lesions were often found also in the skeletal muscles of rheumatoid patients, and the cerebrospinal fluid also was sometimes altered in its content of cells and protein. These findings suggested that the noxious agent of rheumatoid arthritis is a blood-borne irritant which becomes widely disseminated.

Because the serum of patients with rheumatoid arthritis usually contains agglutinins against group A haemolytic streptococci and also precipitins against certain fractions of these bacteria, the latter bacteria had been considered by some investigators to be the probable cause of the disease. But a new hypothesis (based on the presence of hyaluronic acid in synovial fluid as well as in the capsule of group A haemolytic streptococci) was proposed which accounted for the presence of such antibodies without the intervention of bacteria.

The treatment of rheumatoid arthritis by injections of gold salts retained the favour of most rheumatologists. A new treatment was reported for the control of the toxic manifestations of gold salts, the use of BAL (British anti-lewisite, 2,3-dimercaptopropanol). Gold dermatitis, severe purpura and granulocytopenia following treatment with gold responded rapidly to such treatment. The French physician who originally brought treatment with gold salts into favour reported his belief that injections of an organic copper compound gave results superior to those from gold.

No direct indication was found for the use of any vitamin in rheumatoid arthritis, and further severe nonfatal and fatal toxic reactions to concentrated vitamin D compounds, including "ertron," were reported. Penicillin was valueless in rheumatoid arthritis; further results with prostigmine were disappointing.

World War II brought greater prominence to four forms of "rheumatism": rheumatoid spondylitis, psychogenic rheumatism, Reiter's syndrome and acute epidemic tropical polyarthritis. Rheumatoid spondylitis, being a disease chiefly of young men, was commonly encountered among military personnel. In this disease a tendency for an increased urinary excretion of 17-ketosteroids was reported. Many persons with diffuse or localized musculoskeletal aches and pains, suspected of having arthritis or "rheumatism" are merely suffering from tension states or psychoneurosis; so concluded medical officers who noted psychogenic rheumatism among 15% of rheumatic patients sent to army rheumatism centres.

So-called Reiter's syndrome (urethritis, conjunctivitis and arthritis) was studied further; its cause was reported as a dysentery bacillus, a pleuro-pneumonialike organism or a filtrable virus. Secret war reports on the acute epidemic tropical polyarthritis which affected U.S. and Australian troops in northern Australia, Bougainville and nearby islands were made public. Symptoms lasted generally one, occasionally three or four weeks, and disappeared without residues. No cause was discovered.

Further studies of the typical and atypical (including cerebral) manifestations of rheumatic fever were reported. Enthusiasm for the intravenous (rather than the oral) administration of salicylates waned, since no definite clinical superiority, but greater toxicity, was attached thereto. Long-term sulfonamide prophylaxis to prevent the recurrences and complications of rheumatic fever received further approval; patients protected thereby had only a sixth as many recurrences as did the controls. The first report on prophylaxis by the oral use of penicillin appeared: ten patients so treated for a year had only a fifth as many recurrences as did the controls.

Under investigation was the possible relationship of hyaluronidase and hyaluronic acid to the development of certain rheumatic diseases, especially rheumatic fever.

## Art Sales.

As auction price totals are announced at the close of each season, the statistics indicated here cover the 1946–47 season rather than the 1947 calendar year. Parke-Bernet, the leading New York auction house, had a total of more than $6,000,000 for the fourth consecutive season. The total figure, $6,019,153, was actually around $650,000 less than the figure for the previous season which had been the all-time high for auction prices. The Plaza Art galleries totalled $1,411,426 for the season (a decline of only $30,000 from the previous year) and the Kende galleries at Gimbel Brothers in New York had a busy season but announced no figures.

Undoubtedly the most interesting item sold by Parke-Bernet was the *Bay Psalm Book* of 1640, the first book printed in America. This was bid in at $151,000 by Dr. A. S. W. Rosenbach from the Gertrude Vanderbilt Whitney trust and was the highest price ever paid for a printed book. The two collections which brought the highest totals were the Stotesbury estate, $294,480, and the Satterlee sale, $276,710, but 18 other sales netted more than $100,000 each. Madame Vigée-Lebrun's "Self-Portrait with Her Daughter" brought $21,000 at the Thompson sale, the highest price of the season for a painting. Antoine Watteau's "La Danse Paysanne" went for $14,000 at the Rosenfeld sale. Return to popularity of Joaquin Sorolla was indicated by the unusually high price of $13,500 paid for his "Playa de Valencia." There was also a revival of interest in realistic genre painting as indicated by the sale of Jean Vibert's "Vision of Monks Listening to Chamber Music" at $4,800.

Furniture and objects d'art featured frequently in the sales rooms, top items at Parke-Bernet being a pair of Hepplewhite chests at $10,000 and a Chippendale break-front bookcase at $9,500. Prints also were prominent on the sales lists and the top bid was $6,000 for the fourth plate of Blake's "America, a Prophecy."

In London the auction market continued to bring top prices. One of the most publicized sales was the property of the duke of Kent which totalled £92,341 at Christie's. High items in the sale were three Claude Lorrain landscapes sold at £6,930, a set of 20 Chippendale chairs at £2,310 and a pair of silver gilt tea caddies (1766–67) at £900.

Also at Christie's the effects of Viscount Rothermere brought £30,639, top single items being £13,125 for a Rembrandt "Self-Portrait." The earl of Lonsdale's silver fetched a total of £45,769 at Christie's, high item of which was a 34-piece toilet set (1708) at £7,800. At Sotheby's leading sales were a Velazquez "Portrait of Don Gaspar de Guzman" sold for Viscount Cowdray at £11,000 and a Gainsborough "View of the Mouth of the Thames" from the estate of Sir Reginald Proctor-Beauchamp which sold for £4,000. ## Asbestos.

The asbestos output of the major producing countries was as follows during late years:

*World Production of Asbestos*

(Thousands of short tons)

| | 1939 | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|---|---|
| Canada | 364.5 | 345.8 | 477.8 | 439.5 | 467.2 | 419.3 | 466.9 | 547.6 |
| Cyprus (exp.) | 11.4 | 10.7 | 5.4 | 3.4 | 1.3 | 2.2 | 3.3 | 6.6 |
| Italy | 7.5 | 9.1 | 11.9 | 12.9 | ? | ? | 5.3 | ? |
| South Africa | 22.1 | 27.4 | 28.3 | 34.6 | 35.6 | 34.6 | 28.2 | 18. |
| Southern Rhodesia | 58.3 | 57.9 | 54.2 | 62.3 | 56.4 | 58.3 | 56.3 | 55.9 |
| Swaziland | 8.0 | 20.8 | 21.1 | 25.6 | 18.9 | 32.7 | 23.4 | 32.1 |
| United States | 15.1 | 19.2 | 22.4 | 15.3 | 3.9 | 7.6 | 13.6 | 14.4 |

**United States.**—The domestic asbestos production increased from 13,590 short tons in 1945 to 14,426 tons in 1946, and sales rose from 12,226 tons to 14,075 tons. There was a sharp increase in demand, jumping imports from 374,199 tons in 1945 to 456,688 tons in 1946—a new record. Even with the high imports, the supply was short.

**Canada.**—The high demand in the United States caused asbestos production in Canada to rise to a level above that of the war years. The 1945 sales of 466,896 short tons rose in 1946 to 547,685 tons, and in the first half of 1947 to 314,107 tons.

Mines and mills were being expanded in 1947 to meet the higher demand.

**South Africa.**—After the 1943 peak, production dropped to 34,582 short tons in 1944, 28,216 tons in 1945, and 14,435 tons in the first three quarters of 1946. Exports in the same years were 28,174 tons, 22,005 tons and 13,186 tons.

**Southern Rhodesia.**—The postwar decline was less pronounced in Southern Rhodesia, with a production of 58,293 short tons in 1944, 56,348 tons in 1945, and 55,872 tons in 1946.

**Swaziland.**—Beginning as a new producer in 1939, Swaziland developed an output that in 1946 surpassed that of South Africa. (G. A. Ro.)

## Asphalt.

Production and consumption of asphalt and related bitumens in the United States were as follows during late years, in thousands of short tons:

| | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|
| Petroleum asphalt: | | | | | |
| Production | 6,296.3 | 6,756.7 | 6,996.1 | 7,126.6 | 8,165.6 |
| Sales | 6,840.8 | 6,897.8 | 6,735.2 | 6,851.0 | 7,614.3 |
| Domestic oil | 6,337.7 | 6,597.4 | 6,023.0 | 5,770.2 | 6,064.1 |
| Foreign oil | 503.1 | 300.4 | 712.2 | 1,080.8 | 1,550.2 |
| Road oil (000 bbl): | | | | | |
| Production | | 2,295 | 1,556 | 2,686 | 6,175 |
| Sales | | 2,054 | 2,031 | 2,567 | 5,034 |
| Bituminous rock: | | | | | |
| Sales | 935.3 | 835.6 | 740.5 | 643.6 | 777.5 |
| Gilsonite: | | | | | |
| Sales | 40.0 | 50.4 | 49.1 | 61.3 | 68.4 |

Imports of natural asphalts are small, amounting to only 5,148 short tons of all types in 1945 and 4,449 tons in 1946, most of which was lake asphalt from Trinidad. Petroleum asphalt imports were 142,802 tons of solid and 4,029 tons of liquid in 1945 and 97,204 tons of solid and 25,629 tons of liquid in 1946. Imports of all types are more than offset by exports of petroleum asphalt. (G. A. Ro.)

## Assassinations.

The assassinations of 1947, actual or attempted, included the following:

Feb. 10. Pola, Italy. Brig. Gen. R. W. M. de Winten, commander of British 13th infantry brigade, was shot and killed by Italian woman who was enraged by award of Pola to Yugoslavia.

Feb. 26. Haifa, Palestine. A. E. Conquest, Haifa's deputy superintendent of police, was assassinated by Jewish underground gunmen who shot at him from cruising taxicab.

March 27. Sanok, Poland. Ukrainian underground members assassinated Col. Gen. Karl Swierczewski, Polish vice-minister for national defense, near there.

July 12. Washington, D.C. William L. Kaiser, former policeman, fired several shots at Sen. John W. Bricker in senate office building in abortive assassination attempt.

July 19. Rangoon, Burma. Premier U Aung San and five other members of Burma's interim government were assassinated and two others wounded by three assassins armed with machine guns.

July 19. Seoul, Korea. Lyuh Woon-heung, Korean anticommunist leader, was slain by assassin who crawled into back of his car.

July 18. Simla, India. Sir Shafa'at Ahmad Khan, former member of Moslem league, was slain by knife-wielding assassin a few hours after joining the Indian interim government.

Sept. 12. Haifa, Palestine. Sami Taha, Arab labour leader and political foe of Haj Amin el-Husseini, exiled grand mufti, was shot and killed on one of Haifa's main streets by unidentified assassins.

Oct. 10. Indo-China. Dr. Truong Dinh Tri, head of Hanoi municipal council, was mortally wounded by grenades thrown at him by terrorists. (He died on Oct. 11.)

Oct. 10. Cholon, Indo-China. Nguyen Van Sam, anticommunist leader, was shot by passenger travelling on bus with him two miles from Saigon.

Nov. 27. Bordeaux, France. Gen. Raoul Montrelay was wounded by man who, after capture by military police, was identified as Capt. Jean Muselier, son of Free French naval commander.

Dec. 25. Stockholm, Sweden. Alberto Bellardi Ricci, Italian minister to Sweden, was stabbed to death by insane countryman as he was giving farewell party to legation staff.

## Astronomy.

Probably the most important development of the year was the completion of the 200-in. telescope; the giant mirror was moved from the optical shop in Pasadena, Calif., to the observatory on Mount Palomar on Nov. 18–19. Of comparable importance was the near completion of the 48-in. Schmidt telescope of the same observatory. The two instruments would supplement each other; for light-gathering power and distance penetration the 200-in. would be supreme, while the 48-in. Schmidt would occupy a similar position for investigations connected with the structure of our galaxy and other problems which require photographing considerable areas of the sky on a single plate. (*See* also TELESCOPES.)

A remarkable wide-angle camera was designed by J. L. Greenstein and L. G. Henyey of the University of Chicago in connection with a contract with the U.S. navy. The telescope has a field of 140° in diameter and works at a speed of F:2; with it most of the sky visible at any one time can be photographed with a single exposure. The optical system consists of a mirror which forms an image and a lens which photographs this image. The camera should be exceedingly valuable for the photography of meteors, the zodiacal light and aurorae.

The introduction of the new photoelectric cells had a profound effect on astronomical research. The electron multiplier cell made it possible to observe stars of such faintness that photoelectric methods of determining stellar brightness and colour were superseding earlier photographic procedures. It appeared likely that the determination of brightness of stars intended to serve as standards would be done almost exclusively by the photoelectric method, because of its far greater accuracy; for extended programs the photographic method still possesses advantages in that large numbers of stars can be recorded on one plate. The lead-sulphide cell, which is sensitive to light in the far infra-red, was being used by G. P. Kuiper and by A. E. Whitford with great success for both planetary and stellar problems.

**Solar System.**—*The Sun.*—Several successful attempts were made to photograph the far ultra-violet spectrum of the sun with spectrographs mounted on V-2 rockets. The spectrum illustrated was obtained by the Applied Physics laboratory of Johns Hopkins university on a rocket flight at White Sands, N.M., on July 29, 1947; the photograph was obtained at an altitude of 84 mi. This height is above the ozone blanket which cuts off solar radiation at the earth's surface for wave lengths smaller than 2,900 Ångstrom units.

A giant group of sunspots was observed during March and April; in March this group contained the largest single sunspot ever observed; it was somewhat larger than that of Jan. 1946, which previously held the record for size.

*The Planets.*—The radiation of several of the planets was measured in the infra-red by means of a Cashman lead-sulphide cell by G. P. Kuiper at the McDonald observatory, Mount Locke, Tex. Many features were recorded in the range between 7,500 and 23,000 Ångstrom units. The heat radiation (as distinguished from reflected sunlight) from the planet Mercury was detected; because of this planetary radiation Mercury is the brightest of the planets at a wave length of 21,000 Ångstroms. In Oct. 1947, Kuiper announced the discovery of carbon dioxide in the atmosphere of Mars. This is of the greatest interest as indicating similarity in the Martian atmosphere to that of the earth—in particular in connection with the possi-

BATTERY OF TELESCOPIC CAMERAS set up at Bocaiuva, Brazil, where scientists of 20 nations observed a total solar eclipse on May 20, 1947. The camera at the right was designed to take star pictures as a check on the Einstein theory of relativity

bility of some form of life on Mars. The amount of carbon dioxide present in the Martian atmosphere is similar to that found for the earth.

*Comets.*—A very bright comet was discovered in December; it was a conspicuous object to the naked eye for observers in the southern hemisphere.

**The Stars.**—One of the most remarkable developments of the year in stellar astronomy was the discovery of magnetic fields in several stars by H. W. Babcock of the Mount Wilson observatory. Prior to Babcock's work, the only star known to have a magnetic field was the sun. The fields were discovered from measurements of minute shifts of certain lines in the spectra of a peculiar group of stars. The implications of this discovery were far reaching and the field promised to be one of the most active in astronomy in the future.

Among other results may be mentioned the search for the nucleus of our galactic system by Joel Stebbins and A. E. Whitford of the Washburn observatory with the use of a photoelectric cell sensitive in the region of 10,000 Ångstroms. A bright region in the infra-red was detected at a position which suggests that it is actually the nucleus of our system. The reason for working in the infra-red for problems of this kind is the greater transparency of the space between the stars for light of long wave length. A somewhat similar investigation making use of photographic plates sensitized for the infra-red was carried out by J. J. Nassau and G. B. van Albada of the Case Institute of Technology. Their photographs, which were made with the Schmidt telescope of the Warner and Swasey observatory, reveal myriads of distant red stars and open a new field for galactic studies. It was expected that more and more investigations would utilize the infra-red spectral region because of its greater space-penetrating power. (W. W. M.)

**Athletics:** *see* TRACK AND FIELD SPORTS; etc.

## Atomic Energy.

The subject of atomic energy during 1947 can be divided into four topics, namely, (1) international deliberations; (2) activities in the United States, including actions of the U.S. Atomic Energy commission, distribution and use of radioactive isotopes, studies of power production and military reports; (3) activities in other nations; and (4) advances in atomic physics.

**International Deliberations.**—While considerable progress was made during 1947 in developing the plan of international control acceptable to a majority of the members of the United Nations Atomic Energy commission, virtually no progress was made in reconciling the majority and minority viewpoints. To state the situation another way, no progress was made in reconciling the U.S. and soviet viewpoints. For the majority plan in essence was that proposed by the U.S., and every nation represented on the commission favoured it with the exception of the Soviet Union and Poland.

As the year progressed, the continued bitter charges of the soviet representatives attacking the good faith of the U.S. brought forth countercharges from the U.S. representatives that the Soviet Union had followed a policy designed to delay as long as possible any settlement of the problem.

It will be recalled that the United Nations Atomic Energy commission adopted its first report on Dec. 30, 1946, by a vote of ten to zero but with two of its members, the Soviet Union and Poland, abstaining from voting. This report was transmitted to the Security council on the last day of 1946.

**The First Report.**—The plan outlined in the commission's first report was essentially an elaboration of the plan proposed to the commission at its initial meeting on June 14, 1946, by the U.S. representative, Bernard M. Baruch. It was based on the Acheson-Lilienthal report made public by the U.S. department of state on March 28, 1946.

It provided for the establishment of an international control agency in the field of atomic energy charged with the duty of preventing the use of atomic energy for destructive purposes and ensuring its use for peaceful purposes. The agency was to be authorized to maintain a system of international inspection and to supervise or manage all activities whose nature made them dangerous to world peace.

In addition the plan called for prompt punishment of violators of the international agreement and provided further that the veto power in the Security council was not to apply to the agreed activities of the international control agency or the prompt punishment of violators.

**Resignation of Baruch.**—On Jan. 4, 1947, Bernard M. Baruch presented his resignation as the U.S. representative on the United Nations Atomic Energy commission. He explained that he and his associates had accomplished their task and that since practically every other nation was represented on the commission by its delegate to the Security council, it would be wise for the U.S. to follow the same plan. Accordingly, Pres. Harry S. Truman appointed Warren R. Austin, chief U.S. delegate to the Security council, to replace Baruch.

**The Security Council.**—No progress was made by the Security council in reconciling the U.S. and soviet points of view, although the situation looked momentarily brighter in February. On Feb. 14 Andrei A. Gromyko, the soviet representative in the Security council, stated that "in spite of serious defects of the report, the U.S.S.R. is prepared to consider it item by item and submit amendments." On Feb. 18 he submitted a list of 12 such amendments.

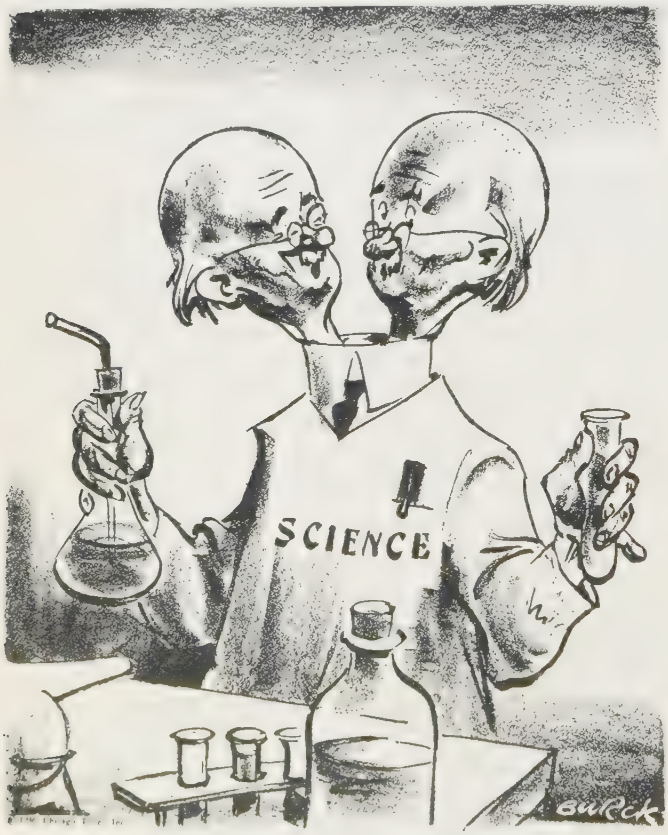
However, on March 5 he delivered an address that was so bitter an attack upon the U.S. as to make it apparent that no immediate solution of the problem was possible in the Security council. Accordingly on March 10 the Security council voted to return the problem to the Atomic Energy commission with instructions to return a second report before the next session of the general assembly which had been set for Sept. 25.

**The Commission Resumes.**—On March 19 the United Nations Atomic Energy commission began its second series of meetings.

Addressing a full session of the commission on June 11, Gromyko set forth more clearly the soviet plan for atomic control. He agreed that inspection should be carried out by international personnel and, reversing previous soviet policy, agreed that the international control agency should operate its own research laboratories. However, he reiterated the familiar soviet demand that atomic bombs be outlawed and the U.S. stockpile of bombs be destroyed before international control methods were discussed. Likewise, he again insisted on the maintenance of the veto power. On Aug. 13 the Canadian representative offered a resolution calling the soviet proposals inadequate. This was adopted two days later by ten votes, all but those of the Soviet Union and Poland. No negative votes or abstentions were recorded.

The commission's Control committee spent the summer studying a series of six "working papers" which had been prepared by small subcommittees whose members served as individual experts without committing their governments. These six papers constituted a detailed elaboration of the control scheme in the commission's original report. They dealt with the operational and developmental functions of the proposed international control agency, its research activities, and its functions in every phase of the production of atomic energy from the mining of ores to the distribution of nuclear fuels. During the discussion of these papers, the soviet representatives assumed the role of interested observers only. On Sept. 8 both the Control committee and the Working committee approved these six papers. Ten nations voted for the papers. The U.S.S.R. voted against all six. Poland voted against five and abstained from voting on one.

**The Commission's Second Report.**—The commission adopted its second report on Sept. 11 by a vote of 10 to 1. The negative vote was that of the Soviet Union. Poland abstained from voting.



THE UNIVERSAL QUERY which remained unanswered in 1947: "I've just discovered a new world shattering weapon—have you found a counter measure yet?" Cartoon by Burck in the *Chicago Times*

The report summarized the 1947 proceedings of the commission and incorporated the six working papers as Part II under the title of "Operational and Developmental Functions of the International Control Agency." The report recommended the establishment of production quotas based on principles and policies to be specified in the international treaty or convention; ownership by the international control agency of nuclear fuel and source material; ownership, management and operation by the agency of facilities dangerous to world security; licensing by the agency of nondangerous facilities to be operated by nations; and inspection by the agency to prevent or detect clandestine operations.

**In the United States.**—Control of atomic energy in the U.S. passed from the Manhattan Engineer district of the army to the U.S. Atomic Energy commission on Jan. 1, 1947.

President Truman had appointed the members of the commission on Oct. 28, 1946, but long debate in the U.S. senate delayed the confirmation of these appointments until April 9, 1947. Members of the commission were David E. Lilienthal, chairman, Robert Fox Bacher, Sumner T. Pike, Lewis L. Strauss, and William Wesley Waymack. Carroll L. Wilson was general manager.

In a report to congress on July 22, the commission summarized the first six months of its operation. The report stated that the commission "has pressed the production of fissionable materials and the improvement of atomic weapons as essential to the security of the country." The plants at Oak Ridge, Tenn., for the separation of uranium 235 from ordinary uranium, and at Hanford, Wash., for the manufacture of plutonium from uranium, had been operated steadily from the start of the year and improvements and economies effected in their operation. The atomic weapons program was being carried forward at the Los Alamos laboratory near Santa Fe, N.M. The report made it plain that the commission had no intention of relaxing these activities until congress "affirms that acceptable international agreements have been reached."

**Budget and Personnel.**—By June 30 the commission had obligated approximately $600,000,000 to cover contracts and other obligations from funds of the Manhattan project which President Truman had allocated to the commission. The president's budget for 1948 recommended congressional appropriations of $250,000,000 for expenditures in 1948 plus an authorization for the commission to enter into contracts during 1948 that would involve the expenditure of a similar amount in 1949.

The commission had 4,133 employees as of May 31. About half of these were at Oak Ridge. Fewer than 200 were in Washington, D.C.

**Plan of Operation.**—Headquarters of the Atomic Energy commission were in Washington. The commission was planning a decentralized organization with broad operational authority designated to five major centres of operation, each charged with the responsibility for a different part of the commission's total program.

The first of these centres, the Office of New York Directed Operations, was established on June 9. The Office of Santa Fe Directed Operations was established on July 2. The other three centres were to be at Oak Ridge, Hanford and Chicago.

None of the commission's major production or research programs was being carried on by direct commission operation. The commission had more than 100 contractors and these in turn had several hundred subcontractors. These contractors and subcontractors had about 37,000 employes.

**Pacific Proving Grounds.**—An important step taken by the commission during 1947 was the establishment of a proving grounds in the Pacific for routine experiments and tests of atomic weapons. The location was not disclosed until Dec. 1 when the commission announced that the site was Eniwetok Atoll in the Marshall Islands. The 145 natives on Eniwetok were to be moved to new homes.

**Principal Laboratories.**—The commission in 1947 operated five principal laboratories for research in the field of atomic energy. These were: The Los Alamos laboratory near Santa Fe, N.M.; the Argonne laboratory, just outside Chicago, Ill.; the Clinton laboratories at Oak Ridge, Tenn.; the Brookhaven National laboratory under construction at Patchogue, Long Island, N.Y.; and the Knolls Atomic Power laboratory under construction at Schenectady, N.Y. In addition, large laboratories were operated under contract with the commission at Berkeley, Calif.; Ames, Ia.; Dayton, O.; and Hanford, Wash.

In pursuance of its policy of obtaining the broadest possible participation of qualified institutions in its program, the commission arranged for the operation of the Argonne National laboratory by the University of Chicago with the participation of 29 midwestern universities and research institutions.

The Brookhaven National laboratory was being operated under contract by Associated Universities, Inc., a nonprofit organization of nine eastern universities.

The commission was assisting studies being made on behalf of the army air forces by the Fairchild Engine and Airplane corporation as to the possibility of applying nuclear energy to the propulsion of aircraft. It was also assisting the navy in connection with similar studies regarding the propulsion of ships.

**Medical Program.**—The commission was conducting a medical program to study the dangers created by fissionable materials and to extend knowledge of the effects of radioactivity on living organisms. A grant of $100,000 was made to Western Reserve university for an investigation of the effects of radioactive substances on living cells.

**Radioactive Isotopes.**—The first sale of radioactive isotopes, or radioisotopes, from the uranium pile at the Clinton laboratories at Oak Ridge, Tenn., took place on Aug. 2, 1946. On Aug. 3, 1947, the U.S. Atomic Energy commission issued a report summarizing the first year of such sales.

During the period, the laboratory made 1,092 shipments of radioisotopes to scientific and industrial research institutions in the continental U.S. and the territory of Hawaii. Approximately 100 varieties of isotopes made from 60 chemical elements were furnished to 170 institutions or research workers in 92 localities. They included, among others, isotopes of barium, calcium, carbon, chlorine, copper, gold, iron, mercury, nickel, phosphorus, platinum, silver, sodium, sulphur, tin, tungsten and zinc.

It is difficult to realize the difference which the uranium pile has made in the production of radioisotopes. For example, carbon 14 is being produced at a cost of $50 a millicurie. To manufacture that same amount with the aid of a cyclotron would cost $1,000,000.

There are two chief uses for radioisotopes at the present time. One is as a substitute for radium or X-rays for the treatment of disease, particularly cancer, goitre and leucaemia. The other is for so-called tracer experiments. Because of its radioactivity, a radioisotope can be traced through a complicated chemical reaction or an involved biological cycle.

Researches with radioisotopes covered a wide range in 1947. The University of Wisconsin, Madison, Wis., used them in investigation of the therapeutic action of drugs. At Vanderbilt university, Nashville, Tenn., Dr. Paul F. Hahn experimented with radiogold (the radioactive isotope of gold) as a treatment for chronic forms of leucaemia, lymphoma and Hodgkins' disease. Dr. George E. Burch at Tulane university, New Orleans, La., employed radiosodium in the study of congestive heart failure. At the Cedars of Lebanon hospital in Los Angeles, Dr. Myron Prinzmetal used radiophosphorus to compare the circulation of the normal heart with that in coronary occlusion. Dr. Edward H. Reinhard at Washington university, St. Louis, Mo., used radiophosphorus for the treatment of leucaemia. At the same institution, Dr. Carl V. Moore employed radioiron in the study of anaemia. Other institutions employed radioisotopes in numerous biological, chemical and metallurgical investigations. (*See* also X-RAY AND RADIOLOGY.)

RESEARCH IN RADIATION SICKNESS, using laboratory rats, was continued at Oak Ridge, Tenn., in 1947. Stunted growth in the rat on the left resulted from a dose of beta radiation which also left it half-blind and almost hairless

**World-Wide Distribution.**—On Sept. 3, 1947, President Truman sent a telegraphic message to the fourth annual meeting of the International Cancer Research congress in St. Louis stating that the U.S. was ready to furnish radioisotopes to scientists in foreign countries for biological and medical research. Subsequently the U.S. Atomic Energy commission issued a list of 30 radioisotopes for foreign distribution. These contained no chemical element beyond No. 83 (bismuth) in the periodic table of chemical elements.

**Stable Isotopes.**—On Dec. 1 the U.S. Atomic Energy commission announced the availability of more than 100 stable isotopes of 29 chemical elements for distribution to research laboratories in the U.S. These are produced at the Oak Ridge electromagnetic isotope separation plant. As the designation indicates, these isotopes are not radioactive but they are equally important for many types of researches.

**Power Production.**—Addressing the Economic club of Detroit on Oct. 6, Chairman Lilienthal of the U.S. Atomic Energy commission intimated that the first experimental power plant using atomic energy to operate a steam turbine-electric generator would be in operation in 1948 or 1949. However, he emphasized that many serious scientific and engineering problems would have to be solved before such power generation could be put on a commercial basis.

The production of power requires the development of a uranium pile capable of operating at high temperatures. A second important problem is the development of structural materials which will withstand both the high temperature and the intense radioactivity of the pile. Still another difficult problem is the removal of fission products from the uranium pile since these in time would absorb so many neutrons as to stop the chain reaction.

Lilienthal indicated that the probability was that a power plant would require an atomic pile enriched by the addition of purified materials, either uranium 235 or plutonium.

Also on Oct. 6, the U.S. Atomic Energy commission announced the appointment of a board of consultants to act as an industrial advisory group. Heading this board was James W. Parker, president of the Detroit Edison Co.

**The Plutonium Pile.**—Dr. Norris E. Bradbury, scientific director of the Los Alamos laboratory, announced in 1947 that a plutonium pile or fast reactor had been in operation at the laboratory from Nov. 1946. Unlike the uranium pile, which employs a moderator to slow down the neutrons which sustain the chain reaction, the plutonium pile requires no moderator and, like the atomic bomb, makes use of fast neutrons. In fact this reactor may be regarded as an atomic bomb brought under control and made to release its energy slowly instead of in a fraction of a second. Dr. Bradbury stated that the plutonium pile was another step toward finding the most efficient method of utilizing atomic energy.

It is presumed that the development of the plutonium pile cost the life of Dr. Louis Slotin, who died from an overdose of radiation as the result of an accident at Los Alamos in May 1946. Dr. Slotin is understood to have separated with his bare hands some pieces of plutonium which were beginning to glow with a blue light, apparently approaching the explosive point.

**Military Considerations.**—The U.S. army expressed its views on the atomic bomb in 1947 in a document submitted to congress under the title of "The Effects of the Atomic Bomb on National Security (An Expression of War Department Thinking)." This report states quite frankly, "The total destruction of a nation's resources which has evolved from the development of strategic bombing has been brought to culmination by the atomic bomb. The end of an atomic war may find both victor and vanquished in a state of almost complete ruin. It follows that winning the war may well not be preserving national security."

The army held that the atomic bomb is not an all-purpose weapon but that when used to attack major military targets it is "a decision in a package." While the long-range bomber is the principal means of delivering the bomb at present, the army anticipated the development of pilotless aircraft and guided missiles suitable for this purpose.

The army believed that the existence of the bomb makes it imperative for the U.S. to build up stronger defenses of radar detection stations, interceptor fighter planes, etc. It also saw the need of military allies and advanced bases.

The report concludes, "The bomb, and the potential range of aircraft and missiles, has made the defense of the nation more difficult, more expensive, and less certain of attainment. The need of eliminating war itself has never been so vitally necessary to the national security of the U.S. and to the survival of civilization throughout the world."

The views of senior officers of the U.S. navy were set forth in a report prepared by Dr. Bernard Brodie for the legislative reference service of the Library of Congress. The navy officers believed that it would be approximately 15 years before any other nation possessed atomic bombs in quantity and that the existing U.S. active and reserve fleets appeared suitable for the kind of hostilities likely to prevail should war break out in the next 10 years. The officers regarded the bomb as a "scarce and expensive" weapon which could be delivered successfully only from advanced bases by well-protected bombing planes.

In a subsequent "critique," Dr. Brodie took the navy officers to task for regarding the atomic bomb as scarce and expensive and said that in his view a nation could afford to lose 90% of the bomber planes bearing atomic bombs by reason of the immense damage the other 10% could do.

**Special Weapons Project.**—On July 24, 1947, the U.S. army and navy announced the formation of an Armed Forces Speci Weapons project as a joint organization to discharge all militar functions relating to atomic energy. The program include training of special personnel and "military participation in th development of atomic weapons of all types." The project wa commanded by Maj. Gen. Leslie R. Groves, wartime head o the Manhattan project.

**Radioactivity at Bikini.**—The Bikini Atoll, scene of the 194 atomic bomb tests, was still radioactive in the summer of 194 Dr. William H. Hamill and Dr. Russell R. Williams, Jr., of th University of Notre Dame, reported that coconuts growing o the island of Bikini were radioactive and that fish caught in th lagoon were also radioactive. The two scientists spent five week on the island with a navy expedition. They regarded the islan as safe for human beings for short periods.

**Plight of Bikini Natives.**—When Bikini Atoll was chosen fo the 1946 atomic bomb tests, "King" Juda and his 165 follower were moved to Rongerik Island, 130 mi. east of Bikini. A repor made to the navy in 1947 by Dr. Howard G. MacMillan state that the natives were "destitute and unable to support themselves on the island's agriculture or fisheries." On Oct. 2, th Pacific Trusteeship authority at Pearl Harbor announced tha the Bikini natives would be moved to Ujelang Island, 290 mi southwest of Bikini and 400 mi. west of Rongerik. Ujelang is larger island than Rongerik.

**In the United Kingdom.**—The British Atomic Energy act o 1946 was adopted by the house of commons on Nov. 6, 1946 It is comparable in many ways with the U.S. Atomic Energ act of 1946. However, instead of creating a commission, i lodges the control of atomic energy activities in the ministr of supply.

A uranium refining factory was located at Springfields, Lancashire, and 1,000 tons of uranium ore were imported from th Belgian Congo.

On May 19 the ministry of supply announced that "Possibl use of the former explosive factory at Drigg for a purpose i connection with atomic energy is under technical examination." British newspapers said that the site, which is in West Cumberland, 250 mi. northwest of London, was being considered fo the construction of a uranium pile.

**In France.**—The French government created an Atomic Energy commission (Commissariat à l'Energie Atomique) of which Dr. Frederick Joliot-Curie was the head. Dr. Joliot-Curie state that the commission intended to devote itself to the peacefu applications of atomic energy only.

He disclosed that the commission had made substantial progress in the construction of two atomic piles of medium power A survey to find uranium ores had been started. Factories t purify uranium salts were put into operation. Laboratories were established at Fort Chatillon on the outskirts of Paris. Construction work was started on a "Center of Nuclear Studies" on the Saclay plateau 15 mi. from Paris.

**In Canada.**—The story of Canada's part in the wartime atomic bomb researches was disclosed more fully during 1947. Experiments with uranium, using carbon as a moderator, were begun in the laboratories of the National Research council at Ottawa in March 1940.

In 1942 a laboratory was established at Montreal as a joint project of the Canadian and United Kingdom governments. In 1943, following discussions with U.S. and British authorities, it was decided to build a uranium pile using heavy water as a moderator on the south bank of the Ottawa river, near Chalk river and 130 mi. west of Ottawa. Operation of the Chalk River plant was taken over by the National Research council of Canada under the direction of Dr. David Keys.

On Aug. 31, 1946, Canada established an Atomic Energy Con-

Below: **BROOKHAVEN NATIONAL LABORATORY**, a huge centre for peacetime atomic research set up at Brookhaven, N.Y., in 1947. The government-financed project was operated by nine eastern universities

Below: **BLOOD TESTS** in 1947 for members of the U.S. navy who took part in the Bikini tests of 1946. Remaining ships were still too radioactive to be manned in 1947, but all personnel were reported free of contamination

Below: **MEASURING VAPOUR PRESSURE** of fission products at the Argonne National laboratory, centre of nuclear studies at Chicago, Ill. Plans were under way in 1947 to unite the project's scattered facilities on government-purchased land 26 mi. outside of Chicago

trol board to control all activities connected with atomic energy. It has powers to control the operation of the uranium mines at Great Bear lake, N.W. Terr., and the refineries at Port Hope, Ont., as well as other activities.

**In the Soviet Union.**—Addressing the Moscow celebration of the 30th anniversary of soviet rule on Nov. 6, 1947, Foreign Minister Molotov stated that the secret of the atomic bomb "has long ceased to exist." This statement brought wild cheers from his auditors who apparently interpreted it to mean that the Soviet Union now had the atomic bomb.

Statesmen, scientists and military experts in other countries rejected this interpretation, agreeing in general that it would take the Soviet Union from 8 to 15 years to produce atomic bombs in quantity.

**Elementary Particle Physics.**—Laymen who have difficulty in keeping up with the developments in nuclear physics may be surprised to learn that many leaders of the world of physics are turning to a yet newer specialty known as subnuclear physics or elementary particle physics. This branch of physics is concerned with certain aspects of the behaviour of the elementary particles comprising the universe, namely, the electron, the positron, the proton, the neutron and the meson. In particular, it is concerned with transformations in which these elementary particles change their character or are created or destroyed.

At the present moment, these researches represent an attempt to arrive at a better understanding of nature. But it is difficult to predict what their ultimate effect might be. Dr. John A. Wheeler stated that one eventual possibility is a method of releasing atomic energy which would produce from the ordinary substances all around us greater amounts of energy than uranium fission. Such a development would make it possible to manufacture atomic bombs thousands of times more powerful than those now in existence. It would change the whole aspect of the international control of atomic energy which is predicated on the fact that at present it is only necessary to control uranium and thorium.

Researches in elementary particle physics require the use of extremely high energies. It is for this reason that an effort is being made to design more powerful cyclotrons and other machines. The subject has also given an impetus to the study of cosmic ray phenomena since such high energies are encountered in the cosmic rays.

**New Atom-Smashers.**—More than $10,000,000 was spent in the U.S. during 1947 on new "atom-smashers." These included the familiar Van de Graaff generators, cyclotrons, betatrons and three newer devices, namely synchrotrons, synchro-cyclotrons and linear accelerators. It was estimated that the bill for these new devices would eventually reach $100,000,000. So far, a great part of the financing had come from the army and navy.

**Atmospheric Radiocarbon.**—Researches conducted by the Institute for Nuclear Studies of the University of Chicago and the Houdry Process corporation, made public on May 30, disclosed the existence of carbon 14, a radioactive isotope, in the atmosphere. The carbon 14 is produced by the bombardment of atmospheric nitrogen by incoming cosmic rays. Dr. Willard F. Libby and Dr. A. V. Grosse, who headed the researches, also demonstrated that this radiocarbon is a constituent of all living matter. Less than one millionth of 1% of the carbon in the human body consists of carbon 14. Nevertheless this is enough to cause 150,000 nuclear disintegrations per minute. Dr. Grosse believed that other "cosmic ray elements" would eventually be found in the atmosphere.

**The Future.**—Scientists feel that civilization stands at the crossroads. One path leads to an international atomic armament race which they believe certain to end in World War III and the destruction of civilization. The other path leads to the peacetime development of atomic energy with vast possibilities for the advancement of health and happiness. (*See* also Chemistry; Metallurgy; Physics; Uranium.)

Wheeler, "Elementary Particle Physics," *American Scientist*, 35:2 (1947). (D. Dz.)

**Atom Smashers:** *see* Atomic Energy.

**Attlee, Clement Richard** (1883– ), British prime minister, was born in London on Jan. 3. After leaving Oxford university he worked in the East End of London, and in 1913 became a lecturer at the London School of Economics. In World War I he served in Gallipoli, Mesopotamia and France. He was elected mayor of Stepney in 1919, member of parliament for Limehouse in 1922, and in the second Labour government was chancellor of the duchy of Lancaster, and later postmaster general. He held office in the wartime coalition government, and became prime minister when the Labour party achieved a majority in July 1945.

Attlee took special responsibility for the passage of the bills through parliament which led to the transfer of power from British hands in India and Burma. He also acted as chairman of the joint committee of ministers and officials which handled the fuel crisis in February.

In Jan. 1947, he received a visit from Léon Blum, prime minister of France, and during the year also received delegations from the supreme soviet of the U.S.S.R. led by V. V. Kuznetsov (January), the parliament of Czechoslovakia (May), the executive council of the governor of Burma (January), and in June a Burmese goodwill mission.

Attlee, at the Labour party conference in May, reviewed the achievements of his government and spoke of the long-term plan to which it was pledged.

The prime minister and Mrs. Attlee visited Walcheren, Netherlands, to take part in a tree-planting ceremony observing the restoration of the island which was flooded in 1944 when R.A.F. raids blew four breaches in the dykes. Following the wedding of Princess Elizabeth to the duke of Edinburgh on Nov. 20, Attlee held meetings with William Mackenzie King, premier of Canada, Field Marshal Jan Smuts, premier of South Africa, and other empire statesmen who were in London.

**Auriol, Vincent** (1884– ), French statesman, was born on Aug. 27 at Revel (Haute-Garonne *département*). After receiving his degree of doctor of laws at the faculty of law in Toulouse, he practised in that city. He was elected to the chamber of deputies as Socialist member for Muret in 1904, and was successively re-elected up to the collapse of France in June 1940. Auriol's first cabinet post was in Léon Blum's popular front government in 1936, when he was appointed minister of finance. He was minister of justice in the Camille Chautemps government (1937–38) and held a cabinet post in the second and short-lived Blum government in 1938. Auriol protested against the armistice of 1940 and against Marshal Henri Philippe Pétain's efforts to establish totalitarian rule, was imprisoned by Vichy authorities for several months but was later released. In Oct. 1943 he escaped to London where he joined Gen. Charles de Gaulle's movement. He became a member of the assembly set up in Paris after its liberation in Aug. 1944. In Nov. 1945 he was appointed minister of state without portfolio in the De Gaulle government. He was elected president of the French constituent assembly on Jan. 31, 1946. On Jan. 16, 1947, Auriol became the first president under the constitution of the Fourth Republic. In April 1947 he paid an official visit to French West Africa.

## Austin, Warren Robinson

(1877– ), U.S. statesman and politician, was born in Highgate, Vt., Nov. 12. He was graduated with a Ph.B. degree from the University of Vermont in 1899 and was admitted to the bar in 1902. He was elected to the U.S. senate on the Republican ticket in 1931 to fill out an unexpired term and was re-elected in 1934 and 1940.

Although a Republican, Austin sided with the Roosevelt administration on foreign policy. In June 1946, he was appointed U.S. representative to the U.N. security council by President Harry S. Truman. He formally succeeded to this post (vacated by Edward R. Stettinius, Jr.) in Jan. 1947 at which time he also became a member of the U.N. Atomic Energy commission. Shortly after assuming the latter post, Austin reaffirmed (Jan. 25) U.S. support of the Baruch plan for international atomic control.

On March 28, Austin told his security council colleagues that the Truman doctrine did not signify that the U.S. was forsaking the U.N. He urged the security council (June 27), to use "enforcement action" under the charter to prevent further support of Greek guerrillas by Yugoslavia, Bulgaria and Albania.

On Oct. 23, he demanded flat rejection of the Soviet resolution calling for punishment of "warmongers" and on Nov. 11, he scored abuse of the veto by the Russians and their failure to agree on atomic energy control.

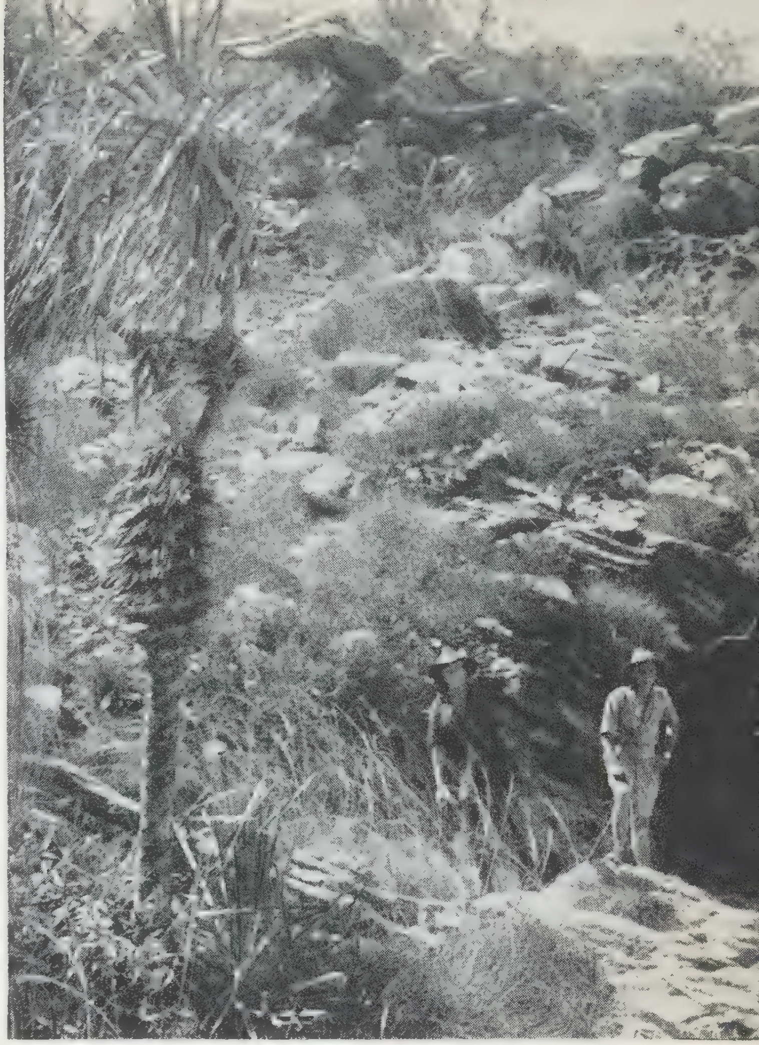
## Australia, Commonwealth of.

A self-governing member of the British commonwealth of nations, situated in the southern hemisphere. Area: 2,974,581 sq.mi.; pop. (census June 30, 1947) 7,580,820. Chief cities (pop. June 30, 1947): Canberra (capital, 15,156); Sydney (1,484,434); Melbourne (1,226,923); Adelaide (382,604); Brisbane (402,172); Perth (272,586); Hobart (76,567); Newcastle (127,188). Language, English. Religion, Christian (census 1933: Anglican 2,565,118; Roman Catholic 1,161,455; Presbyterian 713,229; Methodist 684,022; other Christians 603,914). Ruler, King George VI. Governor general in 1947, William John McKell. Prime minister, Joseph Benedict Chifley.

**History.**—On Jan. 31, 1947, approval of the appointment of W. J. McKell as governor general was announced from Buckingham palace. McKell, who had been premier of New South Wales from 1941 until the date of his appointment, was the second Australian to hold the office of governor general of the commonwealth.

Following its return to power after the general elections in Sept. 1946, the Chifley government had a strenuous term of office. It encountered some difficulties with its own supporters over the proposal to ratify the Bretton Woods agreements, but these were successfully overcome in March 1947 when a bill for acceptance of the agreements was finally passed.

The political sensation of 1947 was the government's announcement that it proposed to nationalize the private trading banks. In May it was decided, under the powers given by section 48 of the Banking act, 1945, to prevent private banks from conducting the banking business of state and local governing authorities as from Aug. 1. On Aug. 13, after challenge by the Melbourne city council, the high court declared section 48 invalid. Three days later the proposal to nationalize the banks was announced by Prime Minister Chifley, and a bill to give it effect was introduced into the house of representatives on Oct. 15. While the bill provided for protection of the interests of shareholders and bank staffs, the proposal to give the Commonwealth bank a practical monopoly of banking aroused the most intense controversy. It was anticipated that the almost certain passage of the bill would be the prelude to a long battle in the courts.



AUSTRALIA'S WILD COASTAL REGIONS to the west were being recharted in 1947 as part of a royal naval project to correct the sketchy coast-line map of the huge island continent. Surveyors are shown on field assignment

Extensive amendments, under which conciliation commissioners were given very much wider powers and increased considerably in numbers, were made to the Commonwealth Arbitration act in April. The new act came into operation with a full complement of commissioners later in 1947. An act to consolidate commonwealth social services was passed in June, and a bill was in preparation at the end of the year for the purpose of establishing a comprehensive national medical service.

A commonwealth census of population and dwellings was taken on June 30, 1947. It revealed that the population had increased from 6,629,839 at the census of June 1933 to 7,580,820, or by 14.3%, compared with an increase of 22% in the shorter interval between 1921 and 1933. The immigration program sponsored by the commonwealth government officially commenced in March, but was hampered in its early stages by the shipping shortage. European and American as well as British sources were being tapped.

*External Affairs.*—The year was marked by the holding of two important international conferences in Canberra. At the first, which opened on Jan. 28, the six participating governments (Australia, France, Netherlands, New Zealand, United Kingdom and United States) signed an agreement establishing a South Pacific commission within the ambit of the United Nations charter. The commission would be concerned with the economic and social interests of the Melanesian and Polynesian peoples of the South Pacific region, numbering nearly 2,000,000. The second gathering, which opened on Aug. 28, was a British Empire conference on the Japanese peace settlement. It was attended by representatives of the United Kingdom and all the dominions, including (for the first time) the new dominions of India and Pakistan, and a representative of Burma. No formal decisions were recorded, but a wide harmony of views was evident on the scope and character of the peace settlements.

An Australian delegation took a prominent part at the second session of the preparatory committee of the United Nations Conference on Trade and Employment at Geneva and at the full conference at Havana at the end of the year. The general agreement on tariffs and trade was provisionally accepted in November, and consequential adjustments in the Australian tariff were brought into operation at the same time.

*Defense.*—General demobilization ended in Feb. 1947. Australia's postwar defense plans were completed by the middle of 1947 and discussed with Field Marshal Viscount Montgomery of Alamein during his visit to Australia in July. The government approved a five-year program which would involve a total expenditure over the period of £A1,000,000.

Work commenced on the Guided Missiles range, which extends from Mt. Ebo in South Australia to the Indian ocean. The Guided Missiles project was vigorously advanced despite some early opposition from the Communist party.

*Public Finance and Economic Affairs.*—During 1947 employment rose to record levels. Seasonal conditions were greatly improved, and very high prices were received for exports, especially wool and wheat. By September the export price index was 71% above the level of June 1946 and 171% above the 1937–39 level. Industrial output made good but uneven gains, and there was a marked growth in new manufacturing activities. Fair progress was made with the housing program, but it was somewhat hampered by shortages of labour and materials.

After a protracted hearing the Commonwealth Arbitration court decided in September to reduce the standard working week under commonwealth awards from 44 to 40 hours as from Jan. 1, 1948. Major relaxations of the wage-pegging regulations were made in April and again in October, and industrial tribunals were then substantially free to vary wage rates at their own discretion.

Overseas trade for the year 1946–47 resulted in an export surplus of £A77,782,000. Exports of merchandise increased by 56% to £A306,685,000 while imports rose by 17.6% to £A228,903,000. As a result of the British sterling crisis Australia, as a member of the sterling pool, agreed to live within its overseas income in 1947–48. The astonishingly bountiful season, resulting in a record wheat crop and an excellent wool clip, together with the high prices then ruling for Australian exports, would make this easy, but the dollar position continued to cause anxiety. Heavy restrictions on imports from dollar sources were imposed in early September, and further drastic cuts were made later in the year.

In March 1947 taxation reductions were announced to operate as from July 1. Income tax and social service contribution rates were reduced and rebates for dependents increased, at an estimated cost of £A34,000,000 per annum. The only new changes made in the September budget for 1947–48 were the abolition of the wartime (company) tax, minor sales tax concessions and suspension of the gold tax.

Expenditure on defense and allied services in 1946–47 was £A129,000,000 and on postwar charges £A161,000,000. (Credits against both items reduced the net total to £A232,000,000.) The second item included a gift of £A25,000,000 to the United Kingdom as a contribution to war costs in the Pacific. Nonwar expenditure amounted to £A218,000,000. Total expenditure at £A450,000,000 exceeded total revenue by £A38,000,000, the deficit being financed wholly out of loans raised from the public. Expenditure in 1947–48 on defense and allied services was estimated at £A80,000,000, on postwar charges at £A120,000,000 (with credits of £A32,000,000), and on nonwar items at £A259,000,000 (including £A33,000,000 on civil works). The expected deficit of £A30,000,000 would be financed by public loans.

**Education.**—In 1945: state schools 8,447, average attendance 726,440, teachers employed 31,061; private schools 1,817, average attendance 249,024, teachers 11,799; technical schools 114, total enrolment 110,841, teachers 5,165; business colleges 109, average attendance 23,270, teachers 659; universities 7, total enrolment 15,586.

**Banking and Finance.**—Revenue (est. 1947–48) £A397,000,000; expenditure (est. 1947–48) £A427,000,000 (ordinary £A259,000,000; defense and postwar charges £A168,000,000). Revenue (actual 1946–47) £A412,437,000; (est. 1946–47) £A384,976,000; expenditure (actual 1946–47) ordinary £A217,734,000; defense £A232,597,000; estimated (1946–47) ordinary £A222,505,000; defense £A221,000,000. Public debt (June 30, 1947) £A2,891,032,000; notes issued (June 30, 1947) £A202,643,000; gold and sterling reserve (June 30, 1947) £A50,880,000; exchange rate £A1 = 321.8 U.S. cents.

**Trade and Communications.**—Overseas trade 1946–47 (merchandise): imports £A228,903,000; exports £A306,685,000. Communication and transport: roads (1944) total mileage *c.* 491,000 mi.; railways open to traffic (1947) 27,180 mi.; airways (1946–47), distance flown (internal) 24,485,000 mi., (external) 6,154,000 mi.; mails carried (internal) 941,301 lb., (external) 628,218 lb.; motor vehicle registrations (June 30, 1947): cars 550,409, commercial vehicles 376,320, cycles 86,636; wireless receiving set licences 1,771,247; telephones, number of lines, 647,846; instruments connected, 855,917.

**Agriculture, Manufacturing, Mineral Production.**—Production (in short tons): wool (1946–47) 491,895; wheat (1946–47) 3,517,860; oats (1946–47) 311,300; barley (1946–47) 289,925; maize (1946–47) 161,589; cane sugar (1946–47) 618,240; butter (1946–47) 160,508; cheese (1946–47) 47,150; gold (1946) 824,480 fine oz.; coal (1946) 15,551,000; pig iron (1946) 1,276,000; copper (1946) 25,378; lead (1946) 153,954; tin (1946) 2,492; zinc (1946) 85,474; silver (1946) 6,182,760 oz. Total value of production (1945–46): agricultural, pastoral and dairying £A251,679,000; mineral £A26,288,000; manufacturing £A354,479,000. Labour and employment: employment in factories (1937–39 = 1,000) (Aug. 1947) 1,533; number (Aug. 1947) 805,800; unemployment (trade union returns) (Aug. 1947) 1.1%. Total output of factories (1945–46) £A869,803,000.

(R. Wn.)

## Austria.

A republic of central Europe. Area: approx. 32,000 sq.mi.; pop. (1939) 6,650,000, of whom more than 90% were Roman Catholics. Chief cities (pop. 1939): Vienna (cap., 1,918,462); Graz (210,175); Linz (131,423); Salzburg (79,264); Innsbruck (80,084). President of the republic: Karl Renner; chancellor: Leopold Figl.

**History.**—In Jan. 1947 the Four Power talks began in London on the Austrian treaty. An Austrian delegation composed of Chancellor Figl, Foreign Minister Karl Gruber and the minister of economics, Dr. Peter Krauland, went to London to ask for full implementation of the Moscow decisions of Nov. 1943 concerning Austrian independence and the integrity of the 1938 Austrian frontiers. These talks did not lead to any definite results; the U.S.S.R. objected to the U.S. and British views on German assets in Austria, which it estimated much higher than did the western Allies. The U.S.S.R. also indicated that it would support Yugoslav territorial claims on the southern frontier districts of Carinthia, which the western powers strongly opposed. Subsequent Four Power talks took place in April in Moscow, and again in London in October, but on neither occasion was any agreement reached on any essential points. A new invitation for the next meeting in London on Nov. 25 was addressed to Dr. Gruber, who had then a new opportunity to reiterate his country's point of view, but again there was a deadlock over the question of German assets, and no solution was reached.

The lack of any essential agreement among the Four Powers largely determined internal developments. The hopes of the Austrian government of seeing an end, or at least a reduction, of the Allied occupation in Austria, which was economically a hard burden on the country and politically an obstacle to the achievement of full national independence, came no nearer to realization. The economic situation still suffered greatly from the division of the country into four zones, as well as from the obstacles put in the way of a regular trade with Austria's eastern neighbours Hungary and Yugoslavia. At the end of 1947, the daily individual food ration of Austrians amounted to 1,600 calories, and the efforts of the federal government were directed towards an increase to 1,800 calories. The federal government also applied to the Allied control commission for repeal of Allied military law over Austrian civilians. It argued that the Allied control agreement of June 28, 1946, foresaw the transfer of certain cases to the ordinary Austrian courts; yet in two notable instances in September, on the occasion of a demonstration in Ischl against Jewish displaced persons from Hungary and Rumania, whose presence gravely increased the local food difficulties, and in the case of two policemen in lower Austria who wounded a soviet soldier, allegedly drunk and disorderly, military courts gave verdicts which Dr. Figl judged too severe, if not entirely unjust.

On the other hand, a few friendly Allied gestures caused great satisfaction. The U.S. high commissioner, General Geoffrey Keyes, ordered the cessation of telephone and telegraph censorship in the U.S. zone as from Nov. 10. Great Britain restored the state of peace with Austria on Sept. 16, and Lord Pakenham, in the name of the British government, addressed a friendly telegram to Dr. Figl on this occasion. Among other improvements, Austrian prisoners of war detained in the U.S. and British zones in Germany were repatriated in great numbers, and the repatriation of Austrian prisoners of war in the U.S.S.R. or in soviet-occupied territories also began. On the coming into force of the Italian peace treaty, normal diplomatic relations were established with Italy, and on this occasion the importance of the Austro-Italian agreement of Sept. 5, 1946, concerning the minority rights of the population of South Tyrol (which was added as annex No. 4 to the peace treaty), was officially reiterated. In a speech at Innsbruck on Sept. 21, much commented on, President Renner emphasized that Austria would never renounce her rights in the South Tyrol and developed the idea of an east-west corridor in Europe, consisting of Switzerland and Austria, adding that such a neutral corridor could have prevented the formation of the Rome-Berlin axis before 1938 and could now be a "useful bridge between east and west Europe." This speech seemed to contain the essence and the constructive outline of Austrian diplomacy. Trade with western Europe was reopened, an Anglo-Austrian chamber of commerce was constituted, and the first postwar Vienna Fair was held in September with considerable success.

In internal politics the most significant crisis came to a head at the end of August. The director of the Vienna police, Dr. Klauser, who owed his position to the support of the soviet occupation authorities, was replaced by the federal government by the Social Democrat councillor, Yoseph Holaubeck, hitherto chief of the fire services of Vienna. Other appointments aiming at strengthening the federal authority over the administration and especially the police force took place, but some of them concerning the districts in the soviet zone could not be put into effect owing to the opposition of the occupying authority.

SOME OF VIENNA'S OLDEST TREES were being cut down for firewood in 1947 to alleviate a severe coal shortage during the winter months. Workmen are shown sawing a fallen log in the park before the *Rathaus*

The political situation was still characterized by the coalition of the Social Democrats and the Christian Democratic People's party represented respectively by President Renner and Dr. Figl. (*See* also OCCUPIED AREAS, ADMINISTRATION OF.) (B. ME.)

## Automobile Industry.

New records were established in the production of motor trucks, motor buses and automotive replacement parts in the U.S. in 1947, even though the output of passenger cars was surpassed by nine prewar years. Total employment and pay rolls of motor vehicle, parts and accessory manufacturing plants surpassed all previous high marks. The registrations of passenger cars, trucks and buses likewise chalked up a new high mark, as did the aggregate of vehicle miles driven and the total of special motor vehicle taxes. Motor truck production of 1,219,446 units in 1947 surpassed the preceding peak year, 1941 by 16% and 1946 by 31%.

Passenger car production, hampered by the shortage of sheet steel to a relatively greater degree than truck output, reached a total of 3,558,118 units, which was 5% lower than 1941 but 66% greater than 1946. The output of motor coaches, exclusive of school buses, equalled 18,835 units, a new high record.

Factory sales to the U.S. domestic market during 1947 were

3,297,247 passenger cars, 970,416 motor trucks and 16,383 motor coaches. Compared with factory sales to the domestic market in 1946, there occurred an increase of 64% in passenger cars, 30% in trucks and 76% in coaches.

Factory sales to foreign markets in 1947 likewise reflected gains over 1946. Passenger car exports of 260,871 gained 81%, motor truck exports of 249,030 increased 33% and motor coaches shipped abroad of 2,452 gained 201%. In the latter half of 1947 several countries imposed restrictions on importation of motor vehicles from the U.S., due to shortages in dollar balances for payments. However, the total volume of vehicle exports was not greatly affected because the world demand for motor transportation was so large that the curtailment or embargo by some countries was soon absorbed by other countries with adequate means of payment. As in the domestic market, the demand for vehicles was greater than the supply, so that the cessation of demand from certain markets was compensated by a corresponding increase in allocation of vehicles to other markets that stood ready to absorb them.

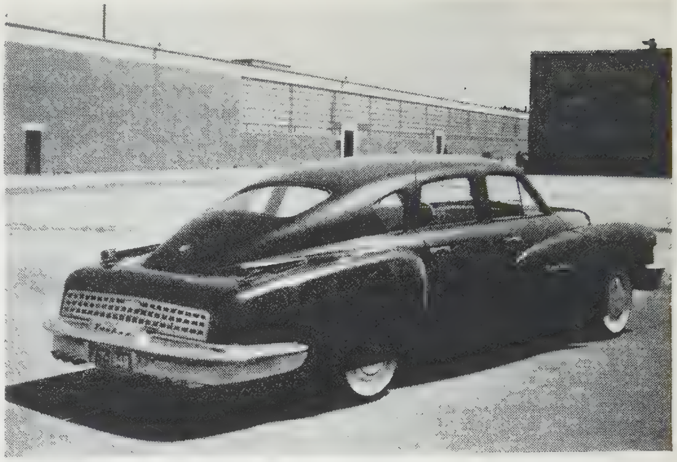
The trend in demand for heavier or larger trucks as measured by gross vehicle weight, is reflected in the figures for 1947 as compared with 1946, shown in Table III. In 1947 factory sales of trucks with a g.v.w. rating of 16,000 lb. and over comprised 9% of total compared with 6.7% in 1946. Although comparable classifications of truck factory sales were not available in prewar years because manufacturers then rated trucks on a carrying-capacity basis, truck factory sales in 1940 with a rated capacity of 2½ tons and over, roughly comparable with the present grouping above 16,000 lb. g.v.w., represented only 4.9% of total factory sales that year.



THE REAR-ENGINED TUCKER '48, which was previewed in Chicago, Ill., during the summer of 1947

The record demand for replacement parts continued throughout the year 1947, when an aggregate of $2,352,000,000 worth of parts was produced, surpassing the prior record year 1946 by 34% and the highest prewar year 1941 by 227%. When production of new cars, trucks and buses was either sharply curtailed or entirely discontinued at the beginning of 1942, owners of motor vehicles began the practice of maintaining their vehicles in better condition by replacing worn out or broken parts, with the result that the total volume of replacement parts produced kept on increasing throughout the war period. Since production of new civilian vehicles could not catch up with the tremendous accumulated demand accruing during the war period, owners of old cars continued the practice of repairing their vehicles until they could purchase new ones. The demand for new vehicles continued to surpass the supply by a very wide margin, so that the demand for replacement parts for the old vehicles in use continued unabated.

**Table III.**—*Motor Truck Factory Sales by Gross Vehicle Weight* From Plants Located in United States*

| | 1946 (1st 11 Mo.) | | 1947 (1st 11 Mo.) | |
|---|---|---|---|---|

| 26,001 and over | 12,178 | 1.5 | 24,348 | 2.2 |
| Total | 823,144 | 100.0 | 1,119,065 | 100.0 |

*Gross vehicle weight includes weight of the truck and the maximum load.

Due to the hundreds of thousands of different kinds of parts used in the production of the various annual models for the previous 15 years and other complications, there were no figures available on the physical number of units produced but it was possible to obtain approximate figures on the aggregate dollar volume of replacement parts and accessories sold at wholesale prices in the industry by months, as well as annual totals:

Employment in the production of motor vehicles and parts and other products produced by motor vehicle and parts factories during 1947 was 19% higher than the average for 1946 and 37% higher than the average for 1941. The average number of production workers in the year 1947 was 786,000, as compared with 661,000 in 1946 and 570,000 in 1941. When salaried workers are added to the total production workers, average employment in 1947 was approximately 965,000 as compared with 819,000 in 1946 and 654,000 in 1941.

Average weekly pay rolls of production workers in the industry during 1947 varied from a low of $40,000,000 in January to $47,682,000 in Oct. 1947, the latest figures available. The October average weekly pay roll was more than double the average pay roll in 1941 and 45% higher than the average weekly pay roll in 1946. The aggregate pay roll for production workers in the motor vehicle and parts industry in 1947 was approximately $2,300,000,000, as compared with $1,713,000,000 in 1946 and $1,346,000,000 in 1941.

**Registrations.**—According to preliminary figures issued by the U.S. Public Roads administration, the total registrations of passenger cars at the end of 1947 were 30,545,000, as compared with 28,100,188 at the end of 1946 and 29,418,313 at the end of 1941, which was the peak year prior to 1947. The number of cars in use increased 9% over 1946 and 3.5% over 1941.

Motor truck registrations at the end of 1947 were estimated at 6,492,000, compared with 5,725,692 at the end of 1946 and 4,876,054 at the end of 1941. The 1947 figures reflected an increase of 13% over 1946 and 34% over 1941. The total number of buses registered was estimated at 127,405, as against 119,937 in 1946 and 88,800 in 1941. This showed an increase of 6% over 1946 and 44% over 1941.

Total registrations of motor vehicles in the U.S. as compiled by the U.S. Public Roads administration are shown in Table VI.

Table VI.—*Registrations of Motor Vehicles in the United States*

| | Passenger Cars* | Trucks | Total |
|---|---|---|---|
| 1941 | 29,507,113 | 4,876,054 | 34,383,167 |

Motor vehicle owners paid out more taxes in 1947 for the purchase of new vehicles and the operation of their vehicles than in any previous year in the history of the industry. They paid a total of $2,914,000,000, consisting of $602,000,000 in state registration fees, $1,178,000,000 in state gasoline taxes, $1,039,000,000 in federal excise taxes on purchases of new vehicles and parts and gasoline and lubricating oil, and $95,000,000 in tolls and local taxes. During 1946, which was the highest previous total for motor vehicle owners' special taxes, an aggregate of $2,507,000,000 was paid by the highway users. In 1941, $2,147,000,000 in special motor vehicle taxes was paid by highway users.

The increase in tax collections from motor vehicle users in 1947 was due to two factors, (a) the increased registration of motor vehicles, and (b) an increase in the aggregate vehicle miles travelled, which set a new high mark of 370,000,000,000 vehicle miles, as compared with 333,400,000,000 vehicle miles in 1941.

Instalment credit outstanding at the end of Oct. 1947 amounted to $1,050,000,000, as compared with $544,000,000 at the end of 1946, $227,000,000 at the end of 1945, $200,000,000 at the end of 1944, $175,000,000 at the end of 1943, $482,000,000 at the end of 1942, and $1,942,000,000 at the end of 1941, which was the peak reached in prewar years. It will be noted that the total automobile instalment credit outstanding at the end of Oct. 1947, the latest available figure, was only 54% of the 1941 total.

Due to the pressures of higher manufacturing costs, wholesale prices of new passenger cars and new trucks continued to increase in 1947. Higher wage rates granted because of increased cost of living, not only for workers in the motor vehicle factories but also for workers in plants supplying raw materials and finished and semifinished parts, caused prices of materials, parts and services purchased by motor vehicle factories to increase at approximately the same rate as in the products produced by motor vehicle plants. According to the price indexes compiled by the U.S. bureau of labour statistics on a monthly basis, the prices of new passenger cars sold in October were 12% higher than in Oct. 1946, and 43% higher than in Dec. 1941. Prices of new trucks sold in October were 12% higher than in Oct. 1946 and 42% higher than in Dec. 1941.

A survey issued by R. L. Polk and Company at the beginning of 1947 giving data as of July 1, 1946, showed the average age of passenger cars in use on July 1, 1946, to be nine years. This compares with an average age of 7.3 years as of July 1, 1944, and 5.5 years of age on July 1, 1941. Data for prior years indicate that the weighted average age of all vehicles in use maintained itself around 5.5 years of age.

A survey completed by the Automobile Manufacturers association in 1947 indicated that 8,200,000 persons were directly or indirectly employed in highway transportation industries. Of these, 1,741,000 were employed in the manufacture of motor vehicles, parts and accessories, tires, batteries and raw materials used in their manufacture, approximately 1,310,000 were employed in the sales and servicing of motor vehicles and parts, 4,753,000 individuals were employed as truck drivers or in the operation of trucking concerns, 203,400 were employed as bus drivers or in the operation of bus transportation companies, while 191,300 were employed in construction and maintenance of federal and state highways, not including construction and maintenance of local roads and streets. This figure of 8,200,000 represents one out of each seven persons gainfully employed in the U.S.

**Canada.**—Production of passenger cars in Canada during 1947 totalled 164,822 units, as compared with 91,871 in 1946. 1947 was exceeded only by the years 1929 when 203,307 passen-

Note: The above table excludes motor coaches or buses from both the passenger car and motor truck sections. In addition to the motor trucks and passenger cars produced and exported as shown above, Canadian plants produced an estimated 863 buses for the Canadian domestic market and 33 units for export, or a combined total of 896 buses.

ger cars were produced, 1928 with 197,848, and 1926 when 166,887 units were turned out.

Of the 164,822 units produced in 1947, 38,757 were produced for export. Nearly 23% of the units produced were produced for export.

More motor trucks were produced in Canada in 1947, with 90,499 units, than in any peacetime year in the history of the industry. Of this total, 29,819 were produced for shipment to other countries. This was 33% of the production. During the war a greater number of military trucks were produced than the 90,499 turned out in 1947.

Monthly production for Canadian domestic market and for exports are shown for passenger cars and trucks separately in Table VII.

No estimates were available on total registrations in Canada at the end of 1947, but the total registrations of passenger cars at the end of 1946 were 1,234,006 and motor trucks 371,294, or a combined total of 1,605,300.

**Great Britain.**—Production of motor vehicles for the full calendar year 1947 was not available on an estimated basis, and hence figures for the first ten months of the year are shown in Table VIII.

Table VIII.—*Motor Vehicle Production and Exports in Great Britain*

| Production | Passenger Cars | Commercial Vehicles | Total |
|---|---|---|---|
| First 10 mo. 1947 | 238,365 | 124,801 | 363,166 |
| First 10 mo. 1946 | 166,311 | 113,310 | 279,621 |
| Exports | | | |
| First 10 mo. 1947 | 124,341 | 39,354 | 163,695 |
| First 10 mo. 1946 | 76,221 | 39,598 | 115,819 |
| Per Cent Exported | | | |
| First 10 mo. 1947 | 52.1 | 31.5 | 45.0 |
| First 10 mo. 1946 | 45.9 | 35.0 | 41.5 |

Production of passenger cars in Great Britain during the first ten months of 1947 increased 44% over the corresponding period of 1946, while exports of passenger cars gained 63% during the same period. Motor truck production in the first ten months of 1947 gained only 10% over the previous year, while exports of trucks actually showed a slight decline.

The proportion of passenger cars exported in 1947 was 52.1% of total production, as compared with 45.9% in 1946. The 31.5% of truck production exported represented a decrease from 35.0% trucks exported in 1946. (*See* also BUSINESS REVIEW.)

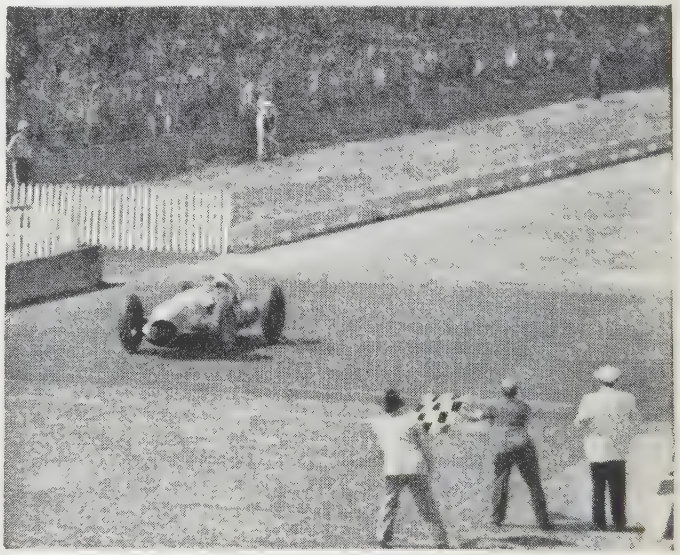
## Automobile Racing.

Mauri Rose, veteran speed-race auto driver from Chicago, Ill., won the annual 500-mi. Indianapolis speedway classic, driving a Blue Crown Sparkplug Special, in 4 hr. 17 min. 52.17 sec. Bill Holland, of Bridgeport, Conn., in the same racing equipment, was second in 4 hr. 18 min. 24.29 sec. Rose averaged 116.338 m.p.h. while Holland's speed was 116.097 m.p.h. Third place was captured by Ted Horn of Paterson, N.J., driving a Bennett Brothers Special.

The classic also resulted in the death of Shorty Cantlon of Indianapolis, Ind., who crashed into a wall.

Rose made a spectacular triumph, drawing up from 14th place to battle for more than 100 mi. with Holland; 50 mi. of this nip-and-tuck struggle kept the decision constantly in the balance.

A crowd of 168,000 persons saw the Indianapolis classic.



MAURI ROSE, winner of the 1947 Memorial day classic at Indianapolis, Ind., is shown at the finish line after covering the 500-mi. run in 4 hr. 17 min. 52.17 sec.

The Atlantic states ten-mile championship at Kingsbridge armory in New York city was won by Ed Schaeffer of Floral Park, L.I. Charles Miller of Linden, N.J., was second in this midget event. Jeep Colkitt of Paterson, N.J., was third.

The American Automobile Association George Robson memorial 100-mi. auto race was won for the second straight year by Tony Bettenhausen of Tinley Park, Ill. He drove a Belanger Special powered by a four-cylinder Offenhauser engine. His time was 1 hr. 14 min. 56.54 sec. He bettered his own 1946 time by three minutes. Ted Horn was second, half a lap off the pace. Charles Van Acker of South Bend, Ind., was third.

(T. J. D.)

## Aviation, Civil.

**Scheduled Air Transport.**—International carriers, with approximately 500,000 employees and 2,000 aircraft, were operating about 500,000 mi. of routes during 1947. For the year ending June 30, 934,799 passengers entered U.S. territory by air and approximately one-third of all visitors to Britain during 1947 arrived by aircraft. Between January and June, 80,108 persons moved on the 3,361 flights linking New York and Europe. Sleeper planes appeared on Atlantic routes for the first time after World War II, and additional all-cargo flights indicated the growing importance of cargo.

At the close of its first year of operation on July 31, British European Airways' routes covered some 17,035 mi. During that period, B.E.A. in all services operated 35,933 flights 7,399,206 aeroplane miles, carried 269,678 passengers 73,689,920 passenger miles, 2,670,800 lb. of freight and 2,239,600 lb. of mail. In addition, B.E.A. participated in air transportation through partial ownership of air lines in Cyprus, Gibraltar, Greece, Eire and Italy. Plans for a separate air cargo division were abandoned, but all-cargo planes were put into operation and exclusive mail-freight flights were begun to the continent. Remaining priorities were abolished on nearly all routes.

British South American Airways inaugurated service to the west coast of South America and awaited U.S. approval of a Miami-Jamaica route. In its first year of operation ending June 30, B.S.A.A. carried 8,865 passengers, and flew 687,684 mail ton miles and 1,338,202 freight ton miles.

British Overseas Airways corporation supplemented its Atlantic services with its first commercial operation between England and Canada and began the first commercial service to Ceylon from the west. B.O.A.C.'s latest report, covering the year ending March 31, showed total traffic of 129,928 passengers, 276,000,000 passenger miles, and 3,598,384 freight ton miles.

Of the three British air lines, only B.S.A.A. claimed profitable operations; B.E.A. and B.O.A.C. reported heavy losses. Government financial restrictions on pleasure travel outside the British Isles imposed Oct. 1 were a further blow to B.E.A.

U.S. international air routes increased from 175,488 mi. to 178,768 mi. Service was inaugurated over many routes previously authorized and increased on routes already operating. Pan American Airways inaugurated service on its around-the-world route and to South Africa; Northwest Airlines began operations between the U.S. and Asia; Trans World extended its Atlantic route to Bombay; and United Air Lines started California-Hawaii service.

International U.S. air lines carried an estimated 1,500,000 passengers, an increase of 44% over 1946. Freight and express ton miles increased from 15,092,127 to approximately 39,312,300, and revenue passenger miles rose some 70% to nearly 1,900,000,000. The international air fleet grew from 150 to 168 planes. Passenger fatalities per 100,000,000 passenger miles dropped from 3.5 to 1.1.

Comparable growth was registered by other international carriers. The routes of Air France became the most extensive in the world except for those of Pan American. New services linked France with the French West Indies and Shanghai, China, and joined French possessions in the Indian ocean with Africa. S.A.B.E.N.A. (Société Anonyme Belge d'Exploitation de la Navigation Aérienne), the Belgian company, began North Atlantic service, bringing the total number of operators linking Europe and the Americas to 13.

Swissair and China National Aviation corporation received authority to operate from their respective countries to the U.S. and planned early inauguration of service. Australian National Airways, as contractor for the government-controlled British Commonwealth Pacific Airlines, began scheduled service connecting Australia and New Zealand with the U.S. Iberia, the Spanish air line, joined operators across the South Atlantic; Philippine Air Lines extended its service to the U.S. and China; Peruvian International Airways spread from New York to Chile. Countries in the Russian orbit also expanded their international services, a few extending to western Europe. Czechoslovakian Airlines (Ceskoslovenske Aerolinie) reached London and Finnish Air Lines (Aero O/Y) began service to Stockholm.

In internal operations, B.E.A. began domestic service, nearly completing nationalization of scheduled British services. Elsewhere in Europe, services were increased. Russia claimed the largest network of internal routes in the world, but lack of reliable information made appraisal of Russian operations impossible.

Australian internal services had their biggest year, with cargo showing the greatest increase. Although Trans-Australia Airlines, the government air line, displayed rapid growth, it still was receiving a smaller share of traffic, both on the basis of total operations and of services over competitive routes, than its largest privately-owned competitor. In Australia, as in the U.S. and Canada, passenger fares were increased, but fares in the three countries remained among the lowest in the world.

Table I.—*Selected Statistics for Australian Air Carriers**
(Twelve months ending Sept. 30)

| | 1947 | 1946 |
|---|---|---|
| Miles flown | 25,704,023 | 17,542,425 |
| Passengers carried | 951,275 | 556,707 |
| Passenger miles flown | 408,946,193 | 242,883,852 |
| Mail (ton miles) | 623,023 | 862,701 |
| Freight (ton miles) | 7,388,594 | 2,982,810 |
| Passenger load factor (%) | 65.5 | 78.1 |

*Includes all regular internal air transport services.

Growth was likewise registered by Canada's internal operators. Trans-Canada Air Lines added more than 1,200 mi. of routes and shortened its transcontinental operation with a cutoff across the U.S. T.C.A. in domestic services carried an estimated 440,000 passengers, 2,500,000 lb. of mail, and 1,500,000 lb. of cargo. Despite increased revenues, greater expenses resulted in financial losses for the year. Canadian Pacific Air Lines began withdrawing from "bush" operations in line with government policy favouring reservation of such services for small operators. However, its regular feeder operations showed traffic gains and new services were begun.

Table II.—*Selected Statistics for Canadian Air Carriers**
(Eight months ending Aug. 31)

| | 1947 | 1946 |
|---|---|---|
| Passengers carried | 490,597 | 409,480 |
| Passenger miles flown | 159,752,678 | 131,375,688 |
| Mail (ton miles) | 983,860 | 982,012 |
| Goods (ton miles) | 2,317,074 | 1,457,821 |

*Includes all operations of scheduled and nonscheduled carriers.

Additional authorizations, consisting primarily of service to smaller localities and new competitive routes between points already served, raised total U.S. domestic route mileage from 84,358 to more than 110,000. Feeder authorizations increased from about 11,500 mi. to nearly 21,000 mi. Approximately half of the feeder carriers had begun operations. An entirely new type of service was authorized with Civil Aeronautics board certification of Air Commuting, Inc., to operate a commuter's service between outlying communities and seaplane bases on the East river near lower Manhattan in New York city.

Revenue passengers carried by U.S. domestic lines rose approximately 7.7% to more than 13,000,000 and revenue passenger miles totalled an estimated 6,284,759,000, a gain of 5.6%. Feeder operators were judged to have accounted for about 246,000 revenue passengers and 49,000,000 revenue passenger miles of the total. Mail dropped a little less than 1% to approximately 32,750,000 ton miles. Aircraft utilized in domestic services grew from 659 to 793, and available seat miles were up 28% to nearly 10,000,000,000. The revenue passenger load factor decreased from 78% to an estimated 64%.

The most outstanding growth in certificated air-line traffic was in cargo transportation. Air express increased 26% to about 30,000,000 ton miles. Air freight showed an even more startling growth. Sharp reductions in rates, additional all-cargo planes, and greater emphasis on cargo development raised air freight to

THE "REYNOLDS BOMBSHELL," piloted by Capt. William P. Odom, as it landed at La Guardia field, N.Y., on April 16, 1947, after setting an unofficial round-the-world speed record of 78 hr. 55 min. 58 sec.

Table III.—*Selected Traffic Statistics for U.S. Domestic Scheduled Air Carriers**

(Twelve months ending Sept. 30)

| | 1947 | 1946 |
|---|---|---|
| Revenue miles flown | 314,298,492 | 282,800,657 |
| Revenue passenger miles | 6,102,407,000 | 5,324,278,000 |
| Mail (ton miles) | 32,318,245 | 38,903,942 |
| Express (ton miles) | 28,834,639 | 19,313,528 |

*Includes the 16 domestic trunk line carriers but does not include scheduled feeder carriers.

nearly 41,000,000 ton miles, a growth of 111% over 1946.

The certificated carriers joined in activating Air Cargo, Inc., as their co-operative ground-service organization for freight, published a consolidated tariff showing rates for all lines, set up a consolidated air freight terminal at Detroit, Mich., and began working out arrangements with motor carriers to tap traffic at off-air-line points.

Table IV.—*Selected Revenue Statistics for U.S. Domestic Scheduled Air Carriers**

(Twelve months ending Sept. 30)

| | 1947 | 1946 |
|---|---|---|
| Operating Revenue: | | |
| Passenger | $297,243,726 | $247,695,565 |
| Mail | 23,232,944 | 21,462,840 |
| Express | 11,270,148 | 7,594,955 |

†Denotes deficit.

Notwithstanding the heaviest traffic and greatest gross revenues ever experienced, conditions such as lower load factors, expensive financing of large new equipment, and generally increased costs resulted in net operating losses for the first 11 months of approximately $15,000,000. While only five fatal crashes occurred on certificated routes, the greater number of passengers killed raised the passenger fatality rate, according to CAA estimates, from 1.2 to 3.4 per 100,000,000 passenger miles flown.

**Noncertificated and Charter Services.**—CAB action establishing two classes of noncertificated carriers clarified the status of the U.S. operators commonly known as nonscheduled carriers. The first class, designated as noncertificated air cargo carriers, was authorized to engage in scheduled, common-carrier transportation of property only. The second, termed irregular air carriers, was permitted to transport persons and property in services not involving regularity of routes or schedules. However, foreign air transportation of passengers by the latter class was prohibited. Indicating the scope of noncertificated operations was a Civil Aeronautics administration report that on Oct. 1 approximately 2,000 noncertificated firms operating 4,439 planes and employing 8,488 pilots had received approval required by the safety regulations and that about 200 new applications were being received each month.

Despite intensified development of cargo services by the certificated lines, noncertificated operators retained their position as the largest carriers of freight. Like the certificated air lines, noncertificated carriers registered substantial gains; 6 of the largest among the 14 companies in this class reported 35,514,000 ton miles for the first 10 months of 1947 as against 26,321,000 ton miles for all of 1946. Rates of these carriers dropped as low as 12 cents a ton mile, and the number of aircraft owned in the large transport category exceeded 50.

British charter operators also had their biggest year. By summer, the British Air Charter association, at the close of its first year, had some 40 members. To maintain high standards of service, the association promulgated its own safety requirements, with which all members were required to comply.

Skyways, Ltd., reported to be the largest charter operator in Europe, with an organization of about 1,600 employees and a large fleet of transport planes, during a single week in October operated 59 flights approximately 71,000 aeroplane miles. The charter division of Airwork, Ltd., another large operator, in September flew 55,320 aircraft miles and 1,075,555 passenger miles. London Aero Motor Services, Ltd., reportedly the largest European freight carrier, and Sky Taxi's of South Africa jointly created a charter concern with operating companies in England, Africa and Australia.

Nonscheduled carriers were equally active throughout the remainder of the world. In Canada, during the first eight months, nonscheduled operators carried 72,945 passengers, flew 6,139,273 passenger miles and 527,931 freight ton miles. Revenues for the same period rose from $885,588 in 1946 to $2,680,181 in 1947.

**Private and Industrial Flying.**—British private flying suffered a setback when foreign pleasure flying became impossible and later when gasoline rations were withdrawn from pleasure flying and reduced for private flying in connection with business. The government-appointed Special Advisory Committee on Private Flying, one of several groups which studied the existing problems during the year, called for financial grants to aero clubs, interest-free loans to finance plane production, and for the government to make airfields available to the clubs. Australia and South Africa continued aero club subsidies; New Zealand presented aircraft to its clubs, approved plans for club training of Air Training corps (ATC) cadets, and authorized the clubs to engage in commercial activities as subcontractors to the national air line.

Under the impetus of the G.I. training program, the number of licensed pilots in the U.S. continued to grow. Approximately 200,000 student pilot permits were issued and certificated pilots rose from 400,000 to some 455,000. Aircraft certificated increased from 81,002 to approximately 95,000. Government-sponsored training was a major source of income for aviation training schools, and most private flying was still instructional in nature. However, the use of planes by farmers and business men in their work became an increasingly important type of private flying. Indicating the unflagging efforts to increase the utility of the private plane was the designation by the CAA of Skyway Number One, a route between Los Angeles, Calif., and Washington, D.C., to be marked by cities and states along the way.

In industrial flying there was an extension of activities similar to those of the preceding year. An incomplete CAA survey revealed that in the U.S. there were 188 firms in crop dusting, 84 in seeding from the air, 58 in towing gliders, 37 in towing signs, 19 in making aerial photographs, 51 in patrolling power lines, 34 in patrolling pipe lines, 155 in shooting coyotes, and 12 in spraying for mosquito control. The use of aircraft in pest control showed particular promise because of the plane's ability to reach inaccessible places and to cover large areas quickly.

**Government and International Co-operation.**—Following ratification of the permanent Chicago convention by 26 nations, the permanent International Civil Aviation organization (I.C.A.O.) came into being and held its first general assembly meeting. The transition from a provisional organization (P.I.C.A.O.) to I.C.A.O., however, was marked by little visible change. To qualify for affiliation with the United Nations organization, I.C.A.O. expelled Spain. Renewed attempts to reach accord on a multilateral agreement governing reciprocal aviation rights among nations failed in disagreement over the question of "fifth freedom" traffic. However, many new bilateral agreements were negotiated.

The International Air Transport association, comprised of about 70 international air carriers, held its third general meeting in Brazil. Action included approval of an air travel plan for international transportation on credit, agreement to maintain international fares at existing levels for the time being, establishment of a uniform rate structure for international services, and further standardization of traffic procedures.

Britain enacted a new Air Navigation bill ratifying the Chicago convention and giving broad powers to the ministry of civil aviation. An Air Transport Advisory council was established to consider public complaints and representations respecting the three government-owned air lines. The British post office announced substantial reductions in air mail postage rates to all countries outside Europe, and by agreement between the European postal authorities and air carriers, surcharge was removed from all European air mail.

In Canada, delegates of nine British commonwealth nations met at the second Commonwealth Air Transport council. The battle between the government and private operators in Australia, begun the preceding year when the government-owned Trans-Australia Airlines initiated operations in competition with private companies, increased in intensity. Major issues were competitive fares, charges for government-owned airways and airport facilities, and methods of allocating gasoline under rationing. A new law authorizing T.A.A. to operate intrastate services caused further disagreement. New Zealand completed nationalization of its scheduled services, and South Africa, with trunk lines already government-operated, authorized operations by privately owned feeder companies.

A series of serious accidents in the U.S. focused attention on safety matters. Congress conducted safety investigations and the president appointed a Special Board of Inquiry on Air Safety. Subsequently, the president established an Air Policy commission to study and make recommendations on broad questions of aviation policy. A congressional Aviation Policy

TESTING FROST-COATED AIRCRAFT ENGINE for effects of "icing" conditions in a research project conducted atop Mt. Washington, N.H., in Feb. 1947 board was also created to study the needs of the aircraft manufacturing industry.

Much work of the CAA was directed to pressing the national airport program and continuing efforts to improve navigational facilities and traffic control. Several projects such as studies in methods of air-line pilot selection, and development of cross-wind landing gears and noiseless planes were in progress under CAA sponsorship. The CAB began an investigation into the reasonableness of air-line cargo rates and had under consideration a proposed regulation authorizing the operation of air-freight forwarders. For the second time in its existence, the CAB approved the sale of an air-line route with the transfer of Western Air Lines' Denver-Los Angeles route to United Air Lines. Among the safety activities were new regulations imposing higher standards of fire prevention and detection, and providing for temperature accountability in determining maximum take-off weights under varying atmospheric conditions.

**Helicopters.**—Following post office department experiments, the CAB issued Los Angeles Airways a temporary certificate for scheduled helicopter cargo and mail service primarily to test distribution of air mail from the Los Angeles airport to approximately 30 nearby communities. Using Sikorsky S-51's, operation over a major portion of the routes was begun by the end of the year.

For a time, the Skyway corporation conducted helicopter passenger and cargo shuttle service between downtown Boston and the airport, but discontinued service, reportedly because of unprofitable payloads and management difficulties. The first CAB authorization of scheduled helicopter passenger service came with issuance of a temporary certificate to the Yellow Cab company of Cleveland, O., for passenger and cargo operations between the airport and downtown Cleveland, and between the airport and Euclid, O., with a stop in a residential suburb.

Several charter companies were reported and the helicopter was put to a variety of uses in industrial flying. Reflecting the growing importance of helicopters was CAB issuance of revised air traffic rules with specific provisions for helicopter operation. In England, B.E.A. established a helicopter unit and began experimental operations with Sikorsky S-51 and Bell 47 machines.

**Aids to Navigation.**—After the winter of 1946–47, the flying public became alarmed over the number of accidents and exasperated by schedule cancellations, en route groundings and late departures and arrivals. These same conditions contributed substantially to air-line financial losses.

Adequate air traffic control, meteorological services and radio or radar navigation systems were conceded to be essential to efficient and safe operation of modern air transportation. Necessary navigation aids were classified as approach and landing, short-distance and long-distance aids. Selection of the most suitable systems for postwar civil flying was difficult. Wartime military systems, adapted to specific objectives and theatres, had been added to a diverse collection of prewar developments. The choice was limited by the cost of installation and maintenance, and the amount of equipment which could be economically carried by an aeroplane and efficiently operated by its aircrew.

Two of the most prominent instrument landing systems were instrument landing system (ILS) and ground controlled approach (GCA). ILS was a radio system in which the information necessary for making a blind approach was given on an indicator in the aircraft. In GCA, ground personnel followed the planes on radar scopes and relayed continuous instructions for landing to the pilot by radio. In 1946, ILS was chosen by P.I.C.A.O. as the standard for international airports.

Most major British and continental European airports, being international in character, planned to install ILS. In 1947, however, no such ideal standardization existed. SBA (standard beam approach), based on a prewar European system, was adopted for interim use in some places. London, in addition to GCA, ILS, and SBA had BABS (Beam Approach Beacon System), another wartime radar landing system. Use of the ILS system in the U.S. began in midsummer. By the end of the year the CAA had authorized 12 air lines to use 42 of the 52 ILS systems installed.

Because no instrument landing system permitted completely blind landings, fog dispersal or high intensity lights or both to improve visibility near the ground were considered necessary adjuncts. Research on Fido (Fog, Intensive, Dispersal of), a British war-developed system of fog dispersal, continued at Arcata Landing Aids Experiment station in California. Although high fuel consumption caused abandonment of Fido at London during the fuel shortage, CAA permission for its first U.S. commercial use was granted a scheduled feeder line. In view of the limitations of each landing system, a pattern widely held to be desirable for airports was ILS accompanied by GCA, in case of ILS failure and for aircraft not equipped for ILS, plus fog dispersal or high intensity lights or both.

Wartime Gee radar and omnidirectional ranges were favoured as short-range navigation aids. In parts of Britain and Europe, Gee, installed during the war, was in use and plans were made for completing coverage of the United Kingdom and extending it in European countries. In the U.S., despite reduced funds, progress was made in CAA installation of very high frequency (VHF) omnidirectional ranges to cover the country. There was considerable disagreement on the relative merits of this type in comparison with radar beacon navigation, the latter being highly regarded by the military for its purposes. The first transcontinental radar airway was established as a joint navy-A.A.F.-coast guard project.

U.S. Loran and British Consul, wartime developments, were well-known long-distance navigation aids. Low-frequency Loran employing the same principles as standard Loran, was being studied. The LF Loran was expected to cover 1,500–2,000 mi., day or night, over land or sea, whereas standard Loran's maximum range over sea was 850 mi. by day and 1,600 by night, with performance over land poor.

Air-borne radar to detect high ground, turbulent clouds and other planes received its share of attention. A CAB order required that by early 1948 all scheduled transport aircraft be equipped with an absolute terrain proximity indicator. Radio altimeters and radar terrain clearance indicators were approved types.

In Britain, since the small size of the country made uniformity imperative, a unified control service, staffed by the royal air force, royal navy and civilian controllers was planned; and a system of area control was adopted. Approach and airport control was to be established at all permanent civil airfields. In the U.S., although a system of airways traffic control had been continuously augmented after its establishment in 1936, heavier aircraft movements necessitated further expansion and improvement, especially at congested airports. Ground radar surveillance sets were being studied by the CAA as traffic control aids and GCA was being explored for its potentialities in traffic control as well as in instrument landings.

Again in the interest of uniformity and high standards, I.C.A.O. approved a set of codes for supplying weather data for international services. Six of the 13 Atlantic weather ships, called for by a P.I.C.A.O. agreement in 1946, had been placed in operation by the end of the year. ## Aviation, Military.

**United States Air Force.**—The U.S. air force (succeeding the army air forces) was established Sept. 18, 1947, as an autonomous armed service. Thus, under provisions of the National Security act of July 26, 1947, United States military aviation now enjoys a status co-equal and co-ordinate with that of the army and the navy in the national military establishment, and the increasingly important role of air power in United States national defense is given legal recognition.

The department of the air force was designed as a streamline organization, to bring the methods of business efficiency to the administration of the modern air force that must provide an instantly ready instrument of national air security. In the reorganized air force headquarters the old style military general staff was replaced by staff sections for (1) personnel and administration, (2) operations, and (3) matériel. Regrouping of functions placed intelligence as well as training and requirements and plans and operations under the deputy chief of staff for operations. The designation of an additional deputy chief of staff as (4) air comptroller to administer the principles of cost control and management control indicated the increased emphasis placed on economy and on budget and fiscal matters.

The division of the air force in the United States into three combat commands and five supporting commands was retained from the army air forces organization, as was the tactical structure of the combat groups. The group, however, and not the squadron is the lowest unit to perform both tactical and administrative functions, and a wing, organized as a mobile, self-supporting organization, was introduced at the next higher echelon.

The U.S. air force security program, which called for 70 regular air force groups plus air national guard units and air reserve groups as civilian components, was temporarily modified in accordance with budget considerations to 55 combat groups and 17 specialized squadrons on Jan. 1, 1948.

Of the 401,000 regular personnel and 15,000 aircraft required for the fullest realization of the 70-group program, the U.S. air force had, on Jan. 1, 1948, approximately 335,000 personnel and less than 10,000 aircraft, more than half of which were in storage. An aviation career program for high school graduates and a reopened aviation cadet program were inaugurated to supplement normal recruitment.

The completion, during 1947, of the surplus property disposal program left the air force with few surplus planes. The continuing modernization of the U.S. air force requires, however, replacement of obsolescent planes with planes of new types, at a rate of approximately 25% annually. The extensive research and development sponsored or developed by the air force was designed to provide it with the best aircraft and weapons. Research in guided missiles, trans-sonic speed and jet and rocket propulsion was being pursued. An air industrial preparedness program was inaugurated to ensure the procurement of new aircraft required and also to maintain the aviation industry as a healthy nucleus, readily and rapidly expansible in time of emergency.

Aircraft introduced in 1947 were the B-47, the latest jet bomber, which, because of its sweptback wings and the placement of its six engines, represented the most radical departure in design of any air force bomber to date; the B-48, the first six-engine jet bomber flown; the B-49, an eight-engine jet version of the B-35 flying wing heavy bomber of 1946; the B-50, a new and greatly improved version of the wartime B-29, which it exceeds in range, speed and load; and the B-45 and B-46, four-engine jet bombers. The first four are medium bombers; the last two are light.

The single-engine, single-seat, sweptback P-86 and the four-engine P-87 were new jet fighter aircraft. The XC-97, a cargo version of the wartime B-29 (now classified as a medium bomber); the XC-99, a cargo version of the heavy bomber B-36, and the world's largest land-based plane; the XF-11, a photo reconnaissance plane; and the XR-10 and XR-12, helicopters, were other new aircraft first flown or announced in 1947.

One of the most important announcements made by the air force in 1947 concerned the climatic hangar at Eglin field (near Valparaiso, Fla.) designed to test aircraft and equipment under all types and extremes of weather conditions, at a central testing site. Also important were announcements of flights by Alaska-based squadrons which determined that there are three north magnetic poles instead of one as previously believed, and which also showed that the U.S. air force could operate aircraft and equipment efficiently in the polar regions, during any season of the year. The outstanding aviation event of 1947 was the flight, Sept. 21–22, of an air force C-54 with preset, push-button control (not to be confused with radio control) from Stephensville, Newfoundland, to Brize Norton, near London, England, in 10 hr. and 15 min. Although a full crew was aboard, they served as observers only, and all details of the flight were accomplished by the automatic radio-guided control of a "mechanical brain."

(C. Sz.)

**United States Navy.**—Naval aviation moved ahead in a year marked by rapid development in naval aircraft, particularly in the field of jet propulsion. The resulting speeds established new marks in the world's record book.

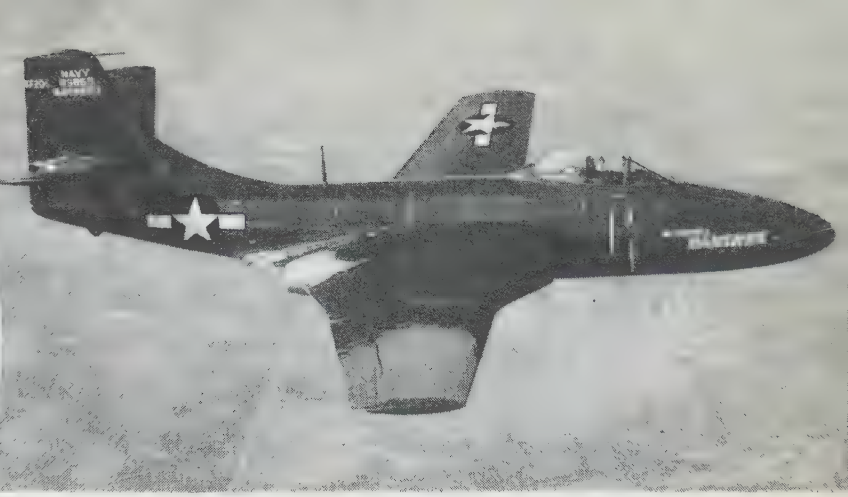
Highlights in the record-breaking flights of the navy included those of Commander Turner F. Caldwell, Jr., U.S.N., and Major Marion E. Carl, U.S.M.C. Piloting the Douglas Skystreak at 640.7 m.p.h., Commander Caldwell broke the world's speed record on Aug. 20, 1947, at Muroc Dry lake, Calif. Five days later, flying the same Skystreak over the course, Major Carl broke the record again at 650.6 m.p.h.

Operational employment of jet propelled aircraft kept pace with its technical development with the organization of the navy's first jet fighter squadrons. During 1947 two navy and one marine jet squadrons were formed and equipped with Phantoms and North American FJ-1s. New planes that spelled increased power for naval aviation were of many types. Aircraft driven by a combination of two power plants were the XF2R-1, the Ryan-built "Dark Shark Fireball," and the XFR-4. The shark-nosed XF2R-1, first turbo-prop aircraft in the navy, set what was believed to be an altitude record for that type when it topped 39,000 ft. It climbed to 10,000 ft. in less than 2 min.

The newest addition to the navy's line-up of all-jet fighters was the Grumman XF9F-1 Panther. With a speed well over the 600 m.p.h. mark, this new fighter seemed destined to be one of the navy's outstanding carrier-based fighters. In addition to the XF9F-1 Panther, navy all-jet fighters included FH-1 Phantom, F2H-1 Banshee, the FJ-1 and the F6U Pirate. The F2H-1, built by McDonnell, was powered by two turbo-jet engines installed in the wing roots which gave it a speed of more than 600 m.p.h. In contrast to the Banshee, the FJ-1, developed by North American and the F6U-1, built by Chance Vought, are powered by single turbo-jet engines.

In attack planes the AM-1 Mauler, a carrier-based torpedo plane built by Glenn Martin, and the AD-1 Skyraider built by Douglas, both powered by conventional engines, were rapidly replacing the TBF Avenger and the SB2C Helldiver in the fleet. Several squadrons were using the AD-1. Still other new planes were the XP4M-1 Mercator, Martin's long range patrol plane, powered with two jet and two conventional engines, and the PBM-5A, the world's largest amphibian.

Helicopters were rapidly gaining favour, and the navy was using such craft aboard carriers for various purposes, particularly transportation between vessels and air-sea rescue. The



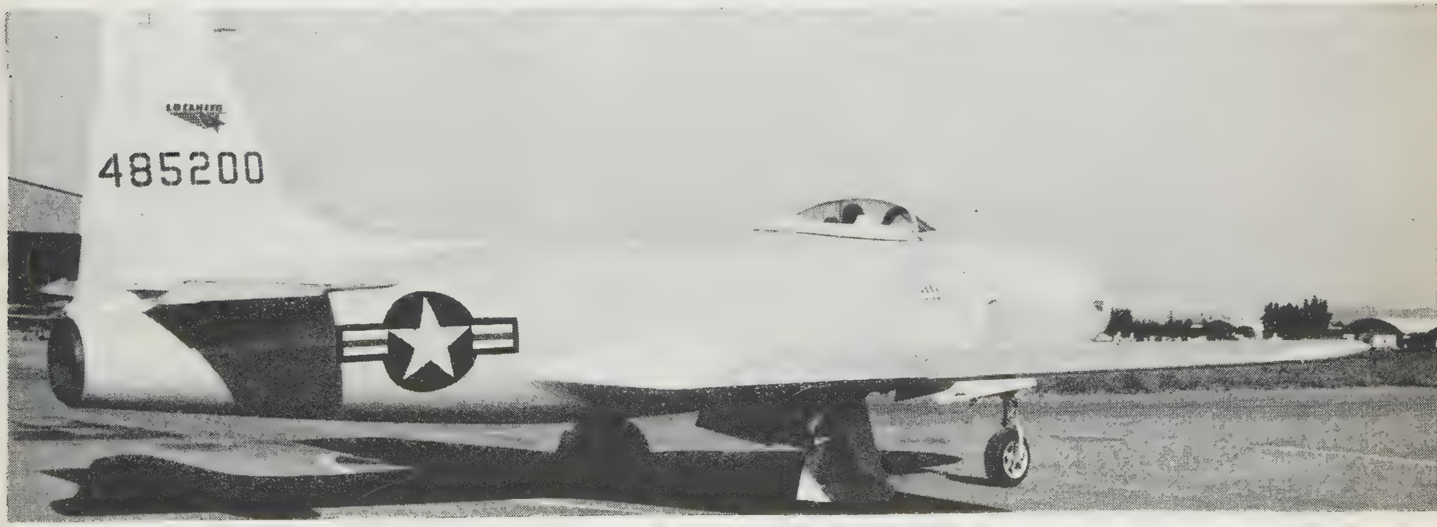
Above, left: AUTOMATIC CONTROL PANEL of the U.S.A.F. C-54 Skymaster which completed the first pilotless transatlantic flight in aviation history on Sept. 22, 1947, when it transported 14 men from Newfoundland to England in 10 hr. 15 min.

Above, right: McDONNELL BANSHEE, U.S. navy, carrier-based jet fighter plane test flown in May 1947

Right: MARTIN XP4M-1 Mercator, U.S. navy four-engine patrol bomber with a maximum range of more than 3,000 mi., which was first flown in 1947

Below: LOCKHEED P-80R Shooting Star, U.S. army jet plane which returned the world speed record to the U.S. after 24 years, flying at 623.8 m.p.h. on June 19, 1947

Bottom: DOUGLAS D-558 Skystreak, U.S. navy jet-powered research plane designed to hold a pilot and 500 lb. of recording instruments, which broke all world speed records on Aug. 25, 1947, flying at 650.6 m.p.h.



Sikorsky HO3S-1 was used in Operation "Highjump" in the antarctic in the winter of 1946–47. Two new helicopters made their debut in 1947, the XHJS and the XHRP. Known as the Flying Banana, the XHRP features a counter-rotating rotor on both ends. The first marine helicopter squadron was formed during 1947 and was equipped with Flying Bananas.

Foreshadowing things to come was the experimental firing of the V-2 rocket from the carrier "Midway," demonstrating the versatility of the flattops and opening a wide field of new effort in naval warfare of the future.

The navy in 1947 had 8,000 planes in operation, including fleet, training and reserve. To support these operating aircraft, approximately 7,000 planes were in storage, pool and overhaul activities. During the year, the navy trained 1,800 pilots and 15,000 technicians. Supporting the regular forces of the naval aeronautical organization was the air reserve, which more than doubled in size after Oct. 1946. There were at the end of 1947 45,000 officers and men in the navy and marine corps air reserve, of which 20,000 were participating in regular hours of navy-based activity. The goal for 1948 was 40,000 in the organized program. (*See* also NAVIES OF THE WORLD.) (D. B. D.)

**Air Forces—The World.**—For the air forces of the world, 1947 was definitely a transition year. After the end of active warfare in 1945 and the shrinkages and readjustments of 1946, a certain amount of technological progress was to be noted in most countries in 1947. In practically all countries which retained any of their military establishments (with the possible exception of the U.S.S.R.) production of new military aircraft reached the lowest levels since the mid-1930s, but research and development projects were extremely active. Factories everywhere were busy turning out the prototypes of the new and faster fighters and bombers which were displacing the machines that were in use at the end of World War II.

The most active development centred around new types of power plants. Jets, turbo-jets, turbo-propellers and rocket engines of many shapes and sizes were tested both on the ground and in the air. There is little doubt but that most of the high performance military aircraft of the future, under whatever flag, will be powered with one or another of such engines.

THE "BETTY JO," U.S. army P-82, which made a record nonstop flight from Hawaii to New York city in 14 hr. 33 min. Lt. Col. R. E. Thacker, pilot, and Lt. J. M. Ard, co-pilot, are shown on their return to New York, Feb. 28, 1947

Not that the reciprocating engine-driven propeller combination which was the conventional power plant throughout World War II, was due to disappear entirely. Because of the high fuel consumption of the turbine types it was probable that the older forms of power plants would remain in use for some years for long-range bombardment, transport and reconnaissance aircraft. This condition would probably exist until some form of atomic-energy propulsion was developed, but that was something for the next 10 to 25 years. In the latter connection one can only repeat a remark that was made at the close of 1946: "It would be dangerous to predict that aircraft of the future will *not* be atomic-powered. For the present, however, the practical military application of atom-splitting remains in the field of the weapon and not the carrier."

**Guided Missiles.**—Although little information was published on progress during 1947 in guided-missiles design and development in various parts of the world, it can be asserted with assurance that intensive work was in process in every country that supports any military program. The greatest question resolved around Russian activity in this field. It was well-known that the U.S.S.R. had been exploiting to the full the technical information and the scientific personnel that came out of the Russian-occupied zone of Germany. Rumours of great activity persisted, but what was actually going on in the way of research and development and in the testing of actual missiles deep in the Siberian steppes was entirely unknown. With the international political situation as delicately balanced as it was at the close of 1947, it is safe to say that any announcements that were made during the year of new developments in the guided-missile field related to equipment that had long been outmoded. (*See* also MUNITIONS OF WAR.)

**Piloted Aircraft.**—The complexion of all air forces in the world changed radically in 1947 as more and more service squadrons were equipped with postwar designs. In actual numbers, the older forms still predominated, but it was obvious that the experimental and test stage was well behind for many jet fighters and jet bombers. The trend which was noted in 1946 of reclassifying wartime, combat types as "trainers" continued in 1947. The standard 400-m.p.h. fighters of 1945 had become the transitional trainers for the 600-m.p.h. jet fighters of 1947–48.

In the paragraphs following, a brief survey is set out of the new aircraft and engines which appeared in countries outside the U.S. for which information was available. From a study of these newer types in comparison with those which appeared in 1946, some indication is to be had of the trends of the world's military aircraft as disclosed in 1947.

**Great Britain.**—Immediately following the close of World War II the British air ministry announced that further development of military types for reciprocal engines would be abandoned. During the following years the British actively pursued their announced policy. Throughout 1945 and 1946 a number of jet-propelled prototypes were flown and, in fact, a number of jet-fighter squadrons were activated, but 1947 saw the disclosure of a great many new types which had been started under the new program. A number of these are described below.

*New British Jet Aircraft.*—The Hawker N.7/46 fighter is a low-wing type without sweepback, powered by a Rolls-Royce Nene II turbo-jet. Top speed was expected to be more than 600 m.p.h. The engine was reported to be barely audible at 300 knots from within the cockpit.

The Saunders-Roe S.R./A1, first flying boat fighter, is powered by two Metropolitan Vickers Beryl axial-flow turbo-jets, each developing 3,850-lb. jet thrust at 7,750 r.p.m. Top speed was "probably more than 500 m.p.h."

Developed both as a land-based and carrier-based fighter, the Vickers-Armstrongs (Supermarine) Attacker (E10/44), was in small-scale production. Maximum speed at sea level was 590 m.p.h. It is powered by a Rolls-Royce Nene II turbo-jet.

Extensive flight tests during 1947 with the A.W.52G all-wing glider provided aerodynamic data for the Armstrong-Whitworth A.W.52 flying wing powered by two Rolls-Royce Nene II turbo-jets. Design features include sweptback laminar flow wings of 90-ft. span, boundary layer suction control, thermal de-icing and a pressurized cabin.

The De Havilland tailless D.H. 108, of composite construction, is powered by the new De Havilland MR.III turbo-jet. Problems of sweptback wing design were to be investigated with it, and data obtained from tests were to be applied to the projected D.H. 106, a 75,000-lb. transatlantic air liner.

First flown with a Bristol Mercury engine, the Balliol MR.I advanced trainer of Boulton-Paul Aircraft, Ltd., was to be powered eventually by an Armstrong-Siddeley Mamba or Rolls-Royce Dart turbo-prop.

*Miscellaneous Types.*—The Westland Wyvern T.F.1 torpedo attack bomber and fighter was described as "a real slugger." It weighed 22,000 lb. and had a maximum speed of 455 m.p.h., powered by the new Rolls-Royce Eagle 24-cylinder, 3,500-h.p. sleeve-valve engine, driving Rotol counter-rotating propellers. Typical armament included four 20-mm. guns, one 20-in. torpedo and one 2,000-lb. bomb or eight 60-lb. rocket projectiles.

The Blackburn S.28/43 Firecrest had a more powerful engine than its predecessor, the Firebrand, and differed widely in other respects. It is a smaller aeroplane in general with a slightly higher wing loading. Its Bristol Centaurus 59 engine produces 2,825 h.p. at take-off, using methanol-water injection. The S.28/43 has a "gull wing" look caused by the dihedral of the outer two-thirds of its wings. Its wings fold in three sections.

The Avro Shackleton was ordered in quantity for the coastal command. It was reported heavier than the Avro Lincoln, and powered by four Rolls-Royce Griffon engines driving counter-rotating propellers.

The Fairey Operational Trainer was developed from the Firefly I, long-range naval reconnaissance fighter.

Two new observation and liaison aircraft appeared during the year. The Heston Aircraft Co., Ltd., A.2/45 has twin booms, a pusher propeller, and is powered by one De Havilland Gipsy Queen 33 engine. It carries a crew of two. The Scottish Aviation observation and liaison aircraft derives from the civil Prestwick Pioneer of that company.

*British Jet Engines.*—The greatest development during the year in the gas turbine field was in turbo-props (gas turbines driving propellers). The Napier Naiad was a newcomer in the field in the 1,600-h.p. range.

The Bristol Phoebus was reported to be an experimental type expected to be used in the development of the Proteus turbo-prop for the Bristol 167 (Brabazon I) and the Saunders Roe S.R.45 transports.

Roy Fedden, Ltd., developed a turbo-prop of about 1,400 h.p. for use in short- and medium-range two- or four-engine transports, but work on this engine was discontinued in the summer of 1947.

The Rolls-Royce Dart of 1,000 h.p. was mentioned as a possible power plant for several advanced trainers, usually as an alternate of the Armstrong-Siddeley Mamba I. The experimental Rolls-Royce Trent, flown many hours in the Gloster Meteor, is an adaptation of the Derwent turbo-jet redesigned to drive a propeller.

Two other new gas turbine power plants, the De Havilland H.3 and the Power Jets 250, were reported but no details were available. The De Havilland Goblin III was developed for installation in the third version of the D.H. 108, supersonic research aeroplane.

Fido (Fog, Intensive, Dispersal Of), a joint army-navy-CAA research project in progress at Arcata, Calif., in 1947. Fido was expected to supplement automatic landing aids guiding pilots to a field by clearing the runway itself to allow the pilot to complete his landing in safety

Research with gas turbines included flight testing of such large four-engine aeroplanes as the Lancastrian with turbo-jets in the two outboard nacelles. This "flying test-bed" was used for the Armstrong-Siddeley ASX, the Rolls-Royce Nene and, in 1947, the De Havilland Ghost, first flown on July 31.

Bristol Theseus turbo-props were flown in the two outboard nacelles of the Lincoln. The Armstrong-Siddeley Mamba turbo-prop and also the Napier Naiad were being installed in a Lincoln for testing. An Armstrong Siddeley Python-powered Lancaster was reported flying. In these installations, turbo-props were reported installed in the outboard positions only. In the case of the Python Lancaster, each Python drives two four-blade counter-rotating propellers.

The first public appearance of the Gloster Meteor powered by the experimental Rolls-Royce Trent turbo-prop was made at the Derby International Air rally, June 21, 1947.

| Turbo-jets | | Jet thrust (lb.) | R.p.m. | Dry weight (lb.) |
|---|---|---|---|---|
| Armstrong-Siddeley ASX | | 2,600 | 8,000 | 1,900 |
| De Havilland Ghost II | | 5,000 | 10,000 | 2,011 |
| De Havilland Goblin II | | 3,000 | 10,200 | 1,573 |
| De Havilland Goblin III | | 3,300 | 10,750 | 1,573 |
| Metropolitan-Vickers F.2/4A Beryl | | 3,850 | 7,750 | 1,550 |
| Metropolitan-Vickers F.3 (duct fan) | | 4,600 | 7,390 | 2,200 |
| Metropolitan-Vickers F.5 (open fan) | | 4,710 | 7,700 | 2,200 |
| Rolls-Royce Derwent I | | 2,000 | 16,600 | 920 |
| Rolls-Royce Derwent V | | 3,600 | 14,700 | 1,280 |
| Rolls-Royce Nene I | | 4,500 | 12,000 | 1,640 |
| Rolls-Royce Nene II | | 5,000 | 12,300 | 1,640 |
| Turbo-props | Shaft H.p. | | | |
| Armstrong-Siddeley Mamba I | 1,010 | 320 | 14,500 | 750 |
| Armstrong-Siddeley Mamba II | (under development) | | | |
| Armstrong-Siddeley Python I | 3,670 | 1,150 | 8,000 | 3,150 |
| Armstrong-Siddeley Python II | (under development) | | | |
| Bristol Phoebus | (under development) | | | |
| Bristol Theseus II | 2,180 | 600 | 8,200 | 1,860 |
| Bristol Theseus 21 | 1,950 | 500 | 8,200 | 2,310 |
| Bristol Proteus I | 3,500 | 1,100 | ... | ... |
| Fedden | 1,305 | 312 | ... | 750 |
| Napier Naiad | 1,590 | 241 | 18,250 | 1,095 |
| Rolls-Royce Clyde I | 3,600 | 1,200 | 6,000 | 2,500 |
| Rolls-Royce Dart | 1,000 | 325 | ... | ... |
| Rolls-Royce Trent (Experimental) | 750 | 992 | ... | ... |

The published characteristics of British turbo-jet and turbo-prop engines of 1947 are given in the table.

**France.**—During 1945 and 1946 French aviation groped its way out of the period of wartime occupation and disruption.

By the end of 1947, however, a considerable degree of substantial progress was in evidence. Not only were the manufacturing plants beginning to turn out production types, but more important, French research establishments were being reactivated and, in spite of severely strained economic conditions, some new ones were being built. The large wind tunnel installations at Chalais-Meudon were again in operation. These tunnels are all in a low-speed category, but are still useful for testing aircraft in the subsonic ranges. A new installation of supersonic wind tunnels was reported to be located deep in the French Alps where electric power is cheap and abundant. Also, in Toulouse, a new aeronautic research establishment was opened at which new wind tunnels and a towing basin were being installed. There also, extensive laboratories were already in service for type-testing of aircraft components and for basic research on aircraft materials.

The postwar French aircraft industry has been re-established along substantially the same lines as the prewar industry. It was nationalized in 1937–38 and operates under four overriding government-owned and -controlled corporations generally abbreviated as S.N.C.A. (Société Nationale de Constructions Aeronautiques) du Nord, S.N.C.A. du Centre, S.N.C.A. du Sud-Est and S.N.C.A. du Sud-Ouest.

In 1946 it was possible to report that the French were experimenting with the design and development of jet engines of their own, meanwhile building a few experimental aircraft around German-built turbo-jet engines. Although in 1947 some German-built (and even some British-built) turbo-jets were still reported as installed in French-designed aircraft, several French-designed power plants of the newer type appeared to be nearing production stages.

*French Turbo-jets and Turbo-props.*—The Ateliers Aeronautique Richenbach ATAR 101 turbo-jet was being developed by Voisin, and built by S.N.E.C.M.A. (Société Nationale d'Etude et de Construction de Moteurs d'Aviation), the nationalized French engine factory. It was derived from the German BMW turbo-jet. Fifty were ordered to start, and 15 per month was the production goal.

The Rateau A-65 (SRA-1) turbo-jet was reported running successfully on test-bed for several months. This unit was planned for use in the S.N.C.A de Sud-Ouest S.O. 6000 experimental jet plane.

The Compagnie Electro-Mécanique of Lyons produced the TGA-1 bis turbo-prop, planned for test flying in an S.N.C.A. de Sud-Ouest S.O. 161 Languedoc, probably in the two outboard nacelles.

*French Service Types.*—Projected military designs included the S.N.C.A. de Sud-Est S.E. 580 single-seat fighter, powered by a 2,500-h.p. Hispano-Suiza 24-cylinder liquid-cooled engine; the S.N.C.A. de Sud-Ouest S.O. 177, reconnaissance version of the S.O. 175 (Bloch) reconnaissance bomber, powered by two Hispano-Suiza 12-cylinder engines; and the S.N.C.A. de Sud-Ouest S.O. 8000, a long-range fighter. S.N.C.A. de Sud-Est had also the S.E. 2000, a 4-engine 50-passenger monoplane under development.

A new name in the French aircraft industry is the Société Générale de Mécanique, Aviation (Société Matra), developing an interesting fighter, the Matra R-75. It is a twin-boom monoplane, with two Mathis engines driving a single-pusher propeller. It has no ailerons and obtains lateral control by differential control of the elevators. Flaps are fitted on the entire trailing edge of the wings.

The Arsenal V.B. 10C-1 went into production in 1947. It is adaptable as a day or night fighter at medium and high altitudes, a fighter-bomber and a photo-reconnaissance aircraft. Its two Hispano-Suiza 12Z liquid-cooled engines are mounted in tandem in the fuselage and coupled through a Vernisse-type drive to two Ratier, three-blade counter-rotating, coaxial propellers. Its armament consists of four 20-mm. cannon and six 0.50-in. machine guns in the wing. In addition, two 1,100-lb. bombs may be carried in wing racks, or eight 60-lb. rocket projectiles. The VB-10 has been called the most complicated aircraft in the world in its experimental version.

The first prototype of the S.N.C.A. du Centre NC 1070 carrier-based torpedo dive bomber was flown late in 1947. It has folding wings, and is a double tail plane. Two Gnôme and Rhône 14R radial engines, of 1,600 h.p. each, supply power for a maximum speed of 359 m.p.h. at 22,637 ft.

The S.N.C.A. du Nord 1500 Noréclair, a torpedo bomber, was first flown in Aug. 1947. It is powered by two Gnôme and Rhône 14R 25 radials.

The Dessault D. 315 (previously Bloch) two-engine ambulance aeroplane is a version of the feeder-liner Dessault D.303, powered by 580-h.p., S.N.E.C.M.A. Renault 12 S.00 in-line engines.

The S.N.C.A. du Nord 1400 Noroit reconnaissance flying boat was scheduled for production late in 1947. Twenty-six were to be produced for the French navy at Sartrouville. Two Gnôme and Rhône 14R 25 radials of 1,675 h.p. each furnish power for a maximum speed of 216 m.p.h. It carries a crew of seven.

*French Jet Projects.*—One of the most interesting and original projects is the Bréguet Leduc 0.10. It is an all-metal, midwing monoplane with tricycle landing gear, using a pulse jet unit similar to that in the V-1 flying bomb. As this engine gives little power at low speeds, the Leduc 0.10 is mounted on pylons on a S.N.C.A. de Sud-Est S.E. 161 Languedoc 4-engine aircraft from which it is released at about 16,000 ft. Maximum speed was expected to be in the 600-mi. range.

*Other Research Types.*—The NC 3021 Belphagor of the S.N.C.A. du Centre, is a low-wing monoplane intended for research at high altitudes. It can be fitted for meteorological, aerodynamic, electrical and cosmic ray research. A Daimler-Benz DB610A liquid-cooled 24-cylinder engine of 2,950 h.p. is installed. It was developed from the Farman 1000 of 1932, and the NC 3020 version flown in 1946.

The Bréguet 482, powered by two Hispano-Suiza 12Z liquid-cooled engines in underslung nacelles, is a research monoplane which made its first flight late in 1947.

The Voisin M.P. 1000 canard ("tail-first") type was planned for an estimated maximum speed of 646 m.p.h. A Voisin 2,000-h.p. liquid-cooled 42-cylinder 6-row radial engine drives 2 large diameter 5-blade tractor propellers.

*Passenger and Freight Aircraft.*—Largest of the projected French transports was the 140-ton S.N.C.A. Sud-Est S.F. 1200 eight-engined flying boat. A flying model was under construction, to be powered by four Renault 6 Q engines of 240 h.p. each. Span of the model is 72 ft., and the gross weight is 14,100 lb.

The Bréguet 761 transport, adaptable to a wide variety of military and commercial uses, progressed to its final stages of assembly. Four Gnôme and Rhône 14R engines were installed. Its gross weight was 92,593 lb.

The first prototype of the Bréguet 731 four-engine flying boat was flown at Biscarosse Sept. 2, 1947. It is the commercial development of the Bréguet 730 military reconnaissance flying boat of 1939.

The French Armament Ministry placed a large order for the S.N.C.A. du Nord Castel Mauboussin CM 10 high-wing freight gliders. Disposable load of the glider is 8,820 lb., and the freight capacity is 1,130 cu.ft.

The S.N.C.A. du Sud-Est S.E. 2010, a transatlantic 72-ton liner, was being assembled at Toulouse, 25 having been ordered by Air France. Four Pratt & Whitney R4360 Wasp Majors were installed but possibly French engines would be used later.

*French Helicopters.*—The French have long been pioneers in the helicopter field. In 1947 further progress was reported.

S.N.C.A. du Sud-Est reported successful test flights of the S.E. 3000 helicopter, a twin rotating five-blade type patterned after the German Focke-Wulf. A later model, the S.E. 3100, was also under active development. This is a much larger machine with an all-up weight of more than 14,000 lb. Professor Henrich Focke (Germany) was reported as assisting in these designs.

The S.N.C.A. du Sud-Ouest jet-driven helicopter S.O. 1100 (Ariel) was said to have flown in mid-1947. It was a novelty in that the rotor was driven by small jets at the blade tips and the whole machine was propelled forward by an orthodox pusher propeller.

**Russia.**—Very little was known on aviation activities in the U.S.S.R. —at least outside of military intelligence files. It was thought that several B-29s of the 20th air force made forced landings on Russian territory during the operations against Japan. It was generally assumed (and sometimes stated positively) that the Russians had built and flown replicas of the U.S. Superfortress.

It was known that Russian designers had been active in turbo-jet engine development. They not only secured many examples of German jet engines but they also captured a number of well-known German designers of such engines. Russian jet-powered fighters and bombers had been observed in flight. Published reports stated that at least six new types of jet aircraft were observed in a demonstration over Moscow in Aug. 1947.

A British source described a twin-jet Russian aircraft designed by S. Lavochkin. This machine, a midwing monoplane with cockpit well forward, was said to be powered by two German-built BMW 003A turbo-jet units mounted underneath the fuselage.

Another report from the same source indicated that an improved version of the German Messerschmitt Me 262 twin-jet fighter was in production in considerable numbers in the U.S.S.R.

Probably the most reliable information regarding soviet aviation activities concerns transport types. Photographs and some descriptions were published of the IL-12 and the IL-18, similar in design to the U.S.-built DC-3 and DC-4, respectively. The civil version of IL-12 is powered with two 1,600-h.p. engines. Its payload is reported at 6,600 lb., cruising speed of 197.5 m.p.h. and a range of 1,250 mi. is claimed. The aeroplane differs from the DC-3 in that it has a tricycle landing gear.

The IL-18, of general DC-4 configuration, differs from it in many details. The nose section, for example, is more nearly like the Boeing C-97. The fuselage appears to have a greater fineness ratio than the DC-4 and the tail surfaces are more highly tapered. Its four engines are M-89s, 14-cylinder radials, which stem back to the French Gnôme and Rhône 14-cylinder designs. These engines are reported as equipped with direct fuel injection and are rated at 1,300 h.p. each for take-off and 1,140 h.p. at 19,700 ft. The machine would be considered as under-powered by U.S. standards.

There were various estimates as to the strength of the Russian military air establishment. It was publicly stated by a high ranking U.S. air force officer that the Russian air forces possessed in 1947 at least 40,000 usable aircraft. The U.S.S.R. production rates in that year were estimated to be of the order of 20,000 aircraft a year. Exact figures, however, were lacking.

**Other Countries.**—Although most of the aeronautical activity of the world is in the hands of the few countries discussed above, a revival of aerial activity throughout some of the smaller nations was noted in 1947. Below, without any claim for exhaustive treatment, is a scatter of aeronautical notes from various sources.

*Argentina* reported a first test flight in Aug. 1947 of a single-seat jet fighter, the Cordoba Pulque Arrow, powered with Rolls-Royce Derwent R5. It was developed by the Aero institute at Cordoba. The Argentine air force also converted six Bristol-type 170 transports for troop carrier purposes.

*Belgium* ordered 20 Stampe et Vertongen SV-4B biplanes to replace the British De Havilland Tigermoths as standard air force trainers.

*Brazil* was starting its aviation industry by developing a series of low-powered trainer, ambulance and liaison aircraft built by the Compania Aeronautica Paulista of São Paulo.

*Canada* was developing a new trainer, the De Havilland (Canada) Chipmunk. Avro of Canada had under development an axial-flow turbo-jet power unit for military and civil use and also a design for a long-range fighter for the royal Canadian air force.

*Italy,* one of the most active countries in aeronautics before World War II, was slowly reviving its aircraft industry. Savoia-Marchetti was said to have a 20-passenger transport design, powered by two 12-cylinder in-line Isotta Fraschini Delta RC41 III engines. This aeroplane was also intended as a freight transport. Caproni reported an all-metal midwing monoplane for five passengers with two pusher propellers. Breda-Zappata was developing a 55-passenger transport, the BZ-308, powered with four British Bristol Centaurus engines. Fiat, long in the reciprocating engine field, was reported to have active research and development underway in gas turbines and turbo-jet categories.

*Netherlands.*—The Fokker company was stated to have been revived and to have begun construction of two- and three-place bombing and navigational trainers.

*Spain* was reported to be producing 100 two-seat trainers and 70 target-towing aircraft.

*Sweden* was modernizing its air force by the addition of jet fighters. The air force purchased a number of British-built Vampires and British-built turbo-jet units, chiefly the De Havilland Goblin II. Svenska Aeroplan A.B. of Linköping had developed the J21R fighter around the Goblin engine. This machine was in production during 1947 for the Swedish Air Forces. The SAAB factories, it may be noted, were completely underground. (*See* also Aircraft Manufacture; Airports and Flying Fields; Aviation, Civil; Civil Aeronautics Administration; Gliding; Munitions of War; World War II.) (S. P. J.)

## Bacon.

The decline in U.S. hog slaughter in 1947 was reflected in proportionately reduced output of bacon. Sliced bacon produced under federal inspection in 1947 amounted to about 500,000,000 lb. compared with 522,918,000 lb. in 1946 and 549,857,000 lb. in the record year of 1944. The inspected bacon represented only about half the total, however, and about 19% of the total dressed weight of hogs is usually classed as bacon. By this method of estimating, the total output of 1947 was about 1,500,000,000 lb., compared with 2,100,000,000 lb. in 1946. The retail price of bacon continued high throughout the year, ranging from 70 cents to 95 cents per pound. The supply in retail markets was more evenly distributed than in former years, but larger exports helped to hold retail prices at high levels. (*See* also Hogs; Meat.) (J. C. Ms.)

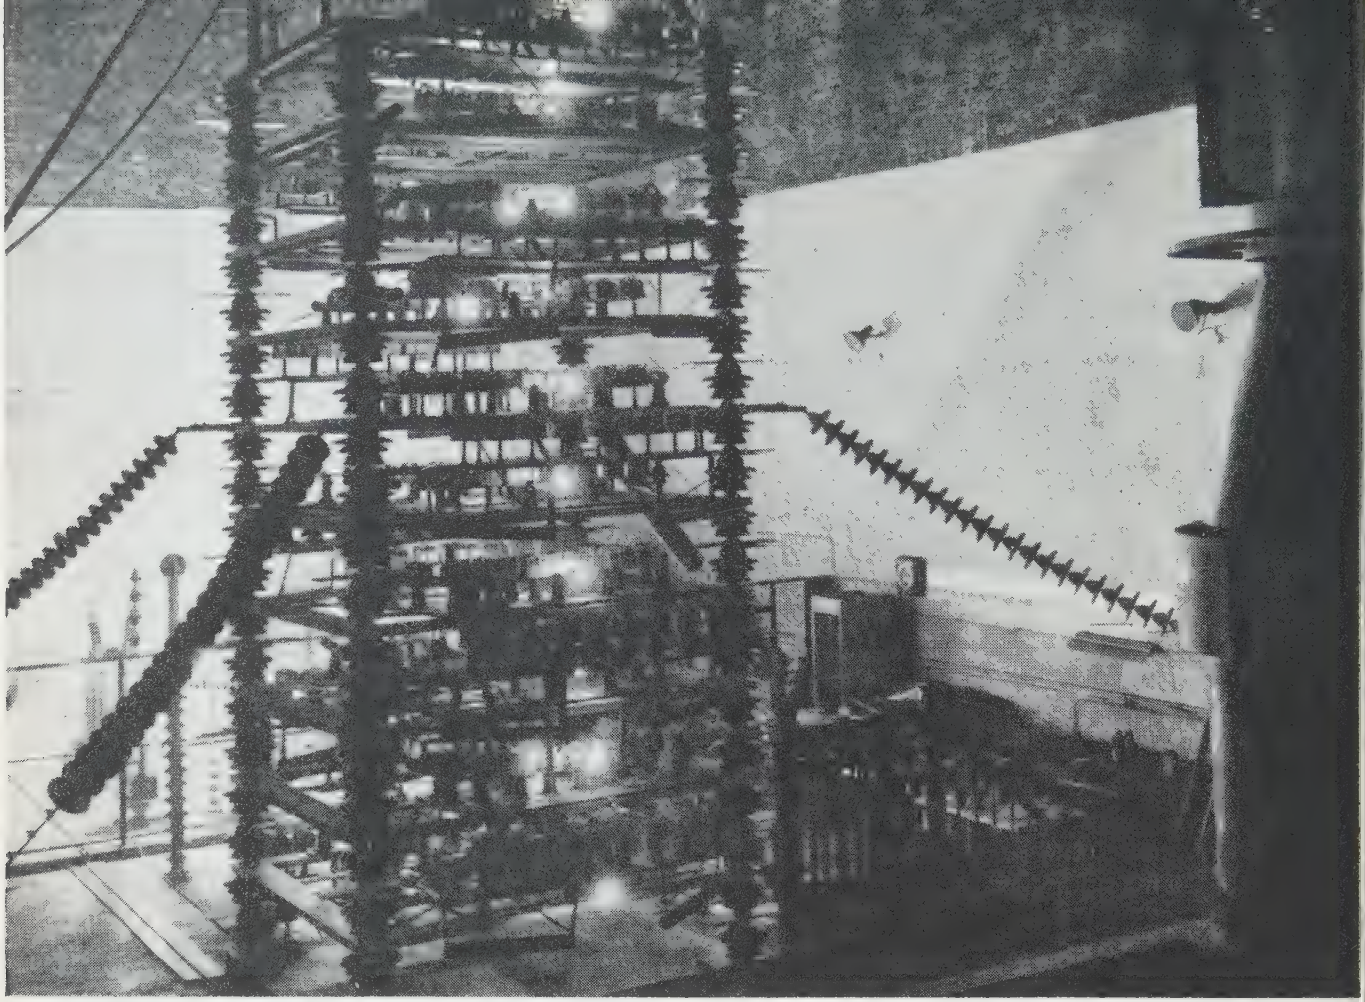
## Bacteriology.

During July 1947 the first postwar assembly of the International Congress for Microbiology was held in Copenhagen, Denmark. There, for the first time since the third congress in New York in 1939, microbiologists of all countries renewed acquaintances and exchanged news and scientific data. The register of contributors included about 320 names. The fields of microbiology covered were general, antibiotics, medical and veterinary, viruses, soil, water, dairy, food, serology, variation and mutation, plant diseases and industrial.

M. Frobisher and E. I. Parsons of Baltimore, Md., discussed immunization of rabbits with the endotoxins of avirulent diphtheria bacilli which resulted in complete resistance to doses of live virulent strains always fatal in normal rabbits. J. W. McLeod of Leeds, England, described increases of incidence of diphtheria and concurrent spread of gravis-type infections, especially in immunized persons, in various countries of Europe and in England. An important contribution to knowledge of spread of brucellosis was made by H. C. Bendixen and E. Blom of Copenhagen, who showed that artificial insemination of cows could transmit the disease from infected bulls, the organisms being demonstrated in semen. Encouraging data on vaccination of animals against brucellosis were presented by G. Schmidt of Berne, Switzerland, and by A. W. Stableforth of Weybridge, England.

Further work was reported in 1947 by R. J. Dubos and associates on the use of liquid media containing a wetting agent ("Tween-80") and a serum albumin fraction (V) for the cultivation of tubercle bacilli. The albumin acts mainly to detoxify oleic acid present as an impurity in "Tween-80." Other data in this field were presented at a national Sigma Xi lecture at the Johns Hopkins university. It was shown that mice could be used effectively in the study of tuberculous infection if the bacilli grown in the fluid medium were injected intravenously or intracerebrally or fed to the mice. A method of diagnosis with sputum was indicated. The bacilli were found to grow in the chick-embryo yolk sac. Such material, or a mixture of sterile yolk and bacilli, produced rapid and extensive disease in mice. Pigmented strains of mice were generally found more susceptible than albino mice. Concomitant inoculations with subinfective doses of pneumotropic viruses and small doses of tubercle bacilli, even when weeks apart, were found to produce rapid and extensive development of tuberculosis in the mice.

In the field of public health, work on the communicable disease centre, a new division of the U.S. public health service, organized primarily for service and aid to laboratories doing public health work, and with headquarters in Atlanta, Ga., progressed rapidly. The construction of provisional bacteriological and serological laboratories, in addition to the already-functioning parasitological laboratories, was brought nearly to completion at Lawson General hospital, Atlanta, Ga. Plans for a new mycology branch were completed, and the well-developed laboratories for virus studies located at Montgomery, Ala., carried out several important projects. A laboratory of the tuberculosis



THE CAPACITRON, 5,000,000-volt atom-smasher successfully used in 1947 for preserving fresh foods. Bacteria and enzymes in substances placed under its electron beam were killed and spoilage prevented

control division of the public health service also began to function regularly at Lawson hospital in connection with the communicable disease centre.

New publications on the flagella of bacteria were of particular interest since it was stated that bacteria move only because they are helicoidal in structure and that flagella, long regarded as the organs of bacterial locomotion, are merely filaments of capsular or slime layer which wriggle passively because of the motion of the bacteria. If confirmed, this was a revolutionary finding. (*See* also EPIDEMICS.)

**Badminton.** After a four-year lapse because of war emergencies, badminton returned to national competition in 1947. The nationals, held at Los Angeles, Calif., and the first national junior championships, held at Baltimore, Md., established the 1947 national rankings as follows:

*Men's singles:* David G. Freeman, Pasadena, Calif.; Carl Loveday, Montclair, N.J.; Marten Mendez, San Diego, Calif.; Barney McCay, Alhambra, Calif.

*Men's doubles:* David G. Freeman and Web Kimball, Pasadena, Calif.; Robert Williams, Buffalo, N.Y., and Clinton Stephens, Baltimore, Md.; Carl Loveday, Montclair, N.J., and Richard Yeager, New Rochelle, N.Y.; Leroy Erickson, Pasadena, and Barney McCay, Alhambra, Calif.

*Women's singles:* Ethel Marshall, Buffalo, N.Y.; Janet Wright, San Francisco, Calif.; Thelma Scovil, San Francisco; Patricia Stephens, Baltimore, Md.

*Women's doubles:* Janet Wright and Thelma Scovil, San Francisco; Elizabeth Anselm and Shirley Blanchet, San Francisco; Helen Ough, Oakland, Calif., and Zoe Yeager, New Rochelle, N.Y.; Patricia Stephens, Baltimore, Md., and Helen Gibson, Buffalo, N.Y.

*Mixed doubles:* Wynn Rogers, Glendale, Calif., and Virginia Hill, Burbank, Calif.; Mr. and Mrs. Clinton Stephens, Baltimore, Md.; David Freeman and Helen Tibbetts, Pasadena; Leroy Erikson and Loma Smith, Pasadena.

*Veterans' doubles:* Hulet Smith and Lewis Rulison, Pasadena; Chips Aurand and Ray Wihelm, Los Angeles; Gene Elms and Earl Pound, Los Angeles; Everett Oliver and E. F. Tackaberry, Los Angeles.

*Boys' singles:* Ted Moehlmann, Jr., University City, Mo.; Wilbur W. Bullen, Jr., Waban, Mass.; Allen Hardin, Atlanta, Ga.; William K. Kellogg III, Glencoe, Ill.

*Girls' singles:* Barbara J. Scarlett, Baltimore, Md.; Jean Harvey, Baltimore; Clarke Lowndes, Baltimore; Susan Devlin, Baltimore.

Carl Loveday of Montclair, N.J., beaten by Freeman in the national final, 15–8, 15–8, dominated lesser tournaments in the east. He won the New Jersey state and Buffalo Invitational and dominated the Middle Atlantic doubles.

In the most important sectional tournament of the season—

the California state—Freeman warmed up to his U.S. title reign with victories in the men's singles and doubles and mixed doubles. John Samis of Vancouver, B.C., won the Canadian championship, while Stanley Cutts of Toronto, Ont., again proved his superiority over Doug Grant of Montreal, Que., with a 15–11, 15–12 conquest in their annual challenge match for the professional title. (M. P. W.)

**Bahamas.** An archipelago of islands, cays and rocks outside the Gulf of Mexico, lying between 21° and 27° north latitude and 72° and 81° west longitude. Administered as a British colony from 1787. Capital: Nassau (on the island of New Providence). Area: 4,400 sq.mi.; pop. (1943 census): 68,846, of which the island of New Providence accounted for 29,391. Language: English; religion: predominantly Christian. The constitution provides for a governor appointed by the British crown and advised by an executive council of 9 members, as well as for a legislative council of 9 (nominated by the crown) and for a house of representatives composed of 29 members elected from 15 districts. Governor (appointed in 1945): Sir William Lindsay Murphy.

**History.**—There was an important constitutional development in the Bahamas during the year 1947. The General Assembly Elections act, passed by the local legislature in Aug. 1946, came into force in 1947. It provided that voting at elections for the house of representatives should thereafter be by secret ballot, not only in the island of New Providence (where the practice already existed) but also in all the out islands of the colony. Another important measure taken during the year was the setting-up of a labour advisory board. There were also developments in the local mining industry. The arrangement, inaugurated in the later stages of World War II, for employing a contingent of Bahaman labour in the United States remained in operation during the year. The Bahamas did not participate in the conference held in Jamaica in Sept. 1947 to consider the question of the closer association of West Indian territories. The colony, like Bermuda, lies outside the province of the comptroller for development and welfare in the West Indies and his organization.

**Finance and Trade.**—The legal tender is British sterling currency, though United States currency is also generally used in the colony. Revenue (1946) £591,000; expenditure £868,000. Imports (1946) £2,841,000; exports £399,000. Public debt (1945) £245,000. The Bahamas are almost the only territory in the British colonial empire where agricultural products are of less importance than marine products in the economic life of the community. Fish are abundant and are caught in large quantities for local consumption, but sponges are the only marine product that is exported to any considerable extent. Lumber and tomatoes are other articles of export. (J. E. Sh.)

**Baltimore.** The metropolis of Maryland, and the seventh largest city in the United States according to the federal census of 1940, had a population of 859,100, of whom 692,705 were white and 166,395 (19.4%) were nonwhite, mainly Negro. As of April 1947, the bureau of the census estimated the civilian population at 940,000 for the city and at 1,306,000 for the Baltimore metropolitan district. Land area of the city, 78.72 sq.mi.; inland water area, 6.9 sq.mi. Thomas D'Alesandro, Jr., Democrat, was elected mayor in May 1947, for a four-year term, succeeding Theodore R. McKeldin, Republican. Budget appropriations for 1948 totalled $83,451,250, an increase of 16.9% over the 1947 budget. The city tax rate for 1948 was $2.85 per $100 of assessed valuation (state rate, additional 10 cents). The gross funded debt as of Nov. 30, 1947, was $181,860,000; the net debt was $140,603,264 (not including income accrued to sinking funds). Percentage of net debt to taxable basis (excluding self-supporting debt) was 4.61%; taxable basis, $1,963,729,194.

There were 77,638 white students and 37,167 Negro students, ranging from prekindergarten through teachers' college, enrolled during the school year 1946–47; total, 114,805. The actual enrolment on Sept. 30, 1947, was 72,495 white students and 35,336 Negro students; total 107,831. Dr. William H. Lemmel was superintendent of public instruction in 1947. The department of education is administered as a unit apart from the school system of the rest of the state.

Exports for the first eight months of 1947 totalled 9,668,000 long tons, an increase of 54.5% over the similar 1946 period; imports were 5,054,000 long tons, an increase of 61%. Total vessel entrances in the eight months were 1,368 ships of 5,511,000 net registered tons, an increase of 44.6% in number and 52% in tonnage over 1946.

Production was at a relatively high level in such leading local industries as iron and steel, apparel, chemicals and fertilizers, automobile assembly, meat packing, electrical goods (including radios) and can manufacturing. But a five-month strike at the shipyards reduced shipbuilding activity and an adjustment to postwar demands curtailed aircraft output. Employment in the Baltimore metropolitan area was estimated by the Employment Security board at 498,700 in the latter part of 1947, an increase of 12,500 over 1946 and a new postwar peak. On June 30, 1947, resources of Baltimore's banks totalled $1,446,475,265, representing approximately 70% of the bank resources of all Maryland. (J. S. A.)

**Bananas:** *see* Fruit.
**Bankers Association, American:** *see* Societies and Associations.

**Bank for International Settlements.** The final act of the United Nations Monetary and Financial conference, held at Bretton Woods, N.H., July 1944, recommended the earliest possible liquidation of the Bank for International Settlements of Basle, Switzerland, founded in 1930 to handle German reparations payments under the Hague agreements of 1930. In 1947 it became clear that this recommendation would not be followed. The 17th annual report of the bank, published in June 1947, recorded that by letters exchanged in April 1947 co-operation between the bank and the International Bank for Reconstruction and Development, Washington, D.C., had been established in Europe.

According to this same report, the bank's assets, as of March 31, 1947, amounted to 499,138,672 Swiss (gold) francs (against 451,357,502 Swiss francs on March 31, 1946). Of this total, 16.6% was held in gold bars and coins. Cash and sight funds at interest amounted to 9,640,187 Swiss francs (1.9% of assets); bills and acceptances, time funds at interest and sundry bills and investments to 115,153,562 Swiss francs (23.1%). But the largest part of the assets, 291,160,279 Swiss francs (58.3%) still consisted of "funds invested in Germany in application of the provisions of the Hague agreements." In the absence of a final settlement of German affairs the real value of these claims and their recoverability from the debtors (the German treasury, railway administration, postal administration, etc.) were problematic. Against these assets, the liabilities included long-term deposits received in application of the provisions of the Hague agreements amounting to 228,909,375 Swiss francs, of which 76,303,125 Swiss francs represented the deposit of the German government and 152,606,250 Swiss francs the deposits of the creditor governments. The liabilities side also included a general reserve of 19,870,280 Swiss francs and a contingency reserve of 97,619,239 Swiss francs; short-term and sight deposits, 27,739,777 Swiss francs (of which 18,100,000 were in gold) and the paid-up capital of 125,000,000 Swiss francs (one-quarter of the authorized capital).

The net profit in 1946–47 amounted to 692,787 Swiss francs (against a loss of 616,581 Swiss francs in 1945–46), which was transferred to a special suspense account. The report stated that there had been a progressive revival of activity and an increase in volume of business during the financial year 1946–47.

After the resignation of Camille Gutt in 1946, the chairmanship of the bank passed to Maurice Frère, governor of the National Bank of Belgium, with Sir Otto Niemeyer, a director of the Bank of England, as vice-chairman. Roger Auboin (French) continued as general manager. (R. P. S.)

**Banking.** Loan expansion, retirement of marketable public debt from a treasury surplus and firming of interest rates featured banking developments in the United States during 1947.

From Dec. 31, 1946, through the end of Nov. 1947, total loans of all commercial banks rose by about $6,600,000,000. Holdings of government securities declined $4,700,000,000, and holdings of other securities rose $800,000,000. Total loans and investments declined in the first half of the year but rose in the second half to show an increase for the first 11 months of 1947 of $2,700,000,000.

By the end of Nov. 1947 total loans of all commercial banks amounted to $37,700,000,000, exceeding the previous record high in 1929. Moreover, by the end of the year total loans comprised one-third of total loans and investments of all commercial banks, as compared with slightly more than one-fifth at the end of 1945.

Loan expansion at commercial banks centred in the fields of commercial and industrial loans, real estate loans and consumer loans. During the first half of the year, total loans at all insured commercial banks rose to $2,520,000,000. There were increases of $750,000,000 in commercial and industrial loans, $1,100,000,000 in real estate loans and $860,000,000 in consumer loans. Loan expansion proceeded at an accelerated rate during the second half of the year. The increase in commercial and industrial loans at weekly reporting member banks in leading cities of the United States was $3,300,000,000 during the entire year.

The total money supply—demand deposits adjusted, United States government deposits, time deposits and currency outside banks—declined from $167,100,000,000 at the end of Dec. 1946 to $165,000,000,000 at the end of May, but rose to $169,700,000,000 by the end of October.

The volume of bank debits rose to a high level in 1947, and the rate of turnover of demand deposits continued the increase which began in 1946 after a decline that extended from 1929.

During the year the total gross public debt was reduced by $2,200,000,000 to $256,900,000,000 on Dec. 31, 1947. Total marketable obligations were reduced by $10,900,000,000, the major portion of which was in certificates of indebtedness. Nonmarketable public issues outstanding rose $3,000,000,000, reflecting sales of U.S. savings bonds in excess of redemptions and the sale of the nonmarketable $2\frac{1}{2}\%$ investment issue of treasury bonds in September. Special issues increased $4,400,000,000. Special notes payable to the International Bank for Reconstruction and Development and the International Monetary fund, on which no interest is paid, increased $1,300,000,000. While the retirement of marketable securities in 1947 was substantially less than in 1946, the 1947 retirement was chiefly from a surplus of tax receipts over cash expenditures and cash sales of nonmarketable securities. This was in contrast to the previous year when retirement of marketable securities was made possible chiefly by drawing down large accumulated war-loan deposits in commercial banks.

Corporate security issues for new capital reached the high figure during 1947 of about $4,500,000,000, reflecting needs for funds to finance record business expenditures on plant and equipment. The 1947 total compares with the 1946 figure of $3,500,000,000, the peak in the 1930s of $1,225,000,000 in 1937 and the record high of $8,000,000,000 in 1929, which included, however, large offerings of securities by holding companies and investment trusts. Bond issues constituted about three-fourths of corporate flotations for new capital during the year, and stocks about one-fourth. Flotations of preferred stocks declined reflecting pronounced weakness in the market for these issues as interest rates firmed. Unsettled capital market conditions in the fourth quarter of the year lowered the amount of refunding issues but had little apparent effect on the amount of corporate issues for new capital. It is estimated that in the fourth quarter of the year about one-third of the securities offered were sold directly to the issuers' security holders, and another third were sold privately to life-insurance companies and other large investors. More than half of new capital issues were for public utility and petroleum companies. Corporate security issues for refunding came to about $1,400,000,000 during 1947, less than in any of the three preceding years.

Security issues of state and local governments during 1947 amounted to $2,200,000,000, a new all-time high record. Almost all of these issues were for new capital rather than for refunding. The 1947 total exceeded by more than 50% the previous record high of $1,510,000,000 in 1927. The large amount of financing by state and local governments during the year reflected state bonuses to veterans and a large volume of state and local construction projects, and was achieved notwithstanding a sharp curtailment of new offerings in the final quarter of the year because of unsettled capital market conditions.

Total consumer credit outstanding rose to more than $12,000,000,000 by the end of Oct. 1947, surpassing the previous record high of more than $10,000,000,000 late in 1941. Large increases appeared in the amount outstanding of instalment sale credit, instalment loans and single-payment loans. At the same time, however, automobile sale credit, which amounted to about $1,000,000,000 at the end of Oct. 1947, was far less than previous peak levels.

Firming of interest rates during the second half of the year was a notable development in banking. Several factors together brought about this development. The cumulative effect of treasury and federal reserve actions lessened the margin between short-term and long-term yields on government securities and removed much buying pressure from the longer-term part of the market. These actions included retirement of bank-held debt, particularly that held by the federal reserve banks, from the current treasury surplus of cash receipts over expenditures, the increase in the treasury bill rate from .375% to about .95%, and the increase in the rate on one-year certificates from .875% to 1.125%. Between April and September the treasury investment accounts made net market sales of $1,800,000,000 of marketable treasury bonds, and in September the public sale of $870,000,000 of the nonmarketable investment series bonds added further to the available supply of treasury bonds. Of basic importance, however, in bringing about a decline in bond prices and higher yields were the huge private demands for funds—from business enterprises through both loans and security issues, from state and local governments, from consumers and from those buying or building homes.

By the end of December the yield to call on the longest bank-restricted treasury bond was 2.48%, as compared with a low during the year of 2.26%. Corporate bond yields increased more sharply than government bond yields, and municipal bond yields increased even more during the year than did corporate bond yields. The yield on high-grade municipal bonds at the end of the year exceeded the yield on long-term bank-restricted treasury bonds. (*See* also BUSINESS REVIEW; CONSUMER CREDIT; LAW; PRICE ADMINISTRATION, OFFICE OF.) (J. K. L.)

**Mutual Savings Banks.**—The total number of mutual savings banks in the United States increased to 533 in 1947 through the conversion of 2 building and loan associations into savings banks. The opening of 19 new branch offices during the year brought the total number of branches in operation to 170.

Deposits grew from $16,224,970,861 on July 1, 1946, to $17,415,253,222 on July 1, 1947, a net gain of $1,190,282,361 or 7.3%. In the year ended July 1, 1946, the net gain in deposits was $1,846,557,661 or 12.8%. Assets increased from $18,028,676,696 on July 1, 1946, to $19,363,391,557 on July 1, 1947, a net gain of $1,334,714,861 or 7.4%. In the previous year the net gain was $2,075,343,084 or 13.0%. Surplus increased $121,189,094 to a total of $1,861,962,163 or 10.7% of deposits. The total number of open accounts on July 1, 1947, was 18,177,018, a net gain of 740,844 accounts. The net gain for the previous year was 710,441 accounts. In the 10-year period 1936–46 the gain in deposits was $6,799,929,847 or 67.9%, and the gain in accounts 3,361,736 or 23.3%.

A new type of U.S. government bond, similar to the Series G savings bond, bearing interest at 2½% and designated Investment Series A-1965, was made available in Sept. 1947 to institutional investors holding savings, insurance, pension and similar funds. Savings banks bought at issue $125,260,000 of these bonds.

The first issue of bonds of the International Bank for Reconstruction and Development came on the market in July 1947. These were legal for purchase by savings banks in nine states.

Many banks invested in new corporate issues, which were offered in substantial volume for the first time after 1941. They also actively sought mortgage loans but the supply of corporate bond and mortgage investments was not sufficient to absorb available funds. However, new mortgage loans made during the year, including Federal Housing administration insured loans, Veterans' administration insured loans and conventional loans, increased the total mortgage portfolios of all mutual savings banks to $4,600,000,000. This amount was in excess of the total amount held after the end of 1942 when the great expansion of government bond holdings in savings bank portfolios began. A growing volume of partial payments on principal as a result of the general adoption of the amortized mortgage and of voluntary pay-offs of entire mortgages added to the difficulty of increasing the total mortgage-loan investments.

High construction costs prevented the savings banks in New York state from carrying out all the commitments for the building of savings bank-owned moderate-priced rental housing which were in contemplation at the end of 1946. Parkway Village in Queens county, a garden-type apartment project accommodating 687 families, on which construction was started in 1946, was opened for occupancy in July 1947. This development, costing $11,700,000, was financed by 20 savings banks as a joint venture. Construction of University Park, a development in Rochester, N.Y., to house 184 families at an estimated cost of $1,660,000, was begun in 1947.

Only one other state, Massachusetts, had given savings banks the right to build housing projects, and to undertake improvement of urban blighted areas through redevelopment. Participation in these undertakings was made subject to such regulations as the commissioner of banks deemed desirable.

**Savings Bank Life Insurance.**—There were 243 mutual savings banks selling life insurance at the end of Oct. 1947, an increase of 9 banks during the year. These included three new agency banks in Connecticut, two new agency banks in Massachusetts, two new issuing and two new agency banks in New York. At the close of business on Oct. 31, 1947, there were $9,309,762 of insurance in force in Connecticut representing 9,714 policies; $320,836,136 of insurance in force in Massachusetts representing 350,884 policies and $109,037,817 of insurance in force in New York representing 87,389 policies, or a grand total of $439,183,715 and 447,987 policies. Legislation resulting from the Guertin study was passed in New York and Massachusetts in 1947. The Guertin study was initiated by the National Association of Insurance Commissioners in 1939 under the chairmanship of Alfred N. Guertin, actuary of the New Jersey insurance department, to study the need for a new mortality table and related topics. The law in New York made it mandatory for savings banks in that state to use the new Commissioners Standard Ordinary Mortality table, compiled in 1941 by a group of state insurance supervisory officials, as a base for determining insurance premium rates after Jan. 1, 1948. The law in Massachusetts made it mandatory for old-line life-insurance companies but optional with savings banks. The Commissioners Standard Ordinary Mortality table was made permissive for use by Connecticut savings banks on and after Jan. 1, 1945, but had not been officially adopted at the close of 1947.

PICKETING IN THE RAIN, members of the C.I.O. Financial Employees guild are shown outside the main branch of the Brooklyn Trust Co. in New York city. Employees of the bank and its 24 branches struck in July 1947, demanding a 30% wage increase

**Trustee Savings Banks in Great Britain.**—The total funds of the trustee savings banks in Great Britain increased £80,168,898 in the year ended Nov. 20, 1946. The financial position on that date, as compared with the previous year, was as follows:

| | 1945<br>£ | 1946<br>£ |
|---|---|---|
| Cash balances due to depositors: | | |
| Ordinary department . . . . . . . . . . | 488,526,684 | 557,695,768 |
| Special investment department . . . . . . | 114,553,313 | 112,621,758 |
| Government stock held for depositors . . . . . | 71,736,297 | 83,058,049 |
| Total balances . . . . . . . . . . . . . | 674,816,294 | 753,375,575 |
| Combined surplus funds . . . . . . . . . . . | 15,744,335 | 17,353,952 |
| | 690,560,629 | 770,729,527 |

Deposits continued to increase during 1947 though at a slower rate than in the year 1946.

In the ordinary department there were 4,061,520 active accounts on Nov. 20, 1946, an increase of 201,061 in the year ended that date; in the special investment department there were 329,592 accounts, a decrease of 8,811 in the preceding year, and in the government stock department the number of stockholders increased by 13,588 to 252,906.

On Nov. 20, 1946, there were 87 trustee savings banks with 811 offices, an increase of 41 in the number of offices during 1946.

Possibilities for the extension of the system were improved by the provisions of an act passed in Feb. 1947, which empowered trustee savings banks to make advances for the extension or formation of other such banks. (*See* also BANK FOR INTERNATIONAL SETTLEMENTS; BANK OF ENGLAND.) (HE. BR.)

## Bank of England.

Following the coming into force of the provisions of the Anglo-American loan agreement, the Bank of England as agent of the United Kingdom government took part in negotiations during the first half of the year 1947 for carrying out the terms of clause 10 of the agreement, dealing with the accumulated sterling balances. These involved long and intricate discussions with the governments and central banks who were holders of large sterling balances which had accrued during World War II. Agreement was reached with most of the countries concerned—some of the settlements being necessarily of a temporary nature—and the ground was thus prepared for carrying out one of the most discussed conditions of the loan agreement, which required the United Kingdom, within one year of the signing of the agreement, *i.e.*, by July 15, 1947, to make sterling accruing from current transactions freely available for current payments in any currency area. In order to facilitate these payments, the Bank of England announced in February the introduction of a system of "transferable accounts" and by July 15 "convertibility" arrangements with most countries were in force. The large drawings on the U.S. loan, particularly during July and early August, which Great Britain was forced to make in order to carry out its obligations under these arrangements, however, made it obvious that the loan would be exhausted within three months, and on Aug. 20 the chancellor of the exchequer announced that the United Kingdom was suspending "convertibility" so far as the dollar area was concerned. Consequently, it became necessary to resume negotiations in the light of these changed conditions with the various countries outside the sterling area.

| Reserve . . . . . . . . . . | 49 | 48 | 49 | 78 | 98 |

The figures in the table are the principal changes shown by the bank return during the first nine months of the year.

It will be noted that, because of the stability of the note circulation throughout the period, no change in the fiduciary issue was necessitated, the last increase having taken place in Dec. 1946.

An outcome of the transfer of the Bank of England to public ownership in March 1946 was the publication by the bank in April 1947 of an annual report—the first in the 253 years of its existence. (H. CY.)

## Baptist Church.

The Baptist World alliance, comprising Baptists of all lands, met in its seventh congress in Copenhagen, Denmark, July 29 to Aug. 3, 1947. Purely advisory and with no authority over the churches, this meeting, like its predecessors, was held for inspirational purposes and to discuss themes of common concern to Baptists of all lands. Five thousand delegates attended. Former enemy nations were represented; racial antipathies, had there ever been such, were forgotten, and recognition of common human conditions and needs prevailed which alone, these people believed, could make for peace.

According to reports of the congress, many Baptists were still living in the displaced persons camps of the continent. Some 600 Estonian Baptists were refugees in Sweden and another 100 were in Germany. Yet, with religious freedom prevailing in those nations, Baptist work was successfully carried on. Estonian Baptists in Sweden baptized 38 new members.

In Denmark, there were 34 Baptist churches with 6,427 members. In Finland, the Swedish-speaking Baptists had 29 churches in 1947 with a total membership of about 2,000; the Finnish-speaking Baptists had 16 churches with a membership of 1,000. Each had established a publishing house, young people's organizations, Sunday schools and missionary societies.

In Norway there were 62 churches with a membership of 7,446, and Sunday schools with 4,162 children and 345 teachers. Sweden reported 607 churches with a membership of more than 49,000; Great Britain 385,933 members in 3,247 churches. From other European countries, some with less democratic heritage, came representatives from Yugoslavia, Rumania, Portugal, Spain, Italy, U.S.S.R. and Lithuania. In fact, according to congress records, Baptists were to be found in every nation of the continent. From Asia came delegates of Burma, India, China and the Philippines. Though distance made attendance difficult, Africa and Australia had their spokesmen. Rev. C. J. Tinsley from the latter country was the congress moderator.

The Southern Baptists of the United States, with a total membership of 6,709,305, and more than 26,000 churches, had the largest representation. The Northern Baptists reported a membership of 1,468,043 and 7,603 churches. The two National Baptist conventions (Negro) had 24,600 churches and a membership of 4,073,252. Canada reported 1,214 churches with 139,405 members.

Dr. C. O. Johnson, pastor of the Third Baptist church, St. Louis, Mo., was elected president of the Baptist World congress, to serve until the meeting of the next congress, invitations for which were received from China, Canada, United States and South America. The headquarters of the alliance were moved in 1947 from London, its seat since 1905, to Washington, D.C. Baptists of the world numbered well over 14,500,000 church members in 1947. (*See* also CHURCH MEMBERSHIP.) (R. E. E. H.)

**Bar Association, American:** *see* SOCIETIES AND ASSOCIATIONS.

## Barbados.

The most easterly of the Caribbean islands. British colony; in continuous British occupation from early in the 17th century. One of the most densely populated areas in the world. Area: 166 sq.mi.; pop. (1946 census) 192,841, mainly of African descent. Capital and chief port: Bridgetown (pop. 13,345). Language: English; religion: Christian (about 70% Anglican; the number of Roman Catholics is comparatively small). Executive authority is vested in a governor (appointed by the British crown) assisted by an executive council and, in certain matters, by an executive committee. The legislature consists of the governor, a legislative council of 10 members appointed by the crown and a house of assembly of 24 members (2 for each parish in the colony and 5 for the capital) elected for a period of two years. Governor: Sir Hilary Blood.

**History.**—A ten-year development plan drawn by the Barbados government was under consideration in London during the year 1947. The plan contemplated a total expenditure of £3,400,000, toward which it was estimated that the colony itself would be in a position to make a substantial contribution both from surplus balances and from revenue. Surplus balances stood at £1,087,000 in June 1947. The plan aimed at an all-round improvement of social services and in particular at the reorganization of the education and health services of the colony. Housing was another problem calling for urgent attention. On the agricultural side, the program aimed at developing an intensive system of mixed farming on the basis of animal husbandry and with special reference to peasant holdings. By these means it was hoped to lessen the dependence of the colony on sugar and to stimulate an increase in animal (including dairy) products which was badly needed for improving the nutrition of the people. The Barbados plan was submitted to the secretary of state in April 1947. It received his general approval after examination by the colonial economic and development council.

**Finance and Trade.**—The monetary unit is the pound sterling, tied to the pound in the United Kingdom. Government accounts are kept in sterling, commercial accounts in West Indian dollars bearing a fixed relation to the British pound. Revenue (1946) £1,289,000; expenditure £1,086,000. Imports £4,992,000; exports £3,142,000. The agricultural practice of Barbados is entirely based on the sugar cane, the products of which represented, before World War II, no less than 97% of the domestic exports of the island. Almost the whole island is dependent, directly or indirectly, upon sugar. (J. E. SH.)

## Barium Minerals.

The major producers of barium minerals are the United States, Great Britain and Germany, with small amounts coming from Canada, India, France and Korea.

**United States.**—Data on the production of barite in the United States are shown in the table below.

*U.S. Production of Barite, 1940-46*

(In thousands of short tons)

| | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|---|
| Production, crude . | 390.5 | 483.4 | 449.9 | 429.3 | 515.1 | 692.3 | 725.2 |
| Sales, crude . . . | 409.4 | 503.2 | 429.5 | 420.3 | 518.6 | 696.1 | 724.4 |
| Imports . . . . . . | 7.4 | 0.5 | 4.7 | — | 67.9 | 56.9 | 44.7 |
| Consumption . . . | 404.3 | 490.8 | 449.4 | 453.7 | 595.6 | 720.9 | 722.1 |
| Used for | | | | | | | |
| Chemicals . . . | 66.6 | 93.0 | 104.2 | 99.1 | 100.9 | 99.2 | 102.4 |
| Lithopone . . . | 136.9 | 154.0 | 144.8 | 129.5 | 134.6 | 139.3 | 154.2 |
| Ground barite . | 200.9 | 243.8 | 200.4 | 225.2 | 360.0 | 482.4 | 465.5 |
| Well drilling . | 138.1 | 154.8 | 117.4 | 144.5 | 277.8 | 407.9 | 372.6 |

Instead of declining, the production of barite increased after the close of World War II, partly to cover increased consumption and partly to offset decreased imports.

In addition to the imports of barite shown, there are small imports of witherite and even larger amounts of lithopone and barium chemicals.

**Canada.**—There was a marked increase in Canadian production during the past few years, much of which was exported to Trinidad and South America for use in oil-well drilling. Production increased from 114,387 short tons in 1944 to 139,589 tons in 1945, but declined to 120,419 tons in 1946. Production in 1947 was 133,099 tons. (G. A. Ro.)

## Barley.

The U.S. barley crop was estimated at 279,182,000 bu. in 1947 compared with 262,258,000 bu. harvested in 1946 and an average of 287,360,000 bu. during 1936–45. Acreage was increased about 6% to 11,082,000, compared with 10,411,000 in 1946 and a 1936–45 average of 12,407,000. The yield was 25.5 bu. per acre, slightly higher than in 1946.

*U.S. Barley Production by Leading States,**
*1947, 1946 and 10-year Average, 1936–45*

(In thousands of bushels)

| State | 1947 | 1946 | 10-yr. Average | State | 1947 | 1946 | 10-yr. Average |

| Kansas . . . | 6,380 | 5,022 | 12,051 | North Carolina | 980 | 825 | 598 |
| Wisconsin . . | 5,962 | 4,650 | 16,032 | Iowa . . . . | 799 | 410 | 6,988 |
| Utah . . . . | 5,076 | 4,860 | 4,625 | Nevada . . . | 740 | 680 | 590 |
| Wyoming . . | 4,712 | 4,500 | 2,683 | Arizona . . . | 702 | 600 | 489 |
| Pennsylvania. | 4,059 | 3,942 | 3,140 | Illinois . . . . | 656 | 624 | 2,862 |
| Arizona . . . | 3,842 | 2,975 | 1,533 | South Carolina | 624 | 546 | 325 |
| Washington . | 3,640 | 3,375 | 5,731 | Indiana . . . | 520 | 600 | 1,164 |

*All other states less than 500,000 bu. in 1947.

The price of barley at the beginning of 1947 averaged $1.36 per bushel to growers and then advanced steadily with other grains to $1.61 in August and $2.00 in December. Demand for barley as livestock feed left only a small carry-over of 56,000,000 bu. on July 1, 1947.

World production of barley in 1947 was estimated at 2,220,000,000 bu., slightly higher than in 1946 and approaching the prewar (1935–39) average of 2,363,000,000 bu. The total for Europe was also above that of 1946 but below the prewar level. Good crops were reported in Denmark, Finland and Spain. The United Kingdom crop was twice that of prewar years but less than in 1945 or 1946. China was approaching a prewar level with 317,000,000 bu. (J. C. Ms.)

**Basalt:** *see* STONE.

## Baseball.

On the morning of Wednesday, April 9, 1947, Albert B. (Happy) Chandler, commissioner of baseball, announced that he had suspended Leo Ernest (The Lip) Durocher, manager of the Brooklyn Dodgers of the National league, from "participating in professional baseball for the 1947 season." This drastic action was unprecedented in the major leagues.

The commissioner's statement on the suspension was specific only in stating the punishment had been meted out as a result of the accumulation of unpleasant incidents which he considered detrimental to baseball, and concluded by imposing an edict of silence on all parties to the controversy.

Durocher's "sentence" was the highlight of a baseball year that saw the spectacular departure of Col. Leland Stanford (Larry) MacPhail from the presidency and part ownership of the New York Yankees on the very day his team won the world's championship by beating the Dodgers; the fining and suspension by Chandler of Leslie O'Connor, general manager of the Chicago White Sox, for signing a high school ball player, then defying the commissioner; the sale of the St. Louis Cardinals' empire by Samuel Breadon to former Postmaster General Robert E. Hannegan; the signing of Jackie Roosevelt Robinson, first Negro ever accepted openly in organized baseball, by the Brooklyn club—and finally, the reappointment of Durocher as the Dodger manager by President Branch Rickey, announced on Saturday, Dec. 6.

It was MacPhail who set in motion the chain of events that led to Durocher's banishment. On March 8 and 9 the Dodgers and Yankees played exhibition games in Havana, Cuba, and Rickey and Durocher allegedly charged that two gamblers occupied the MacPhail box in Grand stadium as the Yankee president's guests, with Rickey quoted as saying "apparently there are rules for Durocher and other rules for the rest of baseball."

On March 15 MacPhail wrote to the commissioner asking investigation and redress for these statements, as well as others appearing in a column signed by Durocher in the *Brooklyn Daily Eagle,* which was "ghost-written" by Harold Parrott, the Dodgers' road secretary.

Out of two hearings called by the commissioner, at Sarasota, Fla., March 24, and at St. Petersburg, Fla., March 28, came the Durocher suspension, fines of $2,000 each against the Yankee and Dodger baseball clubs, a 30-day suspension for Charles (Chuck) Dressen, coach who had quit the Dodgers to work for MacPhail, and a $500 fine against Parrott, along with an order to cease writing the Durocher column.

Rickey, stunned by the loss of his 1947 manager only six days in advance of the season's opening, first offered the vacant post to Joseph V. McCarthy, former Yankee manager. McCarthy refused, the season opened with the Dodgers in temporary charge of Clyde Sukeforth, coach, and two days later Rickey's old friend, Burton Edward Shotton, hurriedly summoned from his Bartow, Fla., home, became the Brooklyn pilot.

Shotton led the Dodgers to a pennant and to the limit in the world series before losing it, thereby stirring vast conjecture as to whether he would be reappointed or Durocher returned to his job.

The conjecture ended with Rickey's Dec. 6 announcement, Shotton accepting a post as overseer of all minor league managers in the Brooklyn farm system.

MacPhail, who had been tremendously successful with the Yankees after taking over in 1945, made a highly dramatic announcement of his resignation, choosing the big moment in the Yankee clubhouse when the final putout of the seventh game made the Yankees world champions.

"That's it!" he shouted. "I quit right now!"

Dan Topping and Del Webb, MacPhail's partners, announced that they had purchased MacPhail's stock and that Topping would become president of the club. On Oct. 17 MacPhail came back to the city and issued a long statement, the chief points of which were that he had received $2,000,000 for his stock and that the deal for its purchase had been agreed upon by his two partners and himself on Sept. 18. MacPhail's contract as a high-salaried executive, which had three years to run, was abrogated by mutual agreement.

Leslie O'Connor, general manager of the Chicago White Sox and for 24 years the right-hand man of K. M. Landis when the judge was baseball's tsar, had signed a young player from a high school not affiliated with the National Federation of State High Schools. The commissioner previously had issued a bulletin that, despite the rule specifying only federation youths, he would interpret it as applying to any and all high school players.

With the idea of making it a test case and claiming the commissioner could not alter baseball rules thus, O'Connor signed the player. When Chandler find him $500, then suspended O'Connor and his club because the fine wasn't paid, O'Connor threatened to go into the civil courts.

The big bombshell failed to explode, however, when O'Connor's employers failed to back him and agreed to pay the fine. O'Connor subsided and offered his resignation, which was not accepted, and he returned to his post, later also being re-elected as a member of baseball's executive council which is headed by the commissioner.

Breadon's sale of the Cardinals to a syndicate headed by Hannegan for a reported price of $3,500,000 for the St. Louis club and all its minor-league holdings was announced in St. Louis on Nov. 25. The physical property included ball parks and teams in Columbus, O., American association; Rochester, N.Y., International league, and Houston, Texas, league. The organization also owned 14 other clubs in the lower minor classifications.

Hannegan, with a controlling interest, became president, with Fred M. Saigh, Jr., St. Louis attorney and real estate man, and chief associate in the purchase, becoming vice-president and treasurer.

Breadon, who was more than 70 years old, thus ended a 27-year operation of the club which had been increasingly successful. His Cardinal teams, beginning in 1926, brought him nine pennants and six world championships, and in 1946 and 1947 more than 1,000,000 paid attendance.

Jackie Robinson, Negro second baseman, became a full-fledged Dodger on April 10, Rickey announcing the purchase of Jackie's contract from the Montreal Royals the day following Durocher's suspension and five days before the National league pennant race began. Robinson was transferred to first base and there proved himself a real major leaguer. His hitting, base stealing and general all around play became a big factor in the Dodgers winning the pennant.

Rumbles of opposition among players throughout the National league were heard long before Robinson's elevation, with a players' strike among the St. Louis Cardinals reported to have been in process of planning. Unexpected publicity killed this idea, if indeed it had been seriously contemplated, and Robinson played against all National league teams with unpleasant incidents at a minimum and none of them serious.

Later the Cleveland American league club, owned by Bill Veeck, signed Larry Doby, a Negro, and the St. Louis Browns signed two others. But none was of major league calibre. Near mid-September Rickey signed a second Negro, a pitcher from Memphis named Dan Bankhead, who had yet to demonstrate major league ability when the season ended.

It was an all-time banner year for organized baseball at the box office, both majors and minors achieving new high marks, the combined total—all official figures—being 60,148,795.

For the first time in major league history the National league reached an eight-figure total—10,388,470—six clubs going over the 1,000,000 mark and five of them setting records. Two of the three American league clubs that topped 1,000,000 also set records in attendance.

The minor leagues' total attendance of 40,274,256 was more than 7,500,000 over the 1946 figure, and the latter had been almost double the previous high mark, indicating that baseball prosperity was not just a postwar boom but had acquired something resembling permanence.

A comparison of major league attendances for 1945–47 may be found in Table I on page 112.

**Ownership, Personnel Changes.**—There were no other major league ownership shifts, apart from the Cardinal sale and Yankee change engendered by MacPhail's departure, but two important minor league purchases were made. The New York Giants bought the Minneapolis club of the American association and the Brooklyn Dodgers acquired the St. Paul club of the same league, thus extending into their farm systems the

**AL GIONFRIDDO**, outfielder for the Brooklyn Dodgers, making the outstanding catch which saved the sixth game of the 1947 world series for his team and made a seventh deciding game necessary

torrid National league rivalry that had existed for years.

There were four major league managerial changes, the one of top interest being the appointment of Joe McCarthy as field manager of the Boston American league club to succeed Joe Cronin, the latter moving up as the club's general manager. It was "Marse Joe's" third major league managerial post in two leagues, having first piloted the Chicago Cubs, winning a pennant there in 1929. In 14 seasons as manager of the New York Yankees he won eight flags and seven world series. McCarthy was in retirement on his farm at East Amherst, N.Y., in 1947. Announcement of his appointment was made in New York on Sept. 29, the day before the world series opened.

Billy Meyer, for years a successful minor league manager, was picked to manage the Pittsburgh Pirates, of the National league, succeeding Billy Herman, who was let go by the Pittsburgh management after one season's effort which brought negligible results, his team finishing in a tie for last place with the Philadelphia club.

Herold (Muddy) Ruel similarly was dropped by the St. Louis Browns, of the American league, and James Wren (Zack) Taylor, former major league catcher, was named for the post. Taylor, a coach for the Browns, had acted as manager for a few weeks of the 1946 season after Luke Sewell had been dismissed.

The fourth new manager was Joe Kuhel, veteran first baseman, who was named by president-owner Clark Griffith to direct the Washington American leaguers for 1948. Kuhel succeeded Oscar Bluege, who remained in the organization in an official capacity.

Two former major league stars won minor league managerial posts. Dick Bartell, who piloted Sacramento in the Pacific Coast league in 1947, was named to succeed Meyer at Kansas City in the American association, while Stanley Hack, for years ace third baseman of the Chicago Cubs, drew the Des Moines (Iowa) club of the Western association.

Henry (Hank) Greenberg, home-run hitter of the Detroit Tigers, was sold by that club early in the year to the Pittsburgh Pirates, where he drew a fabulous salary—estimated at $75,000—for the 1947 season. Shortly after the pennant race ended Greenberg was unconditionally released and early in December underwent surgery for the removal of a bone spur from his right elbow, a condition which had hampered his playing. His future in baseball was in doubt as the year ended.

Outstanding player deals were the trading of Fred (Dixie) Walker, an idol of Brooklyn fans for nine years, to the Pittsburgh Pirates on Dec. 10, and the mass sale of its star players by the St. Louis Browns, most of them to the Boston Red Sox. On Nov. 17 Vernon Stephens, shortstop, and Jack Kramer, right-handed pitcher, went to the Sox for a reported $310,000 and several unnoted players. The following day $65,000 more Boston money went to St. Louis for Ellis Kinder, another talented pitcher, and Billy Hitchcock, infielder. The Browns then turned to Cleveland, that club giving them another bundle of cash for Bob Muncrief, capable right-handed pitcher, and Walter Judnich, hard-hitting outfielder.

These sales brought a protest from Dan Topping, Yankee

ALL-STAR GAME at Wrigley field, Chicago, where more than 40,000 spectators jammed the bleachers on July 8, 1947, to watch the American league team defeat the National league players 2 to 1

president, that the Browns, who had finished deep in the American league cellar, were making it a league of only seven clubs. William C. DeWitt, Browns' general manager, stoutly defended the sales, pointing out that since the Browns had finished in last place with star players, they could not do any worse with other, and younger, players.

Another Browns' star, second baseman Johnny Berardino, was dealt to the Washington club but the deal was cancelled by mutual consent when Berardino announced he would quit baseball to fulfil a seven-year contract as a motion picture actor. Later Berardino was traded to Cleveland for outfielder George Metkovich and $60,000—and the Browns were richer by approximately $500,000, although poorer in playing talent.

Edward Grant Barrow, the man who had directed the Yankee baseball empire for so many years until MacPhail took over the top job, resigned as chairman of the board of directors on Jan. 8, ending a lifetime association with baseball.

**"The Third Major League."**—A proposal, long and enthusiastically backed by Clarence (Pants) Rowland, president of the Triple A Pacific Coast league, to give that league major league status was given the thumbs down treatment by the American and National leagues in their joint meeting in New York on Dec. 11. The majors' answer was to the effect that the Pacific coast loop could not qualify, on the seating capacity of its ball parks, the calibre of its play or on any other count, in fact, for such status.

A second proposal from Rowland and his league officials, giving his league a classification above Triple A in order to take players of the loop out of the present draft by which major league clubs acquire certain minor league players for a set price of $10,000, raising that draft price to $25,000 and extending the time limit of player retention to six years instead of four, also was turned down.

Commissioner Chandler had favoured a plan to expand the two major leagues to ten clubs each instead of eight, the idea, of course, being to bring the California cities of Los Angeles, San Francisco, Oakland and Hollywood into the majors. The commissioner, however, did not bring his plan before the joint meeting. It was understood the National league had voted unanimously for such a move but the American league voted five to two against, with Cleveland abstaining.

**Players' Pension Plan.**—Plans for the players' pension were practically completed early in the year by a special major league committee headed by Commissioner Chandler and aided by insurance experts. The plan demanded that $675,000 annually be put into the retirement fund. The pension eligibility age was lifted from 45 to 50 years, eligibility requirement was made ten years of service in the major leagues and the maximum collection $100 monthly.

Players would pay in yearly sums ranging from $45.45 the first year, $90.90 the second, to $454.75 the tenth year, the latter amount the maximum. After paying in $2,500, players' annual contributions would be reduced to $250 each.

The clubs were to supply 80% of the fund, each owner paying in $250 annually for each player, and would also make other contributions. Radio receipts from the world series, $175,000, and the net profit from the All-Star game would go into the fund. The committee ruled that if less than 60% of the personnel of any club failed to sign up for annual contributions, such club's players could not share in pension benefits. It was also made clear that unless 75% of major league players contributed, the pension setup could not work.

Since the world series' radio income was permanently allocated to the fund, club owners would be forced to make financial guarantees to world series' players. The owners previously had voted that the players' pool in any series must amount to at least $250,000. If it was less—and it had been—the owners must make up the deficit.

**Mexican Invasion Ended.**—The spending spree of the Mexican league under the aegis of Jorge Pasquel, during which numerous players from the major leagues jumped to that loop and were banned from organized baseball for five years, came to an

Table I.—*Major League Attendance Figures, 1947, 1946 and 1945*

end during 1947. With Alejandro Aguilar Reyes returning as high commissioner of Liga Mexicana—a post he held for 17 years until 1942—the league adopted a new policy of building up "beisbol" by cultivating native talent. Thus the Mexican raids disappeared along with the baseball union—but not before U.S. players had improved their lot as a result of these twin threats to baseball's peace of mind.

**The Pennant Races.**—In 1947 the rejuvenated New York Yankees, under their new manager, Stanley (Bucky) Harris, and the Dodgers, directed by Shotton, took the respective league flags.

From the start of the American league campaign the Yankees never were more than two or three games off the pace, which was set early by the Detroit Tigers, and on Saturday, June 21, Harris' men took a doubleheader from the Tigers at the Yankee stadium to attain first place by one and a half games.

They held the lead, gradually increasing it until the season's end, at which time they were 12 games in front of the second place Tigers, with the Red Sox finishing third, 14 games from the top. The Red Sox, in fact, reached the top only once—on June 19, when they were two games ahead of New York and Detroit. Ten days later the Yankees began a winning streak that extended to 19 games—the season's longest in the majors, tying an American League mark—before it was broken in Detroit in a twilight game when Freddy Hutchinson, big right-handed pitcher, shut them out for the Tigers, 8-0. During this remarkable victory skein, six pitchers turned in 11 complete games, including 4 by Allie Reynolds.

On Monday, Sept. 15, the Yankees clinched the pennant while sitting idly in their clubhouse because of rain. The Red Sox supplied the clincher by losing the first game of a doubleheader in Boston to the Chicago White Sox. Thereafter the New Yorkers merely played out their schedule.

One surprising angle of the race was the early season showing of the Philadelphia Athletics, under baseball's "Grand Old Man," Cornelius McGillicuddy (Connie Mack). Connie had his boys in the first division during most of June and on June 19—the one day that found the Red Sox at the top—the Athletics were only two and one-half games out of first place. However, they finished fifth, 19 games off the pace.

The National league, as usual, developed another "dog-fight" for the flag during the first half of the campaign, five different clubs occupying first place at various times. Oddly enough, the world champion St. Louis Cardinals, picked by a majority of observers to repeat as pennant winners, were not even first division contenders until late June.

Hampered by injuries and illnesses, especially the appendicitis attack suffered by Stanley Musial, star first baseman, 1946 batting champion and his league's most valuable player, the Red Birds got off to a sad start and didn't even emerge from the league cellar until June 10. Then their drive upward was too late to lift them higher than second place, which position they clinched on Sept. 25.

Meanwhile the Pittsburgh Pirates, the Boston Braves, the Chicago Cubs and the Brooklyn Dodgers were involved in the battle for first place. The Pirates, who eventually wound up in a tie for the cellar, were on top for the first six days of the season. Thereafter they began a steady descent and the fighting was left to the Dodgers, Braves and Cubs.

The Dodgers achieved the top for the first time on April 26, remaining there until May 9; then the Cubs, Giants and Braves alternated in taking the lead, the latter two clubs holding it for a week each, at different times. On July 2 the Dodgers hit the top again, lost the lead by two percentage points to the Braves on July 5, then on the following day went into the lead to stay when Ralph Branca, big 20-year-old ace right-hander, whitewashed Boston with three hits.

On July 11 the Dodger lead was three games, which was the lengthiest the close race had produced up to that point. It hovered around three and two and one-half games for another fortnight, then as the Cardinals began to surge forward the other clubs dropped back. By means of a winning streak of 8 games and losing only 1 in a string of 12, the Red Birds got within 3 games of the leading Dodgers, but that was their high point.

At the end the Cards were 5 games back of the Dodgers, who had annexed their fourth pennant since the turn of the century by winning 94 games, 2 fewer than in the previous year when the pennant eluded them.

There were three no-hit games, only one in the National league. On June 18 Ewell Blackwell, lanky right-hander of the Cincinnati Reds, turned back the Boston Braves with no hits, the Reds winning 6-0.

In the American league Don Black, of the Cleveland Indians, pitched his no-hitter in the first game of a doubleheader with the Philadelphia Athletics at Cleveland.

The man who was the losing pitcher in Black's classic—Bill McCahan, of the Athletics—hurled the other junior circuit no-hitter against Washington in Philadelphia on Sept. 3, winning by the same score, 3-0. An unfortunate error by Ferris Fain, Philadelphia first baseman, prevented McCahan from accomplishing the much more rare feat of pitching a perfect game. In the second inning Fain made a bad throw after fielding a grounder from Stan Spence—and Spence became the only Senator to reach first base during the nine innings.

Four triple plays, a rarity considering the number of games that are played without one being made, were turned in during the major league season. The National league made three of them—Pittsburgh made the first one on April 26 at Cincinnati, the Chicago Cubs at Cincinnati on Aug. 9, and the St. Louis Cardinals at Philadelphia on Aug. 23. The latter was an oddity in triple plays, in that Charley Gilbert, the batsman, in attempting to bunt popped a foul to the catcher and two base-runners, who were "off and running," were caught off base to complete the play.

The American league triple killing was made by the Chicago White Sox against the Browns in St. Louis on April 27 and was made possible by bad base-running on the part of two Brown players who were on base when a simple ground ball was hit to the White Sox third baseman.

In addition to his no-hitter Black also had the distinction of pitching the fastest game in the majors when, with John Rigney as his mound opponent, he blanked the Chicago White Sox, 1-0, at Chicago in a contest that required only 1 hr. 20 min.

**All-Star Game.**—This inter-league midseason fixture, 14th since its inception, was played at Wrigley field, Chicago, July 8, and resulted in the 10th triumph for the American leaguers. The score was 2-1. Johnny Mize, New York Giants' slugging first baseman, made the losers' only tally with a home run off Frank Shea, rookie right-hander of the New York Yankees, in the fourth inning.

Shea, however, became the winning pitcher when the Americans pushed over one run in the sixth against Harry (the Cat) Brecheen, famous St. Louis Cardinal southpaw, and scored the winning run off Johnny Sain, Boston Braves' right-hander, in the next inning. Joe Gordon, Cleveland second baseman, singled, stole second base and reached third on a wild throw by Sain. Then, with two out, Stan Spence, Washington outfielder, hit a pinch single to drive in the run. Seventy-five per cent of the receipts of $105,315 was turned over to the players' pension fund.

**The World Series.**—Scarcely anything that could happen in a world series failed to occur in this 44th renewal of baseball's no. 1 event, which, incidentally, was the 7th so-called "subway series," the New York Yankees being a participant in all of them, the New York Giants in five and the Brooklyn Dodgers in two.

The affair went the limit of seven games, the Yankees winning four games to three for their 11th triumph against only four series setbacks since they won their first pennant in 1921.

The seven games produced, among other things, the unique spectacle of a pitcher being beaten by the only hit he allowed after two were out in the ninth inning; a relief pitcher winning two consecutive games; a substitute outfielder making the most spectacular catch in series history; one competitor (the Dodgers) using 27 pitchers, including the aforesaid relief pitcher (Hugh Casey) in six games; six pitchers, three from each team, making a total of eight wild pitches; one batsman (Yogi Berra) hitting the first pinch home run in series history, and a pinch hitter and two pinch runners winning the one-hit game mentioned above.

It also was the richest series, the total attendance of 389,763 and receipts of $2,021,348.92 being new high marks for a seven-game affair. The players cut a financial melon of $493,674.83, the winning Yankees dividing $207,343.43 of this amount. The players' pension fund was enriched by $175,000 realized from sale of the broadcasting rights, money that in previous years had been added to the players' pool.

The Yankees, pronounced favourites in the betting, became prohibitive choices after winning the first two games, but the odds were shaved sharply when the Dodgers won the next two to even matters.

Scores of the seven games, the first and final two in the Yankee stadium and the other three at Ebbets field, Brooklyn, were: Yankees 5, Dodgers 3; Yankees 10, Dodgers 3; Dodgers 9, Yankees 8; Dodgers 3, Yankees 2; Yankees 2, Dodgers 1; Dodgers 8, Yankees 6; and Yankees 5, Dodgers 2.

There were five home runs, two by Joe Di Maggio and one each by Tommy Henrich and Berra, while Dixie Walker struck the only four-base blow for the Dodgers. Two pitchers won two games each, Frank Shea for the Yankees and Hugh Casey for Brooklyn.

In stolen bases the Dodgers were in front, seven to two. Harold (Pee Wee) Reese pilfered three, Jackie Robinson two and Walker and Al Gionfriddo one each, the latter the most important base theft of the series. Phil Rizzuto stole twice for the Yankees.

With almost perfect weather prevailing and no interruption necessitated for travelling between cities the series was run off in seven straight days, opening on Tuesday, Sept. 30, and concluding on Monday, Oct. 6.

The first game started as a pitching duel between the two talented right-handers, Branca and Shea, with the Brooklyn youngster having a decided edge in the first four innings. But he blew up in the fifth and the Yankees won the game.

The second game was pretty much of a romp for the Yankees.

The third game, however, saw the Dodgers win the first game of their uphill battle, a free-hitting affair that extended 3 hr. 5 min. for a world series longevity record that eclipsed the previous mark of 2 hr. 54 min. also set by the Yankees and Dodgers on Oct. 5, 1941, in Brooklyn.

Next day the Dodgers evened the series at two games each in a contest unmatched in the history of baseball's classic. Casey made just one pitch to become the first relief pitcher to win two consecutive world series games; Harry (Cookie) Lavagetto, Oakland, Calif., veteran, swung his bat just twice (missing the first swing) to win the game, and the hit Cookie made, with two out in the ninth inning, was the only one allowed by Floyd (Bill) Bevens, big right-hander from Salem, Ore.

| Marshall, New York | 106 | Doerr, Boston | 96 |

Shea dominated the fifth game with his four-hit pitching to score his second triumph and put the Yankees ahead once more, three games to two.

Once more, in the sixth encounter, the Dodgers were able to even matters as the battle moved back to the Yankee stadium to produce the second great thrill of the series when Di Maggio was robbed of a third home run by the tiny substitute outfielder, Gionfriddo.

There were two Yankees on base and two out when Di Maggio came to bat in the sixth with the Dodgers leading, 8-5. A home run would tie the score and Di Maggio hit it—but Gionfriddo took it away from him! Joe Hatten, third of the Dodger pitchers, was on the mound when Di Maggio sent a towering drive toward the left field bleachers, 415 ft. away. Gionfriddo, who had just been inserted in left field in place of Miksis, raced back toward the stands and just as the ball was going over the low gate that leads to the visiting "bull pen" the little fellow reached over the barrier with his gloved hand to make a backhanded catch and save the game.

In the final game Joe Page, whose fine relief pitching during the season was an outstanding factor in winning the pennant, came into his own. His fourth and final relief appearance in the series was an almost perfect job. Working the last five innings Page faced the minimum of 15 men and allowed only one hit, a ninth inning single by Miksis after one was out. Edwards promptly grounded into a double play to erase Miksis, end the game and give the Yankees the world's championship.

With this triumph the American league's margin of superiority over the senior circuit was increased to 27 victories in 44 world series played since its inception in 1903.

**Individual Achievements.**—The fourth annual award of the Kenesaw Mountain Landis Memorial trophies for the most valuable player in each major league went to Joe Di Maggio of the New York Americans and Bob Elliott of the Boston Nationals by vote of the two 24-man committees of the Baseball Writers' Association of America.

The National league batting title went to Harry Walker, Philadelphia, younger brother of Brooklyn's Dixie, with an average of .363, high in both leagues, while Williams hit .343 to top the American league. Ted also led his league in home runs with 32 and in runs batted in with 114.

Home-run leadership in the National league was shared by Mize and Ralph Kiner, Pittsburgh, with 51 each, nine short of the all-time record established by the one and only Babe Ruth. Mize led in runs batted in with 138 and four other National leaguers exceeded the century mark in this respect.

Brooklyn's Stanky not only led all second basemen in fielding but set a modern National league record with an average of .9853, eclipsing the mark of .9851 set by Linus Frey with Cincinnati in 1943. This gave Stanky two records, the other being the high league mark of 148 bases on balls in 1945.

John (Buddy) Kerr, Giants' shortstop, added to two major league records he already held by playing through 68 consecutive games (52 in 1946 and the first 16 of 1947) without an error and also extended his string of consecutive chances without a misplay to 383.

In pitching the National league far outdistanced the American league, producing five hurlers who won 20 or more games while the junior loop had only one—the famous Bobby Feller, of Cleveland, who won exactly 20 and lost 11. Feller struck out 196 men, only three more than Blackwell, Cincinnati, for the major league leadership in that respect.

But Blackwell won the most games, 22, pitched the most complete games, 23, and also turned in the longest winning streak, 16 games.

Warren Spahn, Boston Braves' southpaw pitcher, had the low earned-run average of 2.33 to lead both leagues, with Spurgeon Chandler, New York Yankees' veteran right-hander, topping the American league with 2.46.

The leading percentage pitcher was Lawrence (Larry) Jansen, New York Giants' freshman right-hander, who won 21 and lost five for a mark of .808, while Frank Shea, Yankees' first year right-hander, led the American league with 14 victories and five losses for a percentage of .737.

The five top winning pitchers in the National league were Blackwell, Spahn, Jansen, Johnny Sain, Boston, and Ralph Branca, Brooklyn.

Leaders in batting, home runs and runs batted in may be found in Table III.

Four of baseball's greatest modern stars were voted into the Hall of Fame at Cooperstown, N.Y., by the ballots of 161 veteran members of the Baseball Writers' Association of America late in January. They were Carl Owen Hubbell, left-handed pitcher, whose fame was achieved with the New York Giants; Robert Moses (Lefty) Grove, another great southpaw, whose most brilliant years were with the Philadelphia Athletics; Gordon (Black Mike or Mickey) Cochrane, catcher with the Athletics and later manager of the Detroit Tigers, and Frank (Fordham Flash) Frisch, for years talented second baseman for the Giants, later second baseman and manager of the St. Louis Cardinals when that club won the name of "The Gas House Gang," and still later pilot of the Pittsburgh Pirates.

In addition to this quartet, 11 famous players of a bygone era were enshrined in the Hall of Fame, their selection being made by a special committee of men who were active in baseball four decades ago. The names of the 11 old timers follow:

John Dwight Chesbro, pitcher for Pittsburgh in the National, and Boston and New York in the American league, who won 41 games in 1904; Joseph B. Tinker, John Joseph Evers and Frank LeRoy Chance, famous Chicago Cubs infield combination in the early 1900s; George Edward (Rube) Waddell, brilliant and eccentric southpaw pitcher of the Philadelphia Athletics; Edward Arthur Walsh, outstanding right-hander for the Chicago White Sox from 1904 to 1916; Jesse C. Burkett, star batsman, who hit more than .400 to win the batting titles in 1893 and 1896; Joseph Jerome (Iron Man) McGinnity, who on five occasions pitched two games in one day, three times winning both games, and won 20 or more games in seven seasons with Baltimore, Brooklyn and New York; Thomas F. McCarthy, outstanding base-runner, who stole 109 bases with the St. Louis Browns in 1888; Edward S. Plank, 14 years with the Philadelphia Athletics from 1901, one of the greatest left-hand pitchers and one of very few to win more than 300 games; and Clark C. Griffith, president-owner of the Washington American league club, with a 50-year background as pitcher, manager and executive.

**The Minor Leagues.**—Twenty minor league clubs which finished first, either in a full season or split season, also came out ahead in play-offs.

In the Triple A loops Minneapolis won the junior world series from Syracuse, four games to three, although neither had won the pennant in its league, the American association and International league, respectively. Both had finished third and won the right to meet in the series by winning the play-offs.

Los Angeles, winning the Pacific Coast league pennant in a one-game play-off with San Francisco, went on to win the play-off crown by defeating Portland, Ore., and Oakland, Calif., each by four games to one. It was the first time in five years that Lefty O'Doul's San Francisco Seals had failed to win this title.

In the Double A circuits Houston not only won both pennant and play-off in the Texas league but defeated the Southern association's pennant winner, Mobile, four games to two, to take the Dixie series.

(Ro. McG.)

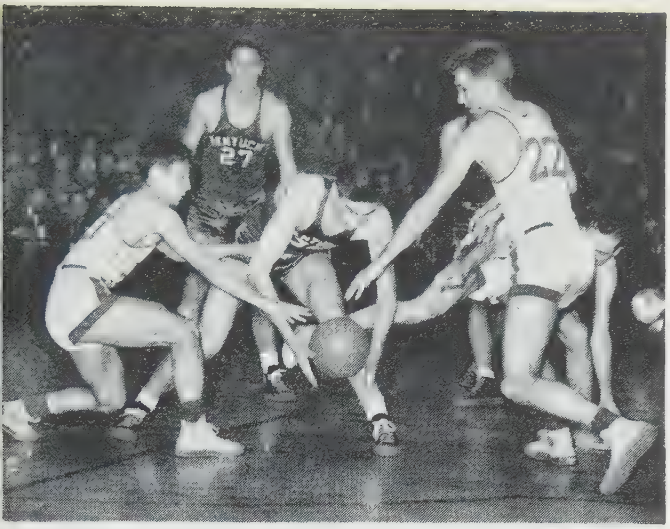
**Basketball.** Holy Cross college of Worcester, Mass., gained the basketball pinnacle for 1946–47 by winning the National Collegiate Athletic association tournament. Holy Cross defeated Oklahoma university, Norman, Okla., 58 to 47, in the final at Madison Square Garden after stopping Navy and City College of New York in the eastern regional tests. The final between Holy Cross and Oklahoma was tied on 11 different occasions, and brought George Kaftan the rating of the N.C.A.A.'s most valuable player on the 18 points he scored for Holy Cross.

Utah captured the National Invitation tournament with a 49–45 victory over Kentucky in the final. Earlier, Utah defeated Duquesne, 45 to 44, and West Virginia, 64 to 62.

Columbia topped the Eastern Intercollegiate league with 11 victories and 1 defeat, while St. John's dominated the metropolitan New York sector with a 6–0 record. Kentucky won its fourth straight Southeastern conference crown as well as its 10th title in 14 years. In the Southern conference, North Carolina State outlasted North Carolina university and Duke to gain the championship.

Wisconsin won a heated Western conference race with a 9–3 record, one game ahead of Indiana and Illinois. Notre Dame led independent play in the middle west with 20 victories in 24 games.

Oklahoma university, with an 8–2 league record, won the Big Six title, while Texas was unbeaten in the Southwest confer-



A TIGHT PLAY during the title game of the National Invitation basketball tournament in New York city on March 24, 1947. Utah scored a victory of 49-45 over Kentucky

ence, winning 12 straight games. Wyoming repeated as champion of the Big Seven, while Oregon State won the Northern and University of California at Los Angeles captured the Southern titles of the Pacific Coast conference. Oregon State beat U.C.L.A. in the playoffs, 69 to 22 and 64 to 46.

For the fifth straight time, Phillips "66" of Bartlesville, Okla., won the A.A.U. championship. The Oilers had little trouble outlasting the 52-team field and defeated the Oakland, Calif., Bittners, 62 to 41, in the final.

The Atlanta, Ga., Sports Arenas ended a three-year reign of women's A.A.U. basketball by the Goldblumes of Nashville, Tenn. Led by Alline Banks, eight times All-American, the Atlanta team defeated the Goldblumes, 26 to 22, in the final. Alline Banks forced the title game into overtime with the basket which made the score 22–22, and scored the tie-breaking field goal early in the extra period.

With the Basketball Association of America completing its first full season, professional basketball gained considerable impetus in 1947. Philadelphia won the B.A.A. crown in a playoff with Chicago. The National league title went to Rochester, N.Y., with the American Gears of Chicago winning the league playoffs and Indianapolis finishing first in the pro tournament.

A third professional league was organized on a 16-team basis late in 1947 by Maurice White of Chicago, but was abandoned after two weeks of play. The College All-Stars defeated Indianapolis, 58 to 52, in their annual game which unofficially opened the 1947–48 season. (M. P. W.)

*A number lacking a decimal is an estimate.

There were sharp postwar increases in output in British Guiana, France and Hungary.

**United States.**—The salient features of the bauxite industry in the United States are outlined in Table II.

In 1946 increases were recorded both in production and imports, with the improvement continuing into 1947. Domestic production (dried equivalent) amounted to 1,027,428 short tons in the first three-quarters of 1947, and imports (as shipped) were 1,608,072 tons, making a total supply of 2,635,500 tons for the period.

Imports are largely from Surinam with small amounts from British Guiana. (G. A. Ro.)

## Beans, Dry.

The U.S. crop of dry beans for 1947 was estimated at 17,164,000 bags of 100 lb. each, uncleaned, compared with 15,859,000 bags in 1946 and a 10-year (1936–45) average of 16,312,000 bags. The acreage was increased about 10% in 1947 to 1,759,000. Average yield was only 976 lb. per acre compared with 981 lb. in 1946 and a 10-year average of 889 lb.

*U.S. Production of Dry Beans in Leading States, 1947, 1946 and 10-year Average, 1936–45*

(In thousands of 100-lb. bags)

| State | 1947 | 1946 | 10-yr. average | State | 1947 | 1946 | 10-yr. average |
|---|---|---|---|---|---|---|---|
| California . . . | 4,363 | 3,587 | 4,610 | Wyoming . . . | 1,444 | 1,305 | 864 |
| Michigan . . . | 3,129 | 3,841 | 4,404 | New York . . . | 1,375 | 1,488 | 1,189 |
| Colorado . . . | 2,568 | 1,618 | 1,676 | Nebraska . . . | 1,058 | 1,054 | 454 |
| Idaho. . . . . | 2,341 | 2,176 | 1,871 | Montana . . . | 364 | 280 | 276 |

The farm price of beans, which had almost doubled during 1946, stood at $12.20 per cwt. in Jan. 1947, advanced to $12.70 by July, and held steady to $12.10 in December. Exports of dry beans increased during 1947; at the higher prices the value of the exported crop almost doubled.

The world's bean production was estimated to be about 10% larger than in 1946. (J. C. Ms.)

**Bechuanaland Protectorate:** *see* British South African Protectorates.
**Beef:** *see* Meat.

## Beekeeping.

The honey crop of 1947 in the United States was estimated at 210,039,000 lb., compared with 213,814,000 lb. in 1946—a decrease of about 2%. The number of colonies was estimated at 5,910,000, or 2% more than in 1946.

Average yield for the United States was 35.4 lb. per colony compared with 36.9 lb. in 1946. California produced a crop of only 14,100,000 lb., compared with 22,128,000 lb. in 1946. Florida's crop of 7,410,000 lb. was also poor. Iowa stood first in production with a 17,570,000 lb. crop. Minnesota stood second with 17,043,000 lb., Texas and New York each had 13,140,000 lb. and Wisconsin 11,660,000 lb.

Imports declined to 15,000,000 lb. in 1947, mostly from Cuba, Mexico, Puerto Rico and Hawaii. Prices ranged around 12 cents per pound, compared with four to five cents in prewar years. (J. C. Ms.)

## Belgian Colonial Empire.

The Belgian colonial empire consists of the colony of Congo in central Africa and the adjacent mandated territories of Ruanda and Urundi. The accompanying table gives material relative to all territories administered by Belgium (*q.v.*). Total area: 925,000 sq.mi.; pop. (est. Jan. 1, 1947): 14,088,191, of whom 34,782 were whites (24,058 Belgians). Chief towns, with their white pop. only (est. Jan. 1, 1947): Léopoldville (cap. 6,183), Elisabethville (5,359), Stanleyville (1,246). Governor general (appointed Dec. 31, 1946): Eugène Jungers.

**History.**—The Belgian colonial empire in 1947 enjoyed great social stability and unparalleled economic prosperity. There were no political troubles and exports were 78% more than before World War II. A certain desire for decentralization existed, but it manifested itself more among the Belgian residents than among the natives. In this connection Governor General Eugène Jungers stated in April, during a visit to Brussels, that during World War II the Congo had developed its resources enormously; it had come of age and it expected that fact to be taken into consideration. The residents, he said, wished to participate more, and more directly, in the government of the colony. They wanted the resources of the Congo to be assigned mainly to the needs of the colony itself. They were not separatist, and they favoured a sound autonomy under the permanent hegemony of the mother country.

From June 29 to Aug. 12 Prince Charles, regent of the kingdom, paid an official visit to the colony. It was an occasion for the natives to show their loyal attachment to Belgium and its dynasty. It was also the occasion for the regent and Pierre Wigny, minister of the colonies, to sign on July 1 two important decrees. The first created a Farmers' Credit bank (Société de Crédit au Colonat) with a view to helping Belgians who decide to settle permanently in the Congo; this arrangement had been recommended by a special commission which discussed the subject in Brussels during July and Aug. 1946. The second decree established a Native Welfare fund (Fonds du Bien-Etre Indigène), having an annual income of 250,000,000 francs, the object of which was to finance all enterprises capable of increasing the moral and material development of the natives in the Congo and in Ruanda and Urundi.

In 1947 there were in the Congo 6,102 primary schools with 358,215 native pupils and 56 secondary schools with 3,872 native pupils; there were also 8,994 rural schools with 246,424 natives attending evening classes. A new technical school for natives was opened at Elisabethville. The missionaries, generally Roman Catholic, were mainly responsible for the education of the natives. The medical corps looking after the state of health in the colony was composed as follows by July 1947: 350 physicians, 703 white nurses, both men and women, and 2,500 native auxiliaries. Mortality among the natives in 1946 was 7 per 1,000.

Among measures taken in 1947 in the interest of the natives were: the prohibition of polyandry; the appointment of a commission to study the problem of 12,000 mulattos, who are rejected both by the whites and the natives; the opening of a native social studies centre at Léopoldville; and the promulgation of a law forbidding the sale of the cotton crop on the field and stating that the growers remained proprietors of the cotton until it was sold on the world market. (G-H. D.)

**Belgian Congo:** *see* BELGIAN COLONIAL EMPIRE.

## Belgium.

A kingdom of western Europe. Area: 11,774 sq.mi.; pop. (est. Jan. 1, 1947): 8,388,526. Chief towns: Brussels[1] (cap. 1,290,534); Antwerp (259,622); Ghent (162,488); Liége (150,103); Bruges (52,698); Namur (30,702). Languages: Dutch, French and German; religion: mainly Roman Catholic. Ruler: King Leopold III, Prince Charles (*q.v.*), regent. Prime minister (appointed March 19, 1947): Paul-Henri Spaak.

**History.**—During 1947 further progress was made in the economic rehabilitation of the country, but the political struggle remained bitter. From the beginning of January the government of Camille Huysmans was attacked not only by the Christian-Social opposition, but also by the Liberals, the Communists and even some Socialists; agreement inside the coalition seemed at an end. On Feb. 26 former prisoners of war organized a march throughout the capital to protest against the slowness shown by the government in granting them material and moral help. The demonstration rapidly degenerated into a serious riot round the royal palace and the government buildings and the horse gendarmerie had to charge the rioters, killing 1 and wounding 30. Twelve days later the shopkeepers started a strike protesting against too many controls and fines.

The government was shaken by these and other signs of general dissatisfaction. On March 11, on the pretext of an increase in the price of coal, the Communist ministers resigned. The government crisis that followed was of short duration. The prince regent asked Paul-Henri Spaak to form a new cabinet. On March 19 the eighth government of Belgium after the liberation, a coalition of the Christian-Social and Socialist parties, came into existence; nine portfolios went to the former, eight to the latter and two to nonparty experts. Liberals and Communists went into opposition.

In his speech to parliament, on March 25, Spaak promised,

mong other measures, to introduce woman suffrage, to imrove the situation of public finance without devaluing the Belian franc, to increase the efficiency of technical education, to asten the repair of war damage and to seek agreement among he parties in order finally to settle the royal question while especting the constitution. The next day the chamber of depuies passed a vote of confidence in the government by 148 votes o 13 and 22 abstentions; on March 28 the senate approved the overnment by 125 votes to 7 and 17 abstentions.

On June 16 and 17 the representatives of the trade unions and f employers held a national conference of labour under the hairmanship of Spaak, assisted by the ministers of labour, vorks, supply and economic affairs. The conference decided to evise the policy of subsidies, to increase family allowances and oliday bonuses and to introduce joint advisory committees *conseils d'entreprise*) in industry. As the suppression of subidies for certain food products automatically caused an increase n prices, the government decided on July 22 to give compenatory allowances to all citizens earning 72,000 francs or less nnually. At the same time a big campaign to reduce prices was tarted.

On June 19 the report of a special commission on the royal uestion was published. This commission, established by King eopold III on July 14, 1946, comprised experts in constituional law and prominent personalities of the right and left uner the chairmanship of Jean Servais, honorary attorney genral and professor at the University of Brussels. The report stablished that the conduct of the king, from 1936 to 1944, was bove reproach. The government discussed the report of the ervais commission on July 4 and asked the prime minister "to xamine the possibility of giving effect to that part of his speech o parliament that concerned the royal question." At the begining of December Spaak was preparing to declare publicly that he king's honour was "unblemished." On Dec. 4 King Leopold eceived at Lausanne, Switz., a delegation of the National Conress to Solve the Royal Question and said to them: "I am eady to re-assume my constitutional duties as soon as the govrnment publicly declares that nothing has ever blemished my onour as the head of the dynasty." When this statement apeared in the Catholic press the leader of the Socialist party sked for a debate on the government's policy regarding the ynasty. Spaak referred to his difficulty over this problem in a overnment which was divided not on the king's honour, but on he king's return. The government received a vote of confidence 152 votes to 32) but the declaration of Spaak was postponed *ine die*. By the end of 1947 discussion between the parties was oing on, generally in secret.

Despite the disillusionment frequently expressed by Spaak, elgium's foreign policy continued to support the United Naions. Belgium was also one of the first states to accept the arshall plan of aid to Europe. But the outstanding event of he year was the signature on March 14 at The Hague of a rotocol establishing a customs union between Belgium, the etherlands and Luxembourg that had been adopted in principle n an agreement signed in London on Sept. 5, 1944. Thus a new conomic unit called "Benelux" was born. The customs duties f the three countries were standardized, and it was hoped that n the near future the same would be done for excise duties, the ransfer tax and tariff legislation. The ultimate objective of Benelux" was complete freedom inside the common frontiers. he three countries were not, however, to limit their collaboraion to the economic field: they were also to conduct a common oreign policy. This unity in foreign policy was apparent for the rst time at the conference of 16 European countries in Paris, n July 12–15; it was evident at the U.N. assembly at Lake Sucess, N.Y., where in regard to Indonesia Belgium defended the Netherlands' point of view. (G-H. D.)

BELGIAN VETERANS rioting on Feb. 26, 1947, at Brussels, where several thousands of former P.O.W.'s and deportees demanded compensation for time spent in prison. One person died and 40 were injured in the demonstration

**Education.**—1945: kindergarten schools 4,140, scholars 228,108; primary schools 8,714, scholars 828,996; higher grade (1946–47) schools 447, scholars 100,459; adult schools 211, scholars 83,856; universities (1946): Ghent 2,228 students; Liége 3,054 students; Brussels 4,302 students; Louvain 7,554 students.

**Banking and Finance.**—Revenue (est. 1946) Fr. 58,000,000,000; expenditure Fr. 70,000,000,000; public debt (June 1947) Fr. 279,586,000,000; gold reserve (Oct. 23, 1947) Fr. 26,960,000,000; note circulation (Oct. 27, 1947) Fr. 78,326,000,000: rate of exchange 1 franc=2.283 U.S. cents (1947).

**Trade and Communication.**—External trade (merchandise): imports (1946) Fr. 52,561,608,000; (Jan.–June 1947) Fr. 36,505,300,000; exports (1946) Fr. 29,654,016,000; (Jan.–June 1947) Fr. 28,297,164,000. Communications: roads suitable for motor traffic (1945) 6,433 mi.; railways open to traffic, main (1945) 3,089 mi.; waterways open to navigation (1945) 936 mi.; airways (1946) passengers carried 9,720; freight 1,203 short tons. Shipping entered (1946) 9,612,000 tons net; cleared 6,180,000 tons net. Motor vehicles licensed (1945): private cars 43,903; commercial 2,217; buses 261; trucks 60,234. Telephones (1944) 304,314.

**Agriculture.**—Harvest 1947 (est. yields in short tons): wheat 124,354; rye 179,479; barley 158,060; oats 550,748; potatoes (early and semi-early) 735,475; peas 16,625; flax (seed) 13,060; flax (straw) 125,220; colza 2,930; fodder crops (grass, sainfoin, lucerne and clovers) 904,404. Other produce (1946) butter 19,800; cheese 8,800; meat 96,000. Livestock (1947) horses 303,925; cattle 1,729,341; sheep 170,166; pigs 616,144; poultry 5,712,112.

**Industry and Labour.**—Industrial production index (1936–38=100). April 1947=99. Textile production during 1946 and the first half of 1947 is shown in the table on page 118. Other products (1946): bicycle tires (number) 6,102,200; matches (boxes) 45,338,798,000; new dwellings under construction

*Belgian Textile Production, 1946, 1947*

(In short tons)

| | 1946 | 1947 (Jan.-June) |
|---|---|---|
| Cotton | 76,390 | 44,740 |
| Wool | 34,050 | 23,700 |
| Linen | 9,380 | 4,977 |
| Jute | 38,820 | 19,960 |

(May 1947) 1,075. Unemployed (June 1947) 46,300.

**Minerals.**—July 1946–June 1947 (in short tons): coal 26,515,200; pig iron and ferroalloys 2,863,000; steel ingots and castings 2,882,800; lead 34,620; zinc 123,110; cement 2,520,270. (*See* also BELGIAN COLONIAL EMPIRE.)

## Benton, William

(1900– ), publishing executive, was born on April 1 in Minneapolis, Minn. He was graduated from Shattuck Military academy, Faribault, Minn., and received the bachelor's degree from Yale university, New Haven, Conn., in 1921. He entered the advertising agency business in New York in 1922. In 1929, in partnership with Chester Bowles, he founded the Benton and Bowles agency, which rose rapidly to become one of the most successful in the advertising business. He resigned from all active participation in the affairs of the agency early in 1936.

Benton became vice-president of the University of Chicago in 1937, partly devoting himself to the development of radio and classroom motion pictures as instruments of education. At Benton's instance the university acquired Encyclopædia Britannica, Inc., in 1943. He financed the company, became chairman of its board and shared its ownership with the university. He launched Britannica into the classroom motion-picture field and served as board chairman of Encyclopædia Britannica Films Inc. In collaboration with Paul Hoffman he helped to found (and served as vice-chairman of the board of trustees for) the Committee for Economic Development, which instituted studies and plans for reaching and maintaining high levels of employment and productivity in the postwar period.

Benton was appointed U.S. assistant secretary of state by Pres. Harry S. Truman on Aug. 31, 1945. He resigned from all operating responsibilities outside the department of state. His special responsibilities within the state department included: (1) a projected program of information and educational exchanges with other countries; (2) U.S. participation in the United Nations Educational, Scientific and Cultural organization and (3) the department's information and group relations program within the United States.

Under the first of these Benton in 1946 and 1947 developed the country's first peacetime international information program, designed to project to other peoples "a full and fair picture of American life, and of the aims and policies of the United States Government." This included short-wave broadcasts in 24 languages; exhibition of documentary films about the U.S. before audiences of many millions abroad; fast servicing to foreign editors of full texts of important U.S. foreign policy statements; stimulation of exchange of students, scholars and scientists and maintenance of small information staffs and U.S. libraries in 62 countries.

In the second field Benton participated in drafting the U.N.E.S.C.O. constitution at London in 1945; served as chairman of the U.S. delegation to the first U.N.E.S.C.O. general conference at Paris in 1946 and again as chairman of the delegation at the second conference at Mexico City in 1947.

During 1947 U.S. policy on international press freedom was developed under Benton's direction, and an organization was set up to administer the greatly expanded student-exchange program made possible under the Fulbright bill.

Benton resigned as assistant secretary on Sept. 30, 1947, though he continued to serve the secretary of state as a consultant on U.N.E.S.C.O. Shortly thereafter he resumed the chairmanship of Encyclopædia Britannica, Inc., and of Encyclopædia Britannica Films Inc. In December he also became board chairman of the Muzak corporation, which he had owned for some years.

## Bentonite.

Sales of bentonite by producers in the United States increased from 573,998 short tons in 1945 to 601,428 tons in 1946, making a new record high. Nevada and Oklahoma appeared as new producers in 1946, in addition to the nine states previously reporting. Wyoming and South Dakota supplied nearly half the total. About 38% of the output goes into rotary drilling mud, 27% into foundry sand and 24% is used for filtering and decolourizing oils, leaving 11% for miscellaneous uses. Most of the increased supply of 1946 went into drilling muds. (*See* FULLER'S EARTH; MICA.) (G. A. RO.)

**Bequests, Philanthropic:** *see* DONATIONS AND BEQUESTS.

## Berlin.

Capital of the German reich from 1871 to 1945, Berlin is the largest and the most important city of Germany. Area: 341 sq.mi.; pop. (census of Oct. 29, 1946): 3,180,383, or 26.4% less than the pre-World War II figure (census of May 17, 1939: 4,332,242).

The political scene in 1947 was dominated by the controversy over the office of *Oberbürgermeister.* Otto Ostrowski, a Social Democrat, chosen after the elections of Oct. 1946, was in April forced by his own party to resign on the grounds that he had been subservient to S.E.D. (the Communist-controlled *Sozialistische Einheits-Partei Deutschlands*) views and lacked courage in his attitude toward the soviet occupation authorities. The Berlin *Kommandantura* (the four Berlin Allied commanders) agreed to his resignation. In July the new nominee of the majority of the city assembly, Dr. Ernst Reuter, another Social Democrat, was accepted by all Allied commanders except the Russian, Gen. Alexander Kotikov, who rejected his nomination

NEW STORE FAÇADE on Berlin's Kurfuerstendam, set incongruously against the ruins of World War II. Shopping facilities were making but slow returns to normalcy in 1947

on the grounds that he was antisoviet and of doubtful political record. The disagreement was taken to the Allied Control council where the Russian representative again vetoed the appointment of Dr. Reuter. For the rest of the year Frau Luise Schröder, a Social Democrat, acted as *Oberbürgermeisterin.*

Berlin's industries, chief of which are electrical equipment, clothing and machine construction, were seriously handicapped by dependence upon raw material supplies from the four zones. In July the Askania instrument manufacturing firm in the U.S. sector was closed down on the grounds that it was making war materials for another Allied power. In the soviet sector 600 nazi firms were expropriated and placed under a trustee with a view to their being handed over to the city authorities or to the co-operatives.

In the cultural field Berlin remained the capital of Germany. Excellent productions at the theatres included works by Jean Cocteau, Eugene O'Neill, Jean Giraudoux, Gerhart Hauptmann, Karl Sternheim, Ferenc Molnar, Franz Werfel and Konstantin Simonov.

The total circulation of Berlin's 15 daily newspapers by Jan. 1, 1947, was 3,500,000. The Russian-licensed or official Russian papers accounted for about 70% of this amount. (*See* also GERMANY.) (D. A. SN.)

**Bermuda.** The Bermudas or Somers islands form a group of about 360 small islands situated in the western Atlantic about 580 mi. east of Cape Hatteras in North Carolina. Together the islands constitute the British colony of Bermuda. Total area: 19 sq.mi.; pop. (1945 est.): 34,435. The capital is Hamilton (pop. *c.* 3,000). The only other town of importance (St. George) has a population of about 1,300. The colony is administered by a governor appointed by the British crown, assisted by an executive council containing four official and three unofficial members. The legislative council consists of 9 members (3 official and 6 unofficial) and the house of assembly of 36 members, 4 being selected by each of the 9 parishes of the colony. Governor in 1947: Adm. Sir Ralph Leatham.

**History.**—The principal questions that arose in Bermuda during the year 1947 had relation to local conditions and standards of living. Toward the end of 1946 a petition to the secretary of state was drawn up by the executive committee of the Bermuda Workers' association (a body claiming a membership of nearly 5,000, representing approximately one-seventh of the population of the colony) praying for the appointment of a royal commission "to investigate and report on the social, economic and political conditions of Bermuda, with recommendations for the alleviation and adjustment of the several inequities and handicaps under which the great majority of the population are labouring." The matter came under consideration in London early in 1947. The secretary of state was not prepared to agree to the immediate appointment of a royal commission. He considered that, as Bermuda had "enjoyed representative government for over 300 years," the petitioners' representations should be examined, in the first instance at any rate, by the local legislature. He invited the governor to take immediate steps to initiate such an examination. He also called special attention to certain imperfections in the local law relating to trade unions; to the desirability of extending the franchise; and to the need for reforming the fiscal system by the introduction of direct taxation. The Workers' association was informed that the secretary of state would reply in due course to its petition in the light of the local legislature's examination and of the governor's observations thereupon. A joint committee of the legislative council and the house of assembly was appointed to inquire into and report on the matters raised in the petition. New salary scales for government servants (in which account was taken of the high cost of living) were introduced in Jan. 1947.

**Finance and Trade.**—The currency of Bermuda is that of the United Kingdom. Revenue (1945) £815,657; expenditure £836,129. Imports (1946) £3,634,000; exports £263,000. The colony had in 1945 a public debt of £875,000 (including two interest-free loans totalling £800,000 to the British government). (J. E. SH.)

**Beryllium.** After declining from 388 short tons in 1944 to 39 tons in 1945, the output of beryllium ores in the United States increased to 100 tons in 1946. Imports declined from 3,115 tons in 1944 to 1,201 tons in 1945 and 1,098 tons in 1946. The production of refined beryllium products from ore had practically ceased everywhere except in the United States. (G. A. RO.)

**Bessarabia:** *see* UNION OF SOVIET SOCIALIST REPUBLICS.
**Best Sellers:** *see* BOOK PUBLISHING.

**Betting and Gambling.** The postwar gambling fever, which had seemed to subside in 1946, was stronger than ever in 1947. Professional gambling houses, illegal in every state but Nevada, were patronized as heavily as in 1945, and many of the smaller ones which had closed during 1946 were reopened.

Outstanding was the spread of "floating crap games." Hitherto a monopoly of New York's underworld, this type of game became prevalent in small town and big city alike. Roulette, a standard game at gambling houses, received its usual high quota of publicity when, in November, two University of Chicago students descended upon the largest gaming house in Reno, Nev., with the claim that they had perfected a system of winning. First reports said the aleatory collegians had won $2,000. A few hours later the figure was doubled. The third flash put the bettors ahead $12,000. After that the story died out, and the fact that the mathematical wizards had lost most (not all) of their winnings was not given enough attention to prevent a parade of other hopeful system gamblers to Reno.

Bingo was played more than in 1946, especially in the small towns. The decline in attendance at motion pictures brought Screeno (a form of Bingo) back as a trade stimulator in a few theatres.

Manufacturers and proprietors of slot machines had a banner year. Factories that had manufactured other products during World War II were reconverted, and thousands of new machines were marketed or reconditioned. In only one state, Nevada, could these machines operate openly, but 17 states permitted them in private clubs, and, legal or not, they were still to be found in clubs in all states.

There was some decline in betting on horse racing, which continued to attract more betting dollars than any other form of gambling. Many of the states that permitted pari-mutuel betting at the race tracks reported a drop in the golden flow. The expected total "handle" of $2,000,000,000 was not reached, nor was the 1946 total of $1,900,000,000 equalled. Off-the-track bookmakers also were pessimistic. The gambling fraternity blamed the decline on public resentment at the heavy "take" of the tracks and state taxes.

Betting on sporting events continued, both in the football pools and with bookmakers. The Minneapolis syndicate furnishing bookmakers with probable results of all football games did its usual accurate job, being right in so high a proportion of the cases that the bookmakers had a profitable year. In basketball there were rumours of "thrown" games, all denied and some disproved but sufficiently grave so that western bookmakers refused to accept bets on games played in some eastern cities.

Football, both amateur and professional, escaped suspicion except in a few cases, and baseball retained the entire faith of the public. There was little heavy betting on boxing matches, perhaps because of the scarcity of bouts between well-matched fighters.

Card games remained a minor factor in gambling. Blackjack, otherwise known as twenty-one, was the principal game in the gambling houses, but was not played for high stakes comparable with those in the dice games. In the temples of luck with social pretensions, chemin-de-fer was gaining favour and was played for higher stakes. The game most often played for high stakes in private homes, clubs and resorts was gin rummy, with stakes ranging from $1 to $15 a point not being uncommon. This attracted card "sharps," and although there was no repetition of the Hollywood scandal in 1946, when detectives exposed a ring reputed to have won more than $3,000,000, there were similar cases on a smaller scale.

In England the stakes in bridge and poker were relatively much higher. A game at London's leading bridge club was played regularly for £40 per hundred points with £100 extra to the winner of the rubber, equivalent to well over $2 a point and more than ten times as high as the highest-stake bridge game regularly played in any U.S. club.

Lotteries continued to have general popularity throughout the world except in the United States, where continued agitation to legalize them made no apparent headway and the undercover numbers game was the only flourishing form of lottery. Toward the end of the year Tass reported that a new Russian loan would be promoted, in accordance with previous custom, by a state-operated lottery, and that there would be seven such lotteries, involving about 8,000,000,000 rubles.

(A. H. Md.; M. Ml.)

**Beveridge Report:** *see* Relief; Social Security.

**Bevin, Ernest** (1881– ), British foreign secretary, was born at Winsford, Somerset, England, the son of an agricultural worker. In 1920 he became national organizer of the Dockers' union, and the following year general secretary of the newly formed Transport and General Workers union. From 1925–40 he was a member of the general council of the Trades Union congress and in 1937 was chairman. In May 1940 he became minister of labour in Winston Churchill's coalition government and entered the house of commons for central Wandsworth. Together with the other Labour members he left the government in May 1945, and in July was appointed secretary of state for foreign affairs by Prime Minister Clement Attlee.

Bevin attended the Potsdam conference (July 1945), the Council of Foreign Ministers in London and Moscow (Sept.–Dec. 1945), the first general assembly of the U.N. in London (Jan. 1946) and the Council of Foreign Ministers and U.N. meetings in New York (Nov.–Dec. 1946). In 1947 the Council of Foreign Ministers met twice, in Moscow in March and April, and in London from Nov. 25.

On April 25, after the Moscow meetings which had ended in a deadlock, Bevin was surprisingly optimistic of the future and said, "I would rather take a long time and produce a good peace in the end than have a loose one, slopping over with false formulas." In June he met Georges Bidault in Paris for discussion on the Marshall plan for Europe, and at the end of the month visited Paris again for discussions with Bidault and Vyacheslav Molotov. In July, at the first meeting of the Committee for European Economic Co-operation, he was elected chairman.

**Bible Society, American:** *see* Societies and Associations.

**Bicycling:** *see* Cycling.

**Bidault, Georges** (1899– ), French statesman, was born on Oct. 5 in Moulins, France. He served in the French army during World War I from 1917 to 1919. After the war, he resumed his studies at the Sorbonne university, being graduated with high honours, and later taught history in secondary schools. In 1932 he and members of a left wing Catholic group founded the Catholic newspaper *L'Aube* with Bidault as foreign editor and columnist. At the outbreak of World War II, he joined the army with the rank of sergeant. He was taken prisoner and held in the reich until 1941. On returning to France, he joined the underground and in 1943 became president of the National Council of Resistance. A fortnight after the liberation of Paris, he was named foreign minister (Sept. 9, 1944), in Charles de Gaulle's provisional government. He headed the French delegation to the U.N. charter conference in San Francisco in 1945 and represented France at all the quarterly councils of the Big Four foreign ministers from the initial parley in the fall of 1945 through 1947.

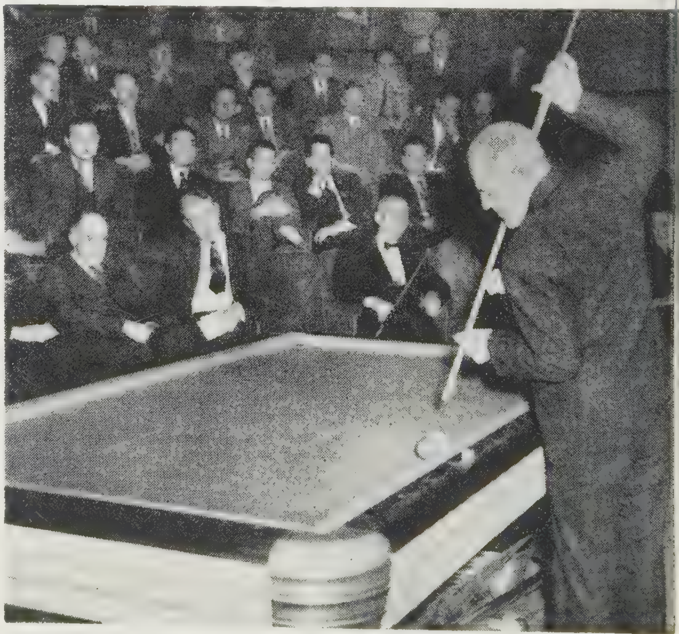
Bidault concurrently held the posts of provisional president and premier of France in June 1946. He resigned in Nov. 1946 but retained the foreign-affairs portfolio in the succeeding Blum, Ramadier and Schuman governments.

A staunch defender of the Marshall plan, he nevertheless expressed regret over the division of the world into "two hostile blocs" and in a speech before the U.N. general assembly on Sept. 20, 1947, said France would work incessantly to recement the riven world. The following month (Oct. 11), he warned his political followers in France that if the Marshall plan failed, "it will mean misery for us all."

During the sessions of the London Council of Foreign Ministers in Dec. 1947, Bidault sided with George C. Marshall and Ernest Bevin in branding as abuse and propaganda Vyacheslav Molotov's charge that the western powers were profiting in Germany.

**Bikini Island:** *see* Atomic Energy.

**Billiards.** Both major world billiard titles, the three-cushion and pocket, were at stake during 1947. Willie



WILLIE HOPPE (right), demonstrating a massé shot before University of Michigan scientists at Detroit in Jan. 1947. The occasion was the discussion of original research on the mathematical and neuromuscular phenomena of billiard playing

Hoppe replaced Welker Cochran as the three-cushion champion, while Willie Mosconi dethroned Irving Crane as wearer of the pocket diadem.

Hoppe's road to the crown he first won in 1936 was made easier when Cochran, the previous champion, did not defend his honours in the world tournament at Chicago in March. The former "boy wonder" was at the top of his game, reeling off eight victories in succession to clinch first place. Arthur Rubin, runner-up with a 7–2 record, lost all hope of tying Hoppe when he was beaten by Andrew Ponzi.

However, Rubin had another chance at the championship later in the year when he played Hoppe in a challenge match. The event started in Detroit on Oct. 25 and ended in Perth Amboy, N.J., on Nov. 9, with the titleholder in front by 1,400 points to 1,076. Hoppe set a world challenge match record in this engagement by scoring 50 points in 21 innings on the opening day. Hoppe and Rubin played the "still ball" game, which is not to be confused with the optional cue ball style used in the 1944 world tournament.

Mosconi, a former pocket billiard champion, regained the title in May by beating Crane in 14 of 16 blocks, 2,000 points to 918, and set a world mark for a 2,000-point match by averaging 15.89 balls per inning. In the fall, Mosconi defended his crown against Jimmy Caras, another former champion, and proved equal to the occasion by capturing 26 of the 32 blocks and scoring 4,000 points to his opponent's 2,334. Mosconi averaged 12.9 balls per inning, and Caras 7.9. Caras took high run honours with 121, while Mosconi's best cluster was 107.

(P. Br.)

# Biochemistry.

**Vitamin-Enzyme Relationships.**—Biotin and pantothen were added to the growing list of those B-vitamins (riboflavin, thiamin, niacin and pyridoxin) which are parts of enzyme systems, and whose biological effects are thus given a chemical basis. Biotin was found to be essential for the enzymatic decarboxylation of oxaloacetate, and for the enzymatic deamination of aspartic acid, serine and threonine. By the reversal of the former reaction, biotin was thought to play a fundamental role in the fixation of carbon dioxide by bacteria and animal tissues. Corroborative evidence was found in the observation that oxaloacetate and aspartate spare the biotin needs of certain bacteria, whose growth is stimulated by carbon dioxide in the presence of biotin, but not in the latter's absence. Biotin deficiency in fowl causes a decrease in the oxaloacetate decarboxylase of liver tissue. Pantothen was found to constitute about 10% of a compound, called coenzyme A, which participates in the acetylation of choline and sulfanilamide by a brain-tissue enzyme, and in the oxidation of pyruvate by bacteria and of acetate by yeast.

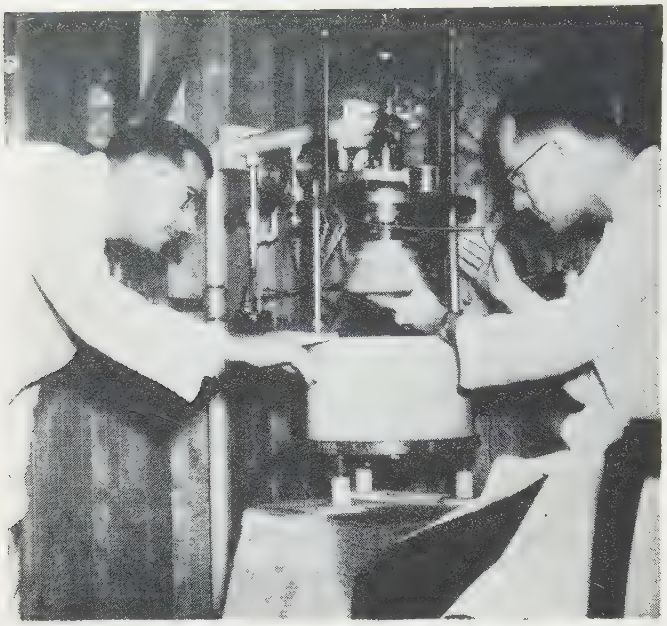
Pyridoxine was found to relieve the deficiency state resulting from absence of dietary fat, and to cause the deposition of linoleic as well as di- and tetraenoic acids in the tissues of rats on fat-free diets. This contradicts the idea that linoleic acid cannot be synthesized by rat tissues, and pointed to a new function for pyridoxine. Pyridoxal phosphate, previously shown to be a coenzyme for transaminases and amino acid decarboxylases, was shown to be also a coenzyme for the tryptophanase of *Escherichia coli,* which converts tryptophane into indole, pyruvic acid and ammonia. Vitamin $B_6$ was also found to be necessary for the metabolic synthesis of tryptophane from indole or anthranilic acid by *Lactobacillus arabinosus.* Pteroyl glutamic acid (PGA) was found to restore the tyrosine-oxidizing capacity of the livers of PGA-deficient rats. In addition to the function of PGA in formation of red blood cells (treatment of pernicious anaemia), this vitamin was found to be essential for normal lactation in rats. The conversion of carotene to vitamin A, previously thought to occur in the liver, was shown in the rat to occur in the intestine, after which the vitamin is transferred to the liver for storage. The oxidation of dioxyphenylalanine was found to be effected by kidney slices of normal animals, but not by those of scorbutic guinea pigs; and the addition of ascorbic acid to the scorbutic slices in vitro restores the ability to oxidize the amino acid. Previously, a similar action of ascorbic acid for the oxidation of tyrosine by liver tissue was reported. Since tyrosine and dioxyphenylalanine are precursors of melanin pigment, these observations are probably related to the removal of the coppery bronze skin colour of Addison's disease by administration of ascorbic acid.

**Enzymes.**—Especially numerous were studies on variations in the occurrence and concentration of enzymes in tissues in different physiological or pathological conditions. Both acid and alkaline phosphatases of kidney are increased in alimentary hyperglycaemia, in phlorhizin poisoning and in alloxan diabetes. It was postulated that the renal threshold for glucose is an expression of the limit to which kidney phosphatase activity can be raised. Striking was the observation that the $\beta$-glucuronidase activity of cancer tissue is 6-36 times greater than that of adjacent or other normal tissue. Since the $\beta$-glucuronidase activity of tissues was known to be increased by estrogens, it was postulated that the increased $\beta$-glucuronidase activity of tumour tissue is a metabolic response to some estrogen or related substance characteristic of cancer.

Among new enzyme activities reported during 1947 may be mentioned: diacetyl mutase, widely distributed in animal tissues, which converts diacetyl into acetic acid and acetoin, and for which diphosphothiamin is a cofactor; a new phospholipid-splitting enzyme specific for the nitrogen base-phosphoric acid ester linkage; an enzyme from liver which converts ribose (from nucleosides) into hexose-monophosphate. For the last reaction, the postulated mechanism is the splitting of the pentose into smaller fragments, and the recombination of two triose units.

**Nucleoproteins and Nucleic Acids.**—The demonstrated relation of nucleic acids to the structure of viruses and chromosomes had implicated these substances in the fundamental processes of growth and inheritance and stimulated many studies on their chemical nature and metabolism. At the annual meeting of the American Society of Biological Chemists in Chicago in May 1947 a symposium was devoted to this subject. The development of methods for the preparation, separation and analysis of these compounds and their degradation products were important. Colorimetric and spectrophotometric methods for characterizing purines, pyrimidines, nucleosides and nucleotides were combined with the use of specific enzymes for degrading and synthesizing these intermediates. Certain strains of neurospora, which require certain purines, pyrimidines or nucleosides for growth were especially useful not only in the analytical methods, but also in showing the metabolic interrelations of the compounds. It was found that the desoxyribose nucleic acids are present in the nucleus, while the pentose nucleic acids are characteristic of the cytoplasm. Dietary adenine, but not guanine, is used for nucleic acid synthesis. From the nucleic acid of tobacco mosaic virus, three mononucleotides were isolated, uridylic, cytidylic and guanylic acids. Ribonucleic acids as usually prepared and as usually occur in tissues are not homogeneous substances; nor do they conform to the composition of a statistical tetranucleotide, containing equimolecular amounts of the four mononucleotides. Variations in tissue nucleic acid composition reflect various stages of growth and development of cells, rather than variations in organs or species.

**Competitive Inhibition.**—Many additional examples were



STANFORD UNIVERSITY scientists, Dr. H. S. Loring (left) and Dr. C. E. Schwerdt, at the centrifuge used in their isolation of an 80% pure virus of poliomyelitis, announced at Palo Alto, Calif., in Jan. 1947

reported of the inhibition of biological processes (growth, enzyme action) by structural analogues of natural substances, especially vitamins and amino acids. Five new analogues of pantothenic acid were found to exhibit antimalarial activity. Tyrosine and β-hydroxyphenylalanine were found to interfere with the growth of *Escherichia coli,* by preventing the synthesis of phenyl alanine. Several synthetic pterins were found to prevent the growth of a number of microorganisms, which require folic acid. Pteroyl aspartic acts similarly on bacteria and was found also to cause folic acid deficiency in chicks. Methylfolic acid was found to displace folic acid in the growth of bacteria and in the action of the enzyme dopa decarboxylase. The growth of *Staphylococcus aureus* was found to be inhibited by the presence of various derivatives of glutamic acid. In each of the above cases, the inhibition could be prevented by the addition of the natural substance analogous to the inhibitor. (*See* also PHYSIOLOGY; VITAMINS.)

## Birth Control.

Planned Parenthood programs throughout the United States were expanded in 1947, a direct result of the first nation-wide campaign of the Planned Parenthood Federation of America, Inc. A major campaign by-product was the vast increase in public understanding and acceptance of Planned Parenthood services. The coverage given by the nation's press, wire services, radio and other media, especially magazines, was instrumental in breaking down some of the resistance to publicized discussion of birth control.

**Research.**—The first comprehensive program for research in the field of human reproduction was instituted during 1947. It was under the direction of the National Research council in Washington. The Committee on Human Reproduction established by the council was to study needs and recommend grants for specific research projects to qualified institutions and i vestigators. The council by contract with the National Con mittee on Maternal Health and in collaboration with the Planne Parenthood federation established this committee to plan th program of research. Research panels were to operate in accor ance with policies to be defined by the newly reorganized boar of the Committee on Maternal Health, under the chairmanshi of Dr. Haven Emerson, professor emeritus of public healt service at Columbia university, and a member of the New Yor city board of health.

The Committee on Human Reproduction of the National Re search council was headed by Dr. Howard C. Taylor, Jr., pro fessor of obstetrics and gynaecology at Columbia university college of physicians and surgeons.

More than the purely medical aspects of reproduction wa envisaged by the Committee on Human Reproduction as vita to its program. The medical aspects are so closely bound to th socio-economic environmental problems of the individual, fam ily, community, nation and the whole world that a sound re search program can ignore none of them. The main areas o the study would include: (1) the physiology of and the factor controlling conception; (2) the causes of sterility and treatmen for infertility; (3) maternal and foetal physiology and clinica disorders developing during pregnancy; (4) the psychologica problems of marriage and family relationships; (5) the popula tion aspects of these problems, social and economic as well a medical.

The Planned Parenthood federation would seek to contribut a substantial part of the funds for the research program. Th clinics and records of its affiliates would also constitute a valu able field for certain of the research projects. While not a part to the contract between the National Research council and th National Committee on Maternal Health, the federation wa collaborating as a full partner in the whole program.

**Medical Survey of U.S. Physicians on Birth Control.**—Dr Alan F. Guttmacher, associate professor of obstetrics and gynae cology at Johns Hopkins, conducted a nation-wide survey t tabulate medical opinion on conception control. According to hi poll, 96% of the physicians in the U.S. approved birth control Teaching of conception control methods in medical schools wa found inadequate. Three-quarters of the respondents had no received training in this area. Only 7% said they had receive both lectures and clinical instruction in contraception.

**Lasker Awards in Planned Parenthood.**—Dr. Guttmache and Dr. Abraham Stone received the third annual Lasker Awards in Planned Parenthood for their distinguished contribution i the fields of marriage counselling and education. The awar recognized Dr. Stone's 30 years of clinical work, teaching an marriage counselling.

**Development of Services.**—Dr. L. E. Kling, formerly wit the U.S. public health service, became acting medical directo of the federation. During his public health services, Dr. Kling developed the first mass X-ray programs and had wide experience in tuberculosis and cancer control public health programs.

Nearly two-thirds of the people of the U.S. believed government health clinics should furnish birth control information, it was found in a Gallup poll conducted during the year. Figures showed that 64% approved, 23% disapproved and 13% had no opinion.

A bill to permit physicians in Connecticut to prescribe contraceptives to their patients was defeated in May when the state senate voted two to one against the bill. It had passed the lower house 180 to 40.

Massachusetts officially opened a campaign for repeal of the state law forbidding medical prescription of contraception on Sept. 2. An initiative petition for a new law was approved by the state attorney general after it had been filed by ten voters headed by Dr. Karl T. Compton, president of the Massachusetts Institute of Technology. Many more than the 20,000 registered voters required by law signed the petition.

Four fertility clinics were opened during the year. Two of them were in Delaware and Connecticut where these services had hitherto been unavailable. Of these four new clinics, two were under Planned Parenthood auspices.

**International Developments.**—An International Union of Family Organizations was established by 27 nations meeting in Paris June 22–29 at a World Conference on the Family and Population. It was called by the French Union of Family Associations. U.S. representatives included Dr. Abraham Stone, who was delegated by the National Research council, the Planned Parenthood federation and the National Council for Family Relations; Dr. Ernest Stebbins, professor of hygiene and public health, Johns Hopkins; Miss Jane Hoey, director of the social welfare bureau, Federal Security agency; Mrs. Rachel Nyswander, director of the women's bureau of the labour department; and Dr. Norman Himes from the educational department of the U.S. military government in Germany. Representatives from the cultural department of the U.S. embassy in Paris and of the United Nations Educational, Scientific and Cultural organization also participated. Dr. Stone was elected a vice-president of the new International Union of Family Organizations.

**Organization.**—The Planned Parenthood federation was in 1947 the national agency and clearinghouse for 38 state leagues and 206 local committees. The total number of birth control centres stood at 550. These services were in 231 public health clinics, 60 hospital clinics and 214 extramural clinics. Of the 55 fertility clinics in the U.S., 12 were under Planned Parenthood direction. (*See* also Birth Statistics.) (M. Sr.)

## Birth Statistics.

Births in the United States reached a record peak in 1947, according to provisional data for the first nine months, which showed a birth rate 23% higher than for the like period of 1946. For each of the first eight months, the birth rate in 1947 was higher than in 1946, but the margin between the two years decreased toward the end of the period; Sept. 1947 fell below the record for the same month in 1946. The estimated number of births in the United States for the whole of 1946 was 3,288,450, and the birth rate 23.3 per 1,000 total population.

Canada's birth rate in 1947 also exceeded that of 1946, according to data for cities of 10,000 or more, which showed a 19% increase for the first eight months. The total number of births in Canada during 1946 was 325,805, the rate being 26.5 per 1,000 total population. There was a rapid upswing in the birth rate in England and Wales from 1946 to 1947; data showed a 13.8% increase for the first ten months in London and the great towns. The recorded number of births for all of England and Wales during the entire year 1946 was 819,894, and the birth rate was 19.1 per 1,000 total population.

An international comparison of birth rates for the years 1944–46 is shown in the table on page 124 with countries ranked according to the per cent change in their rates from 1945 to 1946. It will be noted that all but a few of the countries listed experienced a rise in their birth rate from 1945 to 1946, the first full year of peace. For many of these countries, the birth rates were not only higher than during World War II, but also above the level prevailing a few years before the war. The postwar upswing occurred in spite of food and housing shortages and serious dislocations. At the top of the list of increases in birth rates from 1945 to 1946 were the Netherlands, France and Italy, with gains of 33.0%, 27.2% and 23.5%, respectively. The United States was high on the list with a gain of 18.9%; practically the same showing was made by England and Wales, where the rise amounted to 18.6%. Of the English-speaking countries, Scotland ranked highest, with a gain of 20.1%. Canada showed a rise of 11.8%, while Australia and New Zealand experienced practically identical gains of 8.7% and 8.6%, respectively. The birth rate for the white population of South Africa rose by 7.4%. Observers believed that these postwar increases were the temporary effect of the reunion of families consequent to demobilization; and that, once this effect was over, the birth rate would take a downward trend. Of the few countries showing decreases in birth rates from 1945 to 1946, three—Switzerland, Sweden and Portugal—were neutral, while two—Chile and Mexico—were not active belligerents.

As a result of the upward trend in its birth rate from the low point reached in 1933, the United States had gained, through 1946, more than 4,000,000 babies that would not have been born if the situation of 1933 had remained unchanged (*Statistical Bulletin of the Metropolitan Life Insurance Company*, May 1947). Of this total gain, only 350,000 were attributed to the rise in the birth rate during the 6-year period 1934–39. Substantial contributions to the gain resulted from the wartime spurt in the birth rate. The high birth rate of 1943, as compared with that of 1933, gave the United States 691,000 extra babies; and for the 2 years 1944 and 1945 taken together, the excess amounted to almost 1,000,000.

In 1945, the latest year of complete record for the United States available in 1947, the birth rate for the white population was 19.2 per 1,000, while that for the Negro population was 23.3 per 1,000. The proportion of births attended by physicians ranged from 99.2% for white births in cities of 100,000 or more to only 39.8% for Negro births in rural areas. On the other hand, the proportion of births attended by midwives was at a minimum of 0.7% for white babies in cities of 25,000 or more, but at a maximum of 58.9% for Negro babies in rural areas.

In relation to age of mother, the birth rate in the United States in 1945 was at its highest at ages 25–29 years for white women, the rate being 131 per 1,000 women of those ages; for Negro women, the peak was at ages 20–24 years, with a rate of 149 per 1,000 women.

In view of a common opinion that the ratio of male to female births tends to increase in times of war, R. J. Myers studied the situation on the basis of available data for the United States and Canada over the period 1942–45 (*American Sociological Review*, Feb. 1947). It was concluded that "there is no evidence of any appreciable increase in masculinity of births in the United States and Canada during the second World War, especially when account is taken of the higher proportion of white births and of lower order births."

The sixth of the reports by P. K. Whelpton and C. V. Kiser on the social and psychological factors affecting fertility dealt with the planning of fertility (*The Milbank Memorial Fund Quarterly*, Jan. 1947). The subjects for the study were about 1,000 couples in Indianapolis who were considered typical of a large segment of the urban population. It was found that nearly 90% of the couples attempted, by contraceptive measures, to control the number and spacing of their children. The attempts to plan fertility began at marriage for about two-thirds of the couples, and before the end of the first puerperium by about one-sixth of the couples. Of the couples who knew that they did not experience a period of sterility, about one-half of those attempting to prevent or postpone the first or second pregnancy reported themselves as successful; similar efforts in connection with third, fourth or fifth pregnancies were successful in three-fifths of the cases. Almost three-

*Annual Birth Rates per 1,000 Total Population in Certain Countries in 1944, 1945 and 1946*

| Country | 1944 | 1945 | 1946 | Per Cent Change from 1945 to 1946 |
|---|---|---|---|---|

*Data not available.

quarters of the couples agreed that the most desirable period to bear the first child is from two to three years after marriage, and more than four-fifths agreed upon a like period for the spacing between children. Although almost all husbands were familiar with contraceptive methods before marriage, only one-third of the wives were then acquainted with such methods. Almost all the other wives, however, acquired such information before their second pregnancy. (*See* also CENSUS DATA, 1947.)

## Bismuth.

World production of bismuth was estimated to have reached 1,870 short tons in 1942, but declined to 1,210 tons in 1945 and 1,040 tons in 1946. United States production is about one-half of the total and Peru about one-third, while Mexico and Canada account for most of the remainder. United States output was not reported but is said to have declined by 38% in 1946, because of extended strikes in the smelters and refineries from which most of the metal is recovered as a by-product. Reported outputs for 1946 are as follows, with 1945 figures in parentheses for comparison: Bolivia 30.8 (17.9) short tons, Canada 117.1 (95.0), China 1.5 (—), Mexico 82.7 (178.0), Peru 343 (339). (G. A. Ro.)

## Black Markets.

Black markets in the U.S. were essentially an outgrowth of price controls. When, except for sugar, rice and rent, these controls were removed in Nov. 1946, the background for the black market virtually disappeared. Rice and sugar were decontrolled in July and October, respectively, so that of all wartime price regulations, only rent control remained in effect at the close of 1947. Violations of price ceilings were thus possible only in rentals.

Although 85 areas or portions of areas were decontrolled during 1947, an estimated 14,000,000 dwelling units remained under control at the end of the year. Tenant complaints dropped 38% and compliance actions 67% between the first and last half of 1947, but over-ceiling violations continued on a large scale. Tenants appeared to be restrained from bringing suits for fear of blacklisting or other retaliation. Eviction actions, a means of bringing pressure on the tenant for increased rentals without a written lease, increased 65% over 1946.

**U.S. Gray Market.**—This successor to the black market had its origin in the shortages of many materials and end products which, in spite of record peacetime production levels, co tinued throughout 1947. In the popular mind it consisted of form of profiteering in which speculators bought up all availab supplies of scarce materials with the intention of selling at e cessive prices.

Technically this definition is probably correct, but at least tw other factors contributed to the price squeeze. To keep in bus ness many small manufacturers found it necessary to rely o high-cost spot markets for their supplies, to engage in excessiv cross hauling and to accept abnormal conversion costs. Also, i the absence of legal prohibition many exporters made it a pra tice to charge all the traffic would bear. Much was done to cur the latter practice in Dec. 1947 when congress permitted th Office of International Trade in the department of commerce t take prices into consideration in granting export licences.

Perhaps the most widespread of all gray markets was i building materials. In hearings before the Joint Committee o Housing many instances of profiteering in pig iron, nails, lum ber, gypsum board, steel products and other items were re ported. Maldistribution, however, accounted in some part fo the high prices, as in the case of cast iron soil pipe.

Steel was likewise subject to profiteering. Estimates of th amount flowing into the gray market varied greatly from rela tively negligible quantities to substantial amounts. The out side estimates apparently included high priced output of smal mills forced to absorb uneconomic costs of spot supplies, exces sive cross hauling and abnormal markets—the results of basi conditions and not gray marketeering. Unquestionably som customers of integrated producers preferred to dispose of par of their supplies in the gray market rather than use it them selves. When cognizant of this fact the producers took steps t cut off the customer, even when this involved the threat o legal action for contract violation. Complete policing, how ever, was impossible. Another contributing factor was the pres sure exerted by some scrap dealers on small producers, many o whom were completely dependent on scrap for their raw mate-

OPEN-AIR TRANSACTION in Paris. Low incomes and the continued scarcity of food and other necessities kept black markets thriving in the French capita during 1947

rial. In return for scrap, the dealers forced the mills to furnish them specified quantities of finished steel products which frequently were diverted outside normal distribution channels at high prices.

Gray marketeers also were active in the purchase and sale of automobiles. Production of about 3,500,000 passenger cars in 1947 failed to satisfy demand, and second-hand postwar models continued to bring prices well in excess of those charged for new cars. Many real or pseudo consumers bought for resale through used car lots or individual offerings, and the ability of manufacturers to control the situation was limited. Where it was known that a dealer was profiteering, it was customary to take away his franchise. But since connivance between new and used car dealers was the exception rather than the rule, the results of such policing were relatively insignificant.

Gray markets in exports were probably no more prevalent than in domestic transactions, although some merchandise for prompt delivery was obtained through abnormal trade channels at excessive price levels. A limited number of domestic overmarket sales apparently were consummated in lead, copper, aluminum and other scarce materials. (H. B. My.)

**Continental Europe.**—Black market operations in Europe in 1947 continued to involve directly almost every person able to pay the high prices demanded. In France the pattern was one common to all Europe: money was so unstable as to be undesirable in large quantities and therefore at all costs to be transformed into goods. In general, black market prices were two-and-a-half to three times higher than official prices. It was observed that the black market price fell rapidly as soon as a commodity was released from rationing. When control was taken off wine during the summer, the price for an ordinary bottle fell from about frs. 120 to frs. 45. Major black markets continued to exist in textiles and machinery.

Although conditions were better in the Scandinavian countries and in Switzerland, where there was some rationing but no real scarcity and consequently no black market, the position of the rest of Europe was much the same as that of France. In Italy, Spain and Greece, where many peasants were as badly off as townspeople, the contrast of the luxury provided by the black market with the near-starvation of the lower grades of workers was even more acute. In western Germany, under conditions of total scarcity and with a distrusted domestic currency, black market dealings were based primarily on barter. Here, more than anywhere in Europe, the cigarette was the real currency.

**Great Britain.**—During 1947 the black market in Great Britain continued to be active but did not openly flourish as it did on the European continent. Thefts of cloth, cigarettes and whisky continued to supply the black market. From time to time protests were made against greengrocery wholesalers and retailers for selling scarce fruit and vegetables either above the controlled price or on the understanding that a quantity of less desirable produce was also purchased. In the autumn illicit sales of young pigs took place and later the black market in livestock of all kinds was beginning to reach serious proportions. (G. Ln.)

**Blue Cross:** *see* INSURANCE.

**Bolivia.** A land-locked republic in south central South America. Area, 416,040 sq.mi.; pop. (1945 est.), 3,596,000. The legal capital is Sucre (est. pop., 1946, 32,000); the real seat of government is La Paz (est. pop. 301,000). Other cities (with pop. estimates) include Cochabamba (80,000), Oruro (50,000), Potosí (40,000), Santa Cruz (32,800) and Tarija (27,000). Racial distribution is estimated to be 52.34% Indian, 27.5% mestizo, 13.08% white, 0.22% Negro and 6.85% unspecified. Religion: predominantly Roman Catholic. Presidents in 1947: Tomás Monje Gutiérrez, to March 10; Enrique Hertzog, from March 10.

**History.**—Developments in the early months of 1947 were a direct aftermath of the sensational revolt of July 1946 in which the dictator, Lieut. Col. Gualberto Villarroel, was overthrown and killed. Tension remained at a height in the closing months of 1946 despite the provisional government's promise of presidential elections early in January. In the campaign, as it shaped up at the end of 1946, Enrique Hertzog and Luis Fernando Guachalla emerged as the outstanding opposing candidates. The election was held as scheduled on Jan. 5. Five days later a four-man commission was named by the provisional regime to supervise a recount and certification of the vote, which apparently was quite close. Official results were announced Jan. 16: Hertzog, 43,581; Guachalla, 43,203. The ministry of government announced on Jan. 20 that inasmuch as neither of the two men had an absolute majority of the popular vote it would be necessary for congress to make a decision, as required by the constitution; supporters of the two were almost equally represented in congress.

Guachalla on Feb. 24 withdrew all claim to the presidency, clearing the way for congressional choice of Hertzog soon thereafter. On March 6 congress elected José Antonio Arce, leader of the liberal P.I.R. (Partido Izquierdo Revolucionario), as president of the chamber of deputies.

Hertzog was inaugurated on March 10 and announced an all-Socialist Republican Union cabinet. He lauded the Argentine government and pledged economic co-operation with that country. The government on May 1 arrested Víctor Andrade, an M.N.R. leader and former ambassador to the United States, along with 11 other leaders of the M.N.R., and deported them to Chile because of political plotting. A strike of miners at Bolivia's largest tin mine, beginning May 8, further complicated matters for the government; the mine reopened on government orders on May 24. Labour difficulties continued, however, and on Sept. 18, Pres. Hertzog declared a state of siege; the situation was especially confused in the Catavi area, where the so-called Catavi massacre of miners and their families had occurred in Dec. 1942.

The provisional government was forced to put down Indian raids on farms near Lake Titicaca on Jan. 10. A serious flood at Trinidad in northern Bolivia on Feb. 28 inundated about 50,000 sq.mi. and necessitated evacuation of 200 persons by plane. Bolivia adhered to the I.R.O. (International Refugee Organization) in May and agreed to contract for the immigration of 100 European refugee families.

Bolivia on Oct. 26 concluded an agreement with Argentina to arbitrate all mutual disputes.

**Education and Religion.**—The women's civic league of Bolivia began co-operation during the year with the ministry of education for organization of Sunday courses for workers in reading, writing, Bolivian history and geography, English, Spanish, arithmetic, religion and ethics, civil and criminal law and other subjects. The government during the year decreed pay raises (of from 5% to 65%) for all teachers.

**Finance.**—The theoretical monetary unit is the gold peso, valued at 20.6 cents, U.S. currency. Most transactions, however, are carried on in terms of bolivianos, valued at 2.36 cents (controlled price), U.S. currency, on Oct. 31, 1947. The extraordinary budget was approved by decree on June 27 in sum of 316,776,000 bolivianos; the ordinary budget for the year amounted to 1,156,000,000 bolivianos, the total of the two being 1,472,776,000. Government receipts by April 30 under the ordinary budget were only 66% of expenditures, but the budget director predicted that the deficit would be made up later in the year; revenues by that time were 122,536,000 bolivianos below expectations. The drop was blamed largely on declining tin exports, which had an unfavourable effect on the whole economic picture. The Central bank's dollar balance Jan. 1, 1947, was $1,707,000; the overdraft in dollars April 30 was $2,040,000. A report circulated at that time that a short-term loan of $2,500,000 would be obtained from the New York Federal Reserve bank. Pres. Hertzog on May 31 approved a law authorizing a $5,000,000 loan from a U.S. commercial bank. Another law in May raised the national government's credit limit with the Central bank to 1,300,000,000 bolivianos plus a 200,000,000-boliviano mortgage loan against public construction. The law represented an increase of 600,000,000 bolivianos in the government's credit with the bank; the bank unsuccessfully tried to oppose effecting of the law. Accumulation of unprocessed applications for import licences totalled $50,000,000 by early in the year; the exchange shortage resulted partly from the drop in tin exports during negotiations for a new purchase contract.

**Trade and Communications.**—Imports in 1946 were 313,000 metric tons valued at $52,223,000; exports in the same year were 200,175 metric tons valued at $72,519,000. Imports of petroleum products in 1946 totalled 149,928 bbl. and included 138,325 bbl. of motor fuel. Economic relations with Argentina increased in various ways during the year. The two countries on March 8 signed an economic pact, which the Bolivian congress approved on May 26. On March 26 Bolivia signed a tin-sale agreement with Argentina. Presidents Hertzog and Juan D. Perón met at Yacuiba on Oct. 23 and signed a comprehensive trade pact, terms of which resembled those Argentina had negotiated with Chile. After long negotiations, Bolivia concluded a tin agreement with the United States in March, retroactive to Jan. 1; the basic price was increased from 67 to 76 cents per lb. The government also undertook negotiations for a new trade agreement with Peru.

A section of the railway from Corumbá, Brazil, to Santa Cruz (all of it to be part of a new transcontinental railway from Santos, Brazil, to Arica, Chile), was opened for 186 mi. east of Corumbá early in 1947; it was anticipated that the line would be completed as far west as San José during the third quarter of 1947. The government planned an early start on work on a La Paz-Beni railway to the north. Various highway projects were advanced irregularly during the year.

**Agriculture.**—A U.S.-Bolivian agricultural experiment station program passed the planning stage during 1947; it was designed to begin with experiments with forage crops both in the altiplano and at lower elevations. Brazilian seed was being used extensively in eastern Bolivia. The program planned to pay attention to wheat, barley and rye cultivation.

**Mining.**—Crude oil production in 1946 was 362,659 bbl. (1945: 381,554 bbl.); petroleum products marketed in 1946 totalled 362,981 bbl., including 250,615 bbl. of motor fuel. The government officially approved a petroleum development program on July 3, 1947, involving an Export-Import bank loan of $8,500,000 to Bolivian agencies, approval of contracts for new and extended pipe lines, construction of refineries at Cochabamba and Sucre, etc. Labour difficulties during the year led the government to prohibit closing of any mines for one year.

## Book-Collecting and Book Prices.

There was a marked increase in the collecting of pure Americana and historical works during 1947, and a concurrent decrease in the collecting of literature in the United States. Prices showed the effect of this movement, which was sufficiently strong to deserve more than the designation of a mere trend. Symptomatic were the prices paid in New York city during October for the books of Herbert S. Auerbach, with the following prices suggesting the whole: W. Clayton's *Latter-Day Saints' Emigrants' Guide* (1848), $1,150; Joseph Smith's *A Book of Commandments for the Government of the Church of Christ* (1833), $1,250; Joseph Cain and Arieh C. Brower's *Mormon Way-Bill* (1851), $3,400. Increased shipments of material from Europe to the United States caused prices in the U.S. market for such material to show definite decrease.

The most notable event of the year was the sale at Parke-Bernet galleries in New York city (Jan. 28) of the Prince-Crowninshield-Stevens-Brinley-Vanderbilt-Whitney copy of the *Bay Psalm Book*, printed by Stephen Daye at Cambridge, Mass., in 1640. It was knocked down to the Rosenbach Company for $151,000, thus establishing the highest price ever paid at public sale for a printed book. It was purchased for Yale university libraries, the transfer being marred by a financial misunderstanding which was not satisfactorily explained publicly by either of the principals in the transaction. On another plane was the price realized for a holograph note of Herbert Hoover, written while president of the United States, which was sold at Samuel T. Freeman & Co. galleries (Philadelphia) for the astonishing price of $550. Another noteworthy price was realized at Sotheby's (London) on March 11 when a Gutenberg Bible (vol. 1 only) brought £22,000.

The European market continued turbulent with prices bas on those of commodities in the black market. As for the Briti market, Sir D'Arcy W. Thompson summarized it by declari that the price of better old books had risen greatly, to the poi where the bibliophile-scholar could no longer hope to posse books which he could well afford 30 or 40 years before. S D'Arcy attributed this condition to economic causes, taste a fashion, and the great increase in public libraries, especially the United States.

Among bibliographical publications were: *The New Col phon: A Book Collectors' Quarterly*, edited by John T. Wi terich, Frederick B. Adams, Jr., and Elmer Adler; *Dakota In prints, 1858–1889*, edited by Albert H. Allen; *Carrousel f Bibliophiles*, edited by William Targ; Colton Storm and Hov ard Peckham's *Invitation to Book Collecting;* the Grolier Club *One Hundred Influential American Books Printed Before 190* Worthy of inclusion in this list was the catalogue of books an manuscripts issued by Bernard Quaritch, Ltd. (London) commemorate the 100th anniversary of the establishment of th firm, containing a biographical study of Quaritch written by h daughter, Charlotte Quaritch Wrentmore.

In December, the R. R. Bowker company, publishers to th U.S. book trade, announced plans for the establishment of magazine, *Antiquarian Bookman*, under the editorship of Sc M. Malkin, devoted exclusively to antiquarian books and relate literary material and designed for antiquarian book dealer librarians and collectors. (J. BK.)

## Book Publishing.

The increase of title production in th U.S. which began after the close o World War II continued in 1947 with a total of 9,182, or 1,44 more titles than appeared in 1946. Greatest increase was show in the field of fiction, followed in order by those of religion an theology, philosophy and ethics, science and law. Books on fin arts represented the single class with title production on a de cline, but this may have been a result of increased costs a well as paper shortages. The five leading publishing houses o 1947, as in the previous year, were Doubleday (and subsidiaries with 447 titles, followed by Macmillan (420), Harper (wit Hoeber) (241), Grosset & Dunlap (232) and McGraw-Hi (with Whittlesey House) (214). Book reviewers and deale deplored the flood of new titles appearing in November whic resulted in a seeming neglect on the part of the critics an possibly lowered sales.

There was a marked increase (about $6,500,000) in boo exports from the U.S. to supply an almost insatiable market i Europe and Asia where so many libraries were sadly deplete or totally destroyed.

Table I.—*Publication of Books in the U.S., 1947 and 1946*

| International Classification | 1947 New books | 1947 New editions | 1947 Total | 1946 New books | 1946 New editions | 1946 Total | Ne Chan |
|---|---|---|---|---|---|---|---|
| Philosophy, Ethics | 240 | 50 | 290 | 164 | 28 | 192 | +9 |
| Religion, Theology | 560 | 70 | 630 | 479 | 51 | 530 | +10 |

**Best Sellers.**—Topping the 1947 list of best sellers in fiction was Laura Z. Hobson's *Gentleman's Agreement,* with an over-all sale among stores and book clubs of more than 1,000,000 copies. Second highest on the fiction list was *Prince of Foxes,* by Samuel Shellabarger, with an over-all sales total of 832,000. The bookstore sales for each were 172,615 and 107,000, respectively. They were followed, in third place, by Sinclair Lewis' *Kingsblood Royal* which, like *Gentleman's Agreement,* dealt with inter-racial relations. Next in order of total sales were *The Moneyman* by Thomas B. Costain, *Lydia Bailey* by Kenneth Roberts, *The Wayward Bus* by John Steinbeck, *The Miracle of the Bells* by Russell Janney, *The Vixens* by Frank Yerby, *House Divided* by Ben Ames Williams and *East Side, West Side* by Marcia Davenport; the last two titles were sold only through the bookstores. Rated by bookstore sales alone, *The Miracle of the Bells* in its second year as a best seller took first place and *Prince of Foxes* (second on the above list) placed last.

John Gunther's *Inside U.S.A.,* with 187,000 copies in print, took first place on the 1947 best-seller list for nonfiction, including store and book club sales. It was followed in second place by *Human Destiny* by Pierre Lecomte du Noüy. Joshua Liebman's *Peace of Mind,* a best seller for two years running, was in third place. It was followed, in order of total sales, by the *Information Please Almanac, 1947, Together* by Katherine T. Marshall, *A Study of History* by Arnold J. Toynbee, *The Egg and I* (a best seller for the third consecutive year) by Betty MacDonald, *Speaking Frankly* by James F. Byrnes, *The American Past* by Roger Butterfield and *The Fireside Book of Folk Songs.* On the basis of bookstore sales alone, *Peace of Mind* was first among nonfiction best sellers, having sold about 270,669 copies exclusive of book club and foreign sales. (X.)

**Great Britain.**—Book publishing in Great Britain, during 1947, continued to a great extent to follow the general pattern imposed upon it during World War II. In the first 10 months of 1947, the total number of new titles published in Great Britain was 10,653, of which 1,934 were reprints and new editions (comparative total figures for previous full years were: *1939,* 14,904; *1940,* 11,053; *1941,* 7,581; *1942,* 7,241; *1943,* 6,705; *1944,* 6,781; *1945,* 6,747; *1946,* 11,411).

In the first 6 months of 1947 the volume of business amounted to £13,370,661 (compared with £12,293,692 for the corresponding period of 1946). Since the trade in books during the second half of any year is invariably greater than in the first half, it was expected that the final figure for the whole of 1947 would be greater than the 1946 figure of £26,961,622, which was itself nearly £5,000,000 greater than the 1945 figure. The prewar average annual total was about £10,000,000. During the first half of 1947, the export trade amounted to £3,360,830, compared with £3,095,929 during the corresponding period of 1946.

Despite these considerable increases British book publishers were unable to supply more than a fraction of the quantity of essential books required. In May 1947 the vice-chancellor of Cambridge university, supported by the heads of colleges, appealed in the *London Times* to all former Cambridge students to relieve the book shortage at the university by lending or selling to their old colleges such textbooks and standard works as they might still possess and could spare. At Jan. 1947 the book publishers' paper ration stood at 80% of their prewar consumption, plus an additional 10% for export. In March the basic ration was cut to 70% and in May was further reduced to 60%. Provided a publisher undertook to devote the same proportion of his basic ration as hitherto to the production of educational books or to export he was eligible to receive an additional 20% for these special purposes. Restrictions imposed in Sept. 1947 on the importation of foreign books into Great Britain further aggravated the shortage of technical books.

PROFESSOR ARNOLD J. TOYNBEE, English scholar, in an informal discussion with students at Bryn Mawr college, Pa. A one-volume abridgment of his six-volume *A Study of History,* published in March 1947, became a leading best seller of the year

**Europe.**—In France, although the devaluation of the franc and the exorbitant cost of imported paper inflated the price of books, output in titles approached prewar level. In each of the zones of Germany, general publishing went forward, but the main effort was concentrated upon providing the denazified school books that were required in prodigious quantities. Polish and Czechoslovakian book publishing, which had practically ceased during the years of occupation, except for "permitted" publications, was notably restored, while in the Netherlands and Belgium, from all appearances and accounts—and still more in Italy—book production had fully caught up with, and possibly even outrun, readers' requirements. In Switzerland and in the Scandinavian countries book publishing was marked by its considerable volume and admirable technical quality.

## Boron Minerals.

The United States output of boron minerals made a new record high in 1946 with 430,689 short tons, against 325,935 tons in 1945. This figure is more than a third greater than the previous high of 1937 but the boron content had increased by only 7%. Imports, which had been lacking for 3 years previously, rose from 1,344 lb. in 1945 to 100,567 lb. in 1946. U.S. exports of borax dropped from a high of 154,052 tons in 1937 to a low of 27,118 tons in 1943, but had recovered to 53,303 tons in 1946. About 90% of the world output is produced in the United States. (G. A. RO.)

## Boston.

Boston, the capital of Massachusetts and the ninth city in the United States in population, is located on the Atlantic seaboard at the head of Massachusetts bay. It had a population of 770,816 by the 1940 federal census and a land area of 43.9 sq.mi.

Mayor James M. Curley's appeals from the findings of the federal court in 1946 were not sustained and he started serving the sentence imposed by the court on June 26. Under a special statute, City Clerk John B. Hynes became temporary mayor during the absence of the mayor. This act gave Hynes permanent tenure as city clerk at the end of his service as temporary mayor and permitted Mayor Curley to receive his regular salary. Mayor Curley was pardoned by President Harry S. Truman Nov. 26 and returned to his office immediately.

Loan orders authorizing expenditure of $27,000,000 for veterans' and low-cost housing were adopted by the city council. Subsequently, the housing authority awarded contracts totalling $10,000,000 and providing for the erection of 434 buildings containing 851 apartments. A loan of $5,000,000 was issued for the establishment of off-street parking facilities, and three locations in downtown Boston were taken and conversion of these areas into parking lots started. The council authorized installation of 5,000 parking meters throughout the city and the traffic commission prepared for installations in the Back Bay. The construction of a garage under Boston common was deferred because of court action claiming use of the common for garage purposes would be in violation of the terms under which it was originally secured.

The Metropolitan Transit authority, a political subdivision of the commonwealth, exercised the option provided in the 1931 Boston Elevated Public Control act, paid over to the company cash equal to $85 per share for all outstanding common stock and became invested with the assets, property and franchises of the company and assumed all its outstanding indebtedness and liabilities. The transit commission started construction on an $8,500,000 rapid transit project in East Boston.

Pay-roll costs were sharply expanded by legislative acts authorizing (1) a 48-hr. work week for firemen, (2) one day off in six for patrolmen, (3) substantial increases to school teachers, (4) a 40-hr. work week for employees, except police, firemen and teachers and (5) equal pay for teachers.

The 1947 tax rate was $46.50 (1946—$42.00) on an assessed valuation (real and personal) of $1,558,610,900, an increase of $22,225,300. Budget: (city and county) $61,802,673.82, an increase of $8,000,000; (schools) $19,675,134.99, an increase of $2,100,000. School enrolment decreased 2½%. In the period Jan.–Nov., bank clearings increased 10.7%, bank debits increased 4.7%, department store sales increased 6.9%, manufacturing employment increased 4%, manufacturers' payrolls increased 14%. (C. J. Fx.)

**Botanical Gardens:** *see* BOTANY.

## Botany.

During 1947 botanical activity returned to prewar levels, despite a shortage of qualified instructors and investigators. A survey of the requirements and of the availability of botanists in the U.S.A., conducted by the Botanical Society of America, indicated that by 1950 there would be a 33% shortage of Ph.D.s and a 46% shortage of M.A.s in botany.

Several international congresses of interest to botanists were held during the year. These included the sixth International Congress for Experimental Cytology in Stockholm, Sweden, and the fourth International Congress of Microbiology in Copenhagen, Denmark. Several new journals made their initial appearance, including *Heredity*, published in England, and *Evolution*, published in the United States.

Most botanical societies in the United States held their annual meetings in Chicago, Ill., in December, in connection with the American Association for the Advancement of Science. A botanist, Professor E. C. Stakman, became president-elect of the A.A.A.S. At these meetings, a sufficient number of botani and zoological societies voted to join the proposed Ameri Institute of Biological Sciences to ensure the organization this agency.

All phases of botanical research showed activity during year. Progress was greatly accelerated by the use of newly veloped techniques. The electron microscope began to play significant role in botanical investigation. The greatly increas availability of radioactive isotopes made possible more extens use of these substances in the study of plant metabolism. Pla tissue-culture techniques were further improved and were tensively employed in physiological and genetical investigatio The growing realization of the important biological effect many chemical substances led to a sharp rise in the number investigations in this field. With the assistance of the new established Chemical-Biological Co-ordination centre of t national research council, a number of workers began an exte sive study of the structure of organic compounds in relation their biological effects.

**Research Projects.**—J. T. Buchholz developed methods f the study of cell structure by electron microscopy and describ details of chromosome and mitochondrial structure in vario tissues.

M. S. Brown reported results of the Bikini atomic bomb tes on chromosome structure in cotton. Induced abnormalities i cluded the presence of multivalents, loss of a chromosome a reduction in chiasma frequency.

S. Aronoff, A. Benson, W. Z. Hassid and M. Calvin expos barley seedlings to $C^{14}O_2$ for 60 min. in the light and found t radiocarbon to have been incorporated not only into sugars b also into a variety of other compounds, including amino acid proteins, cellulose and lignins.

C. P. Swanson found that exposure to infra-red before after X-raying increased the number of induced structur changes in the chromosomes in *Tradescantia* microspores.

A. C. Hildebrandt and A. J. Riker showed that tissues higher plants grown in culture respond differently to differe growth-regulating substances. They suggested that tissue cu tures might become valuable as assays of growth regulators.

N. F. Kent and R. A. Brink found that addition of case hydrolysate or tomato juice to the medium in early stages c barley embryo culture prevented premature differentiation, thu ensuring larger, more robust plants.

A. H. Sparrow and M. R. Hammond reported the presence o Feulgen-positive bodies in the cytoplasm of meiotic prophas stages of microsporecytes of eight genera of plants. This con tradicts earlier concepts according to which Feulgen-positiv desoxyribose nucleic acid is confined to the nucleus.

R. S. deRopp showed that bacteria-free crown-gall tumou tissue, growing on tobacco, tomato or sunflower, generates diffusible substance capable of stimulating growth of norma tissue and converting it into tumour tissue.

Sterling Emerson produced a mutant strain of *Neurospor* which requires sulfonamides for growth. T. Kushinck, C. Randle, C. T. Gray and J. M. Birkeland similarly found strain of certain bacteria which require the antibiotic streptomycin fo growth.

C. C. Lindegren and C. Raut found that inability of mutan yeast to grow in media deficient in a specific vitamin is not ab solute, but may be a function of the concentration of that vita min, or of the presence or absence of certain mineral con stituents.

D. I. Macht showed that blood sera from human patients wit different diseases have different effects upon the growth o *Lupinus*, thus offering a possible new method for the differentia diagnosis of these diseases. (*See* also BIOCHEMISTRY; GE

NETICS.)

Books published during the year include: *The Fungi,* by F. A. Wolf and F. T. Wolf; *Introduction to Paleobotany,* by C. A. Arnold; *Diseases of Crop Plants,* by J. G. Dickson; *Radioactive Traces in Biology,* by M. D. Kamen; *Trace Elements in Plants and Animals,* by Walter Stiles; *Hormones and Horticulture,* by G. S. Avery, Jr., and B. B. Johnson; *Nature and Prevention of Plant Diseases,* by K. Starr Chester; *Introduction to Plant Anatomy,* by A. J. Eames and L. H. MacDaniels.

BIBLIOGRAPHY.—*Annals of Botany; American Journal of Botany; Biologia; Nature; Science; Biological Abstracts; Botanical Reviews.*
(R. E. CD.)

**Arboretums and Botanical Gardens.**—The National arboretum in Washngton, D.C., was reactivated by the appointment of a special arboretum dvisory committee by the secretary of agriculture. This committee, omposed of 16 citizens, was given the responsibility of drawing up a tatement of scope and objectives for the National arboretum, and was nost active during 1947; it made its report to a congressional committee nd asked for specific funds to carry out the projected plans. Frederic P. Lee of Bethesda, Md., was designated chairman of this committee.

The Arnold arboretum of Harvard university received two gifts of pproximately 150 ac. of land in Weston, Mass., and nearly $1,000,000 n endowment. A rearrangement of its policies enabled the Arnold aroretum to grow only meritorious plants on its grounds at Jamaica Plain, Mass., and all other plants in permanent nursery rows on the Weston roperty about 12 mi. away. This greatly reduced the maintenance costs f the arboretum proper. The Morton arboretum of Lisle, Ill., had exellent success with its classes for homeowners in landscape planning nd also in various types of art work dealing with plants. Its program or training Chicago schoolteachers in nature study proved a tremendous uccess, and it was being expanded, including many classes for children hroughout the summer.

The New York Botanical garden continued the extensive drive for unds for new buildings. One of the innovations in its rather extensive educational program was a special radio program initiated on a weekly basis. Dr. P. P. Pirone, formerly of New Jersey Agricultural Experiment station, was appointed to the position of plant pathologist. The University of Washington arboretum at Seattle, Wash., reorganized its Arboretum oundation and the method by which this active group of private citizens works for the arboretum's interests was further clarified. The objectives, lans and history of the Cornell plantations (Cornell university, Ithaca, N.Y.) were clearly outlined and discussed in book form, *The Cornell Plantations, A History,* by Ralph S. Hosmer.

The American Association of Botanical Gardens and Arboretums held its annual meeting in San Francisco, Calif.; past accomplishments and uture plans were discussed. One of its publications during the year, *The Arboretums and Botanical Gardens of North America,* by Donald Wyman, Arnold arboretum, Harvard university, discussed in detail all the 90 "gardens" in this category, together with others that had been disontinued and 26 additional "gardens" in 19 states that had been established or were about to be established. (*See* also HORTICULTURE.)
(D. WN.)

## Bowles, Chester

(1901– ), U.S. businessman, government official, author and economist, was born in Springfield, Mass., on Aug. 5. A graduate of Yale, 1924, he formed with William Benton in 1929 the advertising firm of Benton and Bowles and became chairman of its board in 1936. He resigned in Jan. 1942 to become tire-rationing director and later Office of Price Administration director for Connecticut. On July 15, 1943, he was appointed national OPA general manager and, on Oct. 25, OPA administrator. For three years he fought vigorously to maintain and popularize effective price, rent and rationing controls. On Feb. 14, 1946, President Harry S. Truman appointed Bowles director of the Office of Economic Stabilization. In this post he exercised supervisory authority over prices, wages and their interrelations with agricultural and industrial production. He also carried on in the spring of 1946 a bitter fight for one year's extension of price controls after July 1946. On June 28, however, he resigned in protest against congressional weakening of the price control act and urged President Truman to veto the new bill. He predicted that it would permit sharp increases in living costs and a grave danger of inflation. In the autumn of 1946 he was active in Connecticut state politics but failed to receive the Democratic nomination for governor. In 1947 he attended the Paris United Nations Educational, Scientific and Cultural organization conference as an alternate U.S. delegate; lectured widely and wrote articles on current economic problems; served as a consultant to the United Nations and directed the economic report of Americans for Democratic Action. His book, *Tomorrow Without Fear,* published in June 1946, urges annual federal expenditures sufficient to assure full production and argues for greater equality in income distribution to widen mass markets. In 1947 Trygve Lie appointed him chairman of the International Committee of the United Nations Appeal for Children, a voluntary nongovernmental group. In this capacity he left for Europe in Dec. 1947, for an extended survey of the committee's organization in Europe. (R. R. R. B.)

## Bowling.

Junie McMahon of Chicago scored one of the infrequent "doubles" of American Bowling congress history by winning both the singles and all-events of the 1947 tournament. He scored 247–248–245—740 to win the singles crown in competition at Los Angeles, Calif., and collected the all-events title with 1,965. The doubles division went to Edward Doerr, Jr., and Len Springmeyer of St. Louis, Mo., with 1,356. The Eddie and Earl Linsz team of Cleveland, O., won the five-man event with 3,032. Members of the team were: Fred Drury, Samuel Pantelione, Charles Whiteman, Steve Pisesalko and Theodore Miller.

Andy Varipapa, Hempstead, N.Y., veteran, repeated as national individual match game champion, defeating Joe Wilman of Berwyn, Ill., by 17 pins. Stanley Slomenski of Newark, N.J., was third.

In the women's international congress championships, winners were: Marge Dardeen of Cincinnati, O., all-events; Candice Miller and Emma Beard of Fort Wayne, Ind., doubles; Kornitz Pure Oil of Milwaukee, Wis., team. (M. P. W.)

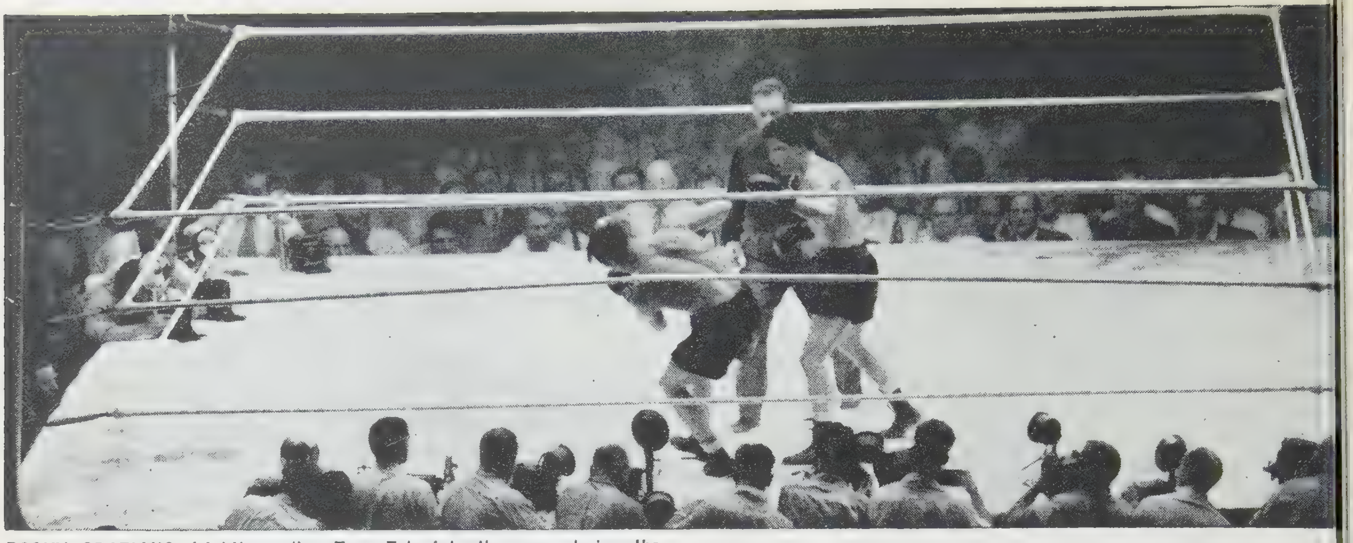
## Boxing.

Professional boxing in the United States started under a cloud in 1947. It ended with a roar of disagreement over a decision in a world heavyweight championship match. Between these periods, spread almost over the year's span, the sport was subjected to a legal investigation in its richest centre, New York; four champions retained their titles, two title-holders were dethroned; another title was declared forfeited for inability of the champion to make his class weight, only to be later restored, and the sport generally underwent a sharp dip from the standpoint of patronage and gate receipts. Tragedy presented itself when, for the first time in modern history, a challenger died following a championship bout.

The investigation of alleged charges that he failed to report a proffered bribe to throw a bout against Reuben Shank in 1946 led to the revocation of the licence of Rocky Graziano in his native New York. Ineligible in his own state, Graziano knocked out Tony Zale of Gary, Ind., in the sixth round of a bout held at Chicago Stadium, Chicago, Ill., July 16, to become world middleweight champion, despite his ineligibility. The bout drew record indoor receipts of $422,918, paid by a crowd of 18,547, which saw Graziano avenge a similar defeat he had suffered at the hands of Zale in 1946, and provided the most thrilling ring spectacle of the year.

Subsequently, publicity was given an unfavourable army record of Graziano's, with the result that the champion found himself disqualified in every important boxing centre. He was still vainly waiting for reinstatement when the year ended, without having once defended his title.

Ray Robinson, world welterweight champion, was also under investigation. He was exposed to official inquiry for failure to report an alleged bribe of $25,000 not to make weight for a bout. The investigation ended with Robinson fined $500 and suspended for 30 days. It was in Robinson's sole defense of his title that tragedy occurred. He knocked out Jimmy Doyle (Delaney), Calif., in the eighth round of a bout at Cleveland, Ohio, July 24, and the following day Doyle died in a Cleveland



ROCKY GRAZIANO (right) sending Tony Zale into the ropes during the world middleweight championship bout at Chicago on July 16, 1947. Graziano became the new titleholder by a technical knockout in the sixth round

hospital. The fatality led to reform in the examination of boxers, orally and physically, which took root in Cleveland and swept the country.

Robinson knocked out Chuck Taylor, Coalport, Pa., in the 6th round of a scheduled 15-round bout Dec. 19, at Detroit, Mich., and following the bout Taylor was removed to Woman's Hospital, Detroit, for observation for a kidney complaint. He was released the following day. The bout drew receipts of $83,522, an indoor record for Michigan.

Joe Louis made one defense of his world heavyweight title and narrowly missed being dethroned. Against Jersey Joe Walcott, in Madison Square Garden, New York, Dec. 5, Louis, far below the form which established him as one of boxing's greatest fighters, retained his title after 15 rounds, on a split decision. The vote was 2 to 1 in favour of the champion. The decision created a furore among onlookers who paid receipts of $216,477, a new record for Madison Square Garden, who disagreed violently after having seen Walcott floor Louis in the first round for a one-count, and again in the fourth round for a seven-count. The Madison Square Garden former receipts record was $201,613, made by Jack Delaney and Jim Maloney in 1927.

Disappointed with his own showing, Louis frankly admitted that his reflexes had dimmed with the passing of the years, and, insisting on a return bout against Walcott for the summer of 1948, declared it would be his last ring battle.

Gus Lesnevich, Cliffside Park, N.J., retained his world light-heavyweight title when he knocked out Billy Fox, Philadelphia, Pa., in the tenth round of a bout held in Madison Square Garden, Feb. 28.

A situation of confusion which involved the world lightweight title was settled when Ike Williams, Trenton, N.J., knocked out Bob Montgomery, Philadelphia, in round 6 of a scheduled 15-round bout at Philadelphia, Aug. 4. Until this bout Montgomery was recognized by the State Athletic commissions of New York and Pennsylvania as world lightweight champion, and Williams was recognized as title-holder by the National Boxing association, having jurisdiction in more than 30 other boxing localities. A crowd of 30,500 saw the match, paying receipts of $178,301.

Willie Pep, Hartford, Conn., survived an aeroplane accident in which he sustained a broken leg and multiple bruises, to come back from this harrowing experience and defend his featherweight title by knocking out Jock Leslie, Flint, Mich., in the 12th round of a bout held at Flint, Aug. 22. It was Pep's only title match of the year.

Manuel Ortiz, El Centro, Calif., Mexican, lost his world bantamweight title to Harold Dade, Los Angeles, Calif., in Los Angeles, on a 15-round decision, Jan. 7, but came back Ma
12 to regain the title from Dade on decision in a return bo
He twice defended the championship, winning a 15-round de
sion over David Kuikong Young, Honolulu Chinese, April
and beating Tirso Del Rosario, Filipino, on a 15-round decisi
at Manila, P.I., Dec. 20.

When Jackie Paterson, Scotland, 3 times failed to make t
required 112-pound weight as world flyweight champion for
title match against Dado Marino, Hawaii, at Glasgow, Sc
land, causing three postponements of the bout, the British Boa
of Boxing Control withdrew championship recognition from hi
However, Paterson carried his case to court, won a verdict, a
the B.B.B.C. rescinded its action, giving Paterson until Mar
31, 1948, to defend his title or surrender it, under B.B.B.C. rul

Amateur boxing was conducted on a scale that compared wi
previous years. A heavy entry list forced the extension of t
Amateur Athletic union's national championship tourname
over a five-day period. Syracuse university won the Easte
Intercollegiate championship tournament and in the Nation
Collegiate Athletic association championships Gerald Auclair
Syracuse won the 125-pound class title. The University of W
consin captured two individual championships in this tourn
ment when Cliff Lutz won in the 145-pound division and Jo
Lendenski was victorious in the 165-pound class. (J. P. D.)

## Boy Scouts.

The theme for 1947 for the Boy Scouts
America was "Scouts of the world building f
tomorrow." Scout activities were centred around this them
Scouts helped their brother scouters abroad through the Wor
Friendship fund to which they contributed. The money w
used to purchase camping equipment, books and other scouti
necessities. Through the "shirts off our backs" program t
scouts gave used uniforms and good, worn scouting equipme
which was sent to scouts overseas.

The 37th annual meeting of the National council was he
in New York May 27–28. More than 1,000 delegates ar
friends of scouting took part.

An outstanding event was the 6th World Jamboree, calle
"The Jamboree of Peace" held at Moisson, France, in Augus
The Boy Scouts of America delegation consisted of 1,100 bo
and leaders from all over the United States. The United Stat
government made available a government transport ship to tak
the boys to and from the jamboree. All expenses were defraye
by the Boy Scouts of America.

This was followed by the 11th International National Scou
Conference of Scout Leaders, including representatives fro
all over the world.

The 8th National Training Conference of Professional Scou
Leaders took place in Bloomington, Ind., in September whe

a five-year program was developed. In the following months a Scout Round-Up was held giving new boys opportunity to join scouting units. The scout program includes cub scout activity for boys 9-11 years old, emphasizing skills and fun around the home under the leadership of "Den Mothers" and "Den Chiefs" (older scouts). Boy scouts are 12 years and older organized in scout troops and other units. They camped in great numbers during 1947, because scouting is an outdoor program emphasizing woodcraft and outdoor skills. The third branch of the scout program is for young men of 15 years and older and features air scouting, explorer scouting and sea scouting. The largest gain in any branch of scouting during the year was made in senior scouting.

As usual, scouts co-operated with the national, state and local governments in many service projects. These included collections of all kinds of materials, distribution of pamphlets and other material, and helping the police in safety work, fire prevention and conservation projects.

There was an increase in membership over the previous year. Nov. 30 figures showed the following:

Total boys 1,534,164
Total leaders 542,141
Grand total membership 2,076,305
Total units 66,743. (L. W. BA.)

**Great Britain and Europe.**—International brotherhood was the keynote of scouting activities in 1947. In August 30,000 scouts from 70 countries camped together for two weeks at the 6th World Jamboree held at Moisson, France. The success of this gathering proved that the organization had emerged from the war stronger and more vital than ever. International friendship was also promoted by correspondence and exchange visits under the "linking-up scheme." About 170 British groups camped with their "partner" groups in various European countries, and many groups from Europe camped in Britain.

In Great Britain the fine summer ensured an extremely successful camping season. A party of 20 senior scouts went to Newfoundland in September with the ninth expedition of the Public Schools Exploring society, to explore an area of unmapped and trackless country.

A memorial to Lord Baden-Powell, the founder of the scout movement, was unveiled in Westminster abbey by the duke of Gloucester on St. George's day, April 23. (E. G. W. W.)

BOY SCOUTS of AMERICA CONTINGENT
SIXTH WORLD JAMBOREE • MOISSON . FRANCE
AUGUST 9TH – 21ST 1947

U.S. BOY SCOUTS ready to sail for France where 30,000 scouts from 70 nations assembled for the 6th World Jamboree at Moisson in Aug. 1947

**Bradley, Omar Nelson** (1893– ), U.S. army officer, was born in Clark, Mo., on Feb. 12. He was graduated from the U.S. Military academy in 1915 and later from the Infantry school, the Command and General Staff school and the Army War college. Early in 1941 he was commandant of the Infantry school, and in Feb. 1943 he was sent to North Africa where he assumed command of the 2nd corps, which he led to victory at Tunis and Bizerte. In Jan. 1944 Gen. Dwight D. Eisenhower disclosed that Bradley had been made commanding general of the U.S. ground forces for the invasion of Europe. When the invasion started, June 6, Bradley headed the U.S. 12th army group. On Aug. 30 it was disclosed that General Bradley had been given equal status with Gen. Bernard L. Montgomery. The U.S. armies under Bradley's command hammered their way into the Siegfried line by the winter of 1944. After recovering from the nazi counterblow in the Ardennes forest, Bradley's forces overran a large part of the reich by the close of the war in Europe. He was made a full general (temporary) on March 13, 1945, and was named (June 7, 1945) by Pres. Harry S. Truman as administrator of veterans' affairs. On Nov. 21, 1947, the president announced a new promotion for Bradley—that of army chief of staff—to become effective when General Eisenhower left the army to become president of Columbia university.

**Brazil.** The second largest nation of the western hemisphere and the most populous Latin country in the world; language: Portuguese; religion: predominantly Roman Catholic, with about 1,000,000 Protestants (including their families) of various denominations; capital: Rio de Janeiro (est. pop. 1947, 2,052,672); president: Gen. Eurico Gaspar Dutra.

Brazil's area of 3,286,170 sq.mi. is second only to that of Canada in the western hemisphere. The population (1940 census: 41,570,341) was officially estimated at 48,000,000 as of Dec. 31, 1947; 13.2% was classified as urban, and 77% as rural. The capital, Rio de Janeiro (coterminous with the federal district), is the largest city in Brazil and the second largest in Latin America.

At the time of the latest census (1940) there were 1,285,000

*This area is in dispute between the states of Minas Gerais and Espírito Santo.

foreign-born residents: 354,000 Portuguese, 285,000 Italians, 148,000 Spaniards, 141,000 Japanese, 71,000 Germans, 41,000 Polish and 245,000 citizens of other countries. Of the total Brazilian population, 26,200,000 declared themselves of the white race, 8,800,000 mulattoes, 6,000,000 Negroes, 250,000 of the yellow race.

**Political History.**—During 1947 a tendency was observed among the political parties to crack up along the old state political lines. At the end of the year this disintegration had gone so far as to leave President Dutra without the backing of a clear-cut majority in the congress. Portions of the Social Democratic party, the majority party which elected him, had veered off so much as to favour measures in direct contradiction to the general policies of the party. In some states (Pernambuco and São Paulo, for instance) the Social Democrats had gone so far as to ally themselves with the communists to secure the control of local government.

The Communist party, reorganized under the electoral regulations of 1945, was declared illegal by the upper electoral tribunal in May 1947. At the end of the year congress had not yet decided, however, whether the communist representatives and senators were entitled to continue to hold their seats. This situation brought about much unrest and a wave of strikes, street incidents and the mobbing of communist newspapers and propaganda centres in several cities. State elections for governors and legislators, held at various times during the year, were marked by violence although the communists apparently showed less strength than had been anticipated.

In the state of Pernambuco—important because of the character of the population and the strategic location of its territory, in the northeastern bump—a coalition of Social Democrats and communists controlled the state legislature. Since the results of the elections for state governor remained uncertain, the president of the legislature, backed by the Social Democrats and the communists, governed the state *ad interim*. On the other hand, in the neighbouring state of Sergipe the governor, backed by the state branch of the Social Democratic party, ruled as a dictator and suppressed all communist activities.

Convinced that the nation was fast approaching a crucial moment in its political and economic life, President Dutra and other political leaders endeavoured to secure a coalition of the Social Democratic party and the National Democratic unio the opposition party, as against the communists. By the end the year these efforts seemed to have been crowned with su cess. On Dec. 5, the publication of *Tribuna Popular,* con munist organ of Rio de Janeiro, was suspended for 30 days an the nation awaited with anxiety the decision as to the legality the communist representatives and senators.

COMMUNIST PARTY building at Rio de Janeiro being taken over by Brazilian police following a government order outlawing the party on May 7, 1947. Estimated Communist membership exceeded 180,000

Internationally, Brazil continued to enjoy increasing prestig The Brazilian representative in the United Nations assembl Dr. Oswaldo Aranha, was elected president of both the speci and the regular sessions of the assembly.

The much-postponed Inter-American Conference for th Maintenance of Continental Peace and Security, decided upo by the American nations at Chapultepec (1945), finally met Quitandinha hotel, in Petrópolis, near Rio de Janeiro, from Au 15 to Sept. 2. After some wrangling and one or two snarls, th conference adopted a treaty on continental defense which wa generally hailed as a step forward in hemispheric co-operatio for peace. (*See* INTER-AMERICAN DEFENSE CONFERENCE.)

At the invitation of the Brazilian government, Pres. Harry Truman, accompanied by Mrs. Truman and their daughter, Ma garet, visited Rio de Janeiro (Sept. 1–7). Truman addresse the closing session of the Inter-American conference. He wa generally received with great cordiality by the authorities an the people of Brazil. On Sept. 5 the Brazilian congress hor oured him with a special joint session.

On Oct. 2 Brazil broke off diplomatic relations with Russi This came in the wake of a series of incidents, climaxed b editorial comments of *Izvestia* on President Dutra, considere insulting by the government and the people of Brazil. A deman for an apology went unanswered.

The Communist party in Brazil, claiming a membership about 130,000, apparently was going underground.

Although the relations between Brazil and the United Stat continued most cordial, at the end of the year a certain amou of dissatisfaction was guardedly expressed in some quarters b cause of alleged unwillingness on the part of the U.S. gover ment to assist in Brazil's industrialization plans.

**Education.**—There were in 1945, 44,794 primary schools with 95,3 teachers and 3,548,409 students. Other schools, according to availab information (1943) were: 1,183 secondary schools with 14,280 teache and 213,520 students; 3,076 professional schools and universities, wit 19,267 teachers and 255,368 students.

There were seven official universities, all of them state institutio except the Universidade do Brasil (Rio de Janeiro) which was maintaine by the federal government. There were also three private universiti maintained by the Catholic Church, at Rio de Janeiro, São Paulo an Pôrto Alegre. The Catholic university of Rio de Janeiro was raised pontifical status in December.

**Finance.**—The cruzeiro, the monetary unit of Brazil, divided into 10 centavos (cents), sold in the free market at about 22.50 per U.S. dolla

The federal government's budget for the year, estimating expenditur at Cr. $12,597,686,000 and revenues at Cr. $12,003,650,000, anticipate a deficit of Cr. $594,036,000. Later, however, the total of authorize expenditures was increased to Cr. $14,360,111,000 which left a defici of Cr. $2,356,461,000 for the year. Alarmed at the magnitude of th deficit, the government undertook to decrease all expenditures. By th end of September the actual deficit was estimated at about Cr. $12 889,000.

Despite strong pressure from some quarters, which recommended tha the budgetary deficit, or part of it, be wiped out by a new increase i money circulation, the government steadily pursued its policy of sys tematic reduction of the currency in circulation as a means to comba inflation. Money in circulation as of Oct. 31 amounted to Cr. $20,297 661,976, a decrease of Cr. $191,750,305 as compared with the amoun in circulation in January (Cr. $20,481,228,492).

The fight against inflation seemed to be the basis of the government' economic program. The principal causes of inflation were the govern ment's annual deficits, the government financing of exports and the pre vailing speculation in values. The first cause tended to disappear wit the approval by congress, for 1948, of a budget estimating revenues a Cr. $14,597,320,000 and expenditures at Cr. $14,596,041,044, with small, but significant, surplus of Cr. $1,278,956.

As to the second cause, it was intimately tied up with the general worl scarcity of dollar exchange. The government faced the problem by re stricting both exports and imports.

The third cause continued uncontrolled because of the apparent diff culty in enforcing price control measures. The prices of some staples ha increased two to four times the prices prevailing in 1941.

The bank situation continued uncertain. The government's propose bank reform was still being discussed in congress at the end of the year. Of 2,111 banking institutions existing at the beginning of the year, 36 were classified as foreign. Most of the banks were in São Paulo and Rio de Janeiro. At the beginning of the year the foreign debt was estimated at £101,126,010 and $207,730,795 U.S.

**Trade and Communications.**—During the first nine months of the year, Brazil exported merchandise valued at Cr. $15,554,721,000, which was Cr. $2,366,222 more than the total for the same period in 1946. The principal items were: coffee (Cr. $5,437,862,000), cotton (Cr. $2,499,965,000), cocoa (Cr. $814,690,000), sugar (Cr. $165,800,000), rice (Cr. $493,847,000) and pine lumber (Cr. $647,790,000).

Although still the principal export item, coffee contributed less to the total, in volume, than in the previous year. During the first six months of 1947 a total of 6,550,393 bags of coffee (132 lb. each), valued at Cr. $3,488,695 were exported, whereas in 1946 the total was 7,650,785 bags valued at Cr. $2,737,648.

The imports increased from Cr. $9,048,349,000 during the first nine months of 1946 to Cr. $16,973,015,000 during equivalent period in 1947. This was caused by a larger number of automobiles, and parts, refrigerators, radios, phonographs, electric apparatus and similar articles imported during the period.

The unfavourable trade balance of Cr. $1,418,494,000 in the first nine months of 1947 contrasted with the favourable balance of Cr. $4,140,150,000 in the same period of 1946. This was because of the lack of imports of many items during the war years and had been anticipated. On the other hand, Brazilian exports to England and other countries had not increased as expected because of lack of dollar exchange. The government, confronted with the alternative of assisting exporters with the purchase of their credits in national currency (which would increase inflation) and the curtailment of exports, preferred the latter.

The government announced plans to re-equip and reorganize the merchant marine (for which 38 new units were purchased) and the railroads (requiring an estimated purchase of 20,000 cargo and passenger cars and at least 1,000 locomotives, besides 3,000 railroad cars already ordered in Brazil).

There were about 22,000 mi. of railroad track in operation and about 38,000 mi. of surface roads and 124,000 mi. of common roads in 1945. It was estimated that the country had about 150,000 passenger automobiles and trucks in 1944.

In 1945, 12 aviation companies operated about 70,000 mi. of routes. Their planes transported about 290,000 passengers, 2,500,000 lb. of baggage, 400,000 lb. of mails and 3,250,000 lb. of freight.

**Agriculture.**—Total output for 1946 was about the same as for 1945. The most important agricultural products in 1946 were: rice (46,198,634 bags of 132 lb. each), cotton (352,752 metric tons), sugar (28,300,000 metric tons), beans (17,000,000 bags of 132 lb. each), tobacco (118,500 metric tons), wheat (248,058 metric tons), cocoa (138,000 metric tons) and coffee (15,335,675 bags of 132 lb. each). The 1946 coffee production was valued at Cr. $5,350,029,000, whereas the previous year's production (13,915,265 bags) was valued at Cr. $3,717,173,000.

Crops were considerably affected by pests in 1947. Clouds of locusts, flying from Argentina and Uruguay, swept over the rich southern plantations destroying everything in their path. In the state of São Paulo many coffee plantations were devastated by the disease known as "broca." It was estimated that the next year's crop might fall as much as 50% on that account.

Total value of animal products in 1945 was estimated at Cr. $6,906,459,000. The livestock production continued high, although a scarcity of meats was observed in Rio de Janeiro and most other important cities. The hog plague, starting in the south, spread until it covered the whole country, killing hundreds of thousands of animals. The congress appropriated about $500,000 to combat this disease.

**Manufacturing.**—The value of industrial production in 1945 was estimated at Cr. $33,121,176,000, showing a substantial increase over the total of Cr. $27,631,386,000 for 1944. There were 576,935 industrial workers in 1945 (550,804 in 1944).

Textile production decreased from 24,246 metric tons in 1945 to 14,103 tons in 1946. During the first six months of 1947, the textile production was 9,994 metric tons.

The iron and steel production was as follows in 1946 (in metric tons): pig iron 365,345, steel ingots 342,643 and slabs 311,515.

Rayon, an industry established in 1924, produced a total of 21,605,080 lb. of fibres in 1946. Other important industrial products were: furniture, food products, shoes, electric materials, glass and rubber products.

**Mineral Resources.**—In 1946 the total mineral output of the nation was estimated at Cr. $2,285,936,000, including iron ore, manganese, coal, oil and other important minerals such as beryllium, watch jewels, industrial diamonds, mica, monazite, quartz, tantalite, tungsten, zircon and rutile.

Geologists had estimated that about 900,000 sq.mi. of Brazilian territory were potentially oil-producing. Of this area, only about 190,000 sq.mi. had been commercially explored. There were 45 producing wells with a capacity of 4,779 bbl. a day and 14 gas-producing units. Crude oil production in 1946 was 66,889 bbl. (12,441 bbl. less than in 1945).

Search continued in the Amazon basin and in the state of Bahia. In Nov. 1947 it was announced in New York city that the Brazilian government had signed a contract with a United States firm to erect oil-refining facilities in Belem, near the mouth of the Amazon, with a daily capacity of more than 100,000 gal. The work was to be finished in 18 months. (*See* also ARGENTINA.)

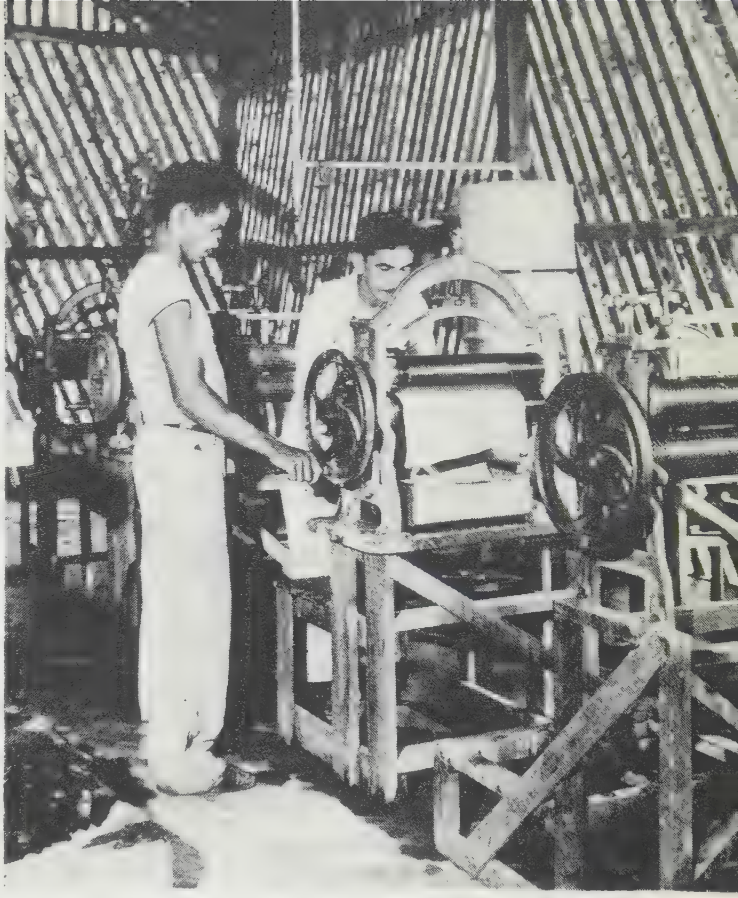
## Bread and Bakery Products.



RUBBER SHEETING MACHINERY at the Instituto Agronomico do Norte in Belém (Para), a Brazilian institute setting standards for farm and forestry products, a service urgently needed in 1947 for purposes of international trade

The attention of leading bakers and millers during 1947 was directed to a consideration of the problems presented by a report of Sir Edward Mellanby, published in the *British Medical Journal* of Dec. 14, 1946. This report showed that the feeding of large amounts of so-called bleached flour produced signs of nervous disorder in dogs. Later studies in England and in the U.S. confirmed the original observations and extended them.

By the end of 1947 it had been established that: (1) The deleterious effects are produced only when large amounts of flour that have been treated with nitrogen trichloride gas are fed, and that none of the other accepted agents for bleaching or artificially aging flour produces harmful effects. (2) The nitrogen trichloride acts on the proteins of the flour. (3) In addition to the effect on dogs, somewhat similar effects can be produced with heavily treated flour fed in large quantities to cats, rabbits, ferrets, monkeys and rats, but not to guinea pigs, hamsters or chickens; and (4) No harmful effects have been observed in human beings who have consumed large amounts of bread made from flour treated with nitrogen trichloride under conditions which would unfailingly produce symptoms in dogs.

The attitude of scientific bodies who studied the evidence, both in the U.S. and in Great Britain, was that the facts do not demand precipitous action. The Food and Nutrition board of the National Research council (Washington, D.C.) recommended to the Food and Drug administration that the use of nitrogen trichloride in the treatment of flour should be reduced to a minimum, and eliminated altogether wherever possible, and that suitable alternative methods of improving the baking qualities of many varieties of wheat should be sought. The organized baking industry in the U.S. at once took action to approve the recommendations of the Food and Nutrition board and urged the milling industry to take steps to bring about the complete elimination of the nitrogen trichloride process.

Like other methods of improving the baking performance of flour, the nitrogen trichloride process long was considered meritorious and harmless. The new developments illustrate vividly the need for the most careful scrutiny of methods of the food-processing industry which involve the addition of foreign substances to foods. The baking industry, in particular, has a responsibility to maintain the integrity of bread by demanding that all ingredients of the loaf must at all times be nutritious and wholesome.

Some experimental corroboration of the conclusion of the U.S. bureau of human nutrition and home economics, that the U. S. diet in general was considerably improved during World War II with respect to thiamin, riboflavin, niacin and iron because of the bread enrichment program, was provided in the report of N. B. Guerrant and O. B. Fardig of The Pennsylvania State college. These investigators showed in experimental work with growing animals, that dark breads and so-called milk breads, as produced commercially in the U.S., are inferior to both whole wheat and enriched breads in thiamin and riboflavin.

With the enactment of compulsory enrichment laws in Oklahoma and Kansas, there were in 1947 21 states plus the territories of Hawaii and Puerto Rico, which required the enrichment of white bread and flour. This movement to establish high nutritional standards for bread, also gained attention in other countries.

Leading bakers estimated that in the U.S. the gross sales of bakery products in 1947 reached an all-time high of nearly $3,000,000,000. (*See* also FLOUR.)

## Brewing and Beer.

On March 1, 1947, all restrictio on the use in the United States the principal brewing grains—malt, corn and rice—were lifte and brewers found themselves, for the first time after Wor War II, in position to produce enough beer and ale to meet constantly rising demand.

Concurrently with the rise in production, sales of beer ar ale began to climb on a scale unprecedented in U.S. histor From a decrease of 1,179,000 bbl. for the first three months 1947 as compared with the corresponding period for 1946, sal rose until they exceeded the 1946 figure by 8,532,133 bbl. the end of the first 10 months, reaching a total of 74,552,5 bbl. and indicating a new all-time high of approximately 9 000,000 bbl. for the year.

Brewers had to revise their plans for unlimited productio however, when it developed, in September, that the food situ tion in Europe was becoming increasingly serious and that U. industries and individuals would have to make sacrifices b voluntarily cutting their grain usage and thus make more grai available for export to the needy countries. President Harry Truman appointed a Citizens Food committee and the brewin industry was requested to work with this group in evolving conservation program that would free substantial quantities edible grains for export without appreciably affecting industr production, employment or quality of the product.

The United States Brewers foundation, whose members pro duce more than 90% of the nation's beer and ale, immediatel created a grain committee to work with the government autho ities and presidential appointees in Washington. The immed ate result of the Washington meetings was acceptance of th foundation's voluntary program of grain conservation, extende over a 90-day period, calling for the following provisions:

(1) Reduction in corn usage by a total of 3,000,000 bu.

(2) Elimination of wheat, table grades of rice and sorghu grains or their products, as brewing ingredients. Wheat held b brewers or under contract was released for purchase to suc buyers as were indicated by government authorities.

(3) Elimination of the use of feed barley, the brewers restric ing themselves to malting barley, which is not normally used fo feed purposes because it brings a higher price to the farmer.

FRENCH WHEAT RESERVES being turned in by rural farmers complying with a government appeal during the bread shortage which became acute in France in April 1947. Daily rations were reduced to 250 grams on April 24

(4) Increasing recovery of such by-products as high-protein residual grains, used extensively for dairy cattle feeding, and yeast for the feeding of poultry. These by-products, recovered in the brewing process, reduce the brewing industry's net annual consumption of all grains to less than 50,000,000 bu., according to a statement by Secretary of Agriculture Clinton Anderson.

Following promulgation of the grain conservation program among all brewers, an Industry Advisory committee was named to work with the Citizens Food committee, later changed to the Cabinet Food committee, consisting of the secretaries of state, agriculture and commerce. Although the industry participation in the program was on a voluntary basis, brewers complying represented approximately 98% of the nation's production.

**Beer for Military Needs.**—A contribution to the increased beer supply for domestic needs was the lifting of the government order, effective March 1, 1947, which required brewers to set aside 3% of their grains for the production of beer for the use of the armed forces. The original order, during the war, called for earmarking 15% of the brewers' production for military use. The set-aside had been ordered after it had been established by service authorities that beer had been a valuable aid to morale and substantially contributed to the army's sobriety. With the gradual return of a large number of the military to civilian life, this set-aside was reduced to 5% on Dec. 1, 1945, to 4% on June 13, 1946, and 3% on Sept. 1, 1946. Another reason for the reduction in military requirements abroad was that some of the beer required for overseas was being supplied by breweries in occupied areas, requisitioned and manned by U.S. troops and civilian personnel.

**By-Products.**—The brewing process extracts only a portion of the nutrients in the raw grains. The brewing industry each year returns about 35% of the original grains to the farms in the form of protein-rich feed concentrate. These by-products, known as brewers' grains, contain about 75% of the feed value of the original grains.

The other important by-product is brewers' yeast, the richest known natural source of vitamins of the B complex, containing between 40% and 50% of high-grade protein. This was supplied in increasing quantity during the years 1942–47 both as a human nutrient and as a protein and vitamin supplementary feed for livestock and poultry to provide a balanced ration. Debittered yeast was used in army rations such as bread and crackers and in the enrichment of such food items as noodles and dehydrated soup. In addition to its use in baking products, it is also added in small quantities to candy bars, meat loaves, gravies, peanut butter, syrups and casserole dishes.

**Moderation and Law Enforcement.**—Close co-operation between brewers, wholesalers and retailers continued to be an integral part of the brewing industry's self-regulation program, which had its origin in 1938. This program is designed to promote moderation and sobriety and to maintain wholesome conditions wherever malt beverages are sold under licence. Trained investigators are utilized to observe the conduct of retail beer outlets and to report to law-enforcement authorities those licensees who fail to comply with all provisions of state regulations. Failure to correct conditions after warning usually leads to suspension or revocation of licence or, in cases that cannot be handled otherwise, shutoff of beer by brewers.

On the basis of approximately 250,000 inspections of retail beer establishments after the program was put into effect, more than 95% of the licensed premises were found to be operated in an orderly and wholesome manner.

**Sales Records.**—Following are the sales records in U.S. barrels (31 gal.) by fiscal years ending June 30: 1933 (85 days), 6,277,728; 1934, 32,266,039; 1935, 42,228,831; 1936, 48,759,840; 1937, 55,391,960; 1938, 53,926,018; 1939, 51,816,874; 1940, 53,014,230; 1941, 52,799,181; 1942, 60,856,219; 1943, 68,636,434; 1944, 76,969,764; 1945, 79,590,598; 1946, 81,286,821; 1947 (official but not audited). 84,353,412.

**Taxes.**—Federal excise and special taxes on beer for the fiscal year 1947 totalled $665,081,497, bringing the cumulative total after relegalization in 1933 to $5,438,690,682. State and local taxes and licence fees in 1947 were estimated at $180,000,000, raising the cumulative figure for that revenue to about $1,875,000,000.

From April 7, 1933, the date of relegalization, the combined public revenue from beer approximated $7,313,000,000. Beer was in 1947 taxed at $8 per barrel, contrasted with the federal tax rate of $1 per barrel from 1902 to 1914. There were no state taxes before prohibition. (*See* also LIQUORS, ALCOHOLIC.) (E. V. LH.)

**Bridge, Contract:** *see* CONTRACT BRIDGE.

## Bridges.

The world's longest spans of the various types built up to 1948 are listed in the following table.

*World's Longest Spans by Type of Bridge*

| Type | Bridge | Location | Year Completed | Span |
|---|---|---|---|---|
| Cable Suspension | Golden Gate | San Francisco | 1937 | 4,200 ft. |
| Transporter Bridge | †Sky Ride | Chicago | 1933 | 1,850 |
| Cantilever | *Quebec | Canada | 1917 | 1,800 |
| Steel Arch | Bayonne | New York | 1931 | 1,652 |
| Eyebar Suspension | *Florianopolis | Brazil | 1926 | 1,114 |
| Concrete Arch | Sando | Sweden | 1943 | 866 |
| Continuous Truss | Dubuque | Mississippi river | 1942 | 845 |
| Simple Truss | *Metropolis | Ohio river | 1917 | 720 |
| Continuous Girder | Cologne | Rhine river | 1948 | 605 |
| Vertical Lift | *Cape Cod Canal | Massachusetts | 1935 | 544 |
| Wichert Truss | Homestead | Pittsburgh | 1937 | 533½ |
| Swing Span | *Fort Madison | Mississippi river | 1927 | 525 |
| Tubular Girder | *Britannia | Menai straits | 1850 | 460 |
| Timber Span | †Wettingen | Switzerland | 1758 | 390 |
| Bascule | *Sault Ste. Marie | Michigan | 1914 | 336 |
| Masonry Arch | Plauen | Saxony | 1905 | 295 |
| Single Leaf Bascule | *16th Street | Chicago | 1919 | 260 |
| Concrete Girder | Villeneuve | Seine river | 1939 | 256 |

*Railroad bridge. †Not standing.

**United States.**—The Bronx-Whitestone bridge in New York city was modified and stiffened in 1947 at a cost of $1,300,000 by the addition of 14-foot high trusses on top of the original 11-ft. stiffening girders. Aerodynamic oscillations of 18 in. were reduced to 9 in.

Immediate construction of a second vehicular crossing of San Francisco bay, at a cost of $134,468,000, was recommended in 1947 by a joint board of army and navy officers. The proposed plan was a combination low-level bridge, under-water tube and filled causeway, a total length of more than six miles from San Francisco to the Alameda shore. An alternate crossing, recommended by the California Toll Bridge authority, about 200 feet north of the Transbay bridge and similar to it in design, was estimated to cost $105,000,000. The California Toll Bridge authority in Nov. 1947 approved both for construction, at a total cost of $239,468,000.

Proposed construction of the Delaware River bridge (suspension type) at Wilmington, Del., was approved by the secretary of war in 1947.

The U.S. army engineers in 1947 approved construction of the proposed $30,000,000 bridge over Chesapeake bay to connect Baltimore with the eastern shore of Maryland.

Construction of the seven main piers of the new Mississippi river bridge at Memphis, Tenn., was completed in May 1947. The design of the main cantilever structure comprises spans of 433, 621, 621, 790 and 359 ft., with 2 approach truss spans of 435 ft.

A new toll vehicular bridge across the Mississippi river between East St. Louis, Ill., and St. Louis, Mo., was begun in 1947 at a contract cost of $6,490,000. The new structure is of reinforced concrete and steel cantilever type, 7,700 ft. long, and carrying 5 highway lanes and 2 sidewalks. The main span is approximately 1,000 feet, flanked by 2 500-ft. spans.

A $6,000,000 bond issue was approved in 1946 for the construction of a state-owned toll bridge over the Connecticut river between Old Lyme and Saybrook, Conn.

The U.S. navy department approved construction of a $6,000,000 low-level highway bridge over the York river at Yorktown, Va.

Preliminary work of borings, surveys and design studies was started in 1947 on the proposed $27,000,000 toll bridge over the Mystic river between Chelsea, Mass. and the Charlestown section of Boston.

The Chain-of-Rocks canal bridge near St. Louis, to carry a relocation of U.S. highway 66 over the proposed Chain-of-Rocks canal, was under construction 1946–47 at a contract cost of $1,585,000.

The historic Eads bridge (completed 1874) at St. Louis, Mo., which was the first bridge across the Mississippi river, was modernized in 1946–47 at a cost of $300,000.

The $1,153,000 foundation contract for the new high-level bridge across the Delaware-Chesapeake canal at Chesapeake City, Md., was completed in 1947. The highway structure, 3,954 ft. long, was designed to cross the canal with a steel tied-arch of 540-ft. span providing 140 ft. clear height above the water.

A new $2,000,000 railroad bridge one-half mi. long was completed in 1947 for the Baltimore and Ohio railroad at Point Pleasant, W.Va. With a main truss span of 480 feet, the bridge crosses the Kanawha river near its junction with the Ohio river and replaces a 16-year-old structure at the site.

A steel bowstring truss bridge of novel streamlined design was completed in 1947 on Oregon's highway across the Santiam river between Salem and Albany, with a 240-ft. centre span and side spans of 180 ft.

The Twelfth Street bridge over the Kaw river in Kansas City, Kan., was partially destroyed when 1945 floodwaters undermined and overturned one of its piers. Reconstruction of the bridge in 1946–47, at a cost of $330,000, included replacing the overturned pier, rebuilding a second river pier and rebuilding of one 200-ft. span and 140-ft. of the centre span of a 3-span 600-ft. long deck cantilever.

Construction of the foundations and the nine main piers of the South Capitol street crossing over the Anacostia river in Washington, D.C., was completed early in 1947. Bids for the superstructure were double the engineer's estimate of $1,000,000 and were rejected. The design was of plate-girder construction, with the main crossing 854 ft. long, including a 386-ft. swing span at the main channel.

Using 24 steel girder spans up to 161 ft. long, a $2,000,000 highway bridge, 2,693 ft. long, 66 ft. wide and 70 ft. high, was completed in 1947 across the Feather river at Marysville, Calif.

An unusual design was represented by the semipermanent railway-highway bridge under construction in 1947 at the Garrison damsite in North Dakota. Carrying an all-steel deck on steel girders, this 1,350-ft. structure was supported on tubular steel piles, 24 in. in diameter and 100 ft. long, each driven to a 150-ton resistance. For maximum future salvage of the steel in the spans, all field connections except main girder splices were bolted with automatic locking nuts instead of being riveted.

The $1,500,000 Piney Bluff bridge, spanning the Altamaha river on U.S. highway 1 between Baxley and Lyons, Ga., constructed in 1947, is 13,115 ft. long and consists of steel girder spans on concrete piers and a series of concrete girder spans on concrete pile bents.

The $5,000,000 bridge connecting Terminal Island and Long Beach, Calif., a U.S. navy project under construction in 1947, included a 240-ft. vertical lift span of record width (two 35-ft. roadways) and record height of lift (from 50 to 175 ft. above water). Construction of the freeway providing access to the bridge, at an additional cost of $9,000,000, was under the supervision of the state highway department.

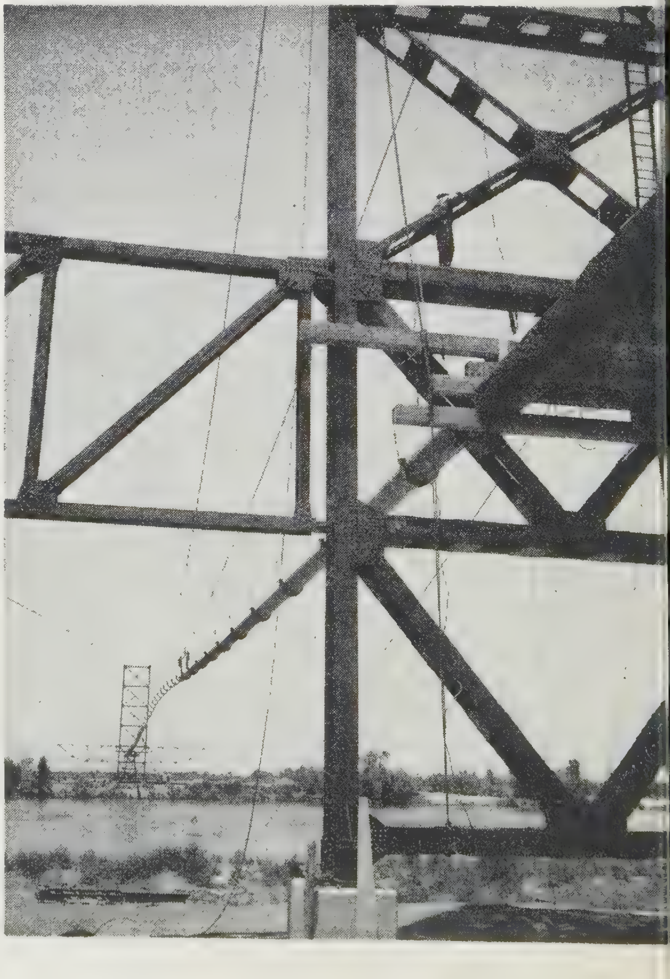
Plans were completed in 1946 for the construction of a 368-ft. span vertical lift bridge at Sault Ste. Marie to replace an old swing span of the International Railway bridge built in 1888. Total cost of the project, including removal of the swing span and Bridge Island, was estimated to exceed $1,000,000.

**Germany.**—Of the 55 pre-World War II bridges that crossed the Rhine (22 railroad bridges, 22 highway bridges and 11 po toon highway bridges), 9 had been replaced by temporary mi tary bridges and 24 by semipermanent reconstruction in 194 The railroad crossing at Brisach was rebuilt for highway traffi The highway bridge at Strasbourg was replaced by a laminat timber bridge of modernistic design. The railroad bridge Strasbourg was replaced with shorter plate girder spans on ten porary piers. The highway and railway bridges at Maxau we each replaced by five truss spans on a single set of tempora piers. At the highway and railway bridge at Spire, only o span was raised and saved. At Mannheim the railway brid was replaced and the highway bridge was scheduled for ear rebuilding. The famous highway bridge at Worms was n scheduled for rebuilding. The railway bridge at this city, hov ever, was replaced with five spans. The Coblenz-Horcheim rai way bridge was back in service on the original piers, and th Coblenz-Pfaffendorf highway bridge had also been rebuilt.

The Cologne-South railway bridge was back in service in 194 Also back in service was the Dusseldorf-Hamm railway bridg with two original arches and two German military spans. Th Dusseldorf-Oberkassel highway bridge was replaced by 4 300-f spans. The Baerl railway bridge lost only the end span and wa back in service in 1947. The 611-ft. centre span was saved fro falling by a safety pier placed under its mid-point by the Ge mans as an air-raid precaution.

The SKR trusses, a German design for military bridges, we used extensively in Rhine bridge rebuilding. With 20-ft. panel the web arrangement and depth were varied to suit the spa with divided Warren web, K-web and Z-web for 20-, 40- an

HAZARDOUS WORK of cradling the "Biggest Inch" pipe line from a suspensio bridge over the Colorado river at Blythe, Calif. Designed to pipe natural ga from Texas to southern California, the project was scheduled for completio late in 1947



o-ft. depths, respectively.

The Frankenthal bridge, whose two continuous girder spans f 543 ft. each were by far the longest girder spans in the world, vas never completed by the Germans because of shortage of teel during World War II.

The war-wrecked Cologne-Deutz highway bridge (a self-nchored suspension bridge with a central span of 605 ft. and ide spans of 302 ft., completed 1915) was replaced with a deck irder continuous cellular bridge on the old piers. The 605-ft. pan established a new world's record for girder spans.

An unusual floating Bailey bridge was built in 1947 by the British royal engineers over the Rhine at Duesseldorf. About 980 of its 2,391 ft. total length was placed on floats, the spans esting on towers providing a vertical shipping clearance of 27 t. and a horizontal clearance of 100 ft. During floods, the enire bridge would be towed away to a safe harbour.

**Italy.**—Some 2,944 bridges on the highways, plus 39 mi. of masonry bridges and 21 mi. of iron or steel bridges on the railoads, were wrecked in World War II. Steel shortages coninued to delay rehabilitation in 1947. The 150-ft. high Sagitario viaduct near Sulmona—originally built of brick but reduced to a pile of rubble by German demolition squads—was ebuilt in concrete in 1947, with 17 arches of more than 30 ft. pans. In the highway bridge over the Tiber near Montecastelli, 210-ft. concrete arch was substituted for 3 90-ft. brick arches.

**Hungary.**—Work proceeded during 1947 on reconstruction f the Franz-Josef bridge over the Danube river at Budapest. This steel cantilever, dating from 1897, was to be the first of he city's bridges restored to service. The Horthy bridge, a coninuous truss completed in 1937, was scheduled to be rebuilt f possible in the original design.

The famed Margaret bridge, a stone spandrel-arch structure built in 1876 to span the Danube at Budapest, was under reconstruction in 1947, replacing the six 269-ft. stone arches with teel.

**France.**—Among France's many hundreds of restored raiload bridges, the one at Nogent-sur-Marne, ten miles east of Paris, was notable as an entirely new structure, whereas the majority of the war-damaged bridges were merely patched and ebuilt. The four original 165-ft. masonry arches of the Nogent bridge had been reduced to unusable rubble by demolition harges. The new bridge was an imposing double-track strucure of three concrete arch spans of 260, 230 and 225 ft. The bridge was constructed with the aid of a 950-ft. span cableway.

After being war-wrecked (1940 and 1944) and rebuilt twice (1942 and 1947) the Eauplet bridge across the Seine upstream rom Rouen again carried all the main line trains between Paris nd Le Havre.

The 354-ft. central arch (reinforced concrete) of the Rhône iver highway bridge at Vienne, France, constructed in 1947, vas said to have the flattest curve at the centre of any similar tructure in the world—only 18 ft. rise on a 207-ft. length. This lat curve, with the radius at the centre reaching 657 ft., was dopted to give an especially wide clearance for river traffic. The centring was hung from a temporary three-hinged steel rch, with a large cableway to place the concrete. Ten 50-ton ydraulic jacks inserted at the crown were used to decentre the rch and induce its precalculated dead load stress.

Ten thousand highway bridges and 5,000 railroad bridges were vrecked or damaged in France during World War II. Timber restles were used to by-pass the wrecked highway spans while masons, aided by hand winches and not much else, rebuilt the bridges to their original outlines. The famous arch bridge over he Loire at Blois, built in 1724 by Jacques Gabriel, was retored to its original lines.

A new bridge over the Loire at Orleans, France, was of reinforced concrete and contained 1 arch of 155 ft. and 10 of 123 ft. It replaced 15 stone arches of 80 ft., 10 of which were completely destroyed during the war.

THE BRONX-WHITESTONE BRIDGE, spanning the East river in New York city, showing its widened roadway and added stiffening trusses. Reconstruction work on the bridge was completed in 1947

The Montlouis bridge over the Loire at Vouvray was completely rebuilt from the ruins of its twelve 82-ft. arches.

About 20 prestressed concrete bridges were built in France in 1947, and 20 more that had been designed were awaiting money and materials. This type was adopted for the large saving in steel. The longest single span, 181 ft., was in the Luzancy bridge over the Marne.

**Other Countries.**—Spanning the Hawkesbury river in New South Wales, Australia, a new steel highway bridge 2,000 ft. long was completed in 1946. A new steel railroad bridge, 2,764 ft. long, over the same river, was completed in 1947.

Construction of a $5,000,000 high-level bridge 5,500 ft. long over the Burdekin river in Queensland was authorized in 1947, following foundation tests and design studies in 1946. The bridge was planned as a dual rail and highway structure, to consist of ten main truss spans, each 250 ft. long, with approach trestles.

An unusual bridge, combining steel and concrete truss members, was completed in 1947 at Tordera, Spain, in the province of Barcelona. In the three deck-truss spans of 148, 177, and 148 ft., the top chords are of reinforced concrete while the bottom chords and the diagonal web members are of steel. The diagonals are of V-form, dispensing with transverse bracing below the deck.

To speed up traffic between Montreal, Quebec, Canada, and the Lachute district, work was started in 1947 on the construction of the new $1,500,000 St. Eustache bridge to replace the old De Bellefeuille span over the River of the Thousand Isles.

A light suspension bridge over the Minero river at Pauna in Boyaca department, Colombia, collapsed in 1947, with an estimated death toll of 25.

The first railroad bridge over the Tigris river was under construction in 1947 by British engineers south of Baghdad, Iraq. The 7 span concrete and steel bridge, carrying a metre-gauge railway line and an 18-ft. roadway, was undertaken to provide through railway freight connections from the oil fields of Iran to Turkey, Mosul and Basra.

The first aluminum bascule bridge in the world was planned in 1947 by British engineers to be erected in the harbour at Sunderland, on the northeast coast of England just south of Newcastle. The proposed double-leaf bascule was designed as a combination highway and railroad bridge, to provide a clear waterway of 90 ft., and to carry a moving load of 70 tons.

A reinforced concrete arch bridge over the Mond river in Udaipur state, India, with a main span of 175 ft. and a total length of 501 ft., was completed in 1946. The concrete hangers were cast integrally with the floor beams to form inverted rigid frames, to aid in resisting lateral wind force. (*See* also Roads and Highways.) (D. B. S.)

**Briquettes, Fuel:** *see* Fuel Briquettes
**British Borneo:** *see* North Borneo.

**British Columbia.** British Columbia ranks third in area among the nine provinces of Canada and occupies the most westerly position. The crown colonies of Vancouver Island (1849) and of British Columbia (1858) united in 1866, and on July 20, 1871, joined the Canadian confederation. The province has an area of 366,255 sq.mi., of which 6,976 sq.mi. are water, and is bounded on the west by the Pacific ocean and the panhandle of Alaska; on the north by the 60th parallel; on the east by the Province of Alberta; and on the south by the Straits of Juan de Fuca and the 49th parallel.

The population on June 1, 1947, was estimated to be 1,044,000 (1941 census, 817,861). The population is predominantly of British origin—70% at the time of the 1941 census. The 1941 census indicated 443,394 urban dwellers and 374,467 rural dwellers. The principal ports and chief urban centres—Greater Vancouver (1941, 351,491), Greater Victoria (75,218), the capital, and New Westminster (21,967) are all located in the southwestern portion of the province. Based on the distribution of ration books, in 1946 the population was: Greater Vancouver, 495,767, Greater Victoria, 97,822, Greater New Westminster, 43,586.

**History.**—In the second session of the 21st legislative assembly (Feb. 11, 1947–April 3, 1947) Herbert Anscomb, minister of finance, reported revenue collected for the fiscal year ending March 31, 1946, amounted to $46,183,468; expenditures had been $38,041,605; the net debt at Dec. 31, 1946, was $132,648,564. Anticipated revenues were $58,888,930 and expenditures $58,781,335 for the fiscal year 1947–48. Measures passed by the assembly included: an act to authorize and implement an agreement between the dominion and the province, involving a five-year tax agreement; the Fur Farm act, enabling the government to administer the fur-farming industry; the Industrial Conciliation and Arbitration act, respecting the right of employees to organize and providing for mediation, conciliati and arbitration of industrial disputes; the British Columb Highway act, enabling the government to borrow $5,000,0 for the purpose of highway and bridge construction.

*Economic Activity in British Columbia, 1945–47*

| | Unit | 1945 | 1946 | 1947 Prelimina Estimate |
|---|---|---|---|---|
| AGRICULTURE: | | | | |
| Total value of production | $ | 103,679,430 | 117,827,400 | 120,700,0 |

Premier John Hart announced in August that old-age pe sioners in British Columbia would receive a maximum pensi of $40 a month made retroactive to May 1, 1947. On Oct. Premier Hart announced his retirement from the leadership the Provincial Liberty party. At the close of 1947, members the provincial executive council, or cabinet, and their portfoli were: Byron I. Johnson, premier and president of the executiv council; H. Anscomb, finance; G. S. Pearson, provincial secr tary, health and welfare; E. C. Carson, public works; E. T Kenney, lands and forests; W. T. Straith, K.C., educatio F. Putnam, agriculture; G. S. Wismer, K.C., attorney gener and labour; R. C. MacDonald, mines, municipal affairs; L. H Eyres, railways, trade and industry, fisheries.

**Education.**—During the school year ending June 30, 194 130,605 students were enrolled in the elementary (89,647 junior high (23,057), superior (2,949), and high (14,952 schools of the province. Teaching staffs comprised 2,931 teachers in elementary, 889 in the junior high and 684 teachers i superior and high schools.

**Communication.**—Total highway mileage as of March 3 1946, excluding the Alaska highway, amounted to 22,027 mi of which 9,541 mi. were surfaced, 9,758 mi. were improved eart 2,727 mi. were unimproved earth roads. By the end of 194 the new highway extending from Prince George to Dawso Creek, connecting with the Alaska highway at that point wa well under way, and the 81-mi. Hope Princeton highway ha moved forward.

Railway mileage in 1945 amounted to 3,886 mi. of single trac

During 1946 approximately 4,316,952 tons of cargo wer loaded at British Columbia ports for foreign countries whil 1,751,922 tons of cargo from foreign countries were unloade at local ports. In the same year, the total number of telephones 179,371, included 62,107 on automatic switchboards.

**Manufacturing, Agriculture, Mineral Production.**—Preliminary provincial departmental estimates for the year 194 indicated that the net value of production in all of the primary industries surpassed the comparative totals for 1946; the details are shown in the table. (G. T. H.)

**British East Africa.** The term British East Africa covers the territories of Kenya, Uganda, Tanganyika (mandated territory, now under United Nations trusteeship) and the Zanzibar protectorate; Somaliland may also be included for purposes of convenience. Kenya: area 224,960 sq.mi.; pop. (est. Dec. 1945) 4,064,675; capital: Nairobi (pop. 108,900); chief port: Mombasa (pop. 95,000). Uganda: area 93,981 sq.mi.; pop. (est. 1944) 3,956,654; capital: Entebbe. Tanganyika: area 362,688 sq.mi.; pop. (est. 1944) 5,499,681; capital: Dar es Salaam. Somaliland: area 68,000 sq.mi.; pop. (1944 est.) 700,000; capital: Berbera. Zanzibar Protectorate (including the islands of Zanzibar and Pemba off the coast of Tanganyika): area 1,020 sq.mi. (Zanzibar island, 640 sq.mi.); pop. (1945 est.): 250,000 (Zanzibar, island, 150,000); capital: Zanzibar, town (est. 50,000). The great majority of the population throughout British East Africa is of African descent, Kenya, and to a lesser degree Tanganyika, differs from the other territories in containing substantial European and Asiatic communities. The population of Zanzibar also includes a substantial Indian element. In Kenya the European community is estimated at about 23,700, Indians at 75,100 and Arabs at 26,200. Europeans in Tanganyika, including Polish and other refugees, number approximately 16,000; Asiatics (including Indians and Arabs) about 46,500. Many different languages are spoken in East Africa; but the dialect commonly known as Swahili (an admixture of Arabic, Persian and various African tongues) is used to some extent as a *lingua franca* throughout the whole region. The framework of the administration in most territories is of the normal British colonial pattern. Executive authority is vested in a governor appointed by the crown and assisted by executive and legislative councils. The system of indirect rule, or administration through properly constituted native authorities, is widely employed. In Zanzibar the government is administered, under the advice of a British resident, by the sultan of Zanzibar, a ruler of the Arab Al-Busa'id dynasty which has reigned in the island for more than two centuries. Governors: Kenya, Sir Philip Mitchell (appointed 1944); Uganda, Sir J. Hathorn Hall (appointed 1944); Tanganyika, Sir William Battershill (appointed 1945); Somaliland, under military administration; resident in Zanzibar, Sir Vincent Glenday (appointed 1946).

**History.**—In the political and constitutional sphere the outstanding question that came under discussion in 1947 in respect to East Africa was that of interterritorial organization as between Kenya, Uganda and Tanganyika. The three territories form a solid geographical bloc, they maintain a common customs and excise tariff (with free trade *inter se*) and they are served by interlocking communications systems. Proposals for interterritorial reorganization had been published in Dec. 1945. Revised proposals, following upon discussions of the earlier plan, were published in Feb. 1947. In broad outline, they provided for the establishment of (1) an East African high commission consisting for the time being of the officers administering the governments of Kenya, Uganda and Tanganyika; (2) an East African central assembly; and (3) an executive organization supported in appropriate cases by interterritorial and consultative bodies. It was proposed that existing advisory and consultative bodies concerned with production and supply, industry, research and publicity should be retained; and that a new advisory board, a post and telegraph board and a transport advisory board should in due course be created. The revised proposals were endorsed by a majority of each of the three local legislative councils; they were to be brought into effect at the beginning of 1948 for an experimental period of four years.

A conference of African governors was held in London in Nov. 1947, under the secretary of state's chairmanship, in which the governors of both East and West Africa took part. This conference discussed African affairs under the three main heads of (1) political and administrative, (2) economic and (3) social. It followed upon a conference of colonial officials held at Cambridge the preceding August, and it prepared the way for a conference to be held in 1948, at which elected representatives of the African peoples would be brought into the discussion.

Among the economic questions arising during the year none was more important than that of the East African groundnut scheme. A comprehensive paper on the subject was published by the British government in Feb. 1947, embodying the report of the special mission sent in the previous year to investigate the practicability of the mechanized production of groundnuts in east and central Africa. The government accepted the view of the mission that the scheme was a practicable one and could be carried out on a large scale. They considered that the most efficient instrument for its execution would be "a government-owned and -financed corporation created by statute with clearly defined powers and duties and with its own separate organization and a responsible board of directors answerable to the government but with the fullest scope for initiative."

There was much other activity in the economic field. A report known as *The Uganda Electricity Survey, 1947* was published in the summer of 1947. Its recommendations, which were submitted to the Uganda legislative council for approval, provided for the construction of a hydroelectric power station at Owen Falls (Lake Victoria) capable of generating 75,000 kw. The estimated cost exceeded £4,000,000. It was considered that, in addition to increasing the production of power, the scheme would result in substantial economies. Progress was made with the construction of a new meat-canning factory in Tanganyika, the establishment of which had been under consideration since 1942. The factory would not only relieve the pressure upon the existing Athi River factory in Kenya, but would provide a market and a channel of outlet whereby livestock surplus to the internal consumer requirements of Tanganyika could be readily disposed of. Grants sanctioned during the year under the Colonial Development and Welfare act included £20,000 for agricultural research in East Africa; £29,000 for experiments with DDT and other insecticides; £300,000 for Makerere college (Uganda); £117,000 for hydrological research in Uganda; and £140,000 for the development of the forest resources of Tanganyika.

A strike of African employees, affecting about 15,000 persons, occurred at Mombasa (Kenya) in Jan. 1947. It was announced in February that an ordinance had been enacted in Kenya providing for compensation to workmen for injuries suffered in the course of their employment. An application from the East African governors' conference for assistance toward a scheme (estimated to cost £1,775,000) for the construction of East African main trunk roads was approved in principle. A Town and Country Planning bill was introduced in the Uganda legislative council.

**Finance and Trade.**—Currency throughout British East Africa is controlled by the East African Currency board in London. The standard coin is the East African shilling. A note issue is also maintained. In Somaliland the Indian rupee is in circulation as well as the East African shilling. Estimated revenue (1946): Kenya £9,020,000; Uganda £3,891,000; Tanganyika £4,996,000; Somaliland £770,000; Zanzibar £718,000. Expenditure: Kenya £8,720,000; Uganda £3,566,000; Tanganyika £4,778,000; Somaliland £770,000; Zanzibar £741,000. Imports (1946): Kenya and Uganda £22,649,000; Tanganyika £8,195,000; Zanzibar £1,978,-

000. Exports: Kenya and Uganda £20,594,000; Tanganyika £9,360,000; Zanzibar £2,164,000. The resources of all the British East African territories are in the main agricultural, though minerals are assuming a rapidly increasing importance in Tanganyika. Kenya, with altitudes varying from sea level to more than 9,000 ft., provides soil suitable for a wide range of crops. Coffee, maize, sisal and pyrethrum (a valuable insecticide) are all grown in substantial quantities and figure prominently in the domestic exports of the colony. There is also a large export trade in animal products (hides and skins). Cotton is the chief export product of Uganda. The principal exports of Tanganyika include sisal, hides and skins, coffee, cotton and gold. The discovery of diamonds and lead in the territory points to a further source o mineral wealth. Somaliland is for the most part a pasture country; settled cultivation is rare and production loosely organized. The only exports of any importance are skins and livestock. The agricultural produce of Zanzibar for export purposes is confined in the main to cloves and coconut products. The clove industry has long been the backbone of the local agricultural economy. (J. E. Sh.)

**British Empire.** The governments of the British empire and the governors and premiers were as follows on Dec. 31, 1947:

*British Empire*

**British Guiana.** The only British colonial territory on the mainland of the South American conti-ent. It is bounded on the north by the Atlantic ocean, on the outh and southwest by Brazil, on the east by Surinam, and on he northwest by Venezuela. Area: 89,480 sq.mi.; pop. (1946 ensus): 376,146, including about 164,000 East Indians, 137,000 Negroes, 9,500 aborigines, 8,450 Portuguese and 3,650 Chinese. Chief towns: Georgetown (cap. 94,358); New Amsterdam (9,588). Religions (1931 census): 192,340 Christians (the Church of England being the largest separate community) and 18,593 non-Christians (mostly Hindus). Executive authority s vested in a governor appointed by the British crown and ssisted by an executive and a legislative council. The legisla-ive council consists of the governor (as president) and 3 other fficial members, 7 nominated members and 14 elected mem-ers. The executive council includes four officials and five non-fficials. Governor: Sir Charles Woolley (appointed 1946).

**History.**—Economic questions were the main preoccupation n British Guiana during the year 1947. In the past the colony vas mainly dependent upon sugar, but it was recognized that in uture there would be a need for a more diversified form of conomy. A sketch plan of development was drawn up in 1943, vith the object of ensuring the best possible use of the colony's atural resources and of encouraging a greater degree of self-ubsistence. The program contemplated a total expenditure of 2,500,000 spread over a period of 20 years. In 1946, after the llocation of funds under the Colonial Development and Wel-are act, 1945, was announced, the British Guiana government et up a committee under its economic adviser to draw up a etailed program of development for the colony. This program ad not been completed in 1947, but in the meantime a number f projects were already in course of execution, with financial ssistance under the act. By the end of 1945 grants were made o a total value of more than £1,000,000 for irrigation and rainage projects. A further grant of £81,127 for the same pur-ose was made in May 1947. In Jan. 1947 it was announced hat the economic potentialities of British Guiana and British Honduras (*q.v.*) were to be re-examined, and that, as a first tep, a commission would be appointed to inquire into the possi-ilities of settlement in those territories, taking into considera-ion the requirements of the existing population and the need to rovide outlets for surplus populations from the West Indian slands as well as for persons displaced from their homes in Europe as a result of the war. The commission was duly ap-ointed and proceeded with its investigations. The special prob-ems of the largely undeveloped interior of British Guiana con-inued to engage the attention of an interior development com-nittee set up in 1944. Other questions under investigation in-luded the possibilities of hydroelectric development, the expan-ion of fisheries and the promotion of secondary industries in eneral. The development of air transport was under active ex-mination. Questions of labour and the development of trade nions were also much to the front.

**Finance and Trade.**—The currency of British Guiana is terling, the monetary unit of account being the local dollar at he fixed statutory rate of $4.80 to the £. Revenue (1946) 2,218,187; expenditure £2,820,711. Imports (1946) £5,597,000; exports £5,634,000. The major products of the colony are sugar and bauxite, in both of which commodities there is a large export trade. Other articles of export are gold, diamonds, wood and timber, balata (a kind of gutta-percha) and copra. (J. E. Sh.)

**British Honduras.** A British colony on the east coast of Central America, bounded on the north, east and south and west, respectively, by the Yucatan peninsula, the Caribbean sea and Guatemala. Area (including certain islands): 8,867 sq.mi.; pop. (1946 census): 59,149. Languages: English, Spanish and Maya. Capital and principal port: Belize (pop. 21,837). Executive authority is vested in a governor appointed by the British crown and assisted by an executive and a legislative council. The legislative council, as constituted in 1936, consists of the governor as president, three ex officio and two nominated members, two unofficial members nominated by the governor and six unofficial members elected by five constituencies. The executive council consists of the governor and official and unofficial members. Governor in 1947: Edward Gerald Hawkesworth.

**History.**—The Development Planning committee for British Honduras produced its report early in 1947. The report contained recommendations for the development of the economic resources of the colony for the next five to ten years, and for an expanded program of social services. A delegation from British Honduras visited London during the year. They were received by the secretary of state for the colonies, who discussed with them the political and economic conditions and aspirations of the colony. Experiments in rice production, and in other branches of agricultural activity, were carried out locally. The long-standing boundary dispute with the republic of Guatemala continued, throughout the year, to form the subject of correspondence. between the British and Guatemalan governments. The proposal that the question should be referred to an international court of arbitration had not been carried into effect by the end of November. The dispute remained unresolved at the end of 1947. British Honduras, like the other British "continental" territory in the Caribbean region (British Guiana), took part in the conference held in Jamaica in Sept. 1947 to consider the question of closer union between the British Caribbean territories (*see* JAMAICA). Substantial grants from the British treasury were sanctioned in 1947, under the Colonial Department and Welfare act, for purposes of road construction in British Honduras. A grant of £43,425 was allocated in May for the road from Belize to Cayo in the interior; and a further grant of £114,500 was approved in the following July for the construction of a road from Belize to Hector Creek.

**Finance and Trade.**—The monetary unit is the local dollar, equal in theory to the U.S. dollar but in practice closely linked to sterling. Revenue (1946): £514,000; expenditure £542,000. Imports (1946) £1,683,000; exports £1,296,000. The natural resources of the colony consist almost entirely of agricultural and forest products.

The export of mahogany, for long the main basis of the trade of British Honduras, had undergone considerable diminution. Other articles of export include fruit, chicle (an essential raw material of chewing gum) and copra.

**British Isles:** *see* GREAT BRITAIN & NORTHERN IRELAND, UNITED KINGDOM OF.

## British Legion.

Membership in 1947 was more than 1,000,000. In addition the women's section numbered nearly 500,000. Branches exceeded 5,000 and more than 4,000 service committees administered to the needs of ex-service men and women. Although the annual income from Poppy day was almost £1,000,000, reserves built up during the war years were being drawn on to meet demands on the benevolent fund, so that expenditure was £250,000 over income. There were 6,500,000 men and women who served in World War II added to the 5,000,000 of World War I, who with their dependents were entitled to assistance from the legion.

The acquisition of eight large houses with grounds was completed; some for the use of the elderly, others for convalescents. The legion sanatoria continued their work of treatment and aftercare. Ex-service men paralyzed by spinal injuries and others suffering from psychoneurosis were subjects of special study and assistance. The legion also set up in 1947 for a year's trial a unit for the intensive treatment of rheumatic diseases. The results in 300 cases were so satisfactory that the ministry of health took over the unit, transferred it to the North-West hospital, London, and agreed to open similar units elsewhere. The legion's work on pensions benefited thousands of ex-service men and women throughout the country. During the year Sir Ian Fraser, M.P., was elected president and Lt. Col. Gordon Larking, national chairman. (J. C. As.)

## British South African Protectorates.

Under this heading are grouped the three British protectorates of Bechuanaland, Basutoland and Swaziland, of which certain essential statistics are given in the table. *See* BRITISH EMPIRE for population and capital towns. High commissioner: Sir Evelyn Baring. For other territories of British South Africa, *see* SOUTH AFRICA, THE UNION OF.

**History.**—After the impetus given to production and service by wartime demands, peacetime development schemes in these protectorates were slow in getting under way, particularly if viewed through the eyes of the native soldier who had to readjust himself to his old surroundings. It would be long, for example, before plans against soil erosion could make themselves felt, and meanwhile the population pressure in Basutoland and Swaziland became worse.

In Feb. 1947, Sir Godfrey Huggins, prime minister of Southern Rhodesia, went to London to arrange for the nationalizati of the Rhodesia-Bechuana-Union railway line. It was hoped relieve the owners from the necessity of finding new capit estimated at £20,000,000 of old debenture debt and £6,000,o new money for re-equipment purposes. Britain refused to burd Northern Rhodesia or Bechuanaland with part of this sum b agreed to assist in raising a loan of £30,000,000, Bechuanala guaranteeing up to £1,500,000 of any deficit. The previous ow ers, the Rhodesia Railways trust, were paid in cash the equiv lent of about 25 years of possible dividends; *i.e.*, £3,150,00 Bechuanaland itself was represented on the control authori of the nationalized line.

The three protectorates were visited by King George VI du ing his tour of South Africa. An elaborate and colourf parade was held at Maseru, where many thousands of nati horsemen attended the *pitso*, or council of state, and witness the investiture of their queen, Mantsebo Seeiso, with the Ord of the British Empire. This took place on March 12, the n tional holiday. It was estimated that 100,000 natives took pa in this ceremony. In Swaziland the royal party did not visit t capital, Mbabane; the paramount chief received them instead Goedegun; the king was given an opportunity of seeing a for of about 4,000 Swazi warriors in their own setting. The visit the largest (if not best-developed) protectorate, Bechuanalan was limited to a crossing by train. The chiefs of Bechuanalan continued to protest against the penetration of the Union South Africa into the mandated territory of South-West Afric They still hoped that either Britain or the United Nations itse would take it in trusteeship and thus enable a railway link-u of their land-locked country with the Atlantic; this could b effected by a continuation of the line from Gobabis, the prese railhead in South-West Africa, via Ghanzi, the European settl ment 200 mi. away and well inside Bechuanaland, to Matetsi Southern Rhodesia, thus skirting Ngamiland (where there sufficient rainfall) and opening up the Ngwato reserve (whe coal had been found but could not be mined): only thus coul Chief Tshekedi hope to introduce home industry to his countr The refusal of the Union of South Africa to surrender its co trol of South-West Africa came, therefore, as a severe blow t Bechuanaland; the protectorate feared that it would rema without any proper outlet to the Atlantic and would be burdene with an additional 500 mi. of frontier, behind which the Union native policy of segregation, etc., would become permanent.

(F. W. PK.)

## British West Africa.

The term includes the four Britis colonial territories on the west coa of Africa, viz: Nigeria, the Gold Coast, Sierra Leone and th Gambia. (The former-mandated territories of British Togolan and the British Cameroons are administered as trusteeship terr tories as part of the Gold Coast and of Nigeria, respectively. Unlike the three main East African territories (Kenya, Ugand and Tanganyika) the four West African colonies are not co tiguous, being separated by tracts of French colonial territor and depending in the main upon sea transport for their com munications *inter se*. Nigeria area 372,674 sq.mi.; pop. (194 est.) 22,000,000; chief towns Lagos (cap. 126,108), Ibada (387,133), Kano (89,162), Og bomosho (86,744), Iwo (57, 191). Gold Coast: area 91,84 sq.mi.; pop. (1942 est.) 3,962, 692; chief towns: Accra (cap 78,858), Kumasi (47,054), Se kondi (23,847), Tamale (21, 303). Sierra Leone: area 27,92 sq.mi.; pop. (1939 est.) 2,000,000; capital: Freetown (1945 est.): 87,000, Gambia: area 4,074 sq.mi.; pop. (1945 census) 220,509; capital: Bathurst (21,152). The great majority of the population of British West Africa is of African descent. For the most part they are pagan in religion, though the bulk of the inhabitants of the northern provinces of Nigeria are Moslem. The nearest approach to a *lingua franca* in West Africa is Hausa (an African language with a considerable infusion of Arabic words), but it is far from being understood everywhere. Each territory has its own constitution: in all four territories executive authority is vested in a governor (appointed by the British crown) who is assisted by executive and legislative councils. The system of indirect rule is widely employed. Governors: Nigeria, G. Beresford Stooke (appointed 1947); Gold Coast, Sir Gerald Creasy (appointed 1947); Sierra Leone, Sir Hubert Stevenson (appointed 1941); Gambia, A. B. Wright (appointed 1947).

**History.**—A notable feature of the year 1947 was the development of closer co-operation between British West Africa and neighbouring countries under French and Belgian colonial administration. Arthur Creech Jones, the British secretary of state for the colonies, laid special emphasis on this development in a speech delivered in the house of commons on July 29, 1947, during a debate on colonial affairs. "We have been developing," he said, "direct collaboration with the other colonial powers, and an important step forward in our co-operation with France and Belgium was taken at a meeting in Paris between representatives of the three governments towards the end of May." Agreement was reached at the Paris meeting on a three-year program of conferences in technical matters between the British, French and Belgian colonial authorities. A program of eight such conferences—to be held in various African centres—was arranged, some of them to be preceded by preliminary discussions in London, Paris or Brussels. They would range over a wide field, covering such subjects as soil conservation, rural economy, nutrition, labour, education, health and the campaign against insect pests. An Anglo-French communications conference took place at Dakar in May 1947. It was attended by technical experts from all four British West African territories and from the territories of French West Africa, the Cameroons and Equatorial Africa. The British colonial office and the ministry of overseas France were represented; Portuguese "observers" were also present. (For the African governors' conference of Nov. 1947 *see* BRITISH EAST AFRICA.)

On the economic side, there were several important developments. The report of a mission appointed to inquire into the production and transport of vegetable oils and oil seeds produced in the British West African colonies was published during the year. The report recommended a number of improvements in methods both of production and of transport. It was announced in Feb. 1947 that an investigation into the hydroelectric potentialities of the Volta river (Gold Coast) had been in progress for some months and that the result was expected to become available in a year's time. A statement was made in the same month regarding the establishment by the Nigerian government of a Cameroons development corporation under legislation enacted in the previous December. The corporation was to concern itself, in the first instance, with banana cultivation in the Cameroons, but would proceed later to deal with other local products. Large-scale grants to Nigeria were sanctioned under the Colonial Development and Welfare act in the course of the year. They included £781,883 for agricultural development, £570,171 for education, £358,113 for forestry and £330,280 for veterinary services. Smaller grants included £57,750 for the expenses of a nutrition field working party in the Gambia and £29,000 for agricultural machinery in the same territory.

The new constitution for Nigeria, sanctioned in 1946, came into force on Jan. 1, 1947. It was formed with the object of promoting constitutional unity under a strong central government, while retaining a large measure of local autonomy in the principal regions. It provided for the establishment of regional councils as a means of bridging the gulf between the people and the central government, of decentralizing powers and of giving the native administrations a recognized place in the constitutional machine. The new legislation council (which had an unofficial and African majority) held its first meeting in March 1947 following upon meetings of the newly formed regional councils in January and February. The revised constitution was criticized in some quarters as not sufficiently democratic.

**Finance and Trade.**—The unit of currency throughout British West Africa is the pound, maintained at par with sterling by the West African Currency board operating in London. Revenue (1946): Nigeria £13,717,000; Gold Coast £6,222,000; Sierra 416,000; Gold Coast £6,091,000; Sierra Leone £1,989,000; Gam- Leone £2,198,000; Gambia £610,000. Expenditure: Nigeria £13,- bia £560,000. Imports (1946): Nigeria £25,685,000; Gold Coast £17,464,000; Sierra Leone £3,961,000; Gambia £949,000. Exports: Nigeria £25,358,000; Gold Coast £20,362,000; Sierra Leone £2,644,000; Gambia £696,000. As in the case of East Africa, the resources of the British West African territories are primarily agricultural; but the area also contains important mineral deposits (tin in Nigeria, gold and manganese in the Gold Coast and diamonds in Sierra Leone). Apart from tin and rubber, the main articles of export from Nigeria are cocoa, groundnuts, palm kernels, palm oil and hides and skins. In the Gold Coast the staple crop, and by far the largest article of export, is cocoa. There is also a considerable export trade in gold and manganese. Sierra Leone's main exports are diamonds and palm kernels. The predominant export crop of the Gambia is the groundnut. (J. E. SH.)

**British West Indies:** *see* BAHAMAS; BARBADOS; JAMAICA; LEEWARD ISLANDS; TRINIDAD; WINDWARD ISLANDS.

**Broadcasting:** *see* RADIO; TELEVISION.

**Bromine.** The United States production of bromine reached a peak figure of 51,056 short tons in 1944 but declined to 39,855 tons in 1945 and 21,392 tons in 1946. The drop in 1945 was the first to occur since the early 1930s when the use of bromine was greatly expanded for the production of antiknock compounds for gasoline. More than 80% of the 1946 output of bromine was used for antiknock compounds and during World War II the percentage was even higher. (G. A. RO.)

**Brookings Institution:** *see* SOCIETIES AND ASSOCIATIONS.

**Broomcorn.** The U.S. broomcorn crop of 1947 was estimated at 32,800 tons, compared with 43,500 tons in 1946 and an average of 41,920 tons in 1936–45. Acreage planted in 1947—226,000—was nearly 30% below that of 1946; the yield of 290 lb. per acre was about the same as in 1946. Hot, dry weather reduced the crop in Oklahoma and Kansas. The leading producing state, as usual, was Oklahoma; Colorado had an average crop, one-third less than in 1946. The Texas crop was above average. Broomcorn prices were higher than in 1946 and fairly steady. (J. C. MS.)

**Brozovich or Broz, Josip (Tito)** (1892– ), Yugoslav statesman and soldier, was born in 1892 in the village of Kumrovec, near Zagreb, son of a blacksmith. He served as a private in the Austro-Hungarian army in World War I and in 1915 went over to

MARSHAL TITO (right) escorting Georgi Dimitrov, Bulgarian prime minister, past an honour guard on the latter's arrival in Belgrade July 27, 1947. The leaders met to confer on political and economic affairs

the Russians. Prisoner of war until 1917, he joined the Red army and fought with it against anticommunist Russian armies. In 1920 he was sent by the Comintern to Yugoslavia to organize the Communist party there. He was arrested many times, and in 1928 he was charged with conspiracy and sentenced to six years' imprisonment. Released in 1934, he went to Moscow, but soon returned to Yugoslavia to supervise the activities of the illegal Communist party. In 1936 he was sent to Paris and helped to organize the transport to Spain of volunteers of many nations joining the international brigades. In 1937 he became secretary general of the Yugoslav Communist party and remained in the country, using many aliases. When World War II started, he was in Belgrade as Slavko Babich, engineer. After the Germans attacked the U.S.S.R. he started guerrilla warfare in Yugoslavia, mainly in Bosnia. In Nov. 1942, using now the pseudonym of Tito, he organized a Yugoslav committee of liberation which formulated a program for a federal Yugoslavia. In the first months of 1945 all Yugoslavia was liberated and on March 7, 1945, Tito, who in the meantime had appointed himself marshal, became officially prime minister and minister of defense of Yugoslavia and commander-in-chief of its armed forces. In March 1946 he made a state visit to Warsaw and Prague, in Nov. 1947 to Sofia and in December to Budapest and Bucharest, signing on each occasion a bilateral treaty of friendship and mutual aid. Addressing the convention of the Union of Ex-Freedom Fighters in Belgrade, on Sept. 30, 1947, he said that the Truman doctrine was "nothing else but an endeavour to provoke war in Europe."

**Brunei:** *see* NORTH BORNEO.

**Bryn Mawr College.** A resident college for women at Bryn Mawr, Pa. In 1947 Bryn Mawr added to its academic program courses in problems of political and governmental reconstruction in postwar Europe, and the epoch of scientific rationalism, and the departments of biology and geology introduced a new interdepartmental course the development of scientific thought. The latter course covers the development of scientific ideas and techniques in chronological sequence, and their origins, interrelationships, and impact on other intellectual activities of various periods. Under the Mary Flexner lectureship, Arnold J. Toynbee, author of *A Study of History,* was in residence at the college for six weeks and gave a series of six public lectures on "Encounters Between Civilizations," which lectures were to be incorporated in the final volumes of his book. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (K. E. M.)

**Bubonic Plague:** *see* PLAGUE, BUBONIC AND PNEUMONIC.

**Buckwheat.** The U.S. buckwheat crop in 1947 was estimated at 7,334,000 bu., compared with 7,124,000 bu. in 1946 and an average of 6,954,000 bu. during 1936–45. Acreage was increased about 33% to 518,000, but the yield was lower—14.2 bu. per acre compared with 18.2 bu. in 1946. Prices rose steadily from $1.39 per bushel in Feb. 1947, to $1.85 in July and $2.01 in December. Buckwheat had declined in importance and was grown chiefly as a catch crop in unfavourable seasons. About two-thirds of the crop was used for livestock feed and less than one-third was sold for meal or for mixed feeds. (J. C. Ms.)

**Budget, National.** The U.S. budget submitted to congress by Pres. Harry S. Truman on Jan. 12, 1948, recommended expenditures for the fiscal year 1949 of $39,669,000,000 and revenues of $44,477,000,000. The corresponding figures for the preceding fiscal year were $37,728,000,000 and $45,210,000,000. Thus, the budget was based on the expectation that government expenditures would increase over those of fiscal 1948 by a little less than $2,000,000,000, while government revenues would decrease by almost $750,000,000.

For national defense alone, an estimate of $11,025,000,000 was presented, the largest single item among the various categories of government expenditures. By contrast, the estimated expenditures on national defense in fiscal 1948 were $10,746,000,000. This increase was accounted for mainly by three items: increased procurement of aircraft; provision of $400,000,000 for universal military training and increased expenditures for military stock-piling. These three items together amounted to considerably more than the increase shown in the budget, as there were decreases in terminal-leave payments and other World War II liquidation expenses.

The other two major items in the budget associated with previous wars or the prevention of future wars were veterans' services and benefits and international affairs and finance. The budget proposals for the latter item showed a substantial increase to $7,009,000,000, compared with $5,533,000,000 in fiscal 1948. By far the largest item of international expenditures was the European recovery program (*q.v.*) known as the Marshall plan. In addition, expenditures for foreign relief and for aid to the occupied areas were expected to increase largely because of higher prices, the poor crops in Germany and the damage to

Table I.—*Summary of Budget Receipts and Expenditures, United States*

Based on existing and proposed legislation

| Description | Actual, 1947 | Estimate, 1948 | Estimate, 1949 |

apanese agriculture caused by extensive storms. It was further ointed out by the president that the obligations of the United tates in Europe would be increased because the United Kinglom could no longer pay the dollar costs of supplies needed or Germany.

Veterans' benefits and services comprised one of the few najor items of the budget to show a significant decline from 948 to 1949. As compared with the total of $6,632,000,000 or the 1948 fiscal year, the budget recommendations for 1949 mounted to $6,102,000,000. Essentially, the president exlained the reduction in expenditures in terms of reduced needs ather than as a limitation of the benefits to be available to eterans. He did recommend, however, that the Veterans' dministration be given authority to prevent the provision of training for avocational or leisure time activity at high cost to he government and without commensurate benefit to veterans." t was expected that college, school and job training would each a peak in fiscal 1948 with an average of 2,250,000 vetrans enrolled, while for fiscal 1949 the average enrolment vould decline to 1,730,000. In addition, the number of vetrans drawing unemployment and self-employment allowances vas expected to decline from 625,000 to 390,000. On the other and, various aspects of aids to veterans were expected to reuire increased expenditures. It was estimated that claimants or compensation and pension payments to veterans and to their ependents would increase slightly and that higher prices would equire greater expenditures for hospital construction and oprating expenses of medical services.

Under the general category of social welfare, health and ecurity, the president made broad recommendations, involving n increase in expenditures from $1,960,000,000 in 1948 to 2,028,000,000 in fiscal 1949. He recommended that coverage nder the old-age and survivors insurance program be extended to all gainful workers including agricultural and domestic employees, farmers and other self-employed persons. He asked for provision of a national system of health insurance and improved facilities for public health and medical care. With respect to unemployment compensation, the president suggested that coverage be extended to employees of small business and as many other groups as feasible and, in addition, requested that federal aid under public assistance programs be broadened to include general assistance and allotment of federal grants in order to relate them to the financial resources and needs of each state.

As the broadening of the social insurance schemes was coupled with recommendations for higher taxes, not only expenditures but receipts would increase. For the immediate future, the increases in payroll contributions would be larger than the increases in benefits, a situation which the president considered useful as an anti-inflation measure.

Budgeted outlays for housing and community facilities were reduced substantially in the 1949 budget to $38,000,000 from the previous year's figure of $113,000,000. The reduction came primarily in smaller outlays on war housing and veterans' reused housing, as well as from smaller obligations to be undertaken by the Reconstruction Finance corporation. On the other hand, the president proposed legislation on a long-range housing program and requested an appropriation of $40,000,000 for that purpose. This program was based on the belief that both private enterprise and local agencies require greater assistance from the government in order to provide adequate housing on a continuing basis for all segments of the population. The appropriation requested for the fiscal year 1949 was expected only to prepare the way for loans and grants at a later time for such programs as low-rent housing, urban redevelopment, farm housing and large-scale rental housing.

Under the general category of education and general research, the budget showed a sharp increase in federal expenditures. Whereas these amounted in 1948 to only $77,000,000, it was proposed that these outlays for 1949 be increased to $387,000,000. While there were minor increases in the existing programs relating to education and general research because of rising costs and the expansion of some activities already authorized by congress, the bulk of the increase was accounted for by new programs proposed by the president. The most important, quantitatively, was a proposal to provide grants to the states for the improvement and extension of elementary and secondary education. The other proposal concerned the creation of a national science foundation which had already been agreed to in principle by congress but not in a form which was acceptable to the president.

Although the budget message emphasized that agriculture was in the best financial condition in history, with both farm prices and farm income at record levels, it was anticipated that greater expenditures under the category of agriculture and agricultural resources would be required. The increase shown in the budget was from $614,000,000 in 1948 to $905,000,000 for the fiscal year 1949. According to the budget message, this change was principally the result of the erratic character of expenditures for the supply and purchase programs of the Commodity Credit corporation. Supplementary material was provided to show that the contract to purchase Cuban sugar largely accounted for net expenditures of $264,000,000 in the fiscal year 1947 and that the subsequent sale of this sugar was largely responsible for the net receipts that were expected for fiscal 1948. Since these net receipts would not recur in 1949, they made a substantial difference between the total expenditures shown for the two fiscal years.

In other respects, the president was expecting agricultural expenditures to be reduced. He proposed a change in legislation with respect to the parity formula and the level of price support for agricultural products which would effect a saving of $50,000,000, and also recommended a reduced scale of payments to farmers under the conservation and land use program. It was emphasized that the high level of agricultural prices would mean that only small cash outlays would be needed for the programs designed to support prices of agricultural products and regularize supplies. Small increases were requested for the Farmers Home administration and for the Rural Electrification administration, the activities of both of which had been drastically curtailed during World War II.

Table II.—*Government Receipts and Expenditures—Great Britain*

(£ millions)

| Receipts | Actual receipts 1946-47 | Estimate for 1947-48 |
|---|---|---|
| Income tax | 1,156 | 1,150 |
| Surtax | 76 | 80 |
| Death duties | 148 | 155 |
| Stamps | 38 | 40 |
| Profits tax | 32 | 200 |
| Excess profits tax | 325 | |
| Other inland revenue | 1 | 1 |
| | 1,777 | 1,626 |

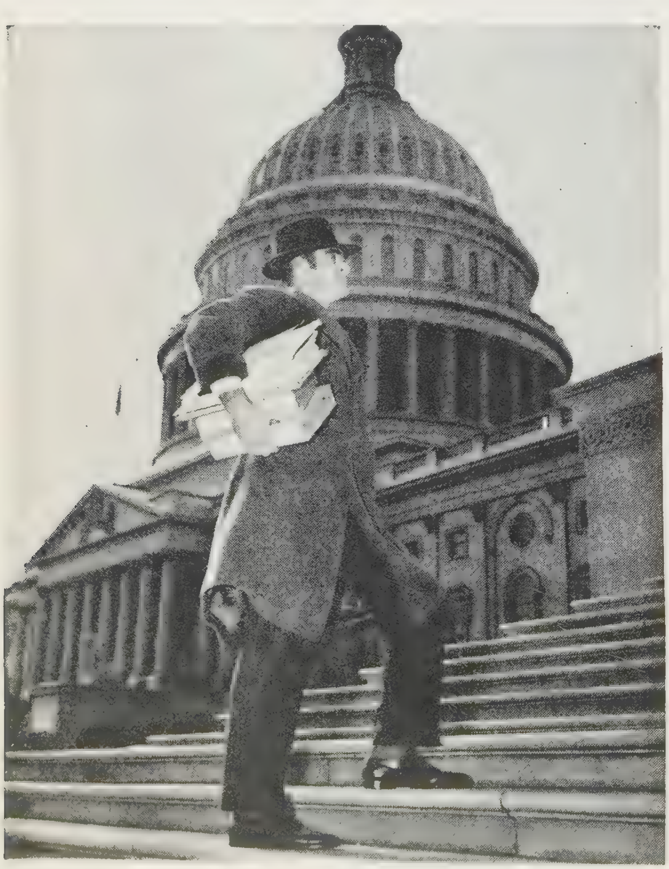
| Excise | 564 | 634 |
| | 1,184 | 1,300 |
| Motor duties | 49 | 50 |
| Total tax revenue | 3,010 | 2,976 |
| Sales of surplus war stores | 156 | 95 |
| Receipts for trading services | 59 | 55 |
| Wireless licences | 10 | 11 |
| Crown lands | 1 | 1 |
| Receipts from sundry loans | 27 | 21 |
| Miscellaneous | 78 | 270 |
| Total ordinary revenue | 3,341 | 3,429 |

| Expenditures | Exchequer issues 1946-47 | Esti 194 |
|---|---|---|
| Interest and management of national debt | 499 | |
| Payments to North Ireland exchequer | 20 | |
| National land fund | 50 | |
| Other consolidated fund services | 9 | |
| | 578 | |
| Supply services: | | |
| Defense votes* | 1,653 | |
| Civil votes (excluding ministry of supply [Defense]) | 1,652 | 1, |
| Revenue departments | — | |
| Total supply | 3,332 | 2, |
| Total ordinary expenditures | 3,910 | 3, |
| Self-balancing revenue and expenditure: | | |
| Post office | 131 | |
| E.P.T. refunds (part deducted for tax) | 151 | |

Slight discrepancies in totals are due to rounding figures.

*Including, in 1946–47, the whole expenditure charged on ministry of supply vote; but in 1947–48, excluding the civil portion of ministry's expenditure.

For the government's programs and services relating to natural resources other than agricultural, the budget showed an increase in expenditures of about $450,000,000 above the level of $1,179,000,000 estimated for fiscal 1948. The increased expenditures were concentrated in three governmental functions respecting natural resources. The largest of these, accounting for more than $200,000,000, was an increase to the Atomic Energy commission. The second was an increase requested for the flood control program, part of the civil functions of the army corps of engineers. Congress had previously provided for an acceleration of this program. The budget figure was stated as the amount required to carry forward projects under way in fiscal 1948.



COPIES of Pres. Truman's 1947 budget message being delivered to congress on Jan. 10 by Herbert Miller, record clerk of the White House

The third item was for the continuance of projects bei carried out by the bureau of reclamation, at a rate which wou yield irrigation and power benefits without undue delay.

In the field of transportation and communication, the crease requested was relatively small considering the magnitu of total expenditure and was requested in order to expand t activities of the Public Roads administration and the Ci Aeronautics administration. Offsetting decreases under this ge eral function were the result of lower construction activity f the coast guard and reduced activities of the maritime comm sion.

One of the few functional components of the budget to sh a substantial decline was finance, commerce and industry, which expenditures of $372,000,000 were to be reduced $190,000,000. This decline was in essence a bookkeeping ent since it arose primarily because of the payment in 1948 of w damage insurance profits to the miscellaneous receipts of t treasury. So far as the substantive items under this catego of expenditures were concerned, however, the trend was ge erally upward. The most important item concerned expend tures to finance proposed anti-inflation legislation. There w also a recommendation that funds be provided the departme of commerce to conduct a new census of business and oth surveys. A small increase was requested for various activiti connected with labour, largely designed to restore some of t reduction that was effected by congress in the preceding yea The expenses for general government operations were litt changed, apart from the costs of handling surplus proper disposal.

Despite the fact that there was a decrease in the public de in 1948 and a further decrease anticipated for fiscal 1949, was expected that interest on the public debt would contin to rise slightly. This was essentially caused by a shift in t composition of the debt away from the types of securiti carrying lower rates to securities carrying higher interest rate Other factors accounting for the increase in interest costs we the greater age of savings bonds carrying higher accrual rat of interest and the increase in short-term interest rates whic occurred during 1948.

As already noted, a decline in total budget receipts was anti ipated on the revenue side of the president's budget, from $45 210,000,000 in 1948 to $44,477,000,000 in fiscal 1949. Th president stated that the estimate of receipts assumed continu tion of a high level of business activity and of national incom and, furthermore, assumed that any further inflation would held in check by an effective anti-inflation program. Hence, th decline in budget receipts was not to be due to any significa change in tax revenues but resulted principally because of a

"DOUBLE TALK" was what Pres. Truman's 1947 policy for domestic finances sounded like to Shoemaker of the *Chicago Daily News*

estimated reduction of $2,000,000,000 in miscellaneous receipts from the sales of surplus property. The question of a general reduction in taxation was dismissed on the grounds that a substantial budget surplus was one of the most effective weapons in fighting inflation. The president had recommended that the personal income tax be reduced by $40 for each taxpayer and for each of his dependents, and he repeated in the budget message his belief that some readjustment was required to afford relief to many families suffering hardship from the tax structure. However, the proposed reduction in the personal income tax was to be offset by an increase in the corporation income tax or by the imposition of an excess profits tax so that government revenues would be unchanged.

Since the revenues of the government were expected to be greater than its expenditures, it was anticipated that a sizable surplus would be available for a further reduction of the public debt. There had been a small surplus in the fiscal year 1947, and for fiscal 1948 a substantial surplus was estimated, amounting to $7,482,000,000. For the following fiscal year, the budget surplus was estimated at $4,808,000,000. The president stated that, as long as employment and income were at record levels, full opportunity should be taken to apply this surplus to debt retirement.

(*See* also DEBT, NATIONAL; INCOME AND PRODUCT, U.S.; TAXATION; UNITED STATES.)

**Great Britain.**—The budget of Great Britain for the fiscal year 1947-48 showed little change on the revenue side and a further decline on the expenditure side. Revenues were expected to total £3,429,000,000, as compared with £3,341,000,000 in fiscal 1946–47. Some minor changes in taxes were proposed which were expected to raise the revenue total to £3,451,000,000.

On the expenditure side of the budget, the only significant change was a further marked cut in outlays for national defense. This item had already been reduced in the fiscal year 1946–47 to £1,653,000,000 as against £4,410,000,000 during the last war year. Estimated expenditures were to be cut to £899,000,000. If account was taken of the proposed tax changes, the budget showed a surplus of approximately £270,000,000. (M. GT.)

## Building and Construction Industry.

Steadily rising costs and several acute materials shortages raised havoc with the construction industry in 1947. In spite of these factors the volume of residential and industrial construction increased, but commercial construction declined. According to the bureau of labour statistics there were 89,300 more home units started in the first nine months of 1947 than in the same period in 1946, bringing the total started in this period to 615,000. Greatest progress was made in home completions which reached 576,000, doubling those in the first nine months of 1946. Whereas single family or row houses started in 1946 took from seven to nine months to complete, most houses of this type were completed in four or five months in 1947.

It was estimated that by the end of October, $11,938,000,000 had been spent for construction of all types, including public and private and new and major repair work. This was 25.8% above expenditures in the first ten months of 1946. But this dollar volume rise reflected spiralling construction costs and therefore could not be interpreted as a proportionate increase in amount of building.

The comparatively large industrial program consisted in the first six months chiefly of completions of contracts let in 1946 when materials supply seemed to be easing and the full impact of uncontrolled costs had not been felt. New contracts did not materialize in sufficient volume to bring about the usual seasonal rise in industrial expenditures normally occurring between August and September, but industrial starts rose in the fall. Public expenditure flowed mainly into new schools, highways, flood control and irrigation works.

Increases in the volume of home building did not follow the normal seasonal curves. There was a marked slump in the spring, usually the season for increased starts, and there was a marked increase in the late summer and early fall when the number of starts usually decline. The spring slump was occasioned by a buyers' panic because of higher prices. In New York city, home building shrank from 1,120 new dwelling units

*Estimated Construction Expenditures, First Ten Months of 1946 and 1947*

*Preliminary.

†Estimates of new construction were prepared jointly by the Bureau of Labor Statistics and the Office of Foreign and Domestic Commerce, and include expenditures for new construction, major additions, and alterations.

‡Excludes expenditures to construct facilities used in atomic energy projects.

§Covers privately financed structural repairs of the type for which building permits are generally required, and also maintenance work on farms.

Source: *Construction*, Series release Nov. 8, 1947, U.S. Dept. of Labor, Bureau of Labor Statistics.

started in March to 630 started in April. (April 1946 had 2,650 starts in the same area.)

Rumours that selling prices would soon drop were halted by the fact that construction costs continued to rise. Prospective buyers saw no actual prospect of lower prices and feared constantly rising prices so by July there was a new wave of buying which continued through the fall. The 85,700 new permanent homes started in July broke records of 20 years' standing and approached the 1925 all-time high. The new buying wave encouraged builders to make an unusual number of fall starts. Private builders marked a high never before reached in September by starting at least 88,000 new permanent homes.

It was estimated that 825,000 new dwelling units were started in 1947 in areas where building permits recorded construction. It was also estimated that a large number of units were built in peripheral districts surrounding urban communities where building permits were not required. Many of these homes, built by individuals for their own use (often by themselves with the assistance of family and friends) were stopped during construction because of high costs which exceeded the amount of money the family could afford or because of material shortages.

The greater number of the estimated 825,000 units started were in suburban areas, small towns and villages where land costs were more favourable.

By October there were four acute material shortages—nails, millwork, gypsum-lath and soil pipe. These shortages slowed construction and their continuance threatened stoppages in many areas. An active "gray market" evidenced itself. Because price controls had been repealed and no law was violated, "gray" was used instead of "black" to describe this market where nails and millwork could be bought at extortionately high prices from merchants and salesmen and others who had previously not sold them at all or to any great extent. Nails could be bought from concerns which did not previously handle nails, but traditional dealers could not get them. The regular price for nails in October was just under $5.00 a keg; the gray market price ranged from $7.70 to $14 a keg. Some builders were using aluminum nails at 60 cents a pound. The following explanations were given for the gray market in nails:

1. Many manufacturers of nails, in their endeavour to secure scrap steel, paid for it in nails and not in cash. Then these nails found their way into the gray market.

2. Many prefabricators who had to curtail or close down were putting products which they were holding in warehouses upon the market at high prices.

3. Steel manufacturers were not producing the nails that the market required because nails were not a profitable item of production.

Rough shop lumber prices mounted. While some old-line lumber producers held them in line, others skyrocketed them. One company sold No. 3 shop and better kiln-dried ponderosa pine at $71.50 per 1,000 delivered, while another sold it at $130 a thousand F.O.B. mill, which meant that when it was kiln-dried and delivered the price was about $172 per 1,000.

Retail lumber dealers were short of millwork because millwork manufacturers had to curtail production for lack of lumber. Many attributed the millwork lumber shortage to lack of boxcar facilities to deliver the lumber to the mills.

The gypsum-lath shortage was caused by shortages of paper and of plant facilities. Fuller production was anticipated for 1948 because two new plants were completed in 1947.

Material shortages, however, were not the only cause of construction difficulty nor the only price booster. There was a general rise. Material prices had risen 17% from Oct. 1946 when OPA controls were lifted to Dec. 1946. From Dec. 1946 to April 1947 they rose another 13%. In his message to congress on the domestic economy on Nov. 17, President Harry Truman stated that, "Since the middle of 1946 . . . buildi materials have gone up 42%."

Wage rates of union workers in the building trades advanc 15% in the year ending July 1, 1947, and continued to ri Employment in the construction industry rose to about 1,92 000 in September, a rise of 10% over Sept. 1946.

Labour difficulties were emphasized in the press. On Feb. 1947, President Truman announced a no-strike, no-locko agreement between the Associated Contractors of America a the Building and Construction Trades department of the Ame ican Federation of Labor for settling labour disputes in t home, highway, heavy and specialized construction fields. Th agreement probably avoided some strikes but it was not entire successful. Fear of repeated wage rises caused contractors pad bids for contemplated public construction, making cos prohibitive to public agencies. In an effort to remove this fa tor of uncertainty the mayor of New York city started negoti tions to obtain a two-and-one-half year wage stabilization agre ment in the New York building industry. Negotiations starte early in the year were reported "progressing" in mid-Novembe Builders complained more bitterly of the effect of labour slo downs than of high hourly rates.

Apprentice-training programs increased 26% with 2,608 trai ing plans in action in September and 103,640 apprentices training.

There were more vocal protests than usual against restri tive building codes which forced unnecessary expenditures, b not many local codes were changed.

The National Electrical Contractors association and the I ternational Brotherhood of Electrical Workers set up the Na tional Electrical Benefit board to operate the first industry-wid pension plan in the building field to which employers woul contribute.

In May congress eased the space restrictions on new housin from 1,500 to 2,000 sq.ft. In June congress passed the Wolco decontrol bill which removed all construction restrictions. Hav ing failed to pass any new legislation to encourage new con struction to alleviate the acute housing situation, congres authorized a 14-member joint senate-house committee to in vestigate housing. Starting in September, the committee unde the chairmanship of Representative Ralph Gamble of Ne York and the vice-chairmanship of Senator Joseph R. McCarth of Wisconsin held hearings in every section of the country

THE CALIFORNIA CABIN, a small prefabricated house popular in the south western U.S. during 1947. The basic three-room unit consisted of six standar ized sections and could be completed by one man in six days. Most wall spac was window

Bibliography.—Reports of the Bureau of Labor Statistics, Housing
nd Home Finance Agency, the National Committee on Housing; *The
rchitectural Forum.* (D. Rn.)

**Great Britain.**—The cold weather of the first three months
f 1947 restricted work very seriously and disposed at once of
ne setting of ambitious targets. The long dry summer and fine
utumn, however, enabled good progress to be made with the
rge numbers of houses started in the previous year and the
nonthly totals of houses completed rose steadily from 8,975 in
Iarch to 17,608 in September. Attention continued to be
ocused on the building of houses, although nearly half the
bour force of the industry continued to be engaged on indus-
ial building whose progress was, in the main, comparable to
nat of housing.

Output of individual operatives remained a source of com-
aint for those responsible for production. Questions of wages and incentives were earnestly debated throughout the year in the joint industrial council of the industry until, in October, it was announced that an increase of 3*d.* per hour had been agreed and a return to a payment-by-results scheme arranged. It was, however, by no means clear that a method had been found of overcoming the many obstacles to the satisfactory working of such a scheme.

Employers in London adopted a training-within-industry scheme to assist with the training of foremen; and, at all levels in the industry, increasing interest was shown in this work.

Supplies of materials continued to be very uncertain. The loss of production during February and March affected building materials very seriously with the result that, when building could start again, it was hampered by shortage of supplies. Steel for large buildings was scarce and it was not unknown for dollars to be spent in importing steel for high priority building.

Finally, the arrangements to meet the economic crisis indicated that the building labour force would be reduced and the building program lightened. The end of the year, therefore, found the outlook less certain than in the immediate postwar period, though there were many who felt that there was gain as well as loss in spreading the expansion of the industry over a longer period. (D. A. G. R.)

**Bulganin, Nikolai Alexandrovich** (1896– ), soviet politician and army officer, was a textile worker before the revolution. At the start of World War II he was chairman of the Moscow city soviet and was made a member of the city's military council after the German invasion.

Thereafter, his rise in the soviet state hierarchy was rapid. Enjoying the confidence of Premier Joseph Stalin, he was made a lieutenant general in the red army in 1942. Later he was promoted to an army general, and in late 1944 he was given the post of vice-commissar of defense. On Nov. 22 of that year, he was also made a member of the Soviet Union's 18-man defense council.

Shortly after taking his new post, Bulganin was dispatched to Poland to co-ordinate red army strategy in that theatre. In this post, he was said to have demonstrated his competence as a military "trouble-shooter," and in 1946, after the war, he was made vice-minister of the armed forces and was also elected to the politburo, the "super-cabinet" generally credited with running the soviet state machinery.

On March 3, 1947, Stalin stepped down as minister of the armed forces because of "the excessive pressure of his main work" and named Bulganin as his successor; two days later, Bulganin was also made a deputy premier.

**Bulgaria.** A republic in the eastern part of the Balkan peninsula. Area: 42,796 sq.mi.; pop. (census 1946): 7,022,206. Chief towns (pop. 1946): Sofia (cap. 434,888); Philippopolis (Plovdiv) (125,440); Varna 77,792; Russé (Ruschuk) (53,420); Burgas (43,684); Stara Zagora (37,057); Sliven (35,553). Religion: mainly Greek Orthodox, with about 800,000 Moslems. President of the republic: Mincho Neychev; prime minister: Georgi Dimitrov.

**History.**—A two-year plan for the Bulgarian economy was introduced at the January session of the *Sobranie*. Special emphasis was laid on the electrification schemes for the country. During the two-year period 12 thermoelectric and 16 hydroelectric centres and 16 transformer subcentres were to be set up. A dam was opened in March at Koprinka which would feed three power stations totalling 50,000,000 kw.hr., and in the August trade treaty with the U.S.S.R. it was stated that the latter would deliver one power station to Bulgaria. The two-year plan paid great attention to agriculture. By the end of 1948 Bulgaria was to have 50 machine tractor stations, and in the same period the number of labour co-operatives (voluntary collective farms) was to be doubled.

The food situation was difficult, a result of the heavy drought of 1946. Bread rations were reduced in January, March and June. In April price reductions of industrial goods were decreed, varying from 10% to 30%, doubtless in the hope of giving the peasants a further incentive to part with their produce. In March all bank notes over the value of 200 leva had to be handed in. The governor of the National bank put forward a claim to examine foreign missions' accounts. Bulgarian foreign trade during the year was principally with the U.S.S.R. which in exchange for tobacco and raw materials supplied some industrial equipment and "technical assistance." Prices were as usual kept secret.

On June 6 Nikolai Petkov, president of the Agrarian party, was arrested and charged with "conspiring with subversive foreign and domestic elements to overthrow the existing government." On June 11 the U.S. government issued the first of a series of protests, pointing out that Petkov "has evoked deep sympathy in the United States because he has openly fought for the acceptance and perpetuation of civil liberties in his own country—principles that were agreed to at Yalta, that underlie the terms of the armistice with Bulgaria, and that Article II of the peace treaty signed with Bulgaria was designed to protect and insure." Next day 23 deputies of the Agrarian party, charged with being "tools" of their imprisoned leader, were forced to resign from the national assembly.

After a nominal trial in the soviet manner, Petkov was found guilty of conspiracy and sentenced to death on Aug. 16. Both the U.S. and British governments protested to Lt. Gen. Alexander Cherepanov, acting chairman of the Allied (Soviet) Control commission, terming the trial a "gross miscarriage of
tice." Gen. Cherepanov replied that he was powerless to in
vene, since the trial was a "purely internal Bulgarian aff
On Aug. 23 the U.S. ambassador to Moscow, W. Bedell Sm
delivered a note to the soviet government requesting immed
consultations among the three Yalta powers with a view
staying Petkov's execution. The soviet reply reiterated Ch
panov's position and expressed "full respect and confide
toward the Bulgarian court set up by the Bulgarian people
guardian of justice." Great Britain supported the United St
in rejecting the soviet reply. Petkov was hanged on Sept.
At the request of the communists, the national assembly
meanwhile dissolved the Agrarian party and prohibited its
deputies from engaging in further political activity. The l
opposition in Bulgaria was thus reduced to the impotent So
Democratic party, represented by 8 deputies in an assem
totalling 465. Both the socialist and Agrarian newspapers
been suppressed the preceding June.

Two weeks after the execution of Petkov the trial of G
Kyril Stanchev began. Stanchev had played a prominent par
organizing the revolution of Sept. 9, 1944, which caused B
garia to break with Germany, and had commanded with disti
tion one of the Bulgarian armies that had subsequently fou
with the Allies. Stanchev was tried for conspiracy, and
ceived a sentence of life imprisonment.

The British government recognized the Bulgarian governm
on Feb. 13, and the United States resumed full diplomatic r
tions with Bulgaria on Oct. 1. On Aug. 25 the Bulgarian par
ment ratified the peace treaty. Bulgarian spokesmen, howev
repeatedly stated that they had not renounced the claim to p
of the Aegean coast. Bulgaria's relations with Greece were u
formly bad, as shown by the whole course of the U.N. inve
gations on Greece's northern frontier. With Yugoslavia re
tions were good; in August Dimitrov visited Marshal Tito, a
a mutual assistance pact was drafted between the two countr
This provided for abolition of visas, co-ordination of rail a

notes, which were placed in circulation on March 10, 1947

egard to "the frequent frontier provocations of Greek monrcho-fascists," and "a Danube river regime which concerns only iparian Danubian states." On Nov. 29, when Tito revisited Dimitrov in Bulgaria, the treaty of mutual assistance was signed. On Dec. 14, during a visit to Bulgaria of the Albanian prime minister, a similar treaty was signed by Dimitrov and Enver Hoxha. Dimitrov announced that Bulgaria would conclude mutual assistance treaties also with Rumania, Hungary, Czecholovakia and Poland.

On Dec. 9, when the new constitution came into force, Mincho Neychev was elected president of the republic and Vasil Kolarov, the provisional president, was appointed foreign minister in the new Dimitrov cabinet. (H. S-W.; L. We.)

**Education.**—Elementary and secondary (1940–41): kindergarten schools 256, scholars 12,465; primary schools 5,568, scholars 662,952; secondary schools 2,260, scholars 376,091; vocational schools 421, scholars 50,803; special schools 16, scholars 2,940. Higher education (1942): superior institutions 12, scholars 15,576; University of Sofia, teaching staff 430, students 9,744.

**Finance.**—Revenue (est. 1946) 42,910,000,000 leva. Money and note circulation (Feb. 1947) 44,457,000,000 leva; bank deposits (1947) 109,500,000,000 leva. No current rate of exchange.

**Trade and Communication.**—Foreign trade: imports (1946) 17,514,000,000 leva; imports (Jan.–June 1947) 7,581,000,000 leva; exports (1946) 14,942,000,000 leva; exports (Jan.–June 1947) 9,184,000,000 leva. Roads (1945) 13,870 mi.; railways (1945) 2,402 mi.; radio sets (1945) 195,645; telephones (1945) 38,842.

**Industrial and Agricultural Production.**—Production (July 1946–June 1947) in short tons: coal 1,096,106; iron and steel 23,322; cotton 18,105. Harvest (1946) in short tons: wheat 1,638,389; rye 159,331; barley 1,799,388; oats 101,235; maize 492,828; tobacco 41,837; rice 11,255; sugar beets 243,026; sweet sorghum 56,615; soya 91,346; cotton (seed) 10,624, (yarn) 4,517; hemp (seed) 2,156, (yarn) 3,207; flax (seed) 374, (yarn) 488; beans 74,074; potatoes 52,082; lucerne 214,207; pimentos 143,313; tomatoes 89,797. Harvest (1947), preliminary estimates: wheat and rye 1,322,800; other grain crops 941,800. Industrial production index (1947) 135 (1937=100). Unemployed (May 1947) 23,200.

**Bureau of Standards, National:** *see* Standards, National Bureau of.

**Burma.** A British dependency, lying on the eastern side of the Bay of Bengal between India, China and Siam, which from Jan. 4, 1948, was to be an independent state, the Union of Burma. Area: 261,610 sq.mi.; pop. (est. 1941): 16,823,798. Chief cities (1941): Rangoon (cap. 500,800); Mandalay (163,527); Moulmein (70,000). Languages: Burmese and English; religion: Buddhist (85%). Provisional president, Sao Shwe Thaik, the Shan chief of Yawnghwe; prime minister, Thakin Nu.

**History.**—In Dec. 1946 the British government invited Burmese political leaders to London and a delegation of six, headed by U Aung San, carried on discussions in London in Jan. 1947. An agreement, which U Saw (Myochit party) and Thakin Ba Sein (Dobama Asi-Ayon party) refused to sign, was reached that the interim government should be conducted generally in the same way as the interim government of India and that a constituent assembly should be elected directly. At the elections held in April the Anti-Fascist People's Freedom league had a sweeping majority; several minor parties boycotted the election. In February a conference of frontier peoples was held at Panglong, in the Southern Shan States, and an agreement was reached on measures for co-operation between the Burmese and the frontier peoples.

The constituent assembly began its deliberations in June and adopted a resolution that the constitution should be that of an independent sovereign republic to be known as the Union of Burma. A goodwill mission headed by Thakin Nu went to London in June and their conversations with the British government turned principally on the arrangements for the transfer of power and the future relations between Burma and Great Britain. The British government agreed that the interim government should become the provisional government of Burma until the transfer should be completed and that the senior member of the cabinet should be designated prime minister and the other members ministers. It was also agreed that a treaty should be drawn up and that missions should be exchanged to deal with defense and other matters. On July 19 seven members of the executive council, including U Aung San, were assassinated in the council chamber. A new government was at once formed headed by Thakin Nu, president of the constituent assembly. Former Premier U Saw and many others were arrested; the country remained quiet.

The constituent assembly held its second session in July and completed its work in September. Thakin Nu paid another visit to London and signed a treaty on Oct. 17. The Union of Burma was to come into being on Jan. 4, 1948, on the transfer of power by the British in accordance with the 1947 act providing for the independence of Burma.

The union would have a president, a prime minister and other ministers, a chamber of deputies and a chamber of nationalities. The Shan state, the Kachin state and the Karenni state would form constituent units of the union. There would also be Karen and Chin affairs councils. The constituent units would be autonomous in certain spheres of government and they and the councils would have ministers in the union government.

The president would be elected by the two chambers in joint session. The president would appoint the prime minister on the nomination of the chamber of deputies. The prime minister and the members of his government would depend on a majority in the chamber of deputies. The life of the chamber of deputies, of probably about 250 members, would be four years unless dissolved earlier by the president. The chamber of nationalities was to have 125 members. Rights of equality, freedom, religion, culture, and education, rights to constitutional remedies and economic rights were written into the constitution. It was also provided that the state should direct its policy toward operation of all public utility undertakings and exploitation of all natural resources in the union by itself or local bodies or by peoples' co-operative organizations.

At the end of 1947 Burma was still suffering seriously from the physical results of World War II, and recovery was hampered by lawlessness in various areas—figures for murder, dacoity and robbery were high—and by strikes. The cost of living, though falling, was still at an index figure of 300 to 400 (1941 = 100) for food, clothing and miscellaneous items. On the other hand, roads and transport were improving, exports of rice and timber were rising steadily, and ministers spoke confidently of a speedy return to normal. (J. Ce.)

**Education.**—In 1940, total number of institutions 27,015, scholars 851,922; primary schools 5,679, scholars 384,060; middle 1,018, scholars 139,190; high 399, scholars 94,353; special 1,172, scholars 19,190; unrecognized institutions 18,745, scholars 212,663; university (Rangoon) 2,365 students; art college (Mandalay) 101.

**Finance.**—Budget (actual 1946–47): revenue Rs.283,840,700, expenditure Rs.429,207,500; (est. 1947–48): revenue Rs.319,403,000, expenditure Rs.356,357,000. Exchange rate: rupee (Rs.1) = 1*s.* 6*d.* (30.155 cents U.S.); one crore = 10,000,000 rupees; one lakh = 100,000 rupees.

**Trade and Communication.**—Overseas trade in merchandise (April 1940–March 1941): imports £22,162,500; exports, including re-exports, £41,535,000. Communication (1940): roads for motor traffic, all weather, 6,811 mi.; seasonal 5,661 mi.; railways 2,060 mi.; inland waterways (approx.) 1,300 mi.

**Agriculture and Mineral Production.**—Production (1940–41) (in short tons): rice 6,720,000; groundnuts 179,200; sesamum seed 80,640; cotton 14,560; tobacco 53,435; teak 491,486. Minerals (1939): petroleum 331,069,920 U.S. gal.; (in short tons) tin concentrates 6,093; tungsten concentrates 4,863; tin tungsten concentrates 6,264; refined lead 85,120; antimonial lead 1,322; zinc concentrates 66,640; copper matte 8,887; nickel speiss 3,244; silver 6,175,000 troy oz.; gold 1,206 troy oz. Estimates for 1946–47 (in short tons): Rice (in husk) 4,357,600; groundnuts (in shell) 112,000; sesamum 34,000; cotton (lint) 4,100. Mineral production was still very small owing to destruction caused by the war.

**Buses:** *see* Automobile Industry; Electric Transportation; Motor Transportation.

**Business Review.** The year 1947 in the United States witnessed marked business expansion, an unprecedentedly high level of employment, rapidly rising prices and widespread antilabour feeling. Progress was made toward the better adjustment of the various sectors of the economy, and many of the retarding and disruptive factors of 1946 were less pronounced. There were fewer production delays occasioned by short supplies of strategic materials and parts, and a marked reduction in work stoppages caused by labour troubles and strikes. Most of the remaining wartime controls over the economy were removed, and new curbs were put on labour. The tempo of business activity was accelerated, reflecting continued high consumer demand in spite of rapidly advancing prices. Bank debits, an indicator of business activity, as reported by the board of governors of the federal reserve system, for the first 10 months of 1947 were 14% above the same period in 1946, and 29% above 1944.

In spite of the many tangible signs of returning business normality and peacetime prosperity, however, the year was characterized by surprise at the continued high level of business activity, uneasiness as to future prospects, and an emerging fear of inflation, which fear became a dominant concern during the second half of the year as the price rise gained momentum, bank loans expanded, consumer credit mounted, and the Marshall plan for aid to Europe approached realization. Reflecting this concern, President Truman late in the year urged the congress to concern itself with anti-inflation legislation, in effect, to re-establish some economic controls. Among the controls which the president strongly urged were: regulation of consumer and bank credit, and the distribution of commodities basically affecting the cost of living or industrial production; extension and strengthening of rent control; use on a selective basis of rationing and price control for essential cost of living items and essential industrial products; extension of authority over exports and transportation and continuation of the grain conservation program of the department of agriculture. On Dec. 9 the congress passed its own version of an anti-inflation measure, which extended the controls over exports and transportation and continued the grain conservation program, but for the rest, recommended a system of voluntary controls.

**Commodity Prices.**—Prices, both wholesale and retail, continued to rise throughout 1947 with only minor interruptions. The bureau of labour statistics index of wholesale commodity prices, other than foods and farm products, which stood at 105.6 in June 1946 rose to 124.7 by Dec. 1946, and stood at 137.3 by Aug. 30, 1947. Wholesale food prices which stood at 112.9 in June 1946 rose to 160.1 by Dec. 1946 and to 172.1 by Aug. 30, 1947. The index of farm products at wholesale rose from 140.1 to 168.1 between June and Dec. 1946 and by Aug. 30, 1947, had reached 181.7. For the year 1947, wholesale prices of commodities other than farm and food products averaged 23% above those of 1946, 37% above 1944, and 66% above 1939.

Retail prices followed wholesale prices upward. The consumers' price index of the bureau of labour statistics rose fr 133.3 to 153.3 between June and Dec. 1946 and by Aug. 1 had reached 160.3. Increases in food, clothing and house f nishings prices accounted for the bulk of the rise. The f index rose from 145.6 to 185.9 between June and Dec. 1946 a by Aug. 10, 1947 had climbed to 196.5. The rise in cloth prices, while less spectacular, was nevertheless substantial. T clothing price index rose from 157.2 to 176.5 between June a Dec. 1946 and to 185.9 by Aug. 30, 1947.

Factors on the demand side contributing to the very ra rise in prices once price controls were removed were (1) large volume of accumulated consumer demand, accompan by a large and widely distributed volume of purchasing pov arising from the high level of operations; (2) expansion in c sumer credit; (3) resumption of inventory accumulation, es cially at the distributive level; (4) European relief and rec struction requirements, reflected in the tremendous increase exports; and (5) on the supply side, the slowness in the upwa trend in industrial production during 1947. (*See* also Pr Administration, Office of; Prices.)

Of all the major wartime price controls, rent control was t only one which remained in 1947, but by the middle of 19 it, too, had been relaxed somewhat. The act passed by c gress in late June 1947 provided for the extension of fede control of residential rents until March 1, 1948, and placed t administration of the act in the office of the housing expedit This act removed controls from hotels and tourist accommo tions, newly-built housing commenced on or after Feb. 1, 19 and from all dwellings which at no time during the period F 1, 1945, to Jan. 31, 1947, inclusive, were rented as housi accommodations. This new rent law permitted rents to be creased 15% above the existing maximum, providing the lar lord and tenant mutually agreed on a lease extending throu Dec. 1948.

The act also provided for local advisory boards with auth ity to increase rents, or order decontrol on an area basis, su ject to revocation within 30 days by the housing expedit Evictions were made subject to state laws. The act also moved all controls over building materials and constructi except over the use of materials for amusement or recreatio purposes. The continuation of rent control was directly relat to the short supply of dwelling units, and the slowness wi which the construction industry was building new dwelling uni

Although residential construction was higher in 1947 than 1946, it lagged far behind the demand for new houses. (*S* also Building and Construction Industry; Housing.)

**National Income.**—The growth in U.S. national income r

"STILL IN SESSION," a cartoon by Illingworth in the *Daily Mail* (London reflecting the gloomy crisis involving shortages, strikes and other problem shadowing both nationalized and private industries in Great Britain througho 1947 ected the high level of business and industrial activity, and e growth in disposable personal income accounts, in part, for e pressure on prices. During the first quarter of 1947, national come was being produced at the annual rate of $197,600,000,00; during the second quarter at the rate of $200,100,000,000. isposable personal income after federal, state and local taxes, uring the first quarter of 1947, was at the rate of almost 170,000,000,000 per year, and by the third quarter it was at e rate of $178,700,000,000. Personal consumption expendiures were at the rate of $166,000,000,000 per year during the ird quarter, and personal savings had dropped to $12,700,00,000. (*See* INCOME AND PRODUCT, U.S.)

**Industrial Production.**—Industrial production continued to pand throughout 1947, but the rate of expansion was low, in ew of the relative freedom, as compared with 1946, from rikes, the more adequate supply and flow of raw materials and arts, the increase in foreign demand and the large effective nsumer demand. The final removal of price controls, except n rents, late in 1946 was not followed by further rapid rise in dustrial production in 1947 from the high levels reached by e end of 1946. In point of fact, the expansion in the physical olume of industrial production during 1946, while price con-ols remained, was far greater than in 1947 after price con-ols had been lifted. During the first 10 months of 1946, there as a gain of 28 points in the federal reserve board's adjusted dex, and even after a November-December drop, there was a ain of 24 points for the year, from 156 to 180. In Jan. 1947, e index rose to 184 and hovered around 185 through August, sing to 190 in September and to 192 in October. Both durable d the nondurable goods industries slumped after the first uarter rise in 1947, the nondurable decline beginning in March, d the durable in April. By Sept. 1947, the nondurable goods dex stood at 171, 5 points below January, and the durable ods index stood at 216, also 5 points below Jan. 1947. All of e durable goods industries, except iron and steel, were producing no more or less in Sept. 1947 than they were producing January, and the increase in the iron and steel production dex was only 3 points, from 192 in January to 195 in Septemer. The lumber products and the stone, clay and glass prod-cts industries maintained a fairly constant level of production uring the first three quarters of 1947, slightly above the level ey had reached by the end of 1946. The machinery and the ansportation equipment industries fell below their first quarter ghs during both the second and third quarters of 1947. Of ten ajor nondurable goods industry groups, only four expanded roduction during the first three quarters of 1947—leather and ather products, tobacco products, printing and publishing and etroleum and coal products. Production in the chemical prod-cts industries and in the paper products industries was fairly onstant throughout the first three quarters of 1947, at a level ightly higher than that reached by the end of 1946. Produc-on declined in the textiles, manufactured goods products, alcoolic beverages and rubber industries during the first three arters of 1947, with the most marked decline occurring in the xtiles and the rubber products industries; the seasonably adsted textiles index dropped from 172 in January to 158 in eptember; the rubber products index, from 247 in January to 2 in September. (*See* also articles on separate industries.)

**Consumer Credit.**—The last wartime control on consumer edit under regulation W, administered by the Federal Reserve oard, expired on Nov. 1, 1947, in accordance with the resoluon of congress approved on Aug. 8, 1947. The extensive sysm of consumer credit control embodied in regulation W was troduced in Sept. 1941 as part of a program to control inflaonary pressures on prices as consumer's goods became scarcer. ollowing the end of the war, there was some relaxation in the extensive system of consumer credit controls embodied in regulation W. Until Nov. 1, 1947, however, a major part of the system of controls was retained by continuing the controls on instalment credit which prescribed minimum down payments and repayment terms. This was considered necessary because of the continued scarcity of the types of goods for the purchase of which instalment credit is primarily used, and, also, because of the general pressure on prices that was not removed by the ending of the war. In spite of the various restrictions on consumer credit, however, and the great increase in personal spendable incomes, the volume of consumer credit had expanded steadily throughout 1946 and 1947. By the end of Sept. 1947, one month before the lifting of the final restriction on instalment credit, the amount of consumer credit outstanding had risen to $11,400,000,000—an expansion of $6,600,000,000 from the wartime low in 1944 and $1,500,000,000 higher than the prewar peak in 1941.

RETAIL MERCHANTS of Newburyport, Mass., voluntarily cut prices 10% after Pres. Truman's appeal of April 10, 1947. Although other U.S. communities adopted the "Newburyport Plan," retailers of Newburyport abandoned it on May 20 because of wholesale price levels

Under the conditions of supply and demand that prevailed in 1947, the expansion in consumer credit was an added inflationary force. However, the expansion that had occurred in the whole economy mitigated considerably the inflationary influence of consumer credit expansion, for the volume of consumer credit, even at the high level of Sept. 1947, was lower relative to total personal consumption expenditures than at the previous peak in 1941—about 7% in Sept. 1947 as compared with 12% in 1941.

Of the various forms of consumer credits, instalment credit, the most volatile of all the types of consumer credit, showed the greatest increase during the first nine months of 1947. The volume of instalment credit at the end of Sept. 1947, however, was still slightly below the prewar peak in 1941, whereas total consumer credit was substantially above the prewar peak. (*See* CONSUMER CREDIT.)

**U.S. Foreign Trade.**—The foreign trade of the U.S. in 1947 was characterized by a phenomenal increase in merchandise exports, largely financed by credit previously extended to other nations by the United States, and by a disturbing widening of the gap between merchandise exports and imports. Enunciation in early June of the Marshall plan for the systematic extension of aid to war-devastated countries for the rebuilding of their economies was of tremendous importance to the future of U.S. foreign trade and to the domestic economy as well. A further event of great importance to the future of the foreign trade of the U.S. was the conclusion on Oct. 30, 1947, at Geneva of the General Agreement on Tariffs and Trade, probably the most significant accomplishment to date under the Reciprocal Trade Agreements program. In relation to the foreign trade of the United States, the Marshall plan was important because it was concerned with rebuilding the productive capacities of countries so that there would be commodities available to export in payment for imports; the General Agreement on Tariffs and T was important because it was concerned with tearing down many artificial barriers to trade that had grown up over a pe of time, especially during the depression period, when count including the United States, were struggling to protect t domestic markets for their home industries, which were abl

"THE UNTOUCHABLE" by Duffy of the *Baltimore Sun*. Speculation as to a possible business depression grew in 1947, as inflationary prices soared and real income dwindled

INDUSTRIAL PRODUCTION of U.S. durable and nondurable goods, 1938–47, adjusted for seasonable variation (1935–39=100) (Source: Board of Governors of the Federal Reserve System)

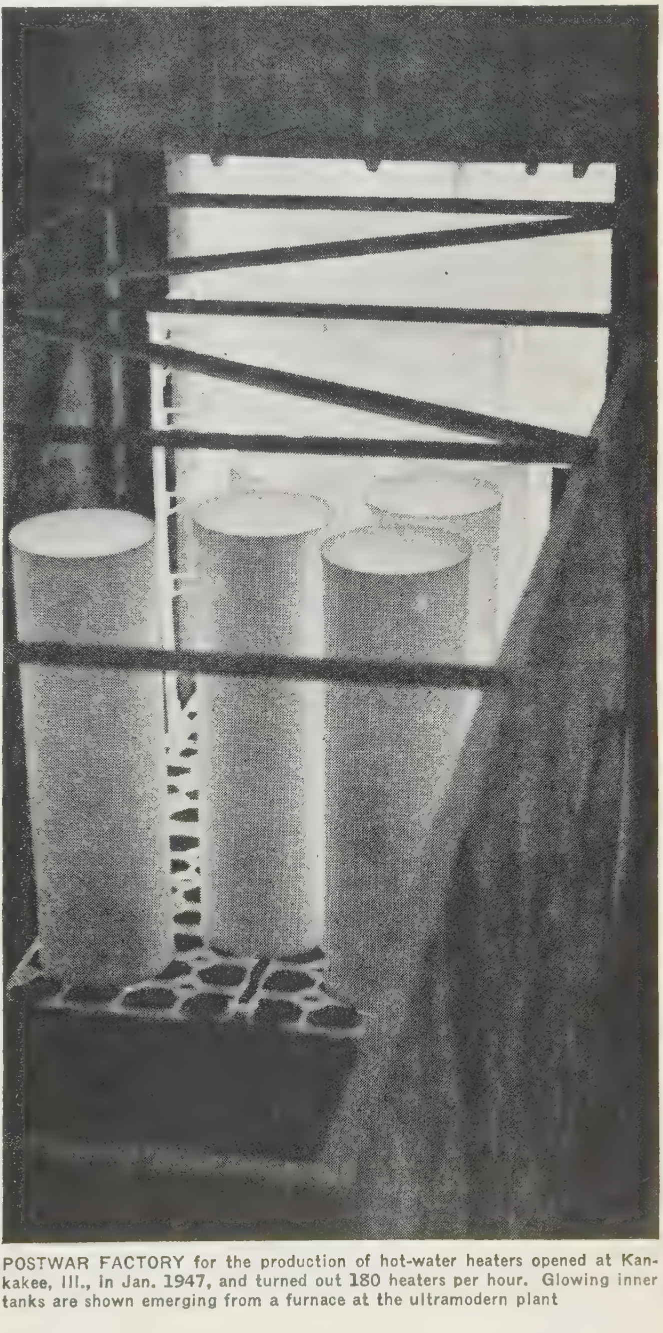
produce more than could be sold under the then existing conditions of consumer demand.

Supported, in large measure, by government credits which the U.S. had extended to countries in need of goods for rehabilitation and relief, the merchandise exports of the U.S. increased greatly throughout 1947. During each month of the first three quarters of the year, according to reports of the U.S. department of commerce, the value of merchandise exports exceeded $1,000,000,000, and the total for the 9-month period amounted to $10,800,000,000. The total for the year 1947 was just under $15,000,000,000. (*See* also European Recovery Program; International Trade.)

**Banking Developments.**—An outstanding development of 1947 in relation to the U.S. domestic economy was the great increase in deposits and currency held by individuals. After declining slightly during the first quarter of 1947, deposits and currency held by individuals rose steadily through the third quarter. At the end of Sept. 1947, the total of privately held deposits and currency stood at $166,000,000,000, which was $21,000,000,000 larger than when hostilities ceased in Aug. 1945, and $103,000,000,000 above the level of 1939. The major factor in the 1947 expansion in privately held deposits and currency was the growth in bank loans. In the first half of 1947, commercial and industrial loans increased by $800,000,000, about the same growth as occurred in the corresponding period in 1946, but after June 1947, there was an intensified demand for business loans and, according to the Federal Reserve board, such loans by reporting member banks increased $2,100,000,000 from June 25 through Oct. 29, 1947. This use of bank credit by business continued to grow in spite of the fact that business profits were at record levels in 1947 and liquid assets high. (*See* also Banking.)

**Company Earnings.**—Earnings of U.S. companies in 1947 reflected the record high levels of peacetime, production trade and national income and, in general, maintained the high level reached during the last quarter of 1946. In 1946, company earnings were characterized by a rapid rise quarter by quarter; n 1947, by a levelling off at the high level attained by the end of 1946. For the first 9 months of 1947, the combined net income of 375 leading corporations in the manufacturing, mining, trade and service industries amounted to $1,980,000,000, an increase of 77% from the corresponding period of 1946, according to a report of the National City Bank of New York. The magnitude of the increase was partly caused by the fact hat net incomes during the first half of 1946, while rising, were low relative to the last two quarters of the year, reflecting in part work stoppages caused by labour difficulties and strikes. The 9 months' net income of these corporations were at an annual rate of 16.2% on an aggregate capital and surplus of $16,300,000,000; the rate in 1946 was 10% on $15,000,000,000.

**Labour Legislation.**—The overshadowing event on the labour front in 1947 was the enactment by congress on June 23, over the veto of President Truman, of the Taft-Hartley Labor-Management Relations act. Widespread antilabour feeling had developed during 1946, a year replete with bitter labour-management controversies and paralyzing work stoppages from strikes. The emerging public defection was organized and exploited in the November political campaign by a majority of the Republican candidates seeking election. When the new, predominantly Republican congress met on Jan. 3, 1947, the drafting of new labour-union control legislation was high on its agenda. Concurrently with the legislative activity in the congress, state labour legislation was also being prepared. In 1947, 44 states met in regular legislative session, and 35 states



POSTWAR FACTORY for the production of hot-water heaters opened at Kankakee, Ill., in Jan. 1947, and turned out 180 heaters per hour. Glowing inner tanks are shown emerging from a furnace at the ultramodern plant

(V. B. B.)

**Great Britain, British Commonwealth and Europe.**—The basic factor in business conditions throughout the world during 1947 was the continued existence of an excess of demand over supply. The extent of this excess varied widely from country to country, according to the progress of the recovery of their system of production on the one hand and the degree of inflation of purchasing power on the other. Even in countries where inflation was practically nonexistent or moderate, and whose industries and agriculture had not suffered greatly from the war, there was an excess of demand, resulting from heavy buying by less favourably placed countries.

There was no indication yet in any country of the much-prophesied postwar slump. Rising prices caused by scarcity of goods did not appear to have resulted in consumers' strikes to any noteworthy degree. Nor did the majority of governments seek to correct excessive demand by means of deflation, beyond the degree achieved in some countries through reductions in government expenditure. To some extent France and Italy were experimenting with credit restrictions, but not nearly to an extent sufficient to bring about a slump similar to that experienced after World War I. In most countries the official monetary policies aimed at maintaining cheap and plentiful supplies of credit, to finance reconstruction or industrialization.

Under the circumstances the world-wide trend of rising prices was bound to continue. While in countries such as Great Britain, the British commonwealth, Switzerland, the Netherlands, etc., the rise was moderate and under control, in many European countries it assumed alarming proportions. Apart from the very marked rise in official prices, there were spectacular ri in black markets which continued to transact a very large p portion of the total trade in many countries.

Rising prices and large turnover continued to create an mosphere of high prosperity. Producers and merchants w able to earn large profits, even though in many cases these pr its were nominal rather than real, since stocks had to be repl ished at very high prices. Owing to scarcity of labour, r materials and fuel, rising prices did not cause general over-p duction, even though in some lines miscalculations by manuf turers resulted in surplus stocks which were not easily mark able.

Business prosperity in 1947 came to be threatened from a other direction. The suspension of the convertibility of sterli on Aug. 20 led to a widespread realization of the degree scarcity of hard currencies, and financially weak countries sorted to drastic cuts in their imports. Great Britain in partic lar, having spent, or lost through the effects of convertibili practically the whole of the proceeds of the U.S. loan of $3,75 000,000, had to discontinue almost completely its imports fro the dollar area. This dollar economy dealt a severe blow many branches of business, in particular to the automob trade. The price of second-hand cars slumped owing to the su pension of the basic ration of gasoline. The government's de sion to concentrate on an export drive meant that industr working mainly for the domestic market had to be deprived raw materials and even of man-power. Capital expenditure, to had to be severely curtailed, and many important public wor and the construction of new factories had to be suspended.

Most continental countries and British dominions had to fo low Britain's example in enforcing stringent import restrictio primarily against goods from the dollar area, but also agai luxuries, in the broadest sense of the term, from no matter wh source. Even countries such as Sweden and Canada, which fe strong enough at the beginning of 1947 to raise the exchan value of their currencies, found themselves threatened with exhaustion of their supplies of U.S. dollars by the summe There were only two countri in Europe, Switzerland and Be gium, which were unaffected the general trend. Among t British dominions, South Afri was in the strongest positio owing to its gold exports.

The progress of the reconstru tion of industries left much be desired. Few of the late E ropean belligerents approache prewar level. While the nu ber of workmen employed wa if anything, above the prew figure, their output per he

as lower. On the other hand, British dominions, which under-ent a large degree of industrialization during the war, showed substantial increase of their industrial production.

The inadequacy of output in Europe in general was accom-anied by excessive consumption, as is indicated by the index f retail trade, Table VI. This was partly the result of inflation, nd partly of a more equal distribution of national incomes, be-ause of which the poorest classes were able to increase their onsumption. Under the influence of the growing political de-hand for them, wages and benefits from social services tended o increase.

Unemployment remained very low during the greater part of ne year, even though there were sharp temporary increases in ritain and other European countries owing to lack of fuel or aw materials.

Government control continued to be a leading factor in busi-ess, especially in Europe. Its extent, far from lessening, ac-ually increased in the late summer and early autumn, as a esult of the dollar scarcity. In many instances the extent of fficial interference approached wartime level. Socialist legisla-on, too, continued in several European countries, especially in ritain where the nationalization of railroads and electricity ndertakings was passed by parliament. In countries beyond the iron curtain" proprietors of private enterprise were gradually queezed out of business by the relentless severity of anti-apitalist laws. Taxation of profits was further increased in everal countries.

The year 1947, nonetheless, was not bad from the point of iew of business activity. Profit possibilities were very favour-ble, especially in branches where prices were not officially xed. In most countries manufacturers and merchants had no fficulty in financing their business activities out of their own quid resources or with the aid of borrowed money. Govern-ents' efforts to balance their budgets made it possible for anks, for the first time since the beginning of World War II, to evote a large part of their resources to financing trade instead lending to treasuries. Owing to the ease with which stocks in eneral could be disposed of, and the high degree of liquidity at prevailed, the number of insolvencies remained very low. he main risk which producers had to run was not bad debts but dden changes in the situation through government interven-on or through lack of transport, fuel, materials or labour. (*See* so INTERNATIONAL TRADE; STRATEGIC MINERAL SUPPLIES; AGES AND HOURS; and articles on individual countries and dustries.) (P. EG.)

## utter.

Production of butter in the United States recovered partly in 1947 from the 40-year low record of 1946. otal output was estimated at 1,700,000,000 lb., compared with 501,000,000 lb. in 1946 and an average of 1,990,000,000 lb. uring 1940–45. With milk production about the same as in 46 and more cream available, butter production was well aintained during the first half of the year but declined sharply in August. Civilian consumption was estimated at about 11.5 lb. per capita, compared with 10.2 lb. in 1946 and an average of about 12 lb. during 1940–45. Less than 1% of total production was exported in 1946 and during the first half of 1947.

The price of butter to producers declined from 74.5 cents per lb. in Dec. 1946 to 63 cents in May 1947, then recovered to 84 cents in September. Retail prices ranged from 75 to 95 cents during the second half of the year. Storage stocks during 1947 were only about 50% of normal.

The increase in world butter production during 1947 reflected chiefly the rise in U.S. production. The severe drought in Europe caused a decline in milk production during midyear. In France, however, there was a marked increase in butter production. Estimates for the second quarter of 1947 also showed increases in Belgium and New Zealand.

**Cacao:** *see* COCOA.

## Cadmium.

By the close of 1947 figures on the production of cadmium in the United States had not been reported for 1946, but after dropping from 4,390 short tons in 1944 to 4,192 tons in 1945, a further decline in 1946 was to be expected. Outputs were reported from other countries as follows for 1946, with 1945 figures in parentheses: Mexico 790 (1,161) short tons of cadmium content exported for treatment elsewhere; Australia 246 (about the same as 1945); Canada 380 (324); Poland 127 (54); other smaller 1946 outputs included Belgium 98 tons, France 53, Norway 28, Italy 25 and Belgian Congo 18 tons. (G. A. RO.)

## Cadogan, Sir Alexander George Montagu

(1884– ), British diplomat and statesman, was born on Nov. 25, and educated at Eton and Balliol college, Oxford. He entered the foreign office, in 1933 went to Peiping as minister, and in 1935 was appointed ambassador. He returned to London in 1936 to become deputy undersecretary of state for foreign affairs, and later permanent secretary.

In 1944 Sir Alexander headed the British delegation to the Dumbarton Oaks conference, and in 1945 attended the San Francisco conference. In Jan. 1946 he was appointed permanent British representative to the United Nations Security council, and also represented Britain at the general assemblies (leading the British delegates at the special assembly on Palestine, 1947), the atomic energy commission and the commission for conventional armaments.

The Security council, in the early months of the year, received a British complaint against Albania, and Sir Alexander spoke bitterly of the way in which a majority, having found the complaint substantiated, had been overruled by the application of the veto, and described the council as being "completely obstructed, sterile and impotent."

**Calendar of Events, 1947:** *see* pages 1–16.

**California.** The most southerly Pacific coast state of the United States, California acquired statehood on Sept. 9, 1850. It is popularly known as the "Golden state," and has an area of 158,693 sq.mi., of which 1,890 sq.mi. is water. The resident civilian population was 9,342,000 (U.S. bureau of census est. on July 1, 1946) or 36.2% more than the 1940 census. Chief cities (with increase over 1940 in parentheses) were: Los Angeles 1,805,687 (20.0%); San Francisco 827,400 (30.3%); Oakland 400,935 (32.7%); San Diego 362,658 (78.3%); Long Beach 241,109 (46.8%); Berkeley 100,024 (16.9%); Pasadena 98,279 (20.1%); Glendale 96,495 (16.8%); Richmond 93,738 (252.1%). The capital, Sacramento, had a population of 119,984 (19.9%).

**History.**—The chief officers of California in 1947 were Earl Warren, governor; Goodwin J. Knight, lieutenant governor; Frank M. Jordan, secretary of state; Thomas H. Kuchel, controller; Charles G. Johnson, treasurer; Roy E. Simpson, superintendent of public instruction, and Fred N. Howser, attorney general.

When the state legislative session ended in July, most of Governor Warren's proposed legislation for 1947 had been made into law. A $3,000,000,000 ten-year highway construction program was launched, the revenue to be raised from a 1½-cent increase in the gasoline tax, a $2 levy on new driver's licences and a raise in automobile licence plate fees from $3 to $6. The state highway patrol was reorganized, a state aviation commission was established and a seven-man recreation commission was set up. Provisions were made for state mediation of labour disputes, liberalization of workmen's compensation benefits and an increase in funds for veterans' housing. The state assembly also outlawed jurisdictional strikes in California and required California citizens convicted of sex crimes to register with local police chiefs.

In July former State Attorney General Robert Kenny began the first official Henry A. Wallace presidential boom. Repercussions were felt at the state meeting of Democratic leaders in August, when the group split into three factions—supporters of President Harry S. Truman; Wallace backers, led by Robert Kenny; and followers of James Roosevelt, chairman of the California Democratic Central committee. Governor Warren was mentioned prominently as a possible presidential candidate in 1948, and state Republicans pledged their support in behalf of his nomination.

State Senator Jack Tenney released a 374-page report of his committee on un-American activities early in March, which charged that a number of organizations within the state were under communist influence and suggested that tax-supported institutions be purged of communists.

**Education.**—Average daily attendance for 1946–47 was estimat have been 304,774 in unified districts, 735,312 in elementary di and 330,602 in high school districts. Public junior colleges en 47,976 students of which 18,700 were veterans. The seven state c showed an enrolment of more than 16,000 students. For the fall ser of 1947–48 the University of California reported a total of 4 full-time students for its 8 schools, of which 21,003 were veterans; 2 were enrolled at the Berkeley campus.

**Social Insurance and Assistance, Public Welfare and Related Progra** For 1946–47 the average monthly assistance payment for the 16 needy aged was $51.35 (total amount spent $103,466,900); the a monthly payment for the 6,314 needy blind was $60.20 (total a spent $4,576,440) and the average monthly payment for the 2 needy children was $29.52 (total amount $9,089,430). During the year 1945–46 payable claims for unemployment compensation amo to 766,938 (70,511 in 1943), and the benefits paid totalled $152,00

Total expenditures for the 6 adult penal institutions and their inmates amounted to $4,020,243 for 1946. For the same year, ex tures of the state youth authority totalled $2,710,387, the foll institutions being under its direction: 5 work camps for boys wit inmates, 3 schools for boys with 1,028 inmates, and 2 schools for with 303 inmates.

**Communications.**—Final automobile registrations for 1946 to 2,801,076. As indicated by a legislative report of 1946 there were 1 mi. of highway in the state system and state expenditures for high in 1946–47 amounted to $74,139,360 (1945–46, $41,858,875). Ex tures for county roads and highways in 1946–47 totalled $4,05 (1945–46, $201,491). California, in 1940, had 16,856 mi. of rai 2,768 mi. of that being electrified. Of the 328 airports in the state in 69 were municipally operated and 125 were commercial; there 2,820 mi. of federal airways within the state.

**Banking and Finance.**—Total assets of the 115 state-supervised (171 branch offices) reached an all-time high of $3,651,914,000 in (1945, $3,236,602,000). On Jan. 1, 1947, 111 California banks members of the federal reserve system. Total bank deposits in Calif at the end of 1946 amounted to $11,353,422,000 (1945, $10,625,383, The 106 state licensed savings and loan associations reported asse $331,210,409.75, an increase of 25.24% over 1945.

At the end of the fiscal year July 1, 1946, total tax collections i state amounted to $4,364,580,000 (1945, $4,362,193,000). For the fiscal year Californians paid the U.S. government $2,464,294,41 income taxes, which gave the state third rank in the amount of in tax paid into the federal treasury.

Total state revenue for 1946–47 was $571,677,261 (1945–46, $ 846,907.47); total expenditures for 1946–47 reached $487,85 (1945–46, $342,174,654.70); the current budget surplus in 1946–47 $83,819,460 (1945–46, $154,672,252.77) and the net bonded de the state as of Dec. 31, 1946, was $102,019,503.10.

**Agriculture.**—In 1946, as a result of favourable agricultural condi the aggregate tonnage of all California crops increased by 7% ove 1945 figure. Total farm value of the major crops produced in the was $1,531,744 in 1946 (1945, $1,251,399). Acreage of truck harvested increased from 611,080 ac. in 1945 to 675,690 ac. in The cash farm income in 1946 was $2,121,948,000 (1945, $1,872, 000) of which $609,245,000 was from livestock and products ( $561,260,000), $1,466,312,000 from crops (1945, $1,271,408,000) $46,391,000 from government payments (1945, $39,618,000).

Table I.—*Leading Agricultural Products of California, 1946 and 194*

| Crop | 1946 | 1945 | Value, 1 |
|---|---|---|---|
| Grapes | .......... | .......... | $238,90 |
| Hay, tons | 6,108,000 | 6,015,000 | 140,484 |
| Oranges, boxes | 43,458,000 | 44,580,000 | 140,477 |
| Cotton lint, bales | 458,000 | 353,410 | 72,645 |
| Barley, bu. | 46,066,000 | 41,608,000 | 65,874 |
| Potatoes, bu. | 47,010,000 | 36,700,000 | 63,464 |
| Tomatoes | .......... | .......... | 62,155 |
| Lettuce, crate (5 doz.) | 22,720,000 | 19,122,000 | 61,187 |
| Peaches, bu. | 888,000 | 30,836,000 | 60,00 |
| Prunes, tons (dry) | 205,000 | 226,000 | 52,480 |
| Beans (dry), bags (100 lb.) | 3,587,000 | 3,274,000 | 44,064 |
| Walnuts, tons | 59,000 | 64,000 | 34,810 |

**Manufacturing.**—The total estimated value of California manufact for 1946 was $7,443,600,000 (1945, $8,269,800,000). Retail sales creased from $6,876,299,000 in 1945 to $8,984,075,000 in 1946, estimates of new construction indicated a total of $1,430,400,000 1946 (1945, $686,700,000).

Table II.—*Principal Industries of California, 1946 and 1945*

| Industry | Value of Products (est.) 1946 | 1945 |
|---|---|---|
| Food and beverage products | $2,366,200,000 | $2,044,200 |
| Aircraft and shipbuilding | 761,800,000 | 1,735,100 |
| Petroleum products | 744,100,000 | 793,400 |
| Iron, steel and products | 514,300,000 | 577,800 |
| Machinery | 463,100,000 | 731,300 |
| Chemical and allied products | 352,000,000 | 269,100 |
| Printing and publishing | 335,800,000 | 274,800 |
| Lumber | 232,800,000 | 198,300 |
| Apparel manufacturing | 225,500,000 | 233,000 |
| Stone, clay and glass | 212,500,000 | 190,400 |
| Automobiles and equipment | 210,900,000 | 178,200 |
| Rubber and rubber products | 179,500,000 | 241,200 |

An average of 677,200 wage and salary workers was employed California industry during 1946, the largest number in any peace year (1,165,500 during the wartime peak of 1943). Total annual w for comparative years were $1,145,000,000 in 1946, $1,610,000,00 1945 and $366,000,000 in 1939.

**Mineral Production.**—Mineral production in 1946 was valued at $559,49,496, higher than in any previous year.

able III.—*Value of Principal Minerals Produced in California, 1946 and 1945*

| Product | Value 1946 | Value 1945 |
|---|---|---|
| etroleum | $386,812,146 | $342,756,767 |
| atural gas | 46,905,877 | 35,362,313 |
| ement | 32,403,081 | 23,469,027 |
| iscellaneous stone | 27,671,788 | 20,207,351 |
| old | 12,488,840 | 5,177,830 |
| rick and tile | 5,565,075 | 3,523,661 |
| ead | 2,227,157 | 1,247,410 |
| inc | 1,786,056 | 2,224,184 |
| uicksilver | 1,648,758 | 2,697,835 |
| opper | 1,357,131 | 1,883,206 |

## alifornia, University of.

A state-supported, coeducational institution with headuarters at Berkeley, where the university was founded March 3, 1868, and with seven other campuses, at Los Angeles, San Francisco, Davis, Santa Barbara, Riverside, Mt. Hamilton and a Jolla. During 1947 construction began on projects authorized y the $95,147,000 permanent building program voted by the tate legislature, and university enrolment hit a new high of nore than 43,000 students registered on all campuses. To meet he needs of this student body while the permanent building rogram was under way more than 100 temporary structures vere erected on the major campuses to provide classrooms, aboratories and office space, and near-by wartime housing projcts were utilized for dormitory and apartment living quarters. On all campuses faculty and administrative staffs, as well as cademic offerings, were augmented. At Berkeley, particularly, he program in Asiatic and Slavic languages was increased in eeping with the coast's vital interests in the Pacific area, and n Los Angeles a new department of theatre arts was inauguated. Through special legislative appropriations, the college of griculture increased its research program by nearly $1,000,000, ts field work by more than $500,000 and its instruction by nore than $250,000. In the atomic research program, the giant 84-in. cyclotron, completed late in 1946, invaded a new domain f the atom. The great cyclotron, 10 times more powerful than ny other atom-smasher, dislodged as many as 30 particles from nucleus, where 2 or 3 is the usual number for other cyclotrons; roduced the most complete disintegrations of nuclei, comarable with cosmic ray phenomena, and verified for the first ime experimentally that subatomic forces operate between elenentary nuclear particles. A 300,000,000-electron volt synhrotron and a 40,000,000-ev linear accelerator neared compleion, and preliminary designs of a 10,000,000,000-ev "bevatron" or accelerating protons were announced. A unique wind tunnel or exploring the atmosphere between 70,000 ft. and 100 mi. bove sea level was under construction with funds from the ffice of Naval Research. A laboratory of experimental oncology as established by the medical school on the San Francisco ampus and the U.S. public health service as a part of an exanded university-wide cancer research program. At the Lick bservatory on Mt. Hamilton the 20-in. Carnegie astrographic amera found a new comet and a new asteroid, while new adances were made in the development of electronic astronomial observations. Operation of the university's Los Alamos N.M.) Scientific laboratory, where the atomic bomb was degned and made, was continued. University extension adult ducation programs turned increasingly to offerings designed for he adult who has been to college, with new refresher courses n law, medicine, engineering, business administration, dentistry nd similar fields. (For statistics of endowment, enrolment, aculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (R. G. S.)

**Cambodia:** *see* FRENCH OVERSEAS TERRITORIES.

## Cambridge University.

The academic year 1946–47 opened with 5,018 men and 572 women undergraduates in residence; 844 men research students and bachelors and 93 women research students were also attached to the university. There were 1,487 masters of arts in residence, and 210 women members of the staff at Girton and Newnham. Two-thirds of the United Kingdom students had done national service before admission. A syndicate appointed for the purpose recommended that full membership of the university be conferred on women.

The parliamentary grant, which amounted to £350,000 for the year, was to be approximately doubled in the next five years. The prewar figure was £118,500. Industrial and other outside bodies contributed £80,000 for research.

Pembroke college celebrated its sixth centenary and Trinity college its fourth centenary. Two new heads of colleges were inducted: Dr. William Telfer (Selwyn) and Prof. Sir Lionel Whitby (Downing). Honorary degrees were conferred on Gen. Dwight D. Eisenhower, Field Marshal Viscount Montgomery of Alamein, Earl Wavell, Ernest Bevin and other public men. During the year ten chairs were filled: J. R. M. Butler, modern history; H. Jeffreys, astronomy; F. J. W. Roughton, colloid science; Dr. M. C. Knowles, mediaeval history; E. C. Ratcliff, divinity; W. I. B. Beveridge, animal pathology; Dr. A. J. Arberry, Arabic; R. O. Redman, astrophysics; O. R. Frisch, natural philosophy; H. S. Commager, American history.

## Camp Fire Girls.

During 1947 more than 360,000 girls in the United States, representing all races and creeds, enjoyed the recreational and educational activities of Camp Fire Girls, Inc. There were also Camp Fire groups in England, Canada, Alaska, El Salvador and the Philippine Republic. Serving three age levels, the youth agency provides the following groups: Blue Birds, for girls 7 to 10 years old; Camp Fire Girls, for the 10- to 15-year-olds, and the Horizon club, which serves the 15- to 18-year-old girls.

Each year, as program emphasis, Camp Fire proposes a national project in which every member may take part. The theme chosen is always one of current national interest, geared particularly to citizenship and service. "Going Places" was the special theme for 1947. The project offered a broad scope and unlimited frontiers for the girls to explore, both in the real and ideal world. It focused attention on global goodwill and community understanding. The members in pursuing the project went forward in every way—travel, knowledge, safety practices, science, service to others, nutrition ideas, world friendship and understanding.

By planning imaginary trips to foreign lands, Camp Fire Girls learned of other customs, other ways. Adapting the project to their long-established "pen pals" activity, they continued corresponding with children of other countries. Many Camp Fire groups became vitally interested in the living conditions of their foreign friends and "adopted" some of them, sending regular contributions of food, clothing, toys and money. Through this phase of their "going places" theme, Camp Fire Girls acquired an increased knowledge of the history, culture, customs and habits of their friends around the globe.

In line with citizenship and service aspects of the 1947 project, Camp Fire Girls inaugurated a "Better Breakfast" campaign.

As a conservative estimate, 25,000,000 persons throughout the nation were informed, through the campaign, of the health benefits derived from eating a nutritious and adequate breakfast.

Other highlights of Camp Fire's over-all program for 1947 included the new edition of the *Horizon Club Program Book* for senior members. Based on suggestions made by the Horizon club members themselves, and edited and written by the national program department, this publication went out to Horizon club members across the United States. It outlined the objectives of the Horizon club—development of personality, social experience, vocational exploration and service to others—all inspired by the ideals expressed in the law of the Camp Fire Girls: Worship God, Seek Beauty, Give Service, Pursue Knowledge, Be Trustworthy, Hold on to Health, Glorify Work, Be Happy.

*The Outdoor Book* was also published during the year. As outdoors craft was found to be the most popular of Camp Fire's seven crafts—home, creative arts, outdoors, frontiers (science), business, sports and games, citizenship—this publication was presented as a resource for leaders in planning outdoor activities for the girls. It includes chapters on: The Importance of Group Camping, Leadership in the Out-of-Doors; Outdoor Activities; Planning Your Trips; Safeguards; Clothing and Equipment; What About Food; Menus and Recipes; Fire Building; Camp Housekeeping; Year Round Activities; Outdoor Neighbours; Games, Songs and Programs.

The official magazine of the youth agency is *The Camp Fire Girl.* This is published monthly, except during July and August. It had in 1947 a monthly circulation of 17,500.

During 1947 the youth agency purchased a seven-story building at 16 East 48th street, New York, for use as national headquarters. Its former home was at 88 Lexington avenue.

Mrs. James C. Parker of Grand Rapids, Mich., was president of the National Council of Camp Fire Girls; Dr. Bernice Baxter of Oakland, Calif., vice-president; Earle W. Brailey of Cleveland, O., chairman of the board; Glenn O. Hoffhines of Creek, Mich., treasurer; and Mrs. Frank C. Love of Syra N.Y., secretary. Miss Martha F. Allen was national dir President Harry S. Truman was honorary president of the o ization, and Herbert Hoover, honorary vice-president.

(E. M. M

CAMP FIRE GIRLS planning an imaginary trip as part of their 1947 project, "Going Places." Actual travel experience was gained by many of the girls during organized trips throughout the year

## Canada, Dominion of.

A dominion of the British monwealth of nations (Statu Westminster, 1931, 22 Geo. V. c. 4) covering all of N America north of the United States except Newfound Labrador and Alaska. Canada is a federal union of nine inces united under the terms of the British North Americ (1867). The original provinces were Nova Scotia, New B wick, Quebec, Ontario; to those were added Manitoba, British Columbia, 1871; Prince Edward Island, 1873; Al and Saskatchewan, 1905. Outside the provincial bound are the Yukon and the Northwest Territories, under juri tion of the national government. Total area: 3,694,863 sq of which 228,307 sq.mi. are water. Capital is Ottawa (q Canada's 17th governor-general, Viscount Alexander of T took office April 12, 1946, succeeding the Earl of Athlone

**Population.**—(1941) 11,506,655; (1947 est.) 12,582, Montreal is the largest city, pop. (1946) 1,082,555. Provi capitals and their populations (1946 assessor's est. except Fredericton and Charlottetown, for which figures are census) in order of provinces listed above: Halifax (100,0 Fredericton (10,062); Quebec (183,441); Toronto (696,5 Winnipeg (231,203); Victoria (55,000); Charlottetown 821); Edmonton (111,745); Regina (56,520).

Population trends through 1947 were interesting. A scale post-World War II immigration policy got under Immigration offices were opened in the United Kingdom six immigration teams were sent to European displaced pers camps to interview prospective immigrants. The governme official policy was to welcome those who could contribute and strength to help Canada exploit its potentialities. Nov. 30, 64,895 immigrants had entered. The 1947 total estimated at 75,000 (1946: 71,719; 1945: 22,722). The lar single 1947 group was from the United Kingdom, 33,910 sons; displaced persons numbered 7,345. About 9,000 Canad resident in the United States returned home (1946: 5,177)

The first mass air-borne immigration took place when Polish girls were flown from Frankfort, Germany, to Que to work in a textile mill. The experiment was soon copied the province of Ontario which flew in 5,800 British immigra by the end of the year, and planned for 1,200 more.

**Constitution.**—During 1947 Canada moved further along road to nationhood. On Jan. 1 the Canadian Citizenship went into force, and for the first time residents became, legal and other documents, "Canadian citizens" rather th "British subjects." The Citizenship act also recognized right of women to decide their own nationality. They no lon automatically assumed the nationality of their husbands wh they married non-Canadians.

On July 1 the United Kingdom changed the title of dominion office in London to the "commonwealth relations fice," which further emphasized the fact that Canada was "oversea Dominion of the King, in exactly the same positi as Great Britain, the Metropolitan Dominion of His Majest

On Jan. 15 the privy council ruled that the Canadian parl ment could abolish appeals from the Canadian supreme co to the privy council. Canada had the power to interpret own laws, and need no longer rely on the judgment of Gre Britain.

A fourth constitutional step was taken on Oct. 1 when

IME MINISTER Mackenzie King (left) accepting certificate No. 1 conferring nadian citizenship during a ceremony at Ottawa on Jan. 3, 1947. Effective . 1, all native-born Canadians were automatically granted citizenship, while naining British subjects

tters patent" authorizing the governor-general to exercise, advice of the Canadian government, the king's powers in pect to Canada, were revised. It became legally possible for governor-general to sign treaties, to sign letters of credence ambassadors and to give assent to honours and awards, hout having to consult the king.

**Politics.**—The Liberal government under the Rt. Hon. W. L. ickenzie King remained in power. Three federal by-elections re held during the year in Montreal-Cartier (Que.), Halifax .S.) and York-Sunbury (N.B.), all won by the Liberals with ge majorities. At the end of the year the Liberals held 126 ts in the 245-seat parliament. Two seats were vacant. There re ten vacancies in the senate.

The Co-operative Commonwealth federation announced a ialization priority list. It "accepted in principle" the nanalization of banking, iron and steel, farm implements, meat king. Leading members of the C.C.F. advocated that nada's constitution, "drawn up for the horse-and-buggy s," should be streamlined.

That was also one of the proposals of the Social Credit party, ich desired a new allocation of powers and revenues between dominion and the provinces. Solon Low, federal Social edit leader, proposed legislation to compel political parties to close the sources of their funds. E. C. Manning, Social edit premier of Alberta, said that the Social Credit goal s "to establish a free economy in which the artificial barriers t restrict and sabotage production will be removed and in ich all production will be fully monetized."

The Bloc Populaire, founded in 1942, which won only three ebec legislative seats in the 1944 provincial election and two parliament in the 1945 federal election, broke apart when leader resigned.

The royal Canadian mounted police and the external affairs artment conducted investigations into communist activities. private bill to outlaw communist organizations was introduced in parliament but had not reached a vote by the end of the year.

**Government.**—The 3rd session of the 20th parliament began late in January and finished in mid-July. The 3rd session passed 78 public laws, all but one of which were government sponsored.

There were 31 new laws. Exportation from Canada of goods not in adequate supply was banned. A dominion coal board was set up to examine Canada's fuel situation. The Eastern Rockies Forest Conservation board was organized to construct, operate and maintain projects to conserve the forest and protect the watershed of that area. It was one of the most vital pieces of Canadian conservation legislation ever enacted. Redistribution changed the boundaries of many federal constituencies and increased parliamentary representation from 245 to 255, effective for the next general election.

The 3rd session made 46 amendments to existing laws. Most important were improvements in the marketing of grain, compulsory grading of flax fibres, banning of private sale of atomic energy inventions, suspension of the collection of excess profits from business. The National Defence act was revised to set up a defense research board, empowered to develop and improve Canada's military equipment. The 1947 budget made cuts averaging 29% in individual income tax.

The government announced a surplus of $541,693,160 for the first seven months of the 1947–48 fiscal year. Six members of parliament were appointed parliamentary assistants, bringing the total to ten.

The government began the 4th session of the 20th parliament on Dec. 5, instead of waiting until Jan. 1948, so as to take urgently needed steps to improve Canada's economic position. The government strategy was twofold. The long-range plan was to ratify the Geneva trade treaties, so that Canada's export trade could be expanded. The short-range plan was to pass legislation banning excessive imports from the United States, because Canada's supply of United States dollars for such imports was inadequate. When parliament adjourned on Dec. 19 it was still discussing the short-range plan.

**External Affairs.**—Speaking in New York city on Oct. 31 at a Canadian club reception, Prime Minister King said that Canada would increasingly be "one of the great influences for world co-operation and peace." Events of 1947 underlined this trend. Canada was active and aggressive at United Nations meetings. On Sept. 30 Canada was elected to the Security council. A Canadian resolution that the Russian plan for an international atomic control commission was not adequate was approved. Another Canadian resolution condemning war propaganda and advocating peace-mongering was unanimously accepted. Canadian delegates were instrumental in getting Russia and the United States to adopt a compromise on the Palestine issue and thus broke the deadlock.

Although the United Nations Relief and Rehabilitation Administration (U.N.R.R.A.) program was terminated, Canada's aid to war-torn Europe and Asia did not cease. In August the government provided $11,000,000 in post-U.N.R.R.A. relief to Greece, Italy and Austria. A $5,000,000 grant was made to the International Children's Emergency fund. Toward the end of the year the Canadian Council for Reconstruction through the United Nations Educational, Scientific and Cultural organization was set up, with the object of raising $5,000,000 voluntarily in Canada to help restore education in Europe.

On Nov. 6, after seven months of study, terms were made public under which Canada would admit Newfoundland as tenth Canadian province. The island was promised full provincial status and benefit of all normal and special services rendered by the federal government to the people of Canada generally. Newfoundlanders were still discussing the terms at the end of 1947, and a May 1948 plebiscite was in prospect.

**United States and Canadian Relations.**—In June Pres. Harry S. Truman visited Ottawa and scored a striking personal triumph. His broadcast speech to parliament was a bold statement on the Truman doctrine, and he received a great ovation when he said: "We intend to support those who are determined to govern themselves in their own way, and who honor the right of others to do likewise."

Canada-United States wartime co-operation for defense of North America continued as a permanent peacetime policy. At special conferences Canadian and United States military experts exchanged ideas on developments in the armament field. Parliament permitted United States troops in Canada in peacetime to have their own military courts for disciplinary measures.

The 1945 air agreement between the United States and Canada was revised permitting carriers additional landing rights in each other's country. Canada extended its consular service to practically all large U.S. cities. On Dec. 15 it was announced that U.S. investments in Canada totalled $4,446,000,000, which was 4 times as great as those in any other single country.

**Dominion-Provincial Relations.**—In an effort to extend the wartime tax agreements, when the 1946 conferences failed, the federal government proceeded to sign five separate provincial agreements. Early in Jan. 1947 this plan ran into difficulty when New Brunswick felt that bargains between the dominion and British Columbia and Prince Edward Island were more favourable provincially than its own. The dominion called a new conference with the five signing provinces and offered a new formula which increased the subsidies to take the place of the income and corporation taxes. It was finally agreed to by all except Ontario and Quebec. In July the government bill to implement agreements with seven provinces passed parliament.

Parliament also passed special government legislation cancelling $55,416,164 of relief debts built up by British Columbia, Alberta, Saskatchewan and Manitoba during the depression. All provinces signed agreements under the amended Old Age Pension act, passed at the third session, which increased social welfare payments.

**Economic Controls.**—Throughout the year there was stant removal of price ceilings, and retained ceilings we the most part revised upward. Sugar, first commodity ra on July 1, 1942, was the last commodity derationed on N 1947. The withdrawal of subsidies was compensated by prices. On Nov. 1 the cost-of-living index stood at on Jan. 2, 1947, the index had stood at 127. Soaring food caused the reimposition of ceilings on canned fruits and tables, but the government went no further along rec than warning about profiteering and food speculation.

When a western Canadian housewives' 30-day buyers' in May had little effect in curbing price rises, 50 na women's organizations held an Ottawa convention and fo the Canadian Association of Consumers. The new body vided a focal point for consumers' price representations recommendations to the government.

The government faced a national economic crisis. U States coal, oil and basic steel continued to be vital to Can industrial life, but it required U.S. dollars to purchase On Dec. 31, 1945, Canada had U.S. exchange reserves tot $1,500,000,000. By Dec. 31, 1946, these had dropped to 250,000,000, and by Nov. 17, 1947, to $500,000,000. Canadian dollar equals $1.00 U.S.) For various reasons C dians were purchasing more heavily from the U.S. than A icans were purchasing from Canada. The government t fore placed an import prohibition on many U.S. commod Others were admitted only on a quota basis. Canadian ple travel in the U.S. was limited to $150 annually. A 25% cise tax was placed on nonessential consumer goods largely from U.S. components. U.S. branch plants in Ca were encouraged to manufacture parts for completed ar made by their industry in the United States.

During the year some important changes were mad Canada's retailing practices. The government announc program of size and quality standardization of textiles, and shoes, plumbing fixtures, domestic weighing scales, ar other items. Dealers were required to state what kind of an provided the fur for a coat, no matter what fancy nam might be given. The department of trade and commerce also given power to say how certain goods would be packa displayed and sold.

**Employment.**—The number of persons working in Canad 1947 approached one-half the dominion's population. supply was high. In mid-October there were 102,000 oper registered with the national employment service compared 92,000 applications for jobs. At the peak of 1947 industrial seasonal activity, only 1.4% of Canada's total labour f was unemployed. On Oct. 1 the number employed in leading industries was 9% higher than at the same date in

Production throughout 1947 was so great that salaries wages during the first half of the year amounted to $2,8 000,000, an increase of $410,000,000 over 1946. More half the increase occurred in the manufacturing and tra groups, in which average weekly earnings rose steadily to $37.37 at Oct. 1, almost 13% higher than at Oct. 1, Farm wage rates on May 15 were at the highest levels that month in any year since statistics became availabl 1940.

However, taking a complete cross section of Canadian ployment, the average income of individual wage earners not increase so much as the total labour income, because number of paid workers increased so greatly. The rise living prices offset part of the increase in workers' incom

**Labour.**—Unions showed considerably more restraint in than in 1946. Up to the end of October there were only trikes, costing 2,400,000 man-working days. In the same eriod of 1946, strikes cost 4,500,000 man-working days.

In June the government introduced in parliament an Industrial Relations and Disputes Investigation act to codify its wn wartime legislation for 250,000 workers in interprovincial ndustries, which were under federal jurisdiction. The revision mbodied few new features, but the government expected it to ecome a model for provincial legislation. At the end of 1947, he bill was still in the committee stages.

**Industry.**—During the first five months of the year the flow f production was at a rate nearly 9% above the same period n 1946. Consumption of primary power continued to rise and n the first ten months of 1947 was 21% higher than in the imilar 1946 period. The gains in industrial production were due partly to a larger factory and mill-working force, and to edistribution of labour, but the most important factor was he greater and steadier flow of basic materials (chiefly steel) or durable goods. In the first ten months production of pig ron rose 47% and steel 30% over 1946. While gold production or the first eight months of 1947 was 7% greater than the ame period for 1946, the monthly average was considerably ess than the 1935-39 period. To stimulate production the government offered a subsidy to be paid on full production for the irst year and on partial production in the next two years of new mine's life. While there were 1947 production advances ver 1946 in copper (23%) and nickel (26%), there were production drops in zinc (13%), lead (12%) and silver (12%). Canada's important hematite iron ore mine at Steep Rock, Man., exceeded its 1947 production target by 10%, when it delivered 1,206,248 tons.

In the first four months of 1947, Canada's forest industries roduced about one-third of Canada's total export; 21% of he exports in the period were for pulp and paper alone. Newsprint production for the 11 months of 1947 increased 7% over he same months of 1946.

The value of all construction completed and in progress in 947 totalled $1,000,000,000. It was the largest amount ever pent in a year in Canada. The construction program was also more varied than previously. Despite these facts, there were notable deficiencies in housing and road building.

Dividend payments by Canadian companies in November vere $15,565,790 (Nov. 1946: $8,032,725; Nov. 1945: $6,562,652).

**Business and Finance.**—Although signs of deferment in consumer spending began to appear in July, total business turnover confounded the economic prophets who had predicted recession by midsummer. Department store buying for the first eight months of 1947 was 14% higher than for the 1946 period.

At the end of 1946 Canadians had $3,850,000,000 cash in banks, or about $300,000,000 more than in 1946; but the rate of saving was slower. Canada's first peacetime saving-bond issue went on sale on Oct. 15, 1946, and by July 31 Canadians had purchased and retained $471,708,350 of them. Between April 1 and Oct. 31, 1947, the national revenue department collected $175,000,000 more tax money than the budget had stimated.

Despite this buoyant situation, there were 402 commercial failures in the first nine months of 1947, compared with 147 in he same 1946 period. Defaulted liabilities totalled $7,100,000, 67% higher than in 1946. The government moved to investigate price-fixing combine operating in the dental-supply field, and began a preliminary investigation of prices in the baking industry.

**Food and Agriculture.**—Grain production dropped in 1947. Estimates (1946 revised estimates in brackets) placed wheat t 340,800,000 bu. (413,700,000 bu.), oats 282,700,000 bu. (371,100,000 bu.), barley 141,500,000 bu. (148,900,000 bu.), rye 13,200,000 bu. (8,800,000 bu.), mixed grain 35,700,000 bu. (53,000,000 bu.), flax 11,500,000 bu. (6,400,000 bu.). Beet-sugar tonnage dropped 18%. While the 1947 wheat crop had a value of $399,000,000 at the farms, a reduction of about $74,000,000 from 1946, the gross value of all principal field crops at farms was estimated to be $1,287,000,000, since the decline in volume was offset by price increases. It was about 3% more than 1946 and fifth highest in the 39-year-old field crop records. Net farm cash income for 1947 was estimated at close to the 1946 figure of $1,270,000,000.

The Canadian Wheat board continued to wield its emergency powers, which enabled it to pay farmers an initial $1.35 per bushel for wheat and sell it to other countries at world prices. The exception was the Canadian contract with the United Kingdom, where the price was the $1.35 per bushel. However, the price under the contract was increased during the year to $1.55 per bushel, which meant another $200,000,000 for farmers. Late in December the government announced that agreement had been reached with the United Kingdom providing not only for the continuance of the wheat agreement but also for the supplying of livestock products and raw materials.

**External Trade.**—There was continuing strong demand for Canadian products abroad, financed in part by credits ($327,508,000 to seven countries during the first seven months of 1947), which resulted in record peacetime totals for export trade. The figure was $4,920,000,000 for the first nine months of the year.

The peak of Canada's activities for trade expansion was its work at Geneva when Canadian delegates met with 25 nations to draw up a framework of general agreement on tariff and

PRES. TRUMAN with Prime Minister Mackenzie King at Ottawa in June 1947, during the first state visit of a U.S. president to Canada

trade. The Canadian delegation was in the forefront of the fight for removal of detrimental trade practices. More than 100 trade agreements were signed by the participating nations. Canada itself made 17 such agreements, which gained a reduction on a long list of manufactured goods and on many basic products of the farm, forest, fishery and mine.

Canadian delegates attended the Havana World Trade conference at the end of the year and pressed hard for complete acceptance of the International Trade organization charter, drafted at the preparatory conference in Geneva.

**Defense.**—The first important defense announcement came on Jan. 9, when 25 duplicated services in the 3 armed forces were consolidated, thus saving $250,000,000 annually. On Feb. 14 parliament approved an amendment to the Militia bill which limited the size of Canada's permanent peacetime army to 30,000 officers and men. The training program for reserves involved 40,000 additional men.

Air force changes included the reorganization of the dominion into two air commands instead of five, special glider training and the use of jet fighters and helicopters.

Naval strength was to be 7,500, though the actual strength fell about 700 short of that. Naval reserves were set at 6,000. Ships and men were divided between the two coasts. The aircraft carrier "Warrior" was retired to England in reserve and

EXPERIMENTAL STATION at Fort Churchill, Manitoba, showing the signal headquarters there of the Canadian army. The U.S.-Canadian military base was maintained in 1947 for cold-weather testing of equipment

replaced by the winterized aircraft carrier "Magnificent."

During the year the three armed services co-operate n
combined training at a joint air school. A triservice de e
college was organized at Kingston, Ont., to train senior of s
only. The course covered military, economic and indu l
organization. Cadet colleges for the three armed forces e
set up.

In November Canadian army medical officers began rece g
instructions on the treatment of atomic-bomb casualties.

**Transportation.**—Special legislation in parliament autho d
the crown-owned Canadian National railways to make $18,
000 of additions and betterments to its equipment and
chase $41,500,000 worth of new equipment. Reorganizatio
the Canadian Pacific railway established an autonomous Pa
region, which recognized the radical differences between op
tions in prairie territory and those in mountainous terri
The C.P.R. ordered $47,000,000 worth of new locomot
gondolas, freight and express cars; to facilitate freight han
in Montreal, it began expansion of terminal facilities and c
tion of the first "hump retarder" yard in Canada.

Both railways faced rising operating costs, and applied to
board of transport commissioners for permission to incr
freight rates 30%. The board travelled 7,000 mi., sat 150
and took 5,500,000 words of testimony. The hearings cl
Dec. 17 with a decision pending.

The crown-owned Trans-Canada Air Lines added 1,200
to its Canadian routes, extended service to 6 additional ci
and carried 50% more passengers and 35% more freight t
in 1946. A direct Toronto-Winnipeg route was establis
T.C.A.'s transatlantic Prestwick (Scotland) route continued
full operation, while a new weekly service was inaugurated
Shannon, Eire. T.C.A. also entered into an air pact
Portugal.

The government established a Canadian maritime com
sion, authorized to study Canada's coastal and transocean s
ping, and make comparisons with other countries.

**Communications.**—Despite materials shortages, the num
of telephones increased, and the mileage of telephone lines
tended. The board of governors of the Canadian Broadcast
corporation approved the construction of two new private ra
stations (which brought the number to 125). For the f
time in Canada, electric power wires were used to carry t
phone conversations. The experiment was in a sparsely sett
area of Quebec, through which a hydro service ran. To se
still more isolated areas in northern Manitoba, the Manit
Telephone system began the installation of a radio-teleph
service to mining communities and Hudson's Bay company f
trade posts. Two-way frequency modulation radio commu
cation was used to co-ordinate the activities of a major sum
log drive in northwestern Ontario. Power line repair crews
Nova Scotia were similarly equipped to speed operations.

**Arctic Developments.**—The royal Canadian air force s
veyed more than 400,000 sq.mi. of hitherto unmapped arc
territory, taking 95,000 photographs. Experimental flights w
carried out to test fuel and aircraft engineering. A joint U
Canadian project established two of nine projected weath
reporting stations, one on Ellesmere Island at Eureka sound a
the second on Cornwallis Island at Resolute bay. By Dece
ber both stations were reporting four times daily. In additi
the U.S.-Canadian technicians constructed two low-frequen
long-range radar stations, one at Point Barrow, Alaska, and o
on Victoria Island at Cambridge Bay, N.W. Terr. The gover
ment purchased the war-famed "Crimson air route" across t
eastern arctic.

Two Canadian scientists trapped spores, some of which cau
plant diseases, in mile-high air over the Arctic ocean. The s

ntists were surprised to find them in such relative abundance. nother Canadian scientist, using a Canadian-devised electronic strument for making precise observations, discovered that e north magnetic pole had shifted about 200 mi. north and at it centred roughly at latitude 73° N., longitude 96° W.

**Frontier Developments.**—Canada's frontier development as far from over, a fact emphasized by the charter parliament ranted for the construction of a railway between the Gulf of . Lawrence and Ungava bay in Quebec. In the consideration age was the extension of the Canadian Pacific railway to ellowknife, N.W. Terr., and a railway from Vancouver, B.C., Fairbanks, Alaska. The only active railway construction was e 55-mi., $2,684,000 line from Barraute to Kiask Falls in orthern Quebec, to tap vast resources of pulpwood in the Hud- on bay watershed.

Besides power projects in the more settled Ontario and Que- ec regions, surveys were laid for a 385,000-h.p. station on the aniapiskau river in the Ungava area of northern Quebec. This as to supply electric energy for exploiting the new Labrador on discoveries. Wilderness pulp and paper towns were under onstruction at Blind River, Schreiber, Terrace Bay and Red ock, in Ontario.

**Tourism.**—While in 1946 United States tourists left $280,- 00,000 in Canada, they left an estimated $400,000,000 during 947, the biggest tourist year. During the first ten-month period 1947, 1,557,784 automobiles entered Canada, 12.6% more an for the same 1946 period. With tourism becoming estab- shed as one of Canada's major industries, the various prov- ces took steps not only to encourage more tourists but to rotect them against exploitation. The advertising of tourist mp operators in Ontario came under government supervision. ublic accommodation in New Brunswick was placed under rovincial control.

**World War II.**—The Canadian government announced that anada had withdrawn its occupation troops from Germany ecause Canada was given no voice in directing postwar Ger- an control policy. The last draft of Canadian soldiers re- rned home from overseas on Jan. 14. In September the state war existing between Canada and Italy, Rumania, Hungary nd Finland ended with the ratification of peace treaties. At e same time Canada asked full participation in the pending eace settlements with Germany and Japan. From Aug. 1945 Aug. 1947 Canadian military officers travelled far abroad vestigating and arranging for the prosecution of axis na- onals involved in war crimes against Canadians. By Sept. 1 ere were still 66 such war criminals whose trials and punish- ents were pending. In May the government announced that orld War II cost Canadians $20,255,865,996, or $1,688 per pita. On Aug. 31 there were 97,729 World War II pensioners ceiving annually $35,136,407 (Aug. 31, 1946: 66,677 pen- oners receiving $26,996,039). By the end of 1947 the Cana- an mint had not finished striking 3,356,000 medals for service four continents and two oceans.

**Human Rights.**—So many Canadians protested the govern- ent's compulsory Japanese-Canadian deportation order that was cancelled on Jan. 24. By a vote of 105 to 31, parliament proved a government order which permitted Canadian-Japa- se to move freely anywhere in Canada except in British Co- mbia. Toward the end of the year a royal commission opened enquiry into more than 1,000 Canadian-Japanese claims in- lving about $3,000,000 worth of property, which their former wners claimed had been forcibly sold for less than its real lue. The government repealed the Chinese Immigration act d permitted wives and unmarried children living in China to ove to Canada.

A joint parliamentary committee on human rights and fundamental freedoms studied the possibility of a comprehensive federal "Bill of Rights," but the question remained in the committee stages.

**Science.**—On May 8, the Canadian Atomic Energy Control board announced that $150,000 would be granted to three Canadian universities for research into peacetime use of atomic energy. On that date, Canada's atomic-energy plant at Chalk River, Ont., had a chain-reacting pile in operation and was stocking up small amounts of plutonium. By September the plant was producing radio-isotopes.

Canadian mineralogists were active. Work with magnesium, lightest of structural metals, was abreast or ahead of that in any other part of the world. A magnetic air-borne mineral detector was used in the Ottawa valley to discover iron-ore deposits. A Canadian steel mill inaugurated the process of blowing air through molten pig iron to speed purification of steel.

The National Research council built a laboratory in Saskatoon, Sask., for research into industrial uses of farm products. The council conducted extensive research into the properties and possibilities of cosmic rays, and developed a radar meter which enabled an aircraft pilot to read his distance in miles from a point on the ground.

**Medicine and Health.**—The National Cancer Institute of Canada was organized to co-ordinate and plan a campaign of cancer control. The health and welfare department called into conference experts on rheumatism and arthritis to lay the ground work for a co-ordinated national campaign against those diseases. Ontario blazed a health trail for Canada in October when it announced free prenatal examination. The province also took steps to appoint a staff dentist to every county health unit. Toward the end of the year the Ontario Medical association launched a prepaid medical care scheme, broader than most schemes because it provided attention for known chronic ailments. The Canadian Red Cross society established a peacetime blood transfusion bank for civilian use, making Canada the first nation in the world to take this step.

**Education.**—Soaring expenses forced the University of Toronto to boost its tuition fee 20%. As partial compensation, $50,000 a year was set aside to establish new bursaries. The Universities of Manitoba, Dalhousie and St. Francois Xavier also announced proportionate increases in fees, although Manitoba's was confined to the medical course. Construction of a $1,200,000 library for the University of Alberta, part of a $20,000,000, six-year program, was begun. Initiated by the Canadian Education association, and financed by contributions from business and labour, a new Canadian research committee was set up to provide education authorities with objective data and scientific directives for adapting the work of schools to the needs of the day. Schooling costs for veterans' rehabilitation were running at the rate of $4,000,000 monthly in 1947.

**Culture and Awards.**—Preservation of the best examples of early architecture in the province was the aim of the Architectural Conservancy of Ontario, which was reformed after a lapse of six years caused by World War II. The Canadian Museum association was formed to promote better education in Canada through museums.

For the first time in Canadian history, a governor-general had his paintings shown in a Canadian art exhibition. A Montreal commercial artist, Henry Eveleigh, won the United Nations international Poster-of-the-year competition, with a pair of hands planting a young tree, the leaves of which were the flags of the 55 members of the United Nations. The first step toward the formation of a national musical organization was taken in November when Ottawa musicians organized a Canadian Federation of Music Clubs. An effort was made to establish a national clearing house of research and technical information on community centres within the department of national health and welfare, but action was still pending at the end of the year.

## Canadian Literature.

**Fiction.**—A notable fiction event was the appearance in English of Gabrielle Roy's *The Tin Flute* (published in 1946 in French under the title *Bonheur d'Occasion*), which hit the best-seller lists and sold to Hollywood. It described semi-slum life in Montreal with sober insight. A second outstanding event was the joint winning of the annual $1,000 Ryerson fiction award by Edward A. McCourt with *Music at the Close,* a story of a frustrated boy growing up on the Canadian prairies, and by Will R. Bird with *Judgment Glen,* a historical novel of Yorkshire settlers in Nova Scotia in the 18th century. Another dual award divided the $1,000 Oxford-Crowell novel competition for Canadian writers between Christine van der Mark with *In Due Season,* modern pioneer farming in northern Alberta, and Angeline Hango with *Truthfully Yours,* modern rural life in Quebec. *Shreds of Circumstance,* by Madge Macbeth, sophisticated in treatment and cosmopolitan in setting, described the plight of displaced persons. Grace Campbell's *Fresh Wind Blowing* was the story of young Canadians whose lives were shattered or changed by World War II. *Of This Day's Journey,* by Constance Beresford-Howe, described a post-World War II college faculty that took refuge behind the traditional "ivied walls." *Deep Doorways,* by Dorothy Dumbrille, chose the problems of Canadians living between two world wars. *Trees Grow Tall,* by Irene Perrot, was a contrasting character study between a violinist-composer and a concert soprano. Historical novels of the year included Maida Parlow French's *All This to Keep,* pioneering in upper Canada at the end of the 18th century, Alan Sullivan's *The Fur Masters,* the struggle between Hudson's Bay company and the North West company, and Edward A. McCourt's *The Flaming Hour,* the 1885 Riel rebellion in Alberta.

Several first novels of importance appeared. *Hetty Dorval,* by Ethel Wilson, was a penetrating if short character study with settings in British Columbia and England. *Serpent's Tooth,* by Isabelle Hughes, was an ironic treatment of family life in Toronto. *Sarah Binks,* by Paul Hiebert, was a satirical novel about contemporary Canadian culture, with settings in Saskatchewan. *Fortress North,* by E. Jacoby Walker, fictionalized the history of Edmonton, Alta., from 1795 to 1943. *The Higher Loyalty,* by Don Synge (pseudonym of H. N. Edelstein), was a plea for racial tolerance, with settings in Ottawa and Montreal. Roderick Stuart Kennedy wrote about World War I in England in *The Road South.* Lionel Shapiro's *The Sealed Verdict* was a melodramatic story of racial conflict with a U.S. prosecutor at the World War II nazi war crimes trials as protagonist.

Several books of short stories were published during the year. Most striking was Thomas Raddall's *The Wedding Gift,* a collection of 15 short stories all based on incidents from Nova Scotian history. Desmond Pacey edited *A Book of Canadian Stories,* a collection of the work of 37 Canadian writers.

**Nonfiction.**—More political, economic, historical, sociological and similar books were published in 1947 than ever before. Most striking biography of the year was W. R. Plewman's *Adam Beck and the Ontario Hydro,* which was not on story of a great Canadian but also reported the struggle be private interests and public ownership in hydroelectric Most important literary biography was *Edwin J. Pratt Man And His Poetry,* by H. W. Wells and Carl F. Klin indispensable critical study of Canada's greatest contem poet. Corolyn Cox's *Canadian Strength* was a series of dian biographies, the subjects being the chief figures of th time departments of the government. *An Infinity of Que* by C. J. Eustace, was another biographical series, desc five modern women who were exponents of the religion and the art of religion. C. B. Sissons completed his exha account of *Egerton Ryerson* with a second volume. *F Time Is at Hand,* by R. S. Lambert, recounted the care Henry Wentworth Monk, sometimes called "The Proph Ottawa." In *The Talking Wire,* O. J. Stevenson told the of Alexander Graham Bell, inventor of the telephone.

Canada and the British commonwealth were popular sub Alexander Brady's *Democracy in the Dominions* traced th velopments of democratic institutions in Canada, Aust New Zealand and South Africa. Gwendolen Carter's *The B Commonwealth and International Security* dealt with effo the members of the commonwealth to achieve security i period between World War I and World War II.

Several nonfiction books were singularly different. *The of Samuel Marchbanks,* by Robertson Davies, was a colle of clever reflections by a newspaper editor on various phas Canadian life. *The Diary of Our Own Pepys,* by E. W. rold, was a similar collection, published posthumously edited by I. Norman Smith. *Consider Her Ways,* by Fred Philip Grove, became a unique satiric commentary on ma reporting on the activities of ants. Duncan Campbell Scott lished his last book, *The Circle of Affection,* a number o choicest poems and short stories covering 50 years.

There were many regional books. *The Great Mackenzi* Raymond Arthur Davies, featured the Mackenzie river, lo in Canada. *The New North-West,* edited by C. A. Da contained material on many phases of arctic life—geogra transportation, health, mining, trade, education. *Alaska B ons,* by Marius Barbeau, was a new interpretation of Al based on the theory of Asiatic beginnings of Indian fo *Cache Lake Country,* by John J. Rowlands, faithfully ch cled life and living in the north woods. Canada's gold mi was the subject of Arnold Hoffman's *Free Gold.* In the *known Mountain,* Don Munday described the conquest of 000-ft. Mount Waddington in the Canadian Rockies. F nature book of the year was a fascinating study of Cana songbirds and their habits, *Flashing Wings,* by Richard Saunders. In *Return to the River,* Roderick L. Haig-Br fictionized the life history of a Chinook salmon which spawn the Columbia river.

There were several books of lively humour. Eric Pat Nicol saw *Sense and Nonsense* in Canada's way of life. E neth C. Cragg laughed at *Father on the Farm* in Ontario in early 1900's. *The Owl Pen,* by Kenneth McNeill Wells, scribed the hilarious, if sometimes painful, adventures of city-dwellers making a home in the country. *Face Powder Gunpowder,* by Jean M. Ellis and Isabel Dingman, was a hu ous treatment of a Red Cross welfare officer's experience World War II. Most unique World War II book was Mi Shulman's *Defeat in the West,* which described the German lapse, using thousands of official German documents and in views with German generals. *Maple Leaf Up, Maple L Down,* by Peter Simonds, recalled first Canadian army op tions in western Europe.

There were miscellaneous nonfiction books of interest.

V.O.N., John Murray Gibbon described a half century of heroic work by the Victorian Order of Nurses in Canada's battle for ealth. *Faces of Destiny,* by Yousuf Karsh, Canadian photogapher of international fame, contained 75 photographs of outtanding world citizens with personality notes by Karsh. Glenn I. Campbell wrote *The Campbells Are Coming* to give Canalian-born Campbells details of their clan history in Scotland. *Men in Sheepskin Coats,* by Vera Lysenko, told the story of he migration of Ukrainians to Canada and their participation n Canadian life.

**Poetry.**—E. J. Pratt's *Behind the Log* was significant narraive verse describing a great sea battle along the Murmansk oute during World War II. Major poets appearing during the ear were: Charles Bruce, *The Flowing Summer;* Raymond Souster, *Go To Sleep, World;* Dorothy Livesay, *Poems For People;* Arthur S. Bourinot, *Collected Poems;* Nathan Ralph, *Coffee and Bitters;* Patrick Anderson, *The White Centre.*

**Juveniles.**—One of the best juveniles of the year was Anne I. Grierson's *The Mounties,* which described some exploits of the amous royal Canadian mounted police. John F. Hayes wrote a ively historical adventure novel, *Buckskin Colonist,* based on he settlement of the Red River valley by Scottish immigrants n 1812. Archer Wallace published *One Hundred Stories for Boys,* all of them highlighted by human interest material. A. E. Wilson's *The Earth Beneath Our Feet* dramatized geology. Ida Cecil Moore's *Lucky Orphan* gave an appealing picture of farm ife in Prince Edward Island. Gordon Sinclair's *Signposts to Adventure* took the young reader through many parts of the vorld. Hilda Mary Hooke's *Thunder in the Mountains* collected Canadian legends. *Canadian Magic,* by Mary F. Moore, reported unusual incidents in Canadian history. (*See* also LITERARY PRIZES.) (C. CY.)

**Canadian-U.S. War Committees:** *see* PERMANENT JOINT BOARD ON DEFENSE.

## Canals and Inland Waterways.

Of the estimated 65,000 mi. of potential nland waterways in the United States, approximately 30,000 ni. had been improved in 1947 for navigation by commercial nd pleasure craft. All operations and maintenance of the sysem remained the responsibility of the corps of engineers, deartment of the army, under the direction of congress.

Principal components of the over-all, interrelated system of ivers, lakes, bays and canals included the Great Lakes, the Mississippi river system, the Illinois waterway, the New York tate canal system, the Cape Cod canal, the Chesapeake and Delaware canal, the Atlantic Intracoastal waterway, the Gulf ntracoastal waterway, the Sacramento river system and the Columbia river system.

The River and Harbor act approved July 31, 1947, provided unds for the construction of 58 authorized projects in 27 tates, bringing the total number of active projects for waterborne commerce in the United States to 1,100. Among the rincipal projects on which construction was begun or continued luring the year were the McNary (Umatilla) dam on the Coumbia river in the interest of navigation, power development nd irrigation; the New York and New Jersey channels; Gulf ntracoastal waterway between Corpus Christi, Tex., and the Mexican border; the Neches and Angelina rivers and the Sabine-Neches waterway in Texas; lateral canal and lock project on he Mississippi river at Chain of Rocks, near St. Louis, Mo.; pen-river regulating works on the Mississippi river between the Ohio and Missouri rivers, and Missouri river between its mouth nd Sioux City, Ia.; Calcasieu river and Pass, La.; Delaware iver from Philadelphia, Pa., to the sea; St. Mary's river and Keweensew waterway, Mich.; Cape Fear river at and below Wilmington, N.C.; and Winyah bay, S.C. (*See* also FLOODS AND FLOOD CONTROL; RIVERS AND HARBOURS.)

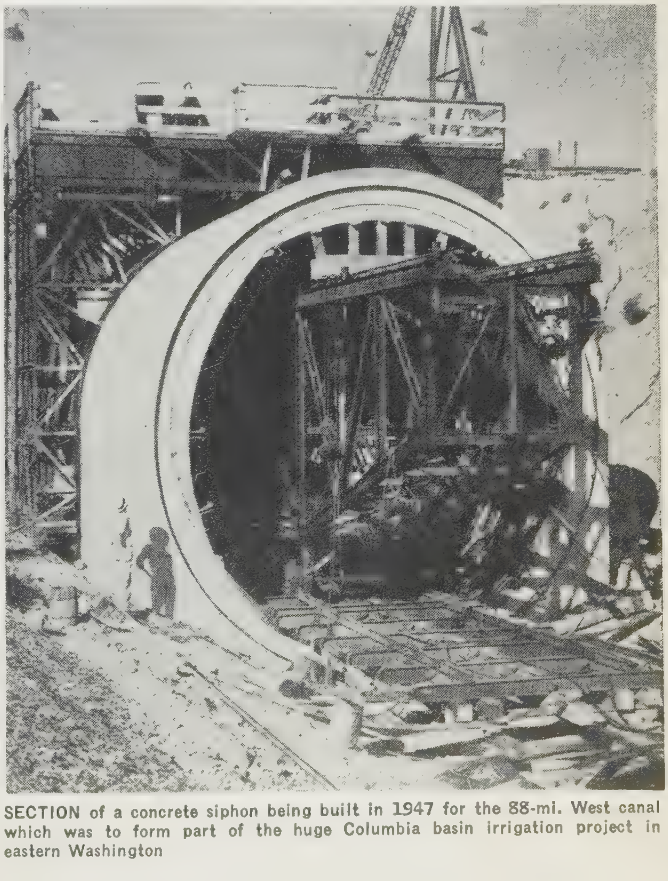
The total net water-borne commerce of the U.S., eliminating all known duplications of traffic between rivers and ports, aggregated 617,955,391 short tons in the calendar year 1946 (latest figures available in 1947). A total of 123,290,879 short tons (gross) was carried on the Mississippi river and its tributaries. On the Great Lakes, 314,510,421 short tons (gross) were transported, with the Detroit river, a connecting channel between Lakes Huron and Erie, carrying 110,863,556 short tons, and the St. Mary's Falls canal, connecting Lakes Superior and Huron in Michigan, carrying 91,586,895 short tons. The New York state canal system, including the old Erie canal connecting the Hudson river with Lake Erie, carried 2,820,521 short tons.

In net tonnage, the ten leading ocean ports in 1946 were: New York, N.Y., 108,553,342; Philadelphia harbour, Pa., 32,779,932; Baltimore, Md., 32,195,348; Houston, Tex., 31,837,453; New Orleans, La., 24,207,733; Beaumont, Tex., 23,052,108; Port Arthur, Tex., 20,177,288; Norfolk, Va., 16,041,678; Boston, Mass., 15,008,334; Los Angeles, Calif., 14,488,796.

Net tonnage of the five leading ports on the Great Lakes in 1946 were: Duluth, Minn.-Superior, Wis., 54,285,385; Toledo, O., 30,051,026; Chicago, Ill., 18,925,928; Cleveland, O., 16,539,046; Buffalo, N.Y., 16,150,366.

The total ton-mileage on the Great Lakes was 96,022,046,000. On the Mississippi river system it was 18,358,220,000. The combined ton-mileage on all inland waterways was 123,973,219,000. (G. HB.)

**Canada.**—At its 1947 session parliament voted $3,577,100 for the operation, maintenance and administration of Canada's 1,844 mi. of canal routes (535 mi. being actual canals and locks). During the parliamentary debate the department of transport was urged to canalize 900 mi. of the Saskatchewan river, which would permit vessels to travel from Winnipeg to



SECTION of a concrete siphon being built in 1947 for the 88-mi. West canal which was to form part of the huge Columbia basin irrigation project in eastern Washington

Edmonton via Lake Winnipeg. Deepening a short section of the Richelieu canal from 6 to 12 ft. was considered, but tabled. The economic value of the Rideau canal was questioned, and the department maintained it was important for tourist traffic. During 1946 it had been used by 16,382 such craft.

The St. Lawrence seaway continued in the news and Ontario Premier George A. Drew declared Ontario might try to proceed with power developments on its own if international action were not forthcoming. At the annual meeting of the Geological Society of America in Ottawa in December, Charles P. Berkey, professor of geology at Columbia university, claimed that the 1944 earthquake at Cornwall presaged immense engineering difficulty when the seaway was constructed. He said his personal investigation indicated that geologic faults and sand deposits would require special techniques to make the proposed dam, locks and powerhouses earthquake-proof.

Tonnages taken up and down through the three major canals and over the entire canal system from the opening of navigation in April to the end of Nov. 1947 and compared with the full 1946 season (April to December, inclusive, in parenthesis) were: Sault Ste. Marie, 2,062,172 (1,940,129); Welland Ship, 11,381,069 (10,580,146); St. Lawrence, 7,145,507 (5,750,578); total for system, 20,986,593 (18,654,919). (C. Cy.)

**Great Britain.**—In Britain, the canal system was to be nationalized under the Transport act, 1947. As soon as capital works were permitted, development toward standardization would be pursued, as the great variety of lock sizes conditioned the size and type of craft employed. Because of the shortage of craft, immediate attention was being given to terminal facilities to expedite the turn-round. In this connection, it was found that the largest craft did not necessarily carry the greatest tonnage over a given period.

**Europe.**—The prolonged drought in Europe during the summer and autumn of 1947 closed numerous small canals, some of which had been previously damaged in the spring floods. The repairs of European works damaged by war action continued, and great efforts had been made to prevent a disastrous transportation crisis in the winter of 1947–48. After World War II, however, the most important work toward re-establishing lines of communication was carried out by E.C.I.T.O. (European Central Inland Transport organization), whose sudden ending in June 1947 terminated an excellent attempt at international co-operation. Through the machinery of this organization, the waterways relieved the overloaded railroads and promoted the rapid liquidation of the effects of war.

In Greece, the reconstruction of the Corinth canal was to be undertaken by the U.S.A. aid mission. In the U.S.S.R., a new canal from the Kama river to the Petchora river was planned to provide an outlet to the Barents sea. German reports indicated a new canal link between the Elbe river and Doemitz and the Baltic port of Wismar. (*See* also AQUEDUCTS.)

(D. G. Ds.)

## Cancer.

By 1947 S. A. Henry had collected more than 3,300 cases of tar cancer in which most of the patients worked with tar, pitch or lubricating oils. The mortality of the disease was still high, and it was strange that the simple prophylaxis of soap-and-water cleanliness of the body had only moderately reduced the incidence of the trouble. In the United States, while the disease had been known to occur, the number of cases remained extremely small. On the other hand, some occupational cancers of the bladder had been described in the U.S. in considerable numbers among those exposed to inhaling dust in the manufacture of certain aniline dyes.

An estimated 600 cancer-forming compounds had been discovered by 1947. Most of these had no relationship to human cancer, but when suitably applied produced cancer in One unpleasant discovery was early made that cancer develop in burns following excessive doses of X-ray or ra or in patients who had been treated with a thorium com which was slightly radioactive. This material was us diagnosis by injection to demonstrate changes which mig revealed by X-ray pictures. Another compound, urethane been used in the treatment of leucaemia, but was fou cause cancer of the lung in mice. Such a drug should n used in human beings, except in usually fatal diseases leucaemia; urethane can then replace X-ray, the ordinary ment, in case the patient has no access to X-ray.

Studies on mustard gas, conducted during World Wa resulted in the production of a considerable number of pounds of this same group. Some were found to be bene in treating leucaemia in animals, but the danger in thei would probably prevent any extensive application in h beings.

The fact that extracts of human and animal tissues injected into mice will give rise to cancer in these animals tinued to be the subject of much study, without any final clusion. It still seemed possible that various chemical proc had altered the extract so that carcinogenic substances produced.

There was no question that heating cholesterol, a constit of most of these extracts, will change this normal constit of the body into one which produces cancer, and this le experiments in which ordinary food materials may bec carcinogenic. Thus, a few tumours were produced in mic injecting cholesterol, fats, oils and other food products he to a temperature of 300° C. The carcinogenic substance is p ably present in minute quantities. The question was raise to the possibility that cancer of the stomach might be ca by consumption of food cooked at a high temperature, but amount of such carcinogenic substances was believed t small; when swallowed, they are not necessarily absorbed the circulation. This was, however, one explanation offered the carcinogenic properties of organ extracts.

**X-Ray and Radium.**—An interesting study was condu by Egon Lorenz and others on the tolerance of animals for longed exposures to a moderate amount of short-wave le gamma-rays, such as are met in handling radium and voltage X-rays. Most of the studies were carried out u radium and daily exposures of from 8 hr. to 24 hr. on m guinea pigs and rabbits. The results showed that it was of p mount importance not to exceed the permissible dose of roentgen unit per day. Lorenz and his associates found tha animals the blood picture is not of much value in determin low-intensity continuous exposures, but these exposures w still capable of causing death of the animals. Also they ca attention to the fact that ovarian tumours in mice were related with low exposures and therefore suggested that wor operators should be limited to 0.02 roentgen unit per day. writers also suggested that daily exposures of short durat over long periods of time should be avoided.

John H. Walker and Milford D. Schulz reported about 1 of five-year cures in cancer of the tonsil. Slightly better res were obtained using 1,000,000-volt X-ray as compared w 200 kv. Despite the presence of new cancers elsewhere in body, called metastases, a certain number of patients obtai satisfactory relief from pain and other symptoms. The use radium in the tissues exerted no noticeable improvement in results.

**Estrogens and Neoplasia.**—The use of large doses of m sex hormone in persons with inoperable or recurrent carcino of the breast had not produced results nearly so striking ose initiated by C. Huggins' discovery of the clinical control, not the cure, of carcinoma of the prostate by the administraon of the female sex hormone or the synthetic product, lbestrol.

## andy.

Sales of candy in the United States during 1947 reached the all-time high of $1,000,000,000 at the olesale level—a gain of almost 40% over 1946 sales of $687,-o,000. Expressed in volume, the 1947 confectionery business ounted to approximately 2,700,000,000 lb., compared with 438,000,000 lb. of candy sold in 1946. The average value at olesale per pound was above 36 cents, compared with 28.2 nts recorded in 1946.

The major development in the industry during 1947 was the mination of sugar rationing in July. For the first quarter of e year candy manufacturers received 60% of base period use, hile for the second quarter the quota was 75%. As a result, les of candy showed a greater increase in the second half of e year than in the first.

Another significant event was the upward spiralling of cocoa an prices which forced the industry to abandon the traditional cent price of nickel candies throughout the United States. her major developments were: (1) the end of price and all her controls; (2) the introduction of new processes and maines, which included a new method to make marshmallow, w coating equipment and new types of wrapping machines; ) the launching of a research program with emphasis on find- a solution to the problem of chocolate bloom; (4) the foration of the American Association of Candy Technologists; ) the expanding of markets by the industry; (6) the decenalization of candy plants and (7) the changing over of a eater number of candy plants from regional to national stribution.

Cocoa bean prices in 1947 reached an all-time high of 50 nts per pound. Generally poor crops and unstable world contions were largely responsible for the rise. As a means of minating these conditions on a long-range scale, the U.S. ocolate industry decided to develop cocoa bean plantations in e U.S. Pacific islands.

For the fourth successive year, bar type candies represented ore than half of the industry's tonnage. Of these 5-cent, cent and 7-cent bars (hitherto sold at 5 cents) amounted to out 90%. Despite the high prices of cocoa beans, chocolatevered bars represented the largest item in this category, reprenting, in fact, a greater volume than the combined sales of other bars. However, a noticeable increase in hard candy d other nonchocolate confections was recorded in 1947. The cond largest classification of candy sold was bulk goods, reprenting about 20% of the total. Package goods came third with out 15%. Penny goods were practically nonavailable. There s a return in large quantities of Christmas and other holiday ecialties, such as candy canes, hollow moulded goods, hard ndy mixed and jelly beans.

Production of candy in the United States continued to be ntred in a region extending from New England westward rough Illinois and southward through Virginia. The 18 states lus the District of Columbia) comprising this section of the untry produced 85% of the U.S. candy in 1947. Consumpn was also heaviest in this region, amounting to about 55% of the total production. The remainder of the country produced only 15% and consumed 45% of the national output. The candy industry employed 65,000 persons, mostly women.

While the United States continued to be the greatest candy-producing and -consuming country in the world, other nations for the first time since World War II began to produce candies in large quantities. The most successful European country to reestablish itself in the candy field in 1947 was the Netherlands, and large quantities of the production found its way to the United States. France, Italy, Denmark, Belgium and even Germany were again making candy in 1947. Next to the United States, Great Britain continued to be the most important candy-producing and -consuming country in the world with its per capita consumption amounting to approximately 22 lb. It was estimated that total exports for 1947 amounted to less than $2,000,000; imports exceeded exports. (H. D. G.)

**Cane Sugar:** *see* SUGAR.

## Canning Industry.

The United States and territorial pack of canned fruits, juices, vegetables, fish and milk in 1947 totalled about 450,000,000 standard cases, compared with 495,000,000 standard cases in 1946. These figures do not include the pack of fruit and vegetable specialties such as baked beans, soup, spaghetti and baby food, nor the considerable quantities of canned meat, poultry and other specialty products packed by the canning industry. Preliminary statistics for the 1947 pack compared with 1946, in terms of millions of standard cases, are as follows:

| | 1947 | 1946 | | 1947 | 1946 |
|---|---|---|---|---|---|
| Fruits . . . . . . . . | 65.0 | 82.2 | Milk . . . . . . . . . | 79.0 | 73.5 |
| Fruit juices. . . . . . | 80.0 | 75.7 | Fish . . . . . . . . . | 21.0 | 20.5 |
| Vegetables . . . . . | 205.0 | 243.0 | | | |

COMMUNITY CANNING CENTRE at Berkeley, Calif. An instructor is aiding a patron to place cans of blanched beans in the exhaust box

The record 1946 pack of canned fruits and vegetables, together with a small carry-over, provided a record high supply for the 1946–47 marketing season. The 1947 fruit and vegetable packs were expected to be about 10% below the 1946 total, in part because of unfavourable weather conditions. However, the supply for the season was estimated to be about the same as in 1946–47 because of the higher carry-over supplies.

Retail prices of canned fruits and vegetables declined steadily during 1947, as contrasted with the sharp upward trend in food prices generally. In late fall, prices were about the same as a year earlier and, compared with prewar relationships, considerably cheaper at retail than other foods. According to bureau of labour statistics information, the index of prices of canned fruits and vegetables was 155% of the prewar level compared with 202% for all foods.

The still existing shortage in world tin production coupled with high demands for this commodity led to congressional extension of authority to allocate tin and tin products. The authority which existed at the end of the year would extend to Feb. 29, 1948, and the administration had requested a further extension.

The U.S. department of commerce, responsible for administering tin controls, announced its intention of re-establishing quotas limiting the quantities of tin-coated containers for use in animal foods, coffee, beer and nonfood items, but quota restrictions on containers for foods for human consumption were not contemplated. The government maintained a maximum quota figure of 32,000 tons of tin during 1947 for the manufacture of tinplate and tin-mill products.

Can size controls were removed in March, 1947, thus reinstating the provisions of the voluntary simplified practice program promulgated in 1940 under the auspices of the division of simplified practice of the National Bureau of Standards. This program was thereupon subjected to review by an industry committee to determine its adequacy from the standpoint of production economy and consumer preference of can sizes.

**Caroline Islands:** *see* TRUSTEE TERRITORIES.

**Cartography.** The wartime stimulus to map making through 1947 and was reflected in t tinued demand for maps by a map-conscious public an production of a large number of maps by both governm private agencies. As a result of World War II cartogra rapidly losing its nationalistic aspects and was becoming factor in international co-operation. The events of 1 cartography reflect this trend.

**International Map of the World.**—The central bur the International Map of the World, which was dormant the war years, was reconstituted during 1947 with headq at Chessington, England, a suburb of London. While ac of the bureau were limited, work on the International m carried on extensively by U.S. and British cartographic tions.

In the United States the outstanding event was the ann ment of the production by the U.S. army map service Hedin *Central Asia Atlas*. The sheets of this atlas, based Sven Hedin's exploratory work in western China and Tibe 1894 to 1933, had been first prepared in Germany by Perthes, Gotha, before the war. The work undertaken army map service in 1946 involved preparation of 11 new and revision of 2 of the sheets published at Gotha. The were to follow closely the style and symbolization f 1:1,000,000 International map and, in addition, would ir terrain features which are peculiar to the area and seldom on maps of this scale. The source material for the map sisted of voluminous notes, sketches, maps and terrestrial graphs produced by Dr. Hedin and members of the exped Supplementing this material were large-scale topographi veys of limited areas and maps, both published and manu by other explorers. The production of the atlas was operation with Dr. Hedin and his associates and was sch for completion in 1949.

The American Geographical society commenced a syst revision in 1947 of its recently completed millionth m Latin America. During the year five sheets were in wo revision from aerial photography and a large amount o data accumulated during the war.

The production of the millionth map of the United Sta the U.S. geological survey was carried on at an accelerated During 1947 work was initiated or continued on 10 which, when completed, would cover approximately one-th the country and would bring the total of published sheets

Production of the millionth map in Europe and Asia als carried on during the year at a pace that promised comp of the International Million map within a decade. Provi publication by the army map service of a number of milli scale maps of areas in Asia established the United States leader in this field during 1947.

Late in October 1946 the soviet newspaper *Pravda* anno the completion of the millionth map, consisting of 180 s covering the U.S.S.R. The maps, while not conforming in respect to the style and symbolization of the millionth ma such that they are acceptable as a soviet counterpart t International map. Unfortunately, although the U.S.S.R made public announcement of their availability, it had not sented these maps for sale or distribution.

**European and Near East Cartography.**—The Nationa hibit and Convention of Cartography and Optics, organize the Istituto Geografico Militare, L'Associazione Ottica Ita and La Commissione Geodetica Italiana on the occasion o 75th anniversary of the Istituto Geografico Militare, was he Firenze (Florence), Italy, Oct. 27 through Nov. 1. This r ing, with 21 nations represented, was the first large int tional congress in cartography after the war. The papers sented emphasized geodesy and photogrammetry.

At the meeting of a special commission of the International Geodetic association in Paris Oct. 15–17, announcement was made of the completion of the adjustment of the central European basic triangulation nets and a plan was discussed whereby such adjustments might be extended to cover all of Europe.

The first International Hydrographic conference after 1937 was held at Monte Carlo, principality of Monaco, from April 22 to May 5. Because of the world conflict, the conference, although scheduled for every five years, did not meet in 1942. Consequently, the 1947 meeting was concerned with a large accumulation of technical proposals. Uniformity of chart specifications, the adoption of newly developed electronic methods of position determination for charting and the standardization of geographic names on charts occupied a large portion of the agenda.

The political changes in the near east, culminating in the withdrawal of Great Britain from India, were directly reflected in the cartographic organization throughout the area. Throughout Egypt, Syria, Iran, Iraq and Afghanistan, the French and British influence or direction of survey work was erased and intense nationalistic interests became dominant. As a result of the conversion, the lack of experienced, trained personnel hampered the work of the newly established survey departments to such an extent that many were little beyond the paper stage. The fate of the survey of India, as a result of the partition of India, was a question of considerable speculation during 1947, until announcement was made of the establishment of separate survey departments of Pakistan and the dominion of India.

**Cartography in the United States.**—From a production and distribution standpoint, leadership in the cartographic field remained in the United States during 1947. Co-operative effort by the federal agencies producing maps resulted in the establishing of uniform, standard specifications for large-scale topographic maps. Along the same vein were the interagency agreements between both the civilian and military mapping agencies which clearly delineated the responsibility of each agency with regard to large-scale mapping in the United States. This agreement placed the responsibility for standard topographic surveys with the U.S. geological survey and thereby eliminated duplication of effort and variety of map styles that formerly resulted.

The U.S. board on geographical names, which had been a part of the office of the secretary of the interior from its establishment by executive order in 1890, was established under legislative act by the 80th congress as an official agency to formulate government place name policies and decisions. The board played an important part in the war in co-ordinating the place name work of federal mapping agencies, and, under the authority vested by congress in 1947, it would exercise considerable influence on U.S. cartography, both governmental and private.

The army map service, in co-operation with the U.S. geological survey, was at work on a 1:250,000-scale topographic map of the entire United States in 469 sheets.

The only map of the series published in 1947 was a preliminary edition of the sheet covering Washington, D.C. Sheets covering about one-quarter of the country were in various stages of compilation in 1947, and the entire series was scheduled for completion within a five-year period.

In 1947 two important series of index maps were issued by U.S. agencies. The coast and geodetic survey published two sets of indexes, one showing the basic triangulation nets and the other, the basic level nets. Each index, on a scale of about 1:650,000, covers a state, coverage for all states being available in 1947.

The U.S. geological survey instituted a series of indexes designed to present graphically the coverage of geologic maps by colour or symbol overprint on a planimetric base. Each index covers a state, the first, issued in 1947, being for the state of Wyoming.

MAP WORKER blanking out unessential section of a cruising map distributed through the Esso touring service

The 1:5,000,000 Map of the Americas produced by the American Geographical society was nearing completion. Of the five sheets planned, three were published in 1942 and the remaining sheets, covering North America, were completed in 1947 with publication expected early in 1948.

The hydrographic office, U.S. navy, published an *Atlas of Surface Currents of the Northeastern Pacific Ocean,* which was the fourth of a series planned to cover all the oceans. The atlas of 12 monthly charts shows current directions per unit degree square and is based on records of 30 years of observation. ## Catholic Organizations for Youth.

The National Catholic Youth council is the single national co-ordinating body officially established by the Catholic bishops of the United States to unify Catholic youth programs of the country. It has two major divisions, one of which embraces community youth groups found during 1947 in the 122 dioceses and more than 20,000 local churches throughout the country. The other division of the N.C.Y.C. unites organizations of Catholic students on a national basis. The council's College and University section has for its major divisions the National Federation of Catholic College Students, comprising student groups in the 209 Catholic colleges and universities of the country and also the Newman Club federation, in which are affiliated 573 Catholic student groups on public and nonsectarian campuses.

The headquarters of the National Catholic Youth council is in the office of the youth department of the National Catholic Welfare conference at 1312 Massachusetts Ave., Washington 5, D.C. The N.C.W.C. Youth department is charged by the Catholic hierarchy with the development and supervision of the National Catholic Youth council. Its staff functions in the field of community and student youth work.

Both the Catholic College federation and the Newman federation held important national meetings during 1947. At Toledo, O., Catholic student delegates from Catholic institutions of the country came together for a three-day meeting on April 18th. A program of student action and closer co-operation with other student groups, both national and international, was enacted by this congress. On July 10 the Newman Club federation held its national convention at Houston, Tex., with a majority of the clubs throughout the country represented.

The first national conference on Catholic Youth Work convened May 19–21 in Cleveland, O. Under the auspices of Archbishop R. J. Cushing of Boston, Episcopal chairman of the youth department N.C.W.C., more than 700 clergy, professional youth leaders and lay sponsors came together to discuss problems in the field of Catholic youth work. Every major national Catholic youth organization was represented, together with executives and staff members of 67 diocesan or regional Catholic youth groups. Nine major phases of Catholic youth organization and programming were considered during the course of the conference. Plans were laid for the establishment of study groups which would arrive at findings and recommendations on problems affecting Catholic youth in the United States. Simultaneous with this conference there was a meeting of 119 Catholic scout chaplains who considered the organization of scouting under Catholic auspices.

Specific national Catholic youth-serving programs continued to sponsor activities for Catholic young people on local, regional and national levels. Following postwar adjustments, these national programs reported an increased membership and program extensions during the year. The following major national programs for Catholic youth evidenced increased activity in many areas: The Queen's Work (Sodality of Our Lady), 3115 S. Grand Blvd., St. Louis, Mo.; The Catholic Student Mission Crusade, Shattuck Ave., Cincinnati, O.; The Junior Catholic Daughters, 39 Manchester Terrace, Mt. Kisco, N.Y.; The Columbian Squires, 45 Wall St., New Haven, Conn.; The Catholic Central Verein, 3835 Westminster Place, St. Louis, Mo.; The Catholic Committee on Boy Scouts, 2 Park Ave., New York, N.Y.; The Junior Holy Name society, 141 E. 65th St., New York, N.Y.

*The Catholic Youth Directory* and *The Proceedings of the First Conference on Catholic Youth Work,* issued by the youth department of the National Catholic Welfare conference, contain a complete listing of Catholic youth-serving organizations
and the major problems and policies to which their at
was directed during the year. (C. E.

## Catholic Rural Life Conference, National.

Founded in 1923 by Bishop Edwin V. O'Hara and a g
priests, this national organization is dedicated to the ec
social and spiritual interests of the U.S. farmer. The c
tion adopted in 1944 pledged the conference to prom
well-being of the rural population by applying the princi
Catholic ethics to rural and agricultural problems a
strengthen and expound Catholic faith in rural districts.

The silver-jubilee convention was held at Lafayette,
Nov. 23–26, 1947. At the convention the conference rece
report from Bishop Aloisius J. Muench of Fargo, N.D.,

## Catholic University of America.

During 1947
Catholic Univ
of America, Washington, D.C., added three buildings with
000 sq.ft. of classroom and laboratory space and increase
faculty by 25 additions to serve an enrolment of 4,200 stud
among whom were registrants from 25 countries other tha
United States and 2,600 ex-service men and women. The
tional Catholic School of Social Service of Washington
merged with the university's school of social work; a bran
the engineering school was established at the army eng
centre at Fort Belvoir, Va.; training for master's degrees in
counselling was opened in conjunction with Father Flana
Boys Town, and new courses in psychiatric and tubercu
nursing were added to the school of nursing education.
operative arrangements were made with the Oak Ridge Insti
of Nuclear Studies to supply training for atomic specialists
consultants in research in the government's program to de
peacetime uses for atomic energy. Dr. Edward J. Finan
named dean of the graduate school of arts and sciences;
Marie A. Corrigan became dean of women, and eight fac
members were promoted to full professorships. Pope Pius
elevated Rev. Dr. John K. Ryan of the school of philosoph
the rank of domestic prelate. Of three original plays writte

niversity students and produced by the speech and drama deartment, one was sold for commercial production. Football ith Mason-Dixon conference teams was resumed after abandonment of the game during World War II. Donations, royales and special grants valued in excess of $950,000 were reeived; plus more than $1,000,000 toward a fund of $5,000,000 equired to complete the National Shrine of the Immaculate onception on the campus. (For statistics of endowment, enolment, faculty, library volumes, etc., *see* UNIVERSITIES AND OLLEGES.) (P. J. M.)

## atholic Welfare Conference, National.

he conference was organized by the bishops of the United tates in Sept. 1919 to unify, co-ordinate and organize the atholic people of the United States in works of education, ocial welfare, immigrant aid and other social and religious ctivities. The conference is conducted by an administrative oard of 10 archbishops and bishops, who supervise its operaon and report annually to the Holy See. The conference does ot exercise jurisdiction in the canonical sense, nor is it a synod r council.

The annual meeting of the conference was held at Washingon, D.C., Nov. 11–14, 1947, attended by more than 130 mемers of the hierarchy. Members elected or re-elected to the dministrative board were: chairman, Archbishop John T. McNicholas, O.P. of Cincinnati, O.; vice-chairman, Archbishop Richard J. Cushing of Boston, Mass.; treasurer, Bishop John Mark Gannon of Erie, Pa.; secretary, Bishop John F. Noll of ort Wayne, Ind.; Archbishop Robert E. Lucey of San Antonio, Tex.; Archbishop Joseph E. Ritter of St. Louis, Mo.; Archishop James H. Ryan of Omaha, Neb.; Bishop Karl J. Alter f Toledo, O.; Bishop Emmet M. Walsh of Charleston, S.C., nd Bishop Michael J. Ready of Columbus, O. Msgr. Howard J. Carroll was re-named general-secretary of the N.C.W.C.

The general meeting voted to hold the bishops' emergency elief collection in 1948 on Laetare Sunday. It authorized the ppointment of a special committee of bishops to represent N.C.W.C. in problems relating to the church in occupied areas f the Pacific. Plans were approved for the formation of the National Catholic Resettlement council to be composed of Catholic organizations interested in the resettlement of dislaced persons. Subsequent to the meeting the council was rganized under the auspices of War Relief Services of the N.C.W.C.

The annual reports of the National Catholic Welfare conference departments, submitted at the bishops' meeting, summarized the conference's activities for the year 1947. Organizations affiliated with the National Council of Catholic Men increased from 2,954 to 3,130. "The Catholic Hour" was heard on 111 National Broadcasting company stations. "The Hour of Faith" was heard over 55 stations while the "Faith In Our Time" program was carried by 77 stations. A total of 4,734 organizations were affiliated with the National Council of Catholic Women, an increase of 136 during 1947. The National Catholic School of Social Service was unified with the Catholic University of America's school of social work. N.C.W.C. News Service was used in 41 countries. The department of education participated in national educational conferences, presented testimony and views on national legislation, and initiated research and interpretation in connection with controversial school matters. The Social Action department sponsored meetings of the Catholic conference on industrial problems, institutes for working women, N.C.C.W. leaders, priests, seminarians, nuns, and business men. The Youth department reported that 64 dioceses had youth programs with 261 priests and 162 professional laymen and women occupied in the work. The Catholic Action Institute of the Confraternity of Christian Doctrine was initiated at the Catholic University of America and was attended by more than 100 religious and laymen from North and South America.

In 1947, national headquarters were located at 1312 Massachusetts Avenue, N.W., Washington, D.C. The official publication is the monthly, *Catholic Action.* (J. LaF.)

## Cattle.

The total number of beef and dairy cattle in the U.S. continued to decline in 1947. A total of 81,051,000 head was reported on Jan. 1, 1947, compared with 82,434,000 a year earlier and the record high of 85,573,000 on Jan. 1, 1945. This decline was attributed to larger slaughter; more cattle and calves were dressed than in any previous year. The slaughter records showed that about 50% more cattle and calves were sold in 1947 than in any of the five years preceding World War II. High prices for all classes of cattle, together with doubt regarding the future, were cited as reasons for the heavy liquidation.

The decline in numbers of milk cows was smaller than that of beef animals—only 2% from 1946. On Jan. 1, 1947, the num-

DAIRY HERD at Coeur d'Alene, Ida., where farmers reported greater silage in 1947 as a result of reclamation work on the Rathdrum Prairie project. Increased feed crops allowed for increases in livestock

ber of milk cows and calves was estimated at 26,100,000 head, compared with 26,695,000 a year earlier and an average of 25,823,000 head during 1936–45. Advancing feed prices in contrast to the relatively steady price of milk caused dairymen to cull their herds closely in the fall months of 1947.

Marketing of cattle and calves, at a high level in Jan. 1947, continued well above the previous year at a steady rate which contrasted with the wide fluctuation of shipments in 1946. A reduction in the number of feed-lot cattle resulted from the high feed prices. The high prices of feeder-cattle discouraged feeders from maintaining their operations at the 1946 level, which was the highest on record.

Prices of all classes of cattle were at record high levels throughout 1946. The average received by producers for all classes in Jan. 1947, was $17.30 per cwt., compared with $11.80 a year earlier. By June 1947, the average price had advanced to $18.60, to $19.50 in August and to $20.20 in September, followed by a slight decline in October. Proposals to send more grain to Europe caused a further rise to $19.80 in December. Calf prices followed the same general trend.

World cattle numbers began to increase in 1946. Decreases in North America, Australia and New Zealand were offset by increases in Europe, South America and Africa. The Americas, Africa, Australia and New Zealand had more cattle than in the prewar decade; the great losses were in the war-devastated countries of Europe and Asia. Canada and Mexico both had to impose restrictions on the shipment of stock and feeder cattle to the U.S. in 1947. Outbreak of hoof-and-mouth d Mexico stopped exports to the U.S. which had rang 400,000 to 500,000 head annually. Canada continued bargo on shipments of cattle to the U.S. to provide a beef for Great Britain. Canadian price controls rem effect through 1947; prices rose but were considerabl the U.S. level.

In Argentina, cattle numbers changed little although mand for beef increased because of domestic needs. Ex beef rose in the early months of 1947, about 90% goin United Kingdom. Increased costs of labour and feeds p Argentine cattlemen from expanding production.

The number of dairy cattle increased slowly in The lands, Denmark and Belgium, but the high cost of i feeds continued to be a handicap. (*See* also LIVESTOCK.

†Preliminary figures.

leaths, leaving a natural increase of 2,558,836, which represents he major part of the population increase. The remainder was nade up of the net civilian immigration, which amounted to 14,697. The rate of increase for the year ending June 30, 1947, vas 2.0%, decidedly higher than the rate of 1.4% in 1943, which iad stood as the record maximum for any year since the early 920s. While the number of alien immigrants admitted in the iscal year 1947 was a little higher than in any recent earlier ear, the main reason for the very large population increase in 947 was the unusually large number of births, approximately 4,000,000, as compared with a little over 3,000,000 in the previous record year, 1943. The increase in births, in turn, was loubtless in large part a result of the very large number of marriages which took place in the months immediately following he demobilization of the major part of the U.S. armed forces n 1945–46.

A preliminary estimate for Oct. 1, 1947, gave the U.S. a total population of 144,708,000.

Two other types of estimates were made—one series representing the population actually in continental United States, excluding persons in military service overseas (sometimes referred to as the *de facto* population) and second, the civilian population, excluding all persons in military service. By midyear, 1945, the number of persons in military service had grown to more than 12,000,000, so that the total population far exceeded the civilian population. In July 1947, the estimated civilian population of the U.S. was 142,627,650, differing from the total population by less than 1,400,000. For the same date the *de facto* population, including military personnel in continental United States but excluding that overseas, was 143,381,587.

**Trends.**—The birth rate (based on recorded births, as reported by the national office of vital statistics, of the U.S. public health service) had increased, with improvement in economic conditions, from a low of 16.6 per 1,000 of the population in the calendar year 1936 to 21.5 in 1943, with a slight recession in the next 2½ years. In July 1946 began a rapid increase, running up to a maximum of 29.5 (annual basis) in Dec., then falling to around 25 in May 1947, with subsequent increase to a provisional figure of 26.8 for Sept.

The death rate declined slowly from 11.3 per 1,000 of the population in 1930 (calendar year) to 10.7 in 1940 and fluctuated closely around that level during the next six years, running slightly below 10 per 1,000 (annual basis) in the summer months and somewhat higher in the winter months. The provisional rate for Jan. 1947, was 10.9 and for September, 9.1.

The number of marriages (figures also from the national office of vital statistics) increased rather rapidly from an average of around 1,350,000 in the five years from 1935 to 1939 to 1,772,132 in 1942 (calendar year) with somewhat lower figures in 1943, 1944, and 1945. It then increased substantially to 2,285,539 in 1946. In the first half of 1947, almost 1,000,000 marriages were reported; during the next three months (July–Sept., 1947) the numbers of marriages reported for all cities of 100,000 or over, with a population aggregating about one-third of the U.S. total, were likewise appreciably lower month by month than in 1946.

The number of divorces in 1945 was estimated at 494,000, or 30.8 per 100 marriages (as compared with 264,000 in 1940) and at a still higher figure, namely, 613,000 in 1946—though the rate per 100 marriages was only 26.8, by reason of the much larger number of marriages.

Assuming a continuation of the birth rates and death rates in each age which prevailed in the period from 1935 to 1940, 1,000 women starting life at the same time would bear 978 daughters during their lifetimes. This figure is a net reproduction rate. A net reproduction rate of 1,000 would mean that each generation would just replace itself under the conditions stated. A rate below 1,000 would indicate a potentially declining population and a rate above 1,000, a potentially growing population. The U.S. rate rose from 1,023 in 1940 to 1,233 in 1943. It then declined to 1,144 in 1945, but rose to 1,451 in 1946, with a much higher figure in prospect for 1947. It seemed almost certain, at the end of 1947, that there would be a substantial decline in fertility rates within the next few years, but opinions were divided as to whether, in resuming the historical trend toward smaller families and a declining rate of increase which had been in progress for over a century, the population of the U.S. would settle back to the prewar trend line or perhaps run along parallel with it at a somewhat higher level. It seemed, in any case, that the prospect of a declining population within a few decades had not been eliminated but that the time of its occurrence (forecast as 1990 with a probable population of around 180,000,000) might be materially postponed.

**Urban and Rural.**—For April 1947, the civilian population was estimated at 142,061,000, an increase of 7.9% over the 1940 census figure. The urban population at the same time, as estimated on the basis of a sample survey, was 83,860,000, or 12.7% more than in 1940 and the rural-nonfarm population was 30,896,000, representing an increase of 14.3%. These gains, both considerably higher than the increase in the total population, were made in part at the expense of the rural-farm population, which declined 9.6% from 30,216,000 in 1940 to 27,305,000 in 1947. The effect of these differential changes was to increase the percentage urban from 56.5 in 1940 to 59.0 in 1947, while the percentage rural-farm declined from 22.9 to 19.2. These figures are presented in Table II, together with classifications by sex and colour.

**Sex and Colour.**—Mainly because the large numbers of im-

Table II.—*Population of the United States, Urban and Rural, and by Sex and Colour: 1947 and 1940*

| | Civilian population 1947 | Total population 1940 | Per cent change |
|---|---|---|---|

| Rural-nonfarm | 30,896,000 | 27,029,385 | +14.3 |
| Rural-farm | 27,305,000 | 30,216,188 | −9.6 |
| By sex: | | | |
| Male | 70,128,000 | 66,061,592 | + 6.2 |
| Female | 71,933,000 | 65,607,683 | + 9.6 |
| By colour: | | | |
| White | 127,044,000 | 118,214,870 | + 7.5 |
| Nonwhite | 15,017,000 | 13,454,405 | +11.6 |

migrants from Europe were dominantly male, there was long in the population of the U.S. a decided excess of males over females, the maximum excess shown for any census date being 2,692,288 in 1910, when the sex ratio was 106.0 males per 100 females. With declining immigration and the ageing of the population, the excess of males became gradually smaller and smaller until in Oct. 1946, according to the current estimates of total population, the number of females slightly exceeded the number of males. In the civilian population, of course, this excess of females was materially accentuated since this figure omitted something like 1,500,000 men in military service. The civilian population of April 1947, for which information of various types is presented in the following paragraphs, comprised 70,128,000 males and 71,933,000 females, or 97.5 males per 100 females.

The white population of the U.S. increased from 118,214,870 in April 1940, to 127,044,000 in April, 1947, or 7.5%. The nonwhite population, mainly Negro, increased during the same period from 13,454,405 to 15,017,000, or 11.6%. The effect of this somewhat more rapid increase in the nonwhite population was to raise the percentage nonwhite in the civilian population from 10.2 to 10.6. These figures should not be interpreted, however, as indicating the prospect of any very rapid or extensive change in the relative numbers of the two racial groups. During the two or three decades ending with 1947 there were, largely as the result of migration from southern states to the north and west, material changes in the living conditions of the nonwhite population, which changes may be accompanied by other changes tending toward lower birth rates among nonwhite families.

**Age.**—Table III shows the civilian population of April 1947, distributed by age and sex, with 1940 census figures for comparison. The effect of the high birth rate of the seven years preceding April 1947 is strikingly shown by the increase of 36.2% in the population under five years old. This is more than four times the rate of increase in the total population and almost seven times the rate of increase in the population five years old and over. Despite the unprecedented increase in the population in the youngest age group, however, the median age of the population rose from 29.0 to 30.0 years.

Making a comparison on the basis of the percentage which persons in each age group form of the total, it may that persons under five years old formed 10.1% of population in 1947, as compared with 8.0% in 1940, w sons from 10–19 years old, the survivors for the mos the low-birth-rate depression years formed only 15.1 total in 1947, as compared with 18.3% in 1940. At end of the age scale, the percentage represented by pe 64 years old increased from 8.0 in 1940 to 8.9 in 1947 figure for persons 65 years old and over increased from 1940 to 7.5% in 1947, thus indicating a definite contin the long-time trend toward an older population which in spite of the unusual increments in the very younges of the population resulting from the high birth rates of period.

**Educational Attainment.**—According to a survey April 1947, more than half of the population of the years old and over had completed the equivalent of year of high school. The median of 9.5 years of schc pleted represented the midpoint in the range of edu attainment among the individuals making up the pop At one extreme were somewhat less than 10% of the tion who had completed less than 5 years of school an other extreme 5% who had completed 4 years or more lege or university. Those persons with less than five y schooling were rather largely concentrated in the ol groups, reflecting the fact that even 30 or 40 years befo cational facilities were less readily available than late college graduate group, however, was more evenly dist by age, the percentage of college graduates in the populat 54 years old being about the same as that in the total 2 old and over. In general, however, there was a definite tion between age and educational attainment, the media ber of years of school completed being highest (12.1) youngest group covered by the inquiry, even though m these persons (20–24 years old) were still in school and eventually add one or two more years to their record. this point the medians decreased gradually to 7.7 for pers years old and over. The medians computed for 1947 in an appreciable advance in educational attainment as co with 1940—9.5 years for the entire group covered by the

*Includes persons reporting no school years completed.

compared with 8.8 in 1940, with increases of something like year for the 4 groups comprising persons from 20–44 years of ge and with little change for those older. These figures are mmarized in Table IV.

**School Attendance.**—About 1,200,000 male veterans be- een the ages of 20 and 29, or about one-seventh of the whole mber of veterans in this age group, were in school or college April 1947, most of them presumably taking advantage of e G.I. Bill of Rights. The veterans in school comprised nine- nths of the whole number of males 20–29 years old enrolled the schools and colleges of the nation and were mainly re- onsible for the fact that the number of young men enrolled school and college in 1947 far exceeded the highest prewar vel.

Data on school attendance or enrolment for the population -29 years of age are presented in Table V. The percentages rolled for persons 7–17 years of age were higher in 1947 than 1940, the only material decline shown in the table being at for five-year-olds. This decrease was believed to be only ominal and the result of a change in the form of inquiry which as more successful in excluding from the count children tending kindergarten.

*Data not available.

**Tenure of Home.**—The number of occupied dwelling units the U.S. increased from 34,854,532 in 1940 to 39,016,000 1947, thus adding about 12% to the number of U.S. homes uring the seven-year period. Since the population increased by nly about 8%, the average population per dwelling unit was lightly lower in 1947 than in 1940 (3.64 as compared with .78).

There was a marked increase between 1940 and 1947 in the roportion of families in the U.S. who owned the houses in hich they lived. In 1947, 54.7% of the dwelling units were ccupied by their owners and only 45.3% by tenants, thus lmost exactly reversing the situation in 1940, when 43.6% ere owner-occupied and 56.4% tenant-occupied. This change n the tenure relationship was the result of conditions in many reas under which it was practically impossible to find a house ffered for rent, so that many families acquired at least the orm of ownership of a home as the only means of obtaining a lace to live. While the percentage of owner-occupied homes, s always, remained higher in rural areas than in urban, the hange between 1940 and 1947 affected both urban and rural reas in similar fashion. The percentage of dwelling units ccupied by owners in urban areas increased from 37.5 in 1940 o 48.4 in 1947. The corresponding change in rural-nonfarm reas was from 51.7 to 64.3 and in rural-farm areas from 53.2 o 64.9.

**Housing Vacancies.**—In addition to the occupied units there ere in 1947 1,028,000 vacant units designed for year-round occupancy (excluding something over 1,000,000 seasonal units, for the most part in rural areas). Of these units, 327,000 were offered for rent and 112,000 were offered for sale only, the remainder being made up of units rented or sold but not yet occupied, units held for absent households, etc. The 439,000 units offered for sale or rent formed a little over 1% of the total number of dwelling units. These figures may be compared with 1,475,374 vacant nonseasonal units for sale or rent in 1940, or nearly 4% of the total. Vacant units offered for rent were relatively much more numerous in rural-farm areas in 1947 than in nonfarm areas, forming 2.3% of the whole number of rural-farm units. This situation doubtless reflects the fact that there was during the period 1940–47 a considerable decline in the rural-farm population through migration to nonfarm areas.

**Table VI.—*Occupied and Vacant Dwelling Units in the United States: April 1947***

(Figures represent ordinary occupied dwelling units and habitable vacant units. Data based on a small sample)

| Status | United States | Urban | Rural-nonfarm | Rural-farm |

| Other* | 318,000 | 88,000 | 88,000 | 142,000 |

*Units held for absent household, pending settlement of estate, awaiting demolition, etc.

**Plumbing Equipment.**—In 1947 an estimated 26,436,000 occupied dwelling units, or 67.8% of the total, were equipped with private bath and private flush toilet, for the exclusive use of the occupants of the unit. This figure may be compared with 55.7% in 1940. Of the urban units in 1947, 84.3% were reported as having these facilities, of the rural-nonfarm units, 57.3%, but of the rural-farm units only 21.9%. All three of these figures, however, represented decided increases over the corresponding figures for 1940.

At the other end of the scale in the matter of plumbing equipment, there were 7,626,000 dwelling units, or 19.5% of the 1947 total, which had no running water in the unit. This percentage may be compared with 29.6% in 1940, these figures indicating a marked reduction in the proportion of households without convenient water supply. Of the 23,835,000 urban units in 1947, only 1,014,000, or 4.3%, were without running water, in contrast with the situation in rural-farm areas where

**Table VII.—*Occupied Dwelling Units by Plumbing Equipment, for the United States, Urban and Rural: 1947 and 1940***

(Figures for 1947 based on a small sample)

| Plumbing Equipment | April 1947 Number | April 1947 Per cent | April 1940 Number | April 1940 Per cent |

| Private bath and private flush toilet | 20,095,000 | 84.3 | 15,830,000 | 76.9 |
| Private flush toilet, no private bath | 1,137,000 | 4.8 | 1,227,000 | 6.0 |
| Running water, no private flush toilet | 1,589,000 | 6.7 | 2,193,000 | 10.6 |
| No running water in dwelling unit | 1,014,000 | 4.3 | 1,347,000 | 6.5 |
| Rural-nonfarm | 8,519,000 | 100.0 | 7,151,000 | 100.0 |
| Private bath and private flush toilet | 4,885,000 | 57.3 | 2,823,000 | 39.5 |
| Private flush toilet, no private bath | 287,000 | 3.4 | 223,000 | 3.1 |
| Running water, no private flush toilet | 1,038,000 | 12.2 | 941,000 | 13.2 |
| No running water in dwelling unit | 2,309,000 | 27.1 | 3,164,000 | 44.2 |
| Rural-farm | 6,662,000 | 100.0 | 7,107,000 | 100.0 |
| Private bath and private flush toilet | 1,456,000 | 21.9 | 776,000 | 10.9 |
| Private flush toilet, no private bath | 98,000 | 1.5 | 37,000 | 0.5 |
| Running water, no private flush toilet | 805,000 | 12.1 | 480,000 | 6.8 |
| No running water in dwelling unit | 4,303,000 | 64.6 | 5,814,000 | 81.8 |

4,303,000 out of a total of 6,662,000, or 64.6%, had no running water in the unit. The classification of dwelling units on the basis of plumbing equipment is summarized in Table VII.

**Electric Lighting.**—More than nine out of ten of the occupied dwelling units in the U.S. in 1947 were equipped with electric lighting, this representing an increase from slightly less than eight out of ten in 1940. As in the case of plumbing equipment, there was a marked differential between urban and rural areas. While only 1.8% of the urban units were without electric lighting in 1947, 8.6% of the rural-nonfarm units lacked this convenience, and 36.7% of the rural-farm units. Improvement in this respect between 1940 and 1947 was more marked than in the matter of plumbing equipment, since the percentage of units without electric lighting was reduced during this period by slightly more than one-half. The reduction in the percentage of homes without electric lights was more rapid in urban areas than in rural, though even in the rural-farm areas the number of homes without electric lights was reduced from 4,810,000 in 1940 to 2,447,000 in 1947. The figures for dwelling units with and without electric lighting are summarized in Table VIII.

**Table VIII.**—*Occupied Dwelling Units by Electric Lighting, for the United States, Urban and Rural: 1947 and 1940*

(Figures for 1947 based on a small sample)

| Status | April 1947 | | April 1940 | |
|---|---|---|---|---|

| Rural-farm | 6,662,000 | 100.0 | 7,107,000 | 100.0 |
| With electric lighting | 4,215,000 | 63.3 | 2,297,000 | 32.3 |
| Without electric lighting | 2,447,000 | 36.7 | 4,810,000 | 67.7 |

**Rental.**—The median monthly rental of the 12,288,000 tenant-occupied urban dwelling units in April, 1947, was $31.64, as compared with $24.60 in April 1940. This change resulted from a decided increase in the number of units renting for $30 or more and similar decreases in the number of units renting for less than this figure. The number of units renting for less than $10, for example, decreased from 1,219,000 in 1940 to 481,000 in 1947, or more than 60%. On the other hand, the number of units renting for $40 to $49 increased from 1,262,000 in 1940 to 2,043,000 in 1947, or something over 60%. These rental figures are summarized in Table IX.

In the northeastern states, the median rental of tenant-occupied urban dwelling units was $34.11; in the north central states, $32.09; in the south, $23.18; and in the west, $32.85. These figures represent increases of 20% or 30% over the corresponding figures for 1940 except that in the south the median increased from $15.13 to $23.18, or more than 50%.

TRENDS in the labour force, 1940 to 1947 (Source: U.S. Bur of Census)

**Employment and Unemployment.**—The civilia force, estimated at 60,200,000 in Nov. 1947, had decl sonally by about 700,000 from the October level. Thi was confined largely to farm workers who left the lab with the end of harvesting operations. The civilian lab in Nov. 1947 included about 1,200,000 more persons Nov. 1946, largely veterans of World War II. There change in the number of women in the labour force 1946 and 1947.

The total labour force, including the armed forces, mated at 61,500,000 in Nov. 1947, or about 500,000 m in Nov. 1946.

The labour force participation rate for male vetera is, the proportion of those in the population who wer civilian labour force, increased significantly during 1 1947. In Nov. 1945, when large numbers of veterans firs returning to civilian life, the rate for veterans 20–44 age was only about 68%. By Nov. 1946 this rate had 88%, and by Nov. 1947 to 91%. The rate for nonvet the same age group was about 97% in Nov. 1947, unchanged from Nov. 1945.

The number of persons employed in civilian work by about 600,000 between Oct. and Nov. 1947, to a 58,600,000. Persons employed in nonagricultural indus talled 50,600,000 in November, virtually the same as in The number of nonagricultural workers in November re at the all-time high of previous months, exceeding the w reached in Dec. 1942, by about 4,500,000, and the No level by 1,500,000. Women employed in nonagricultur in November totalled about 15,300,000, or about 2,000, low the wartime peak of female employment in the sp 1945.

With harvesting operations nearly completed in most a the country, the number of agricultural workers drop about 600,000 between October and November to a t 8,000,000. About half of the decline occurred amon omen and an additional 25% among young farm workers der 20 years of age. Agricultural employment in Nov. 1947 s at about the same level as in Nov. 1946, but the number of ale farm workers had increased by about 250,000 while the mber of female workers had declined by a corresponding nount. This replacement of women by men in farm work had en under way ever since the end of World War II.

An estimated 1,600,000 persons were unemployed in Nov. 47, or about the same number as in October. The stability in employment between October and November extended alike male veterans of World War II, to nonveterans and to women. nemployment in November, representing only 2.7% of the vilian labour force, was the lowest recorded since the fall of 45.

The average duration of unemployment in Oct. 1947 was ne weeks, or about the same as in September. This was sub-antially lower than in Oct. 1946, when the duration of unem-oyment averaged about 12 weeks.

The data from the monthly reports on the labour force are mmarized for the postwar period up to Nov. 1947, in Table X, hile the chart on page 178 shows the principal items in graphic rm for the entire period from 1940 to the end of 1947.

The Dec. 1947 figures for employment and unemployment ere as follows: civilian labour force, 59,590,000; employed, 7,947,000, unemployed, 1,643,000. Persons employed in agriculture numbered 6,962,000, as compared with 7,985,000 in November, thus continuing the usual seasonal decline; persons employed in nonagricultural industries numbered 50,985,000 in December, or a little more than in November.

**Occupational Changes.**—Male and female employed workers are classified by major occupation group for 1947 and 1940 in Table XI. Significant changes among male workers include a decrease in the proportion of the total represented by farmers from 14.7% to 10.7%, by farm labourers from 8.1% to 5.3%, and by general labourers from 8.7% to 7.7%, with increases for nonfarm proprietors and officials from 9.8% to 12.5%, for craftsmen, etc., from 14.5% to 19.0%, and for operatives, etc., from 18.2% to 20.9%.

Among female workers the most significant decreases in proportion were for professional and semiprofessional workers, from 13.2% to 9.4%, perhaps reflecting a movement from the teaching profession to clerical and sales positions; and in domestic service from 17.7% to 8.8%. Significant increases were in clerical workers, from 21.3% to 26.7%, in sales persons, from 7.0% to 8.1%, and in operatives, etc., from 18.4% to 20.1%. The nominal increase in female farm workers reflects mainly the seasonal difference between April and October.

Table X.—*Civilian Employment and Unemployment in the United States: July 1945 to Nov. 1947*

(Figures are exclusive of institutional population as well as of persons in the armed forces. Data based on a small sample)

(*See* also ALIENS; BIRTH STATISTICS; HOUSING; IMMIGRATION AND EMIGRATION; MARRIAGE AND DIVORCE; WAGES AND HOURS; WEALTH AND INCOME, DISTRIBUTION OF.) (L. E. T.)

**Centennials:** *see* CALENDAR, 1948, page xxii.

**Cereals:** *see* BARLEY; CORN; OATS; RICE; RYE; WHEAT.

**Ceylon.** A British crown colony holding limited dominion status in 1947, lying off the southern extremity of India and approaching within 6° of the equator. Area: 25,332 sq.mi.; pop. (March 1946): 6,650,825. Chief towns (pop. census 1931): Colombo (cap., 284,155); Jaffna (45,708); Galle (34,424); Kandy (37,147). Languages: English, Sinhalese, Tamil; religions: chiefly Hindu and Buddhist. Governor: Sir Henry Monck-Mason Moore; prime minister (appointed Sept. 1947): Stephen Senanayake.

**History.**—Interest during 1947 focused on the introduction of parliamentary government. The state council was dissolved on July 10, and the elections were held from Aug. 23 to Sept. 20; under adult suffrage, more than 1,500,000 voters went to the polls. The result was a victory for the United National party, which secured 49 out of the 95 seats in the lower chamber. The next most numerous bloc were the Independents with 21 seats, many of whom would support the United National party's policy and give it a working majority. On Sept. 24 Stephen Senanayake, leader of the party, was asked by the governor to form a cabinet; the members were announced two days later. Under the existing constitution, certain subjects affecting the rights of the minorities, defense and foreign relations were reserved to the governor. After a short experience of the working of the new constitution, it was reasonably certain that these would be removed, and Ceylon would cross the threshold of fully responsible government within the commonwealth. The Ceylon Independence act, which received the royal assent on Dec. 10, provided dominion status for Ceylon as from Feb. 4, 1948.

There was a wave of prosperity during the year. Tea, copra and crepe rubber were booming. On Jan. 27 the government announced an export tax on tea of 38.15 cents per lb., expected to yield Rs.90,000,000. A scheme for free education from kindergarten to university absorbed a large part of the revenue.

(H. G. Rn.)

**Education.**—(1946) Sinhalese and Tamil schools 4,135; scholars, male 374,277, female 292,634; English and bilingual schools 416; scholars, male 66,467, female 34,756; University of Ceylon (1945), students 1,065.

**Banking and Finance.**—Revenue (est. 1946–47) £25,650,000; expenditure (est. 1946–47) £25,585,333; public debt (Sept. 30, 1945) £9,408,775 and Rs. 266,904,100; notes in circulation (May 1947) Rs. 230,100,000; bank deposits (May 1947) Rs. 715,600,000. Rate of exchange (1947): One rupee (100 cents) = 1*s*. 6*d*. or 30.16 U.S. cents.

**Trade and Communication.**—Overseas trade (merchandise, 1946): imports Rs. 602,090,000; domestic exports Rs. 715,847,000. Communications and transport: roads for motor traffic (1943) 6,551 mi.; railways (1944) 912 mi. (including 106 mi. narrow gauge); shipping entered (1942) 2,724,000 net tons; motor vehicles licensed (Dec. 31, 1941): 20,092 motor cars and taxis; 4,394 trucks and vans; 2,486 omnibuses; 2,644 cycles; 66 tractors; 231 trailers; wireless receiving set licences (Dec. 31, 1940) 9,736; telephone instruments in use (1938) 10,424.

**Agriculture.**—Production in short tons (1946): rubber (export) 113,989; black tea (export) 145,250; rice (yearly average) 209,200; desiccated coconut (export) 11,121.

## Chambers of Commerce.

**United States.**—In a year which increasingly emphasized the world-wide attack being waged against democracy, the chamber of commerce of the United States strengthened its leadership as the major business spokesman for free enterprise.

In 1947 member organizations—chambers of commerce, trade associations and professional groups—totalled more than 2,700. Their underlying membership numbered more than 1,250,000 businessmen.

In addition, more than 18,000 business concerns held direct membership in the national chamber.

The chamber strove to alert the U.S. people, not only to the danger threatening their security from without, but also to the need for individual responsibility in strengthening free-enterprise work, and in improving local, state and national government.

Continuing its drive against communism, the chamber distributed more than 500,000 copies of 2 special reports: *Communists within the Government*, and *Communists within the Labor Movement*.

A program of action was launched to disseminate to all groups of people the facts about the opportunities afforded under the U.S. way of life.

Spearheaded by the national chamber, committees on national affairs were active in more than 2,000 local chambers, with the goal of a better-informed citizenry.

The chamber also conducted a broad information program, to place the facts about labour-management questions people.

Its views closely paralleled the majority opinion as by congress in remedial labour legislation.

All fields of business interest, including federal fisc stabilization of private and public monies, educatio transportation, conservation and foreign reconstru trade, received thorough study and action.

In May 1947, Earl O. Shreve, of New York city, w president of the chamber of commerce of the Unit Ralph Bradford, long-time general manager of the cha elevated to the position of executive vice-president. A became chamber manager. (E.

*United States Junior Chamber of Commerce.*—Th young men's civic organization in the world was fo Jan. 21, 1920, in St. Louis, Mo. It is composed o through 35 years of age who are principally concerned their volunteer services to the civic betterment of t munity, state, nation and the world. An affiliate of t Chamber International, the U.S. junior chamber of had in 1947 more than 1,600 local organizations in th States; world-wide, the organization embraced 45 natio were approximately 200,000 individual members in th States.

During 1947 local organizations affiliated with the U chamber of commerce voted to increase their dues to th al organization from $1 to $2 per member per year. Th al convention was held in Long Beach, Calif., and J Shepperd, of Gladewater, Tex., was elected 27th nation dent.

In convention the delegates formally resolved tha Europe as outlined in the European recovery progra shall plan) was a necessity for world peace. They also favour of universal military training.

The biggest single decision of the year was the vote the national headquarters from Chicago, Ill., to Tuls where a permanent war memorial headquarters buildin be constructed to house the headquarters.

During 1947, the executive vice-president in charge o al headquarters was Frank G. Fister; the editor of *Fut Magazine for Young Men,* international publication of junior chamber, was Raymond E. Roberts. (R. E.

**Canada.**—In its 19th year, the Canadian chamber merce had 443 organization members, 1,228 company m and 25 business and professional association members. ties of 1947 included promotion of a first national insti secretaries, held at Hamilton, Ont., in August. More th national affairs committees were set up to create a m formed public opinion and to take the opinions of bus government. The chamber produced a series of radio p called "Pattern for Prosperity," and co-operated with th dian Congress of Labor and the Canadian Trades and congress in the production of another series entitled "La Business Take Stock." Publications included 800,000 co "Pattern for Prosperity," 90,000 copies of "The Con Threat to Canada" and 150,000 copies of "This Is a Bu "Know Your Government" and miscellaneous pamphlets. were presented to the federal government on industria tions, labour legislation, taxation, radio broadcasting, se immigration.

The chamber's 5th National Foreign Trade conferen held in Vancouver, B.C., in May, attended by 250 ex importer delegates.

In its 11th year, the junior chamber of commerce in C had 136 member organizations with approximately 25,0 dividual members by 1947. Throughout the year its ma asis continued on leadership training efforts to fit Canadian n between 21 and 40 for their places in Canada's business rld. The "Jaycees" were also active in their beautification npaign, begun in 1945, and in which 260 communities par-icipated in the spring of 1947. The junior chamber planned nada's first boys' town for juvenile delinquents at Boscoville, northern Montreal. (C. Cy.)

**Great Britain.**—During 1947 British chambers of commerce, mbering more than 100, with subscribers exceeding 50,000 ad representing a complete cross section of the industrial and mmercial community, maintained full activity within their ode field, which is to promote and protect the trade and indus-y of their place of domicile and embraces not only matters of al importance but also the consideration of any British or eign legislation, regulations or orders affecting their members' erests.

In 1947 chambers had more need to consider draft United ngdom legislation, and more calls were received from mem-rs for individual assistance, than perhaps any other year in eir history, which in some cases went back before 1800. New aft laws having a vital bearing on the future of free enter-ise were studied in intimate detail, and through the Associa-ion of British Chambers of Commerce, the national mouth-ce of the movement, some were strenuously opposed; among ese can be listed the Transport bill, the Electricity bill and e Industrial Organization bill. In many cases chambers were le to influence amendments valuable to their constituents, rticularly in the Companies bill. The Finance bills of the ring and autumn received detailed scrutiny, leading to repre-ntations; some recommendations made by the association re accepted.

The Economic survey for 1947 gave rise to recommendations, d some of the advice given to the government (*e.g.*, regarding e necessity to reduce capital expenditure) was in due course cepted.

The fuel crisis created opportunties for local service which any chambers seized quickly; assistance in organizing stag-red hours to relieve the load on electricity plants was given in any cities and towns.

Chambers of commerce provided direct help to many firms gaged in the export drive. (A. R. K.)

**hannel Islands:** *see* BRITISH EMPIRE.

**harles** (CHARLES THÉODORE HENRI ANTOINE MEINRAD DE SAXE-COBOURG, COUNT OF FLANDERS) (1903– ), ince of Belgium, was born in Brussels, Oct. 10, younger other of King Leopold III of the Belgians. On Sept. 20, 1944, ortly after the liberation of Belgium from German occupation, rince Charles was appointed regent by a joint vote of the rliamentary chambers, as the king was still a prisoner of the emy. On May 8, 1945, King Leopold was freed by Allied oops at Salzburg and four days later he confirmed the choice the parliament, asking his brother to "continue the mission had assumed in the interest of the nation." Considering the uteness of the "royal question" (*see* BELGIUM), the prince gent deliberately avoided taking an active part in Belgium's litical life. He was not often seen in public and officially his le was limited to helping in the formation of successive gov-nments. In 1947, however, he paid an official visit to the ongo (*see* BELGIAN COLONIAL EMPIRE). But, when the news as published that he would go in his official capacity to Paris, e Catholic press strongly criticized the idea and the visit was ostponed. On Nov. 20 Prince Charles was present in London the marriage of Princess Elizabeth and the duke of Edin-urgh. (G-H. D.)

**Cheese.** U.S. production of cheese in 1947 was 1,175,000,000 lb., compared with 1,099,000,000 lb. in 1946 and a five-year average of 669,000,000 lb. (1935–39). More milk was available for cheese making, and with reduced exports a larger domestic supply was provided. Production of American Cheddar type cheese was almost 30% above the previous year, amounting to about 5 lb. per capita. Total cheese output was about 8 lb. per capita. Wisconsin continued to hold its lead in cheese production, its output amounting to nearly half of the U.S. total, followed by Illinois, New York, Missouri and Minnesota. Cold storage stocks were high in midyear, and prices held steady.

The strong demand for butter checked expansion of world cheese production. The need for milk for consumption by children was a retarding factor on all dairy manufactures. (*See* also BUTTER; DAIRYING; MILK.) (J. C. Ms.)

**Chemical Therapy:** *see* CHEMOTHERAPY.

**Chemistry.** **Fluorine Compounds.** — Many organic compounds of fluorine were synthesized during 1947 and the years immediately preceding. Major stimulus to this work was the Manhattan project which required fluorocarbons in the first diffusion separation units at Oak Ridge, Tenn.

The electrolytic generation of fluorine from mixtures of potassium fluoride and hydrogen fluoride was extensively developed both in university laboratories and industries (Harshaw, Du Pont, Hooker Electrochemical, Pennsylvania Salt). Synthesis of a variety of aliphatic and aromatic fluorine compounds was reported, and the chemistry of both fluorine and fluorine compounds was greatly extended. One interesting aspect was the announcement that silver difluoride ($AgF_2$) and cobalt trifluoride are effective fluorinating agents.

**Chromium Hexacarbonyl, $Cr(CO)_6$.**—B. B. Owen and collaborators at Yale university developed a procedure for a 60% yield of chromium hexacarbonyl by the interaction of carbon monoxide upon phenylmagnesium bromide and chromic chloride.

**Fluorine Perchlorate, $FClO_4$.**—G. H. Rohrback and George H. Cady of the University of Washington separated fluorine perchlorate from the gaseous reaction products of fluorine and concentrated perchloric acid. The compound boils at −16° C., freezes at −167° C., and may easily be caused to explode.

**Fluoroisocyanates of Silicon and Phosphorus.**—All three silicon fluoroisocyanates, $SiF(NCO)_3$ (b.p. 134° C.), $SiF_2(NCO)_2$ (b.p. 68° C.), $SiF_3NCO$ (b.p. −6° C.), were prepared by direct reaction of silicon isocyanate with antimony trifluoride. This work was reported by G. S. Forbes and H. H. Anderson of Harvard university. All of these compounds react vigorously with water or methanol but are inert and miscible toward such solvents as benzene, carbon tetrachloride or ethylene bromide.

Phosphorus isocyanate, $P(NCO)_3$ and antimony fluoride underwent a similar reaction. Phosphorus fluorodiisocyanate, $PF(NCO)_2$ (b.p. 98° C.), and the difluoroisocyanate, $PF_2NCO$ (b.p. 12° C.), were both formed. The first of these compounds was stable, but the second was fairly unstable.

**Lithium Aluminum Hydride.**—Hydrides of the alkali metals are well known. Potassium hydride (KH), for example, is a white, crystalline, saltlike compound formed when hydrogen is passed over moulten potassium at about 360° C. H. I. Schlesinger, A. E. Finholt and A. C. Bond, Jr., of the University of Chicago discovered that when lithium hydride is treated with an ether solution of aluminum chloride, there is formed lithium aluminum hydride. This is a new, ether-soluble compound with many interesting uses. The equation for its formation follows: $4\,LiH + AlCl_3 \rightarrow LiAlH_4 + 3\,LiCl$. This substance is a complex of lithium hydride and aluminum hydride ($AlH_3$), the latter substance being isolable as an unstable substance if an excess of aluminum chloride is taken.

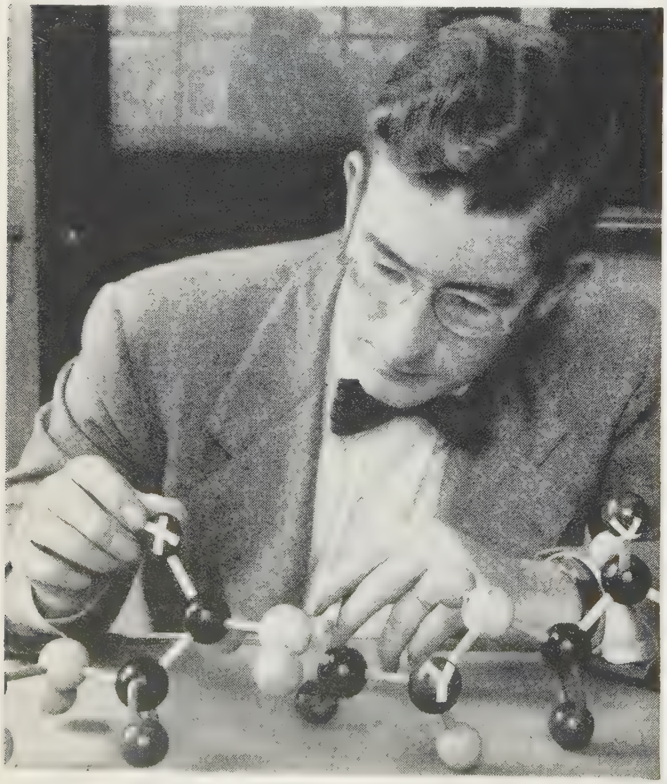
Lithium aluminum hydride reacts vigorously with water or ammonia with the liberation of hydrogen. It reacts with silicon tetrachloride forming silane ($SiH_4$), with stannic chloride yielding stannane ($SnH_4$), or with boron trichloride producing diborane, ($B_2H_6$), the methods being far simpler than those hitherto available. Reaction with dimethylzinc gave rise to the previously unknown zinc hydride ($ZnH_2$).

Perhaps the most striking property of lithium aluminum hydride is its ability to reduce lithium salts of organic acids to alcohols. This observation is particularly important, since none of the common reducing agents is capable of effecting such a reduction. Esters, acid anhydrides and acid chlorides are also reduced readily to alcohols by lithium aluminum hydride. These results were reported by Weldon G. Brown and R. F. Nystrom of Chicago.

**Reactions of Iron Pyrite.**—Three reactions of this well-known mineral were reported by George-Maria Schwab and John Philinis of Greece, namely, the pyrolysis at 600–650° C. into ferrous sulphide and sulphur, the reduction with hydrogen to yield ferrous sulphide and hydrogen sulphide and the air oxidation at 400–500° C. yielding sulphur dioxide and ferric oxide together with some ferric sulphate.

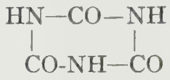
**Trioxane.**—The common polymer of formaldehyde is paraformaldehyde. A lesser known polymer which assumed industrial importance in the past few years is trioxane. This is a trimer of formaldehyde or $(CH_2O)_3$. It is a colourless crystalline compound melting at 62° C. and boiling without decomposition at 115° C.

J. F. Walker and A. F. Chadwick of Du Pont electrochemicals department pointed out that trioxane is a good source of formaldehyde, since in aqueous solution or in glacial acetic acid it is rapidly depolymerized if a little sulphuric acid is added.



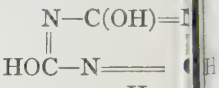
ROBERT B. WOODWARD, with a model of the protein molecules which he succeeded in synthesizing in 1947 with the assistance of C. H. Schramm. His work offered wide new possibilities in the industrial and biological sciences and marked a major advance in organic chemistry

**Cyanuric Acid and Melamine.**—Like trioxane, stances also are trimers. They are related to c (HNCO) and cyanamide ($CNNH_2$), respectively. sorption spectra methods, I. M. Klotz and Themis Northwestern university demonstrated that the st either of these compounds in solution is the same as solid state. Cyanuric acid, which could exist either (I) or enol (II) forms is shown to be of structure I. Me the other hand, is enolic. Its structure differs from



$$\begin{array}{l} \mathrm{HN{-}CO{-}NH} \\ \quad | \qquad\quad | \\ \mathrm{CO{-}NH{-}CO} \end{array}$$

I



$$\begin{array}{l} \qquad\quad \mathrm{N{-}C(OH){=}} \\ \qquad\quad \| \\ \mathrm{HOC{-}N{=\!=\!=}} \end{array}$$

II

each OH group is replaced by $NH_2$.

**Oxynitration of Benzene.**—During World War came of interest to gain insight into the reported con benzene into dinitrophenol or picric acid by use of a mercuric nitrate in nitric acid. The study was succes creasing the yields of dinitrophenol to about 85% and ing a clear picture of the mechanism of the process. was reported by F. H. Westheimer of the University and Marvin Carmack of the University of Pennsylva

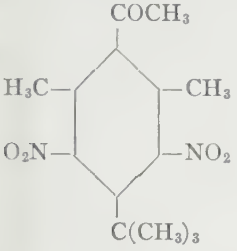
The first two steps in the process are mercuration to phenylmercuric nitrate and conversion of the latte sobenzene by reaction with nitrogen dioxide obtained nitric acid. The nitrosobenzene changed into *p*-nitro either of two processes: (1) conversion by nitric oxide nitric acid to benzenediazonium nitrate, thence to p nitrophenol; (2) direct "rearrangement" to nitrop concentrated nitric acid in much the same way that droxylamine rearranges to nitrosophenol. Of cours nitration of *p*-nitrophenol leads to di- or trinitrophen being picric acid.

Somewhat related to this work was A. A. Morton that phenylmercuric nitrate may be prepared from b excellent yields if mercuric oxide and a desiccant ("L are used with the mercuric nitrate reagent. Mercuric tures the nitric acid formed in the reaction and the captures the water, thereby preventing the secondar known to occur if nitric acid and water are present.

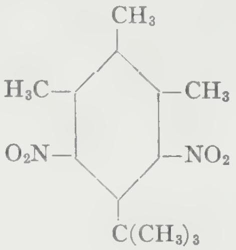
**Benzene Hexachloride.**—In view of the heralde lence of DDT as an insecticide, it is noteworthy that insecticide of great potency was discovered, namely, th isomer of benzene hexachloride. This is made by ad chlorine to benzene. Curiously, only the gamma isome insecticidal value.

That several isomers are formed when chlorine adds zene is understandable from stereochemical considerati six carbon atoms in the molecule may be regarded as at ners of a hexagon. Each carbon holds one hydrogen chlorine. It is apparent that all six chlorines may be a plane of the hexagon and all six hydrogens below it, chlorines may be above and one below, etc. Whether sible isomers are present or not in the reaction mixtu known. Four of them ($\alpha$, $\beta$, $\gamma$, $\delta$) had been known f time. The fifth or epsilon isomer was isolated during K. C. Kauer, R. B. DuVall and F. N. Alquist of Dow C company. Between one-half and three-fourths of the products is the unwanted alpha isomer, and only a yield of the gamma isomer is obtained. The various iso separated from each other by appropriate use of solven Cristol of the U.S. department of agriculture reported kinetics of the detachment of hydrogen chloride from $\beta$, $\gamma$ and $\delta$ isomers.

**Musk Ketone and Musk Tibetene.**—R. C. Fuson orators at the University of Illinois established the structure these important perfume ingredients. They proved that usk ketone was 2,6-dimethyl-3,5-dinitro-4-*t*-butylacetophe- ne (III) and that musk tibetene was 1,2,3-trimethyl-3, dinitro-4-*t*-butylbenzene (IV), thereby correcting errors of ructure which had existed for many years.



III



IV

**Cyclo-octatetraene.**—The recent availability of this hy- ocarbon, by direct synthesis from acetylene, is one reason for erest in the compound. Its importance in studies of reso- nce and other theoretical aspects of organic chemistry is other reason. It was described as a yellow liquid melting at 27° C. Structurally, its molecule resembles benzene, since the ter possesses a six-membered ring made up of three $-CH=$ I$-$ units, whereas cyclo-octatetraene is composed of an eight- embered ring carrying four $-CH=CH-$ units; but it differs emically from benzene in being reactive toward bromine, drogen bromide or potassium bromide.

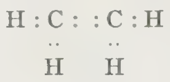
Richard Willstaetter's synthesis of 1911 was repeated in 1947 A. C. Cope and C. G. Overberger of Massachusetts Institute Technology. Except for a higher melting point (−5.5° C.), nfirmatory results were established throughout. The more actical synthesis from acetylene was by polymerization of e latter under pressure (10–15 atm.), a process described by alter Reppe and coworkers of I. G. Farbenindustrie. The uation for this process is: $4\ C_2H_2 \rightarrow C_8H_8$. The reaction was celerated by the presence of either powdered calcium carbide, hylene oxide or tetrahydrofuran. Nickel cyanide was also entioned as catalyst. A little benzene was produced concur- ntly as well as other hydrocarbons.

With this simpler synthesis much larger quantities were pre- red than would have been possible by Willstaetter's method. s prepared in this manner, cyclo-octatetraene was a golden llow liquid, freezing at −7° C. to almost colourless needle ystals. Physical chemical measurements on the pure material ere made by H. Mark *et al.* at the Polytechnic institute of rooklyn and by F. D. Rossini and collaborators of the national reau of standards. Measurement of the heat of combustion ows that in burning, it liberates 34,000 calories per mole ore energy than its aromatic isomer styrene. Therefore, not uch resonance stabilization is found in the cyclo-octatetraene olecule.

**Resonance.**—Resonance is a theoretical concept which has layed an important role in chemical thinking for two decades. has to do with electron patterns in molecules. This concept as introduced into quantum mechanics in 1926 by W. Heisen- erg in connection with the quantum states of the helium atom. luch of the credit for its application to chemistry generally is raceable to the work of Linus Pauling of California Institute f Technology.

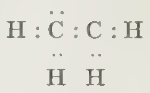
It has been established that in most organic molecules a hy- rogen atom, if present, shares two electrons, whereas other toms (C, O, N, Cl, etc.) possess or share eight electrons. An nstable state arises, for example, if only six electrons are pres- nt. To illustrate with ethylene (ten electrons, each being rep- esented by a dot), it is seen that structure V satisfies the stable structure, whereas VI would be unstable. Ethylene may be

A PLASTIC GLUE, capable of supporting the weight of a 200-ton locomotive and resistant to heat, cold and salt water, was developed in 1947 by the young chemist Elisabeth M. Ackermann, shown here at her Westinghouse laboratory in Pittsburgh, Pa.



$\mathrm{H : \underset{\underset{H}{\cdot\cdot}}{C} : : \underset{\underset{H}{\cdot\cdot}}{C} : H}$

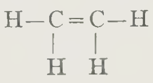
V



$\mathrm{H : \overset{\cdot\cdot}{\underset{\underset{H}{\cdot\cdot}}{C}} : \underset{\underset{H}{\cdot\cdot}}{C} : H}$

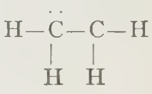
VI

considered a "resonance hybrid" of V and VI, but the contribution of VI is trivial under normal conditions and may be disregarded. The customary mode of representation of V and VI is with bonds, using dots only with unshared electrons, as



$\mathrm{H-\underset{\underset{H}{|}}{C}=\underset{\underset{H}{|}}{C}-H}$

V

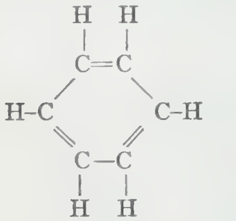


$\mathrm{H-\overset{\cdot\cdot}{\underset{\underset{H}{|}}{C}}-\underset{\underset{H}{|}}{C}-H}$

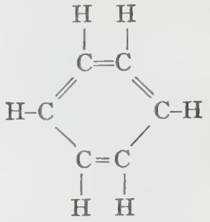
VI

Butadiene, with two double bonds per molecule, also has but one stable modification, namely, $H_2C=CH-CH=CH_2$. Benzene, however, provides two different locations for electrons to appear without deviating from the eight-electron pattern. These two extremes are shown in VII and VIII (p. 184) and benzene is considered to be a hybrid of these structures, both contributing equally. This type of resonance hybrid makes for stabilization. The compound is less reactive chemically than otherwise, it evolves less heat in burning or in hydrogenation, and the distance between carbon centres in the molecules is shortened.

As an example, one finds that cyclohexene ($C_6H_{10}$), cyclohexadiene ($C_6H_8$) and benzene ($C_6H_6$) all may be hydrogenated to cyclohexane ($C_6H_{12}$). Heat is evolved in all three reactions, to the extent of 28,600, 55,400, and 49,800 calories per mole, respectively. Twice 28,600 is 57,200, a value reasonably close to the observed 55,400, showing that there is no important resonance stabilization in cyclohexadiene. Thrice 28,600 is 85,800, which deviates from the observed value for benzene by 36,000 calories. Similarly, the heat of combustion of benzene is found to be 41,000 calories lower than calculated. This value of 36,000–41,000, or about 39,000 calories, is the so-called "resonance energy" of benzene.

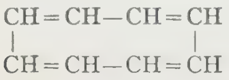


VII

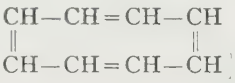


VIII

Since cyclo-octatetraene is less stable than styrene by 34,000 calories, it is evident that cyclo-octatetraene possesses very little resonance energy. This calls for comment, since its formula may assume two stable electron arrangements (IX, X). The only significant difference between the formulas for benzene and cyclotetraene is that the former is planar and strainless, whereas the latter, to be strainless, must possess a puckered ring. Evidently this feature must play an important role in the concept of resonance.



IX



X

**Reactions of Sugars with Nitroparaffins.**—Carbohydrates such as xylose, arabinose, glucose or mannose are polyhydroxy aldehydes. Many of the reactions of aldehydes such as oxidation to acids, reduction to alcohols, conversion to cyanohydrins with hydrogen cyanide, etc., are displayed also by these sugars. During the years 1944–47, John C. Sowden *et al.* of the University of Toronto made a brilliant contribution to carbohydrate chemistry by demonstrating the reaction with nitromethane and pointing out the utility of this reaction.

One may recall that a simple aldehyde (RCHO) condenses in an alkaline medium with nitromethane to produce a nitro alcohol, $RCHOH\text{–}CH_2\text{–}NO_2$. If a suspension of a sugar in methanol is treated with nitromethane in the presence of sodium methoxide, the analogous nitro alcohol is produced. Thus, from L-arabinose, $HOCH_2(CHOH)_3CHO$, Sowden obtained a nitro derivative, $HOCH_2(CHOH)_3CHOH\text{–}CH_2\text{–}NO_2$. The importance of this reaction rests in the fact that the compound formed may be changed by simple procedures into other carbohydrate derivatives, hitherto obtainable only with great difficulty. Thus, treatment of the sodium salt of the above nitro compound with sulphuric acid gives rise to a mixture of L-mannose and L-glucose. D-glucose is the common dextrose of commerce, but L-glucose, its mirror image, is not found in nature. This is the best method for its synthesis.

**Polymerization of Unsaturated Hydrocarbons.**—If one treats pentylchloride ($C_5H_{11}Cl$) with sodium at 0° C. to −10° C., one obtains pentylsodium. This reagent (or other compounds of the alkylsodium class, RNa) effects the polymerization of butadiene into rubberlike compounds. In this process it is regarded that butadiene, $CH_2=CH\text{-}CH=CH_2$, first adds RNa to form $R\text{–}CH_2CH=CHCH_2\text{–}Na$ which being itself a modified RNa again adds to butadiene to yield $RCH_2CH=CHCH_2\text{-}CH_2CH=CHCH_2\text{-}Na$, and so on till very long formed. Such a mechanism would give rise to a branched sequence of carbon atoms. Branched pr formed also, however, and to explain this observa Morton suggests that the terminal sodium atom in E $CHCH_2CH_2CH=CHCH_2Na$ may exchange its locat of a more acidic position, such as $RCH_2CH=CHC$ $CH=CHCH_3$. Addition of this unit to butadiene wo branched carbon skeleton.

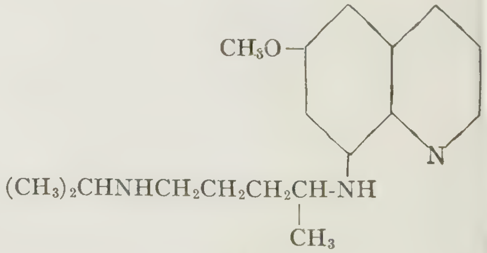
The work of Morton and R. L. Letsinger shows th sodium catalyzed the polymerization of styrene wi parently, adding to it. Pentylsodium did add smoot diphenylethene, however.

An interesting new catalyst, the "alfin catalyst," fo merization of butadiene was announced by Morto group. This substance is unique in causing catalytic zation of dienes and functions differently from the al reagent. The alfin catalyst is made from an alcohol ol) and an olefin, hence the name "alfin." To prepa alyst it is only necessary to mix sodium isopropoxide sodium. These reagents then unite to form a comple the reactive catalyst. Allylsodium may be made by i of pentylsodium with propylene, or the complete cat be made by reaction of pentylsodium with isopropyl

**The Fischer-Tropsch Process.**—A process for gasoline or liquid hydrocarbons from a mixture of hyd carbon monoxide was announced in 1928 by F. Fisch Tropsch. It contributed largely to the German fuel su ing the decade 1935–45. H. H. Storch and cowork U.S. bureau of mines performed important work dur 47 on a study of catalysts and conditions for this rea particular, the use of cobalt-thoria-magnesia-kieselgu 6:12:200) precipitated catalysts, both pelleted and was investigated. Certain large petroleum industries i took active steps in 1947 towards production of hyd from "synthesis gas," the term applied to the mixture gen and carbon monoxide.

**Antimalarial.**—Clinical tests on an antimalarial "Survey Number 13274" were most gratifying. It ported to effect permanent cures on about 95% of a cases of *P. vivax* type of malaria. This is the common variety which has usually required recurring medical tr Quinine is used with SN-13274 in the present therapy.

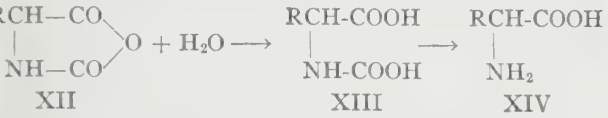
The compound is one of the 8-aminoquinolines studi office of scientific research and development project Elderfield and coworkers of Columbia university. Spe it is 8-(4-isopropylamino-1-methylbutyl)amino-6-meth oline (XI).



XI

**Amino Acids and Proteins.**—The classical studies Fischer established the essential structure of proteins a amides, composed of alpha amino acid units. Since amin with acids forming salts, the correct representation of a acid is the saltlike structure $H_3\overset{+}{N}\text{-}CHR\text{-}COO^-$ rather t simple amino acid structure $H_2N\text{-}CHR\text{-}COOH$. Starti an amino acid, Fischer was able to synthesize a di $H_2N\text{-}CHR\text{-}CO\text{-}NH\text{-}CHR\text{-}COOH$, by indirect interac amino acid molecules. Tripeptides and larger polypeptides e synthesized similarly, but the molecular size of these lucts never approached that of natural proteins.

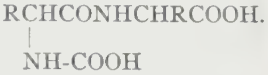
. B. Woodward and C. H. Schramm of Harvard university ounced a successful synthesis of protein analogs with a ecular weight of several million. Such materials were ca- le of being cast into clear, tough, mechanically stable films. obtain this type of high polymer, these investigators first pared an anhydride of N-carboxy-α-amino acid (XII) by wn methods, namely, by reaction of the amino acid with roformic ester. Treatment of this anhydride with water e rise to an unstable substituted carbamic acid (XIII):



$$\begin{matrix} \text{CH}-\text{CO} \\ | \qquad\quad \rangle\text{O} \\ \text{NH}-\text{CO} \end{matrix} + H_2O \longrightarrow \begin{matrix} \text{RCH-COOH} \\ | \\ \text{NH-COOH} \end{matrix} \longrightarrow \begin{matrix} \text{RCH-COOH} \\ | \\ NH_2 \end{matrix}$$

XII XIII XIV

ntaneous decomposition of XIII yielded XIV, capable of her reaction with XII to produce RCHCONHCHRCOOH.



$$\begin{matrix} \text{RCHCONHCHRCOOH} \\ | \\ \text{NH-COOH} \end{matrix}$$

before, the unstable –NHCOOH group decomposes into $H_2+CO_2$, and the reactive $NH_2$ group continues to build in the manner of its predecessor until a molecule of tremen- is size is formed. Amino acid XIV differs from the original ino acid only in not being in the saltlike structure. Its ctivity towards XII exceeds that of water; hence this poly- rization process may be performed in water if desired. This ction is a significant achievement in protein chemistry.

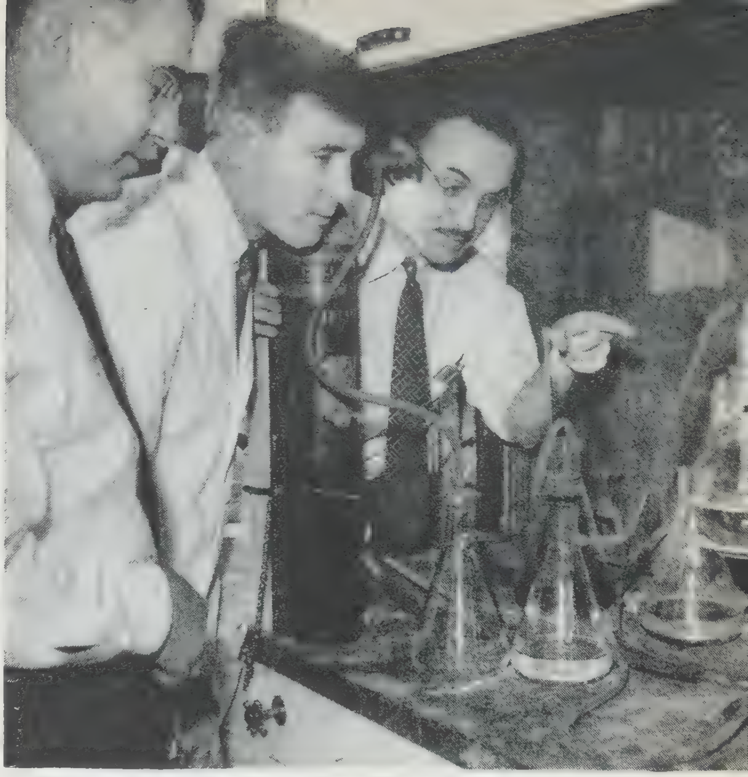
. J. Cohn, W. L. Hughes, Jr., and J. H. Weare of Harvard dical school developed methods for the crystallization of tain natural proteins, namely, human and bovine serum al- nin. (*See also* ATOMIC ENERGY; BIOCHEMISTRY; ELECTRON- ; PHYSICS; VITAMINS.) (C. D. HU.)

**emotherapy.** Increasing attention was focused during 1947 on nutrition, tropical diseases and enerative processes associated with diseases such as high od pressure, heart disease, cancer, muscle-wasting diseases, eases of the brain and nerves, kidney disease and improperly ctioning endocrine glands. The importance of attacking de- erative diseases was reflected in the formation of a new olly public research foundation in Dec. 1947, guided jointly drug and pharmaceutic manufacturers and the medical pro- sion in the United States.

The Therapeutic Trials committee, a standing committee of Council on Pharmacy and Chemistry of the American Medi- association, was organized to bring together the discoverers promising drugs and those qualified to investigate them. jects during 1947 included a combined attack on the study the treatment of cancer using hormones and a comprehen- e approach to the treatment of poliomyelitis.

Radioactive isotopes were used to study the activities of the rmal body and of diseased areas, and to treat diseases such cancer of the thyroid, and certain blood diseases such as caemia. Knowledge in this field advanced sufficiently to rmit the loan of many isotopes on a rental basis from the omic Energy commission, the issuance being restricted to ose qualified to use such products.

Of related interest were the use of hormones for cancer of e prostate gland and of the breast; pteroylglutamic com- unds, derivatives of folic acid, for cancer; urethane for caemia, a disease of the blood cell forming tissues; nitrogen stards for cancerlike blood diseases; podophyllin, which is tained from the mandrake or May apple root, for cancer; and dium fluoride, iodoacetic acid and malanic acid, which are supposed to interfere with cancer digestion of sugars and starches. Such trials, even if they should prove disappointing, would open the door to further discoveries. Some idea of the thoroughness of the studies can be gained by reflecting that about 100 radioactive isotopes were developed in the laboratory and more than 50 nitrogen mustards had been made since the end of World War II. This was remindful of the 5,000 odd sulfonamide derivatives that were made within 4 or 5 years after the value of sulfanilamide and sulfapyridine was established. Only a handful of these sulfonamides proved practical—even sulfapyridine had been discarded because of its toxicity—but thousands were explored before the best were discovered and tested.



PROMIN, a sulfone drug used in treating leprosy, being tested by three of its five co-discoverers. Nineteen patients treated with the drug were discharged from the U.S. leprosarium at Carville, La., in Feb. 1947

Other exploratory efforts in cancer studies involved the use of the much publicized KR serum, made from *Trypanosoma cruzi,* an organism responsible for Chagas' disease; tyrosinase to reduce the white blood cells in leucaemia; H.11 Extract, made from the thymus gland and the amidines, including stilbamidine and pentamidine, for multiple myeloma, a cancerous disease of the bone marrow, to relieve pain and to slow the disease temporarily. Like other new cancer treatments under investigation, the amidines were not known to be curative. Still others would probably prove worthless as they are re-examined.

The role of streptomycin in the treatment of tuberculosis was more clearly defined, and it was shown to be effective in some forms of the disease, but not sufficiently safe or effective to replace standard treatment in all cases. Its toxicity, especially the effect on hearing, limited its use. However, this drug might prove valuable in the treatment of plague and rabbit fever. In mice it was found to be 90% effective for the former disease. Production of streptomycin increased until the supply was almost equivalent to the demand.

Penicillin was shown beyond doubt to be effective in the treatment of syphilis, but its lasting effects were more in doubt than in 1946. Relapses seemed to be occurring with disturbing frequency. The usefulness of penicillin increased as the action was prolonged after injection by the concurrent use of preparations intended to slow the excretion of penicillin from the body; caronamide works thus by decreasing the passage of penicillin through the kidney. The "Romansky formula" (a mixture of penicillin, peanut oil and beeswax), which was developed to permit one daily injection of penicillin instead of six or eight, was modified to overcome the necessity of warming before administration; free flowing preparations were made available. Other means of slowing down body destruction or elimination of penicillin included the application of ice packs, the use of pectin as a base and the simultaneous injection of drugs to lessen blood circulation at the site of penicillin injection. Penicillin was claimed to be more effective in wounds when used with haemoglobin from blood.

Other items of interest in the antibiotic field included the clinical evaluation of bacitracin, which was discovered by Dr. F. L. Meleney of Columbia University College of Physicians and Surgeons, for local infections. Bacitracin was obtained originally from a germ found in an infected wound. California Spanish moss provided an extract found effective in the control of tuberculosis in guinea pigs. Tomatin was secured from the leaves and stems of tomato plants and was shown capable of attacking "athlete's foot" fungi and other fungi; aerosporin might prove effective against whooping cough and typhoid fever; and wild mushrooms yielded several antibiotics active at least in test tubes.

The terror of pneumonia was reduced with the advent of, first, antipneumoccocic sera, and later, the sulfonamides (sulfa drugs) and penicillin, but there was presented to the medical profession a vaccine made from the capsules of the pneumococcal germs to develop immunity against this infection. How effective it would be remained to be seen, as pneumonia is caused by many types of bacteria.

Other infectious processes, or their results, that were brought under further control were brucellosis, against which para-aminobenzoic acid is effective; rheumatic fever, for which para-aminobenzoic acid was used conjointly with salicylates; elephantiasis, which in rats responded to treatment with a cyanine dye; and filiariasis, for which antimony compounds were formerly used, but which responded to a new arsenic compound and to piperazines, as well as cyanines.

The symptomatic relief of asthma had been aided by increasing the medical armamentarium to include benadryl, pyribenzamine, neoantergan and aludrine. The latter was discovered in German files after World War II.

Other agents affecting the involuntary muscular system of the body were priscol, used to combat poor circulation; amyl nitrite, inhaled for hiccoughs; dibenamine, which appeared to cause relaxation of blood vessels by blocking nerve impulses; and tetraethylammonium chloride, which blocks nerve action and permits increased flow of blood.

The use of drugs in the mental field included the intravenous administration of pentothal and amytal to permit free questioning by psychiatrists; the use of nitrous oxide (laughing gas) to calm mental cases; dilantin, mesantoin and tridione for epilepsy; and synhexyl, a synthetic drug somewhat like cannabis (hashish) for depression, but which was still in the experimental stage as it might cause some people to become maniacal. Glutamic acid received widespread attention because of a report that it increased the learning ability of rats and of children.

Other interesting findings included the use of amino acids for myasthenia gravis, a muscle-wasting disease; methadon (a synthetic agent discovered in Germany) and metopon (a derivative of opium developed in the United States) for the relief of pain; vitamin K for chillblains; toluidine blue for the control of bleeding seen in the radiation sickness following exposure to atomic energy; intravenous administration of procaine, a so-called local anaesthetic, for injuries and chronic diseases; BAL to counteract the harmful effects sometimes observed following the use of gold in arthritis; crude liver extract, methionine and choline for liver disease; enterogastrone (a hormone derived from the stomach of hogs) for ulcers; and the use of sodium fluoride, tryptophane (an amino acid) and penicillin to counteract tooth decay. In the latter respect, it was shown that the daily drinking of copious amounts of lemon juice caused etching of the teeth.

Among other phases of chemotherapy were the reports that aspirin may start bleeding after tooth extraction (this substance had previously been mentioned as a cause of ulcers), and the discarding of thiouracil by the A.M.A. Council on Pharmacy and Chemistry in favour of propylthiouracil, which is far less toxic and fully as effective. An interesting sidelight on thiouracil was the demonstration of its usefulness to cause fattening of hogs and lengthening of certain feathers in birds.

During 1947 there was announced the development of a device for administering without injection fluids into and under the skin; the gadget forces the material through the skin in a fine stream and under considerable pressure, which can be regulated to obtain the desired depth of penetration. The device was nicknamed the "hypospray." It offered a means of minimizing the pain normally associated with injection techniques. (*See* also DENTISTRY; MEDICINE; PNEUMONIA; SURGERY; UROLOGY; VITAMINS.) (A. E. SH.)

## Chemurgy.

Heavy demand for consumer goods stimulated chemurgic research during 1947. Many new chemurgic products appeared commercially, while laboratory research brought other items to the pilot-plant stage.

Interest continued to range from national crops such as corn to specialized items such as walnuts. Zein, an alcohol-soluble protein derived from corn, though itself not newly discovered, was adapted to new uses, one being the manufacture of phonograph records. English walnut hulls contain 3% to 5% of vitamin C, and research in 1947 indicated that walnut hulls, long a bothersome waste, might profitably be utilized as a source of ascorbic acid.

**Castor Beans.**—The growing demand for castor-bean oil, which can be dehydrated to yield a superior drying oil for industrial purposes, led to steps for initiating domestic production of castor beans on a commercial basis. The Baker Castor Oil company in 1947 contracted with farmers in Illinois, Oklahoma, Arkansas and Kansas to grow 800 ac. of castor beans to multiply seed. Production for crushing was expected to begin in 1948.

Experiment stations in several midwestern states were speeding research to improve castor-bean varieties. They reported progress toward developing several types with seed that will not shatter and with plants of medium, uniform height, to make mechanical harvesting economical.

Castor-bean research, if successful, would provide a new staple crop in an area centring on the Mississippi river between the corn and cotton belts, and perhaps in the southwest.

**Furfural.**—A plant for processing a product of corncobs into an ingredient for nylon was under construction during 1947 at Niagara Falls by E. I. du Pont de Nemours & Co. Furfural, an aldehyde derived from corncobs, oat hulls, and to a smaller extent from cottonseed hulls, peanut shells, rice husks, flax shives, sugar cane bagasse and wood fibre by-products, makes the conversion possible.

Beginning with furfural, the processing stages are furan, tetrahydrofuran, 1,4 dichlorobutane, adiponitrile and hexamethylene diamine. When the hexamethylene diamine is combined with other chemicals, nylon salts result. One bushel of corncobs, when processed and combined with the other necessary chemicals, will yield about 40 pairs of nylon stockings.

As much as 100,000 tons of corncobs and other farm wastes were expected to be used when the nylon plant was in full operation.

**Peanuts.**—Several companies were reported to have begun plans in 1947 to obtain synthetic textile fibres from shelled peanuts. After removing colouring matter from the skins, or discarding the skins entirely, a low oil content meal is obtained by solvent extraction and a purified protein is separated from the meal. Synthetic fibres are spun from the protein by wet processes similar to those used in viscose-rayon production.

Preliminary tests showed that a modified peanut protein ranked well with other proteins used in paper-coating mixtures. The protein was successfully incorporated in cold-water paint that gave good results in U.S. department of agriculture tests.

**Pectin.**—Low-methoxyl pectin from waste citrus peel makes a good casing for sausages, cheese, dried fruit or other products. It dissolves upon boiling, but is tender and edible. It may be eaten if used with food that is fried or consumed uncooked.

**Rutin.**—More than 15 companies in 1947 were producing rutin on a commercial scale. Useful in the treatment of increased capillary fragility, a condition sometimes accompanying high blood pressure, rutin is extracted from buckwheat. U.S. department of agriculture officials estimated that the annual demand for rutin would eventually exceed 1,000,000 lb. This would require raising 50,000 additional acres of buckwheat.

**Soybeans.**—The soybean continued to be a leading product for use in the chemurgic field. Soybean glue had been used more than any other type in the plywood industry after 1937, and had represented a consumption of about 45,000,000 lb. of soybean meal a year. Soybean protein, being light-coloured, had become especially useful in paper coating, paper sizing, making textile fibre, in water paints and fire extinguisher compound. According to the department of agriculture, soybean protein would soon be used much more extensively in tire-cord sizing, textile sizing, bookbinding, sandpaper adhesive, abrasive wheel binder, match-head binder, cork binder for gaskets, remoistening adhesives for labels, tacky glues and paper lamination. In 1947 a manufacturer of shotgun shells made commercial use of soybean protein adhesives for shell casings.

**Starch.**—Allyl starch, when dissolved in certain organic solvents, forms a hard, glossy, insoluble and heat-resistant lacquer. Allyl starch is made from starch, allyl chloride and caustic soda. Considerable commercial interest was shown in the product, which was being produced on a pilot-plant scale to provide sufficient quantities for further utilization studies.

**Straw.**—Results of studies of the properties of wheat straw showed that it is at least equal in quality to sugar cane bagasse for making high-grade insulating boards. The Northern Regional Research laboratory of the U.S. department of agriculture late in 1947 issued a circular showing how manufacturers can use straw for this purpose.

**Vegetable Wastes.**—A number of micro-organisms grow well on concentrated juice from waste asparagus butts. An antibiotic derived from one of the organisms was named subtilin. Indications were that it might become useful in treating tuberculosis and amoebic dysentery. Subtilin was also believed to have anti-fungal properties of potential commercial value.

(W. McM.)

**Cherries:** *see* Fruit.

## Chess.

Although the United States continued its usual national program, chess experienced a slight lull in Europe preparatory to the staging of the world championship in 1948. Thus, no successor was named to replace Dr. Alexander A. Alekhine as world champion. In European competition, C. H. O'D. Alexander, the British champion, won the annual international event at Hastings, England. Dr. I. Xavier Tarktakower of France won an international tournament at Baarn, the Netherlands, while Alberic O'Kelly of Belgium placed first in the European zone championship at Hilversum, the Netherlands. Irish-born O'Kelly didn't lose a match in accumulating a 10½–2½ score. Ludek Pachman of Czechoslovakia and Dr. Petar Trifunovic of Yugoslavia were tied for second, each with 9½–3½. Paul Keres won the Russian title.

CHESS CONTESTANTS at one of 83 tables set across the U.S.-Canadian border at Blaine, Wash., in Aug. 1947. Canadians won the Class A event in the international tournament

In a masters' tournament at Havana, Cuba, Gilberto Garcia of Santiago, Cuba, won with 5½–1½.

The U.S. open championship, which is worth approximately $1,000 in prize money, was won by Isaac Kashdan of New York city. He defeated a field of 86 players at Corpus Christi, Tex., with 11½–1½. Anthony E. Santasiere of New York city and Dan Abe Yanofsky of Winnipeg, Man., were tied for second with 10–3 each.

Santasiere won both the New York state and New York open titles, while Max Pavey, former champion of Scotland, won the national speed title. Robert Byrnes of Yale won the intercollegiate crown. Larry Friedman of Cleveland, Ohio, repeated as junior champion.

In team play, the U.S.S.R. team defeated Great Britain.

(M. P. W.)

## Chiang Kai-shek

(1887– ), president of China, commander in chief of its military forces and director-general of the Kuomintang, who was regarded as the symbol of a new and united China during its eight years of war against aggression, began to lose prestige and popularity at home and abroad in 1947 and to be openly attacked and denounced by the communists, as China's runaway inflation and its civil war further weakened China's international position and deepened the long suffering of its people. Nevertheless, Chiang was still the centre of politics and was generally accepted as the

GENERALISSIMO Chiang Kai-shek shown at Shanghai as he signed the document calling for a new Chinese constitution to take effect Dec. 25, 1947

indispensable leader in China's crisis. In his 1947 New Year's message to the nation Chiang emphasized that "without unity, China cannot exist, nor can she be regenerated" and he urged the communists not to try to seize political power by the use of arms but to continue peace negotiations with the government. To meet the crisis he ordered on Feb. 16 sweeping economic reforms and immediate reorganization of the government. Following the reorganization of the government, it adopted Chiang's proposal for national general mobilization in early June, which he enforced to quell the communist rebellion. In return the communists denounced him as the chief instigator of the civil war and called on the people to overthrow Chiang's government.

At the age of 60 Chiang enjoyed good health and continued to live a Spartan life and to exhort his people to observe good order, respect law, obey discipline and practice thriftiness and fortitude. However, the deterioration of the military, political and economic situation also caused him to despair, and in early September Chiang was quoted as saying that his 20-year leadership had been a failure.

Chiang was born of a humble family in Feng-hwa, Chekiang province and rose to power as a soldier and revolutionary follower of Sun Yat-sen. In 1926 he led the northern expedition as generalissimo of the revolutionary forces, and the success of the national revolution made him a national and international figure. In 1927 Chiang established the national government in Nanking and married Soong Mei-ling. For more than 20 years he has held the reins of the Chinese government. (*See* also CHINA.)

**Chicago.** Second largest U.S. city, a port of entry and the county seat of Cook county, Ill., at the southwest corner of Lake Michigan, Chicago is the largest centre of U.S. rail traffic and long-distance domestic air routes. Martin H Kennelly succeeded Edward J. Kelly as mayor in 1947.

The population of the city proper by the federal census o 1940 was 3,396,808; white population numbered 3,115,379, non white 281,429. The census bureau estimated the population o the entire metropolitan district in 1947 as 4,645,000 compared with 4,499,000 in 1940.

Employment and production were at high levels in 1947, un interrupted by large strikes until newspaper printers went ou Nov. 24. Only 26,400 persons were receiving public assistanc at the close of the year.

The Chicago Transit authority, a public body, on Sept. 3 assumed ownership and operation of the city's 500 mi. of surface car lines and 85 mi. of elevated and subway lines, with 3,125 street cars, 1,623 elevated cars, 843 buses and 22,000 employes. The price paid for the properties was $87,000,000 raised from the sale of $105,000,000 of revenue bonds. A smaller private bus system remained in operation.

Martin H. Kennelly, an independent antiorganization Democrat, was given the Democratic nomination for mayor. He wa opposed by Russell W. Root, Republican. At the election on April 1, Kennelly received 919,593 votes to 646,239 for Root Republicans increased their number of councilmen from 7 to 1 in a nominally nonpartisan body of 50.

On Nov. 4 the city's voters authorized bond issues of $39,000,000 of which $30,000,000 was for slum clearance and housing. Cook county voters at the same election authorized $12,000,000 of bonds, of which $7,000,000 was for rehabilitation o the county hospital. This reversed the trend toward lower deb which from 1930 had reduced the bonded debt of the six majo overlapping governmental bodies of the Chicago area from $396,556,600 to $228,584,600. Also at the Nov. 4 election Democratic-Republican coalition ticket of 21 candidates fo judges of the superior court was elected over a Progressiv party slate, by large majorities except for one vacancy.

Crime in 1947 showed a slight trend toward a decline excep for robbery and attacks on women. The situation was met b more indictments and convictions, more than 90% of the defendants being convicted and 1,086 sent to the penitentiary.

Chicago's wartime divorce wave receded in 1947, the numbe of decrees dropping to 15,405, compared with 16,741 the yea before. Marriage licenses dropped to 60,684 compared wit 66,622. Births for the first six months of the year totalle 40,562 compared with 27,384 for the same period of 1946.

Reorganization of Chicago schools was vigorously pushed b the new mayor. Herold C. Hunt was called from Kansas Cit and made general superintendent of schools on Aug. 5. Th school board budget for 1948 was set for approximatel $104,000,000.

The budget for Chicago's governmental bodies for 1948 wa $295,060,262.

The city's record high budget was matched by a recor budget for Cook county of $33,462,829.

At the close of 1947 Chicago banks had deposits of $8,092,443,000, loans and discounts of $2,062,473,000, bond holdings o $3,878,297,000 and cash resources of $2,144,955,000.

The Chicago *Tribune* celebrated its centennial June 10, 1947 with elaborate festivities. The Chicago *Sun* combined with th afternoon tabloid *Times* on Aug. 6 and the two papers publishe a joint Sunday edition, although the daily publications remaine separate. (L. H. L.)

**Chicago, University of.** The University of Chicago conferred 2,269 degrees during th academic year 1946–47. Seven hundred and eighty-three bachelor's degrees were granted by the college of the universit which admits students into its four-year program after the sophomore year of high school. Other degrees granted were: 432 bachelor's degrees in the divisions and schools, 600 master's degrees, 117 doctor of philosophy degrees and 337 professional degrees in business administration, divinity, law, medicine, library science and social service.

After exclusion of income used for auxiliary enterprises and restricted expendable funds, as well as most of the income received and paid out on numerous contracts with the United States government (all nonprofit undertakings), the estimated regular budget income for the 1947–48 year was $15,556,282, an increase of $1,822,380 over the previous year's actual budget of $13,733,902. Total current income for the year 1946–47 before the exclusion mentioned above, was $25,612,330, and the comparable estimated total current income for 1947–48 was $28,229,598. Gifts for all purposes for the 1946–47 period amounted to $2,340,334, a decrease of 16.3%. Endowment funds as of June 30, 1947, were $71,767,171, and the book value of all the university assets was $139,279,081.

A bronze plaque, marking the site of the first self-sustaining chain reaction under the west stands of Stagg field at the University of Chicago, was dedicated Dec. 2, 1947, on the fifth anniversary of the Atomic Age. The epochal event which took place in a squash-racquets court in 1942 initiated the controlled release of nuclear energy. The plaque was unveiled before many of the scientists who worked secretly on the atomic bomb and before members of the United States Atomic Energy commission. Speakers on the anniversary occasion included Enrico Fermi, Nobel prize winner, and Charles H. Swift, distinguished service professor of physics, who designed the pile, the university's chancellor, Robert Maynard Hutchins, and Sumner T. Pike, Robert F. Bacher and William W. Waymack, members of the Atomic Energy commission.

Fundamental research at the university during 1947 emanated principally from the knowledge gained during World War II when the university with its Metallurgical laboratory (renamed the Argonne National laboratory) was one of the major centres of research in the development of the atomic bomb. The university's three new institutes—the Institute for Nuclear Studies, the Institute of Radiobiology and Biophysics and the Institute for the Study of Metals—grew out of the Metallurgical laboratory.

Prewar blueprints for housing the institutes gave way to postwar building. Ground was broken in July 1947 for the ion accelerator building, first unit in the university's $12,000,000 building program for basic scientific research in nucleonics. The $1,250,000 basement and one-story laboratory would house a 100,000,000-volt betatron, a 170-in cyclotron, which was to produce a beam up to 300-400 Mev, and the university's rebuilt cyclotron. Other buildings planned for the institutes included offices and laboratories covering one city block adjacent to the north side of the campus. The U.S. government, through the navy, and a number of industries contributed to the partial support of the institutes.

The Argonne National laboratory was also operated by the University of Chicago under a contract with the United States Atomic Energy commission. Twenty-nine midwestern institutions, including the university, co-operated in the research program during 1947. A permanent site for the Argonne was selected 26 mi. southwest of the centre of Chicago in DuPage county. All reactor development and research was consolidated under the direction of Walter H. Zinn.

In the biological sciences, a broad and sustained basic research program to solve the complicated mystery of cancer was given added impetus by the Cancer Research foundation. Organized in 1946, the foundation was engaged during 1947 in raising funds for a $5,150,000 building and equipment program. One million dollars had already been given by the Goldblatt Brothers foundation for the Nathan Goldblatt Memorial hospital—to be one of three in the nation devoted exclusively to cancer research. An anonymous grant of $980,000 had also been made toward the construction of the giant cyclotron whose proton beam was a promising possibility for super-X-ray-type radiation in cancer therapy. In an intensive campaign extending from Nov. 11 to Dec. 22, $1,200,000 was raised toward the initial cost of the Goldblatt hospital, $1,600,000; and of the cyclotron, $1,550,000; and for general needs in cancer activities. A $2,000,000 isotope laboratory for research and treatment with radioactive isotopes was the final and uncompleted part of the program.

The Goldblatt hospital, scheduled for construction in the spring of 1948, would provide an out-patient clinic, a radiology clinic, operating suites and two floors for patients and research. It would also serve as headquarters for the university's 21-man committee on cancer, including Nobel prize winners James Franck and Harold C. Urey. Dr. Charles B. Huggins was named chairman of the co-ordinating group, which in recognition of the fundamental nature of the cancer problem comprised representatives from 17 scientific departments in the university. Research at the university had already made significant contributions to the progress against cancer. These included the first-known chemical test for a form of cancer, a hormone suppression treatment for prostatic cancer, the nitrogen mustard treatment for leucaemia and operative techniques for cancers of the oesophagus and pancreas.

In addition to the cancer research facilities, plans were also under way in the university clinics for construction of the Charles Gilman Smith hospital for infectious diseases, and the Gertrude Dunn Hicks wing to Albert Merritt Billings hospital.

The year 1947 marked the golden anniversaries of Yerkes observatory and of the downtown adult education centre, University college. The 50th anniversary of Yerkes was observed in Williams Bay, Wis., with a special meeting of the American Astronomical society, also commemorating its semicentennial, and with a three-day symposium on planetary atmospheres.

Chancellor Hutchins returned to the university June 30, 1947, after a leave of absence for the academic year to participate in the expanded adult education activities of the Encyclopædia Britannica, Inc. and its affiliated company, Encyclopædia Britannica Films Inc. Hutchins also continued as editor of Great Books of the Western World.

The university's Committee to Frame A World Constitution—headed by Hutchins, Richard P. McKeon, G. A. Borgese, Wilber G. Katz, Robert Redfield, Rexford Guy Tugwell and other authorities in the field of world government—planned to present its preliminary constitutional draft in 1948.

Buildings under construction at the university in 1947, in addition to the ion accelerator building, included a $920,000 administration building, the first unit in the $2,000,000 faculty housing project, and a $500,000 building to house the laboratories of the American Meat Institute foundation. The six-story administration building, providing facilities for effective intercommunication among the principal administrative offices and for conducting business with students and public, was scheduled for occupancy in the spring of 1948. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.)

## Child Labour.

United States.—Although employment of children and young people decreased with the disappearance of war-production pressures, the number of boys and girls under 18 at work was still in the millions during

1947. Apparently the sudden postwar drop in employment of minors was beginning to level off by 1947. In Oct. 1947, after children had gone back to school, the number of young workers 14 through 17 years of age estimated as employed full time or part time was 2,240,000, nearly as many as in Oct. 1946 (2,370,000). Two-thirds were in service trades and in manufacturing, commercial and other nonagricultural industries; one-third were doing farm work. Almost three-fourths of the 16- and 17-year-old workers and half of the 14- and 15-year-olds were working in nonagricultural industries.

In 1947 some advances in state child-labour legislation were made, though fewer than had been hoped. Alabama became the 18th state to establish a basic 16-year minimum age for employment. Massachusetts strengthened its basic 16-year minimum age standard. Another significant development was the establishment or improvement in a few states of standards for employment of children in agriculture.

The child-labour provisions of the Fair Labor Standards act, applying to establishments producing goods for interstate or foreign commerce, with a basic 16-year minimum age and an 18-year minimum in occupations found and declared particularly hazardous, had been a strong influence in reducing industrial employment of children and in supporting state child-labour standards. The co-operative program carried on by the U.S. labour department with state labour and education officials, under which state certificates of age were made available as proof of age for minors, continued during 1947. This program helped prevent violations by giving employers a means of being certain that the children employed were of legal age.

An investigation of the accident hazards of pulpwood logging resulted in the extension of Hazardous Occupations Order No. 4 to include pulpwood logging as well as saw-timber logging.

The child labour program of the U.S. department of labour, which in July 1946 was separated from the children's bureau under the president's Reorganization Plan No. 2 of 1946, was again reorganized in July 1947 and was transferred from the division of labour standards to the wage and hour division. The child-labour research and the age-certification activities were now carried on by the newly-created child labour branch of that division, while the enforcement of the child-labour provisions of the Fair Labor Standards act was merged with the enforcement of the wage and hour provisions of the act.

**Great Britain.**—According to a report of the ministry of labour and national service published in 1947, the number of boys and girls under 18 years of age insured under the unemployment-insurance acts in mid-1946 was 1,765,000. These figures excluded some workers in agriculture and all workers in domestic service.

The industrial distribution of boys and girls who did not go to work until 16 or 17 was different from that of those who went to work before reaching the age of 16. Thus, in the period from mid-1945 to mid-1946, 25% of the boys and 40% of the girls in the upper-age class entered public utilities, professional services, entertainment, commerce and finance and government service, whereas the corresponding proportions in the lower-age class were 7% of the boys and 10% of the girls. On the other hand, among both boys and girls about 50% of the entrants 14 and 15 years old went into manufacturing industries, compared with 39% of the boys and 28% of the girls in the 16- and 17-year-old class.

On April 1, 1947, the school-leaving age provisions of the Education act for England and Wales and the Education act for Scotland went into effect, raising from 14 to 15 the age for compulsory full-time school attendance. A 16-year minimum age for required full-time attendance was to be established as soon as practicable, and compulsory part-time education was to be required up to 18 years of age, this provision to go into eff not later than April 1, 1950.

**Japan.**—A minimum age of 15 for employment was esta lished, except as light work in specified industries was permit outside school hours for children between 12 and 15. Ot sections of the law related to hours of labour, to prohibition hazardous occupations and of night work and to employm certificates. (E. S. J.)

## Children's Books.

Most significant to the field of c dren's literature in 1947 was the pub cation *Illustrators of Children's Books* by Bertha Maho Louise Latimer and Beulah Folmsbee. More books were p lished than during 1946, and colour in picture books continu despite the increased publishing difficulties, as witness *T Golden Egg Book* by Margaret Brown. *The Little Red Fe Boat* by Russell Potter and the delightful photographs by Y in *The Sleepy Little Lion* appealed to the realistic taste. *C ous George Takes a Job* by Hans Rey and *Down Hucklebe Hill* by Leonard Weisgard delighted, and again Dr. Seuss (T. Geisel) captivated all with *McElligot's Pool.* The comic-st device was successfully employed in the illustrations of Ma Ets in *Oley the Sea Monster* and by Helen Sewell in *Three T Tales.* Easily read books were Carolyn Haywood's *Little Ed* and Edith Heal's *The Golden Bowl.*

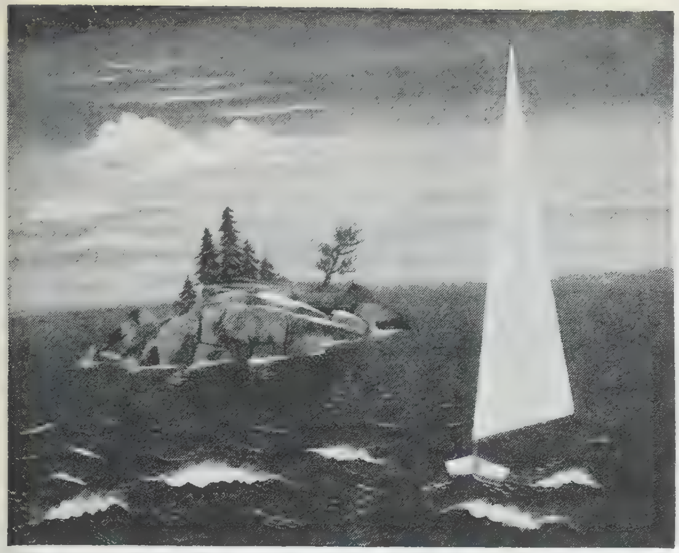
Additions to folklore were *The Cow-Tail Switch* (West Af ca) by Harold Courlander and George Herzog, John Ewe *Written in Sand* (Australia), *Winter-Telling Stories* (Kio Indians) by Alice Marriott and Alexei Tolstoy's *Russian Ta for Children;* adapted and given fine format was *Stone Soup* Marcia Brown while Wanda Gag left a fitting bequest in *M Tales from Grimm. By His Own Might* (Beowulf) by Dorot Hosford and *Rogue Reynard* by Andre Norton enriched tra tional literature.

Realistic stories for girls of eight to ten years were rep sented by Elizabeth Coatsworth in *Plum Daffy Adventure* a by Helen Daringer with *Adopted Jane.* Mabel Hunt wrote Quakers in *The Double Birthday Present* and Lois Lenski c tinued her regional stories in *Judy's Journey* (Alabama a Florida). Poignant was *Pancakes—Paris* by Claire Bishop mystery characterized *Star of India* by Jean Bothwell and story of China was *The Secret of the Porcelain Fish* by M gery Evernden. *Jared's Island* (the Jersey coast, 1760) Marguerite de Angeli and *Benjamin West and His Cat Grim kin* by Marguerite Henry and Wesley Dennis were of histori interest.

Humour characterized *The Twenty-One Balloons* of Willi du Bois and *Mr. Twigg's Mistake* of Robert Lawson. *Bambi the Clown* by Georges Schreiber was beautifully illustrated wh *Positive Pete!* was a rollicking yarn by Phil Stong. Fantasies varying appeal were *The King Gives a Party* by Samuel W ster, *Sky High* by Walter Hodges and *The Other Side of Green Hills* by John Cross.

Horse stories were popular, *Windy Foot at the County F* by Frances Frost being for younger and *The Magnificent B* of Dana Faralla for older. Stephen Holt wrote *Prairie C* (Alberta); and Iris Vinton, *Flying Ebony* (Long Island, 184 while *A Horse to Remember* by Genevieve Eames won the Ju Ellsworth Ford award. A boy and his dog appeared in *Bird D Bargain* by Kenneth Gilbert and two stories of cats were *M Kelly* by Elisabeth Holding and *The School for Cats* by Est Averill. Unusual animal heroes were *The Story of Pam* (chimpanzee) by Mabel Woodbury and *Princess of the Ch nel Isles* (cow) by Eleanor Hoffman.

Multiple interests in nonfiction ranged from *You and United Nations* by Lois Fisher for younger and *How the Uni*



LEONARD WEISGARD'S jacket design for *The Little Island;* his illustrations won for the book the Caldecott medal for the most distinguished picture book for children in 1947

*Nations Work* by Tom Galt for older, to *All About Us* (anthropology) by Eva Evans and *Anywhere in the World* (nature) by Irma Webber. Herbert Zim's *Plants, a Guide to Plant Hobbies* appealed to junior high. *The Great Heritage* by Katherine Shippen was on natural resources of the U.S., and for stamp collectors was *America's Stamps* by Maude and Miska Petersham. Stimulating was Marion Downer's *Discovering Design; Rhymes and Verses* represented the collected poems of Walter de la Mare and younger children enjoyed *The Rainbow Dictionary* by Wendell Wright. Biography was creditably handled, as in *David Livingstone, Foe of Darkness* by Jeanette Eaton and *Gilbert & Sullivan, Masters of Mirth and Melody* by Claire Purdy.

*North Star Shining* by Hildegarde Swift was thought-provoking on the Negro contribution, and other enjoyable stories were *River Treasure* (North Carolina) by Mebane Burwyn and *Jasper, the Drummin' Boy* by Margaret Taylor.

Older girls occupied with problems of today read *Willow Hill* by Phyllis Whitney and *The Divided Heart* by Mina Lewiton. Helene Laird answered many questions in *Nancy Keeps House,* while *By-Line Dennie* by Natalie Frazier concerned a small-town newspaper and Florence Means in *Assorted Sisters* presented an unsentimental picture of missionary life. Unusual were *The Story of Christina* (circus) by Hope Newell and *Nikoline's Choice* (Danes in Utah, 1880) by Margaret Maw.

Older boys read *Shad Haul* by Paul Corey (about co-operatives), *Danger to Windward* by Armstrong Sperry (about whaling) and *Partners of the Powder Hole* by Robert Davis. Sport and school stories were represented by *Gridiron Challenge* by Jack Scholz and *Bertie Comes Through* by Henry Felsen. *Mark of the Leopard* by Alden Stevens and Patricia Kendall continued the story of Simba of central Africa.

Notable were *A French ABC* by Francine Dauphin and *Song of Robin Hood* by Anne Malcolmson; Florence Fitch interpreted oriental religions in *Their Search for God.* Collections of stories were *The Treasure Bag* edited by Lena Barksdale, *Read-to-Me Storybook* (modern stories) by the Child Study Association of America and *The Enchanted Book* edited by Alice Dalgliesh. *Writing Juvenile Fiction* by Phyllis Whitney and *Writing for Children* by Erick Berry and Herbert Best were welcomed. Christmas stories by Dorothy Lathrop, Elizabeth Yates and Lavinia Davis appeared. Fritz Kredel illustrated a new edition of *Aesop's Fables* and Tasha Tudor did *A Child's Garden of Verses;* a deluxe edition of *The Wonderful Adventures of Nils* by Selma Lagerlof and *The Violet Fairy Book* and *The Crimson Fairy Book* received new formats. (*See* also BOOK PUBLISHING; LITERARY PRIZES.) (E. A. Gs.)

# Child Welfare.

**International Services.**—Hunger and malnutrition remained foremost among the war-created afflictions still borne by children. Civil wars, especially in China, continued to add in 1947 to the number of children thus handicapped. The year's most significant new development for meeting the needs of these children was the International Children's Emergency fund (I.C.E.F.) with headquarters at Lake Success, N.Y. This organization, established in Dec. 1946 by the general assembly of the United Nations, was not operating until the year was well advanced. It took over some of the responsibilities previously carried by the United Nations Relief and Rehabilitation administration (U.N.R.R.A.) whose council recommended creation of I.C.E.F.

There were, by the end of the year, in excess of 3,000,000 children in Europe for whom I.C.E.F. was providing or had plans for providing a daily supplementary meal. This service was in operation in Austria, Bulgaria, Czechoslovakia, Finland, Greece, Hungary, Italy, Poland and Rumania. Preparations had been made to extend the feeding program to Albania and Yugoslavia. Unfavourable conditions existing in France led to plans for serving a large number of children in that country. Plans also called for 1948 aid to children in China and other areas in the far east.

The I.C.E.F. proposed to use its resources for the following, with priorities in the order indicated: (1) supplementing essential food and other supplies needed to alleviate malnutrition and disease in children and to safeguard the health of expectant and nursing mothers; (2) encouraging the re-establishment of children's institutions and services destroyed by war through supplying clothing, shoes, cod-liver oil and medical supplies and (3) enlisting co-operation of the U.N. and other organizations in giving assistance for fellowships for the training of health and welfare personnel for children's work.

The substantial but inadequate amount of $38,932,000 had been contributed or pledged to I.C.E.F. by Dec. 1947. Fourteen governments contributed or pledged $27,267,000 and the balance of $11,665,000 was derived from other sources, mostly U.N.R.R.A. assets.

Children in countries not reached, as well as in those reached, by U.N.R.R.A. and I.C.E.F. were well served by the sectarian relief agencies under Jewish, Protestant or Roman Catholic auspices. Many were privately aided through the Co-operative for American Remittances to Europe (CARE). The hesitation of governments to appropriate in proportion to needs for international relief seemed to stimulate contributions from individuals through nonsectarian and sectarian channels. Steps to co-ordinate the financial and service activities of such agencies were being taken in 1947.

The Commission on International Educational Reconstruction, 744 Jackson place, N.W., Washington, D.C., established late in 1946, became effective in 1947. This voluntary organization, sponsored by the American Council on Education, was designated by the U.S. national commission for the United Nations Educational, Scientific and Cultural organization (U.N.E.S.C.O.) as the agency to stimulate and co-ordinate U.S. voluntary efforts on behalf of education in devastated countries.

Resumption of international conferences of professional workers who specialize in service to children was well under way by the end of the year. The fifth International Congress of Pediatrics, held in New York city in July 1947, was attended by pediatricians from 63 countries. Announcements had been widely circulated of the plans and programs of the ninth Pan-American Child congress, Caracas, Venezuela, to be held in Jan.

1948; the International Conference of Social Work, Atlantic City, N.J., to be held in April 1948 and the International Congress on Mental Health, London, England, to be held in Aug. 1948.

The U.N. interest in child welfare was expressed on numerous occasions by the Economic and Social council and the Social commission. Most of their activity was limited to studies and resolutions, but in these 1947 may have seen the sanctions needed to assure later development of international organizations and services whereby children of all lands may profit from professional achievements and social planning, wherever they occur. The publications of these and related bodies were receiving increased attention throughout the world.

**National Developments.** — European countries which were neutral during World War II, especially Sweden and Switzerland, sustained their previously superior services in the fields of education, health and welfare and carried to adjoining countries material aid and much-needed cultural leadership.

Even those seriously damaged by war took steps to improve their services to children. Finland extended its well-baby clinics, which soon would be required by the public-health law in every community. France extended school health services, and its social-security benefits for maternity leave and services were maintained under extremely serious economic strain. Russia's extension of various professional services for children was continued.

Occupied countries in Asia and Europe found military governments beginning to supply local child-welfare services which had been missing. Consultants on child welfare went to Germany, Japan and smaller countries during 1947.

China's plight called for more than the services its children had received from the Chinese Relief and Rehabilitation administration (C.N.R.R.A.), successor to U.N.R.R.A. Religious bodies and other agencies resumed services to children, many of which were under Chinese control even though subsidized by missionary organizations or some of the constituent units of United Services to China. But Asia, like Africa, had few favoured areas in which morbidity and mortality rates were kept under the social controls developing in other parts of the world.

Several Latin American countries extended their health services to children though much of this work remained on an occasional or demonstration basis. Social security, including maternity benefits, was authorized even in the smaller countries of Central America though it was too early to observe the effect of such legislation authorized late in 1946 in the Dominican R public and Guatemala.

"BY THE THROAT," Duffy's version, in the *Baltimore Sun*, of the widespread hunger which was undermining the health of European children in 1947, leaving them easy prey to tuberculosis and deficiency diseases

Australia, Canada, New Zealand and the United Kingdo continued to provide a more universal coverage than in oth large countries, both in child health services and the vario forms of social security for children and mothers establish under the Beveridge plan (U.K.) and the Marsh plan (Canada Dental services in Australia and New Zealand and the Chi Endowment in Australia assured basic health and adequa nutrition as in no other parts of the world unless it was in t smaller and highly developed European countries least damag by World War II.

The United States continued to present contrasts of unm needs, including illiteracy in some states, and in others some the world's most advanced services in education, health a welfare. The traditional inadequacy of Aid to Dependent Chi dren (A.D.C.), intended to keep children with their mothers other close relatives when otherwise they might require care foster homes or institutions, remained seriously meagre in a but a few states. For Sept. 1947 the Social Security bullet (Nov. 1947) reported the average per family receiving A.D. grants to be less than $40 monthly in 11 states and more tha $75 monthly in only 17 states. In California the grant per fam ly averaged $101.43 for that month and in New York $101.o but in all other states the average was less than $100 a famil Such aid was received by a total of 407,610 families and 1,03 210 children. The total amount paid, including federal and sta funds, was $25,472,965, a significant and substantial month outlay in the country's efforts to provide the security of hon life for its children, but also only a fraction of the amount the families needed with the 1947 costs of living higher than previous years.

Various forces hard to reconcile placed the welfare of ch dren in the United States in hazard. Recovery from wartin conditions was sufficient to permit many families to reunite a new families to establish themselves within the previous t years, with the result that more children were born in 19 than in any previous year, the estimated number exceedi 3,500,000. This happened in spite of the continued scarcity housing and the increased costs of living.

Marriage at younger ages than before the war was commo With this trend sustained, the status of family life and chi welfare was expected to be affected. Marriage at older ag was resulting in an excessive number of one-child families. N with fewer single-child families the economics of child care w expected to require more attention from communities as well from parents.

The use of day-care facilities remained nearly at wartin levels, the number of mothers employed in many communit keeping pace with the unprecedented rate of general emplo ment. Withdrawal of certain wartime support and the increas cost of operating day-care facilities led to the closing of ma child-care centres. Statistics on this trend were unavailabl but it was observed, especially in surveys of social needs a resources, that there remained an inadequate amount of orga ized day-care service. With the closing of established day-ca units, parents turned to independent arrangements, too oft leaving little children under care of older boys and girls.

The necessity of improvising resources for occasional care children led to an unprecedented employment of "baby sitters As part-time employment this type of child care previously w regarded as inconsequential, but to consider child welfare 1947 and ignore the baby sitter would be unrealistic.

The increased demand for literature aimed at parent educ tion suggested progress in the understanding of children whi might be the year's greatest achievement in child welfare.

Above: GERMAN youngsters suffering from malnutrition are shown boarding train at Berlin in May 1947, for a three-month period of rehabilitation in Switzerland

Above: SLUM COURTYARD of a tenement district in Rome, Italy. The area housed about 10,000 unemployed and their families in 1947, most of them living in one-room apartments

Above: JAPANESE school children in Tokyo being sprayed with DDT to check the spread of disease in 1947. Girls proved the chief carriers of lice as most boys were customarily close-shaven

Left: POVERTY-STRICKEN Rumanian family approaching a Red Cross depot in Moldavia where they hoped to receive clothing and medical supplies. Starvation in northern Rumania was aggravated by a severe drought early in 1947

Adoption of children claimed an unusual amount of attention. The U.S. children's bureau reported (*The Child,* May 1947) that at least 20 state legislatures in session during the year considered extensive changes in their adoption laws and related procedures. Only about one-fourth of the states had adoption legislation which adequately protected the child, his natural parents and his adoptive parents. The importance of such protection is obvious with about 30,000 of the 50,000 children for whom adoption proceedings are initiated annually being born out of wedlock. The bureau's recommendations on adoption legislation, sponsored by the Council of State Governments in its proposals for state action in 1947, were:

1. Adoption proceedings should be held before a court accustomed or qualified (otherwise) to handle children's cases, in the locality or state where the petitioners for adoption reside.
2. Consent to adoption should be obtained from the natural parents, or, if their parental rights have been legally relinquished or terminated, or if there is no parent, from the person or agency legally authorized to consent to the adoption.
3. The court in every proposed child adoption should have the benefit of study and recommendations by the state welfare department, or an agency designated by it. The department or the agency should have the right to appear at the hearings.
4. Court hearings should be closed to the public and the confidential nature of the records should be assured.
5. A period of residence in the adoption home, preferably one year, should be required prior to issuance of the final adoption decree, so that the suitability of the adoption may be determined.

Child labour safeguards were less than in other previous years. The U.S. congress voted reduced appropriations for federal child labour activities and made several important changes in the administration of this work. For enforcement work, $35,819, about one-third of the amount allowed for 1946, was allowed, and for research into child labour and youth employment problems $110,328, about one-half the 1946 appropriation, was allowed. The child labour and youth employment branch of the division of labour standards of the labour department no longer existed. The child-labour law enforcement work was transferred to and assimilated by the wage-hour division. A child labour branch was set up in the wage-hour division with activities limited primarily to an age-certification program, research involving matters related directly to the child labour provisions of the Wage-Hour act and the statistical, informational and public-relations work.

Scarcity of professionally trained social workers continued to be one of the country's serious child-welfare problems. The Child Welfare League of America, with the co-operation of the Russell Sage foundation, in a study of salaries of child-welfare workers, found substantial increases in salaries as compared with those paid during war years. A lag in the provision of adequate salaries in many communities, however, left child welfare services confronting the same embarrassing shortages in skilled personnel which hampered schools and hospitals as they sought their complete complements of teachers and nurses.

The National Commission on Children and Youth played an important role in co-ordinating planning for child welfare, especially the services under governmental auspices. Its program of action for 1947 and 1948 focused attention on unmet needs in the fields of education, health and welfare. From its beginning the commission brought together leaders in the professions serving children in these fields and thereby advanced badly needed and more comprehensive thinking and planning. (H. W. HK.)

**Chile.** A republic fronting on the south Pacific coast of So America for about 2,600 mi., its average width be only 110 mi. Area, 286,323 sq.mi.; pop. (1945 est.), 5,389,5 density (1944), 18.29 per square mile. The racial composit is largely white; mestizos are estimated at 15% and Indi (chiefly Araucanians in the far south) at 5%. The bulk of population lives in the central valley; Santiago province al has (1945 est.) 1,535,969 inhabitants (density per square m 223.12). The capital is Santiago (pop., including suburbs, 1 census, 952,075). Other important cities (with pop. in 1 census) are Valparaíso (212,072), Concepción (85,938), V del Mar (70,013), Talca (45,462), Antofagasta (50,244), C llán (39,909), Temuco (39,217), Iquique (37,713), Talcahu (30,082), Valdivia (34,600), Lota (1945 est., 34,445), R cagua (21,621), Punta Arenas (29,883), Osorno (25,075), Serena (21,383), Puerto Montt (21,552) and Curicó (19,53 Roman Catholicism is the dominant religion. President in 19 Gabriel González Videla.

**History.**—The year 1947 was characterized especially by increasing sharpness of the communist issue, the climax com in the breaking of diplomatic relations between Chile and Soviet Union in October. The first test of political stren came in municipal elections April 6. The anticommunist fr elected a total of 834 municipal councilmen to 568 won parties in the leftist Democratic alliance. Of the rightist parti the Conservatives won 277 and the Liberals 208. The co munists, who made their chief issue out of the Truman d trine, approximately tripled their previous voting strength; th were reported even in early returns to have won 137 munici council seats as compared with 65 won in municipal elections 1944. President González on April 16 swore in a new cabi composed of 11 Radical party members (his own party) a one Democrat. Labour conflicts, allegedly communist inspir increased sharply in May. On June 5, the Chilean Confede tion of Labour withdrew from the C.T.A.L. (Confederación Trabajadores de América Latina), charging that under the pr dency of the Mexican labour leader, Vicente Lombardo To dano, that organization had succumbed to communist influen A strike of bus drivers in Santiago resulted in a president decree on June 13 placing the capital under a state of em gency; the strike was settled on June 20.

President González on Aug. 2 formed a new "nonpolitic cabinet. On Aug. 21 the chamber of deputies authorized government to suspend individual constitutional guarantees i move to deal with a series of reportedly communist-led strik Large parts of the country's postal and telegraphic services w paralyzed from Aug. 12 to Aug. 16 by a strike in those servic A serious coal strike of 20,000 miners belonging to communi dominated unions was brought to an end on Aug. 23. In a la coal strike the government on Oct. 6 ordered troops to ta over affected mines of the Central Chilean Coal company; alleged communists were arrested as strike leaders. Two da later the government deported two Yugoslav diplomats, And Cunja and Dalibor Jakasa, to Argentina, charging that th were communist agitators largely responsible for the curre strikes. The government's statement linked communist activ in Chile with the revived communist international organizat and asserted that Gen. Ljubmir Ilitch, Yugoslav minister Argentina and Marshal Tito's representative at President G zález' inauguration in 1946, had been instructed to intensify a co-ordinate a campaign against the United States, to attack t policy of continental defense and to develop a plan of sabota On Oct. 11 Yugoslavia severed diplomatic relations with Chi calling the Chilean charges "fantastic libels" and charging Ch with acting in the expansionist interests of certain unnam powers. The following day the Chilean ambassador to the Sov

Union apologized to that government for a machine-gun attack on the soviet embassy in Santiago.

The government concluded an agreement on Oct. 15 for purchase of U.S. coal and asserted the following day that the 13-day coal strike was virtually over, although independent sources said at the same time that only 8,000 of the 20,000 striking miners had returned to work. The miners had reportedly been threatened with court martial on Oct. 13. The government on Oct. 21 severed diplomatic relations with the Soviet Union and Czechoslovakia, charging inspiration of communist unrest among the coal miners. González at the same time announced the end of a 12-day strike in the Schwager mines in central Chile after 2,000 miners had battled troops with dynamite in pits running under the Pacific. On Oct. 22 police arrested 200 communist leaders on charges of inciting rebellion among the miners, arrested the staff of *El Siglo* and placed four mineral-producing provinces under military control. Two days later the government announced that soviet and Czech envoys would be held until Chilean diplomats were permitted to leave Moscow and Prague. The government on Dec. 5 broke a 24-hr. railway strike, allegedly communist-led, by authorizing the military railway management to discharge undesirable workers.

The government during the year considered a five-year plan of hospital construction to cost 600,000,000 pesos.

**Education.**—A state technical university was created in April 1947 as a branch of the ministry of education; it was designed to embrace a number of educational institutions already established, including the school of industrial engineering, parts of the vocational schools, three schools of mines and two industrial schools. Extension classes of the University of Chile were organized as the Valentín Letelier People's university.

**Finance.**—The monetary unit is the peso, valued on Oct. 31, 1947, at from 1.96 to 5.16 cents, U.S. currency, depending on the type of exchange. Government expenditures in 1947, the finance minister reported on Sept. 3, would total 8,244,000,000 pesos and those for 1948 were estimated at 7,716,000,000 pesos. The treasury deficit for 1947 was anticipated to be about 855,000,000 pesos and an estimated 1948 deficit of 293,000,000 pesos was forecast. The government on Nov. 7 revalued the gold reserves on the basis of 31 instead of 30 pesos to the dollar, thus giving the treasury a profit of 930,943,863 pesos. Currency in circulation May 27 was 3,728,800,000 pesos; rediscounts of commercial banks on the same date totalled 564,700,000 pesos. The treasury deficit on June 30 was 2,159,000,000 pesos. Shortage of foreign exchange was serious during the year and on July 10 the government banned dollar allotments for luxury imports and also for trips abroad for pleasure. Further import restrictions were adopted on July 23. The government concluded a financial agreement with Great Britain on July 12. A total of 1,360,000,000 pesos was allotted for public works expenditures in 1948, an increase of 530,000,000 pesos over the corresponding 1947 figure, accounted for chiefly by an allocation of 300,000,000 pesos for improvements in the state railways and 200,000,000 pesos for construction of public buildings. The price index for Chile increased 497% between 1928 and 1946 and the cost-of-living index gained 393% in the same period.

**Trade and Communications.**—The favourable merchandise trade balance for 1947 as of July 30 was only 22,800,000 gold pesos (gold peso equals 20.597 U.S. cents). Nitrate exports in 1946–47 were 1,571,898 metric tons (1945–46: 1,614,615 tons). Agricultural exports as a whole in 1946 were valued at about $50,000,000; rice exports during the same year were valued at almost $8,000,000, the highest value of any single agricultural item. Onion exports in 1946 were 5,075 metric tons (1945: 2,607 tons), of which the U.S. took 35%; garlic exports in the same year were 4,690 metric tons (1945: 3,163 tons) valued at $1,482,366 (1945: $714,922). Raw cotton imports in the first five months of 1947 were 4,369 metric tons (same period in 1946: 2,478 tons); cotton yarn imports in the same period were 606 metric tons (same period in 1946: 654 tons). The government concluded two important commercial agreements with Argentina. One, concluded at the end of 1946 (Dec. 13), was a treaty of customs union, economic and financial co-operation; it provided for establishment of a revolving Argentine credit of $26,800,000 to help Chile finance its unfavourable trade balance with Argentina, pointed toward an Argentine investment of $80,430,000 in Chilean industrialization (especially copper, iron, steel, nitrates, coal, wood and electric power) with Chile guaranteeing excess production for sale to Argentina, provided a like sum as an Argentine loan to Chile for public works construction (especially roads and railroads) which would be aimed at promoting Chilean-Argentine commercial exchange and aimed at the elimination of tariffs except on competing items and products. In the second agreement, signed July 12, Chile pledged to give Argentina a favoured position in purchase of Chilean nitrates in return for which Argentina would abandon manufacture of synthetic nitrates. Negotiations with the U.S. resulted on May 8 in extending the two countries' provisional commercial agreement for one year from July 1, to be followed by negotiations for a treaty of friendship, commerce and navigation.

Railway passenger, baggage and freight rates were increased by an average of up to 50% in 1947, a total average increase of 243% from 1928; the anticipated deficit for operation of the state railways in 1947 was 505,308,000 pesos. Chile concluded a bilateral aviation agreement with the United States on May 10, an agreement with Brazil on July 4 dealing with air transportation, economic co-operation, passenger transit and tourist travel and commerce, and one with Peru on aviation on Aug. 7.

CHILEAN TROOPS searching workers rounded up during a clash between police and striking bus drivers in Santiago on June 12, 1947. A 30-day state of emergency was ordered in the province after the death of 4 persons

**Agriculture.**—Estimates of production of various specialty crops in the agriculturally rich central valley in 1946–47 included: oranges 500,000 boxes (1945–46: about the same); lemons 450,000 boxes (1945–46: 350,000 boxes); hemp fibre 3,904 metric tons (1945–46: 5,369 tons); flax fibre 1,165 metric tons (1945–46: 1,365 tons); onions 68,932 metric tons (1945–46: 49,134 tons); rice 89,084 metric tons (1945–46: 117,941 tons). Of cereal crops, the estimate of wheat production for 1946–47 was down 3%, that of oats was down 20%, that of rye was down 9% and that of barley was up 32%; most cereal crops were damaged by excessive rains but otherwise growing conditions were favourable. A new law on farm labour organization became effective July 29. The government planned an irrigation project in the Azapa valley in northern Chile at an estimated cost of 29,072,000 pesos.

**Manufacturing and Mining.**—Production of cotton yarn in 1947 was estimated at 9,440,000 kg. Nitrate production in the year ending June 30 was 1,540,000 metric tons (1945–46: 1,603,820 tons); production in 1947 was seriously interfered with by the series of strikes; bad weather, which prevented loadings for a period of two weeks in June, and port congestion were other unfavourable factors. A new process was developed in 1947 for recovery of potassium nitrate. Coal production was even more seriously cut by strikes in 1947; the government early in the year adopted a program to increase coal production over a five-year period at an estimated cost of 84,000,000 pesos. Whale-oil production in 1946 was 2,985 metric tons (1945: 3,456 tons); the catch of whales in 1946 was 585 (1945: 477) and in the first four months of 1947 was 277. The 1946 production of fish and shellfish was 61,000 metric tons, with an increase expected for 1947. A serious electric power shortage developed in central Chile in May because of low water levels.

**China.** A republic of eastern Asia. Area: about 3,876,956 sq.mi., divided into 35 provinces, including Taiwan (Formosa), the 9 provinces of Manchuria and a special territory, Tibet. According to the 1947 official estimate, the total population was 455,900,468. The 12 leading cities, under direct central government control in 1947, were Nanking (capital) 1,037,656; Shanghai 3,853,511; Peiping 1,602,234; Tientsin 1,679,210; Chungking 1,000,101; Canton 1,276,429; Mukden 1,175,620; Hankow 749,952; Tsingtao 752,800; Harbin 760,000; Dairen 543,690; Sian 523,183. The predominant beliefs are Confucianism, Buddhism, Taoism and Christianity.

President (1947), Chiang Kai-shek; vice-president (1947), Sun Fo.

**History.**—Following Gen. George C. Marshall's departure from China on Jan. 8, 1947, and the release of his statement on the situation in China on the previous day, in which he condemned the extremists among the nationalists and communists for the continuance of civil war, Peng Hsueh-pei, then the minister of information, proclaimed the government's willingness to continue peace negotiations with the communists. In the meantime it named Gen. Chang Chih-chung to go to Yenan in an attempt to renew peace negotiations and gave its proposal to the communists through U.S. Ambassador John Leighton Stuart. The communists insisted on a return to the military positions of Jan. 13, 1946, and nullification of the new constitution as conditions for renewing negotiations, terms which were previously rejected by the government. On Jan. 21 the government offered four points as the basis for a resumption of peace talks: cessation of hostilities, with troops retaining their existing positions; army reorganization; reopening of communications; a just and equitable solution of the problem of regional administration. In the meantime the communists resumed an offensive in Manchuria while government troops launched big drives on the communists in Shantung and Shensi. Early in March the government ordered all communist personnel to leave government territory and on March 15 Chiang Kai-shek charged the communists with armed rebellion. The break between warring factions was final and complete. The capture of Yenan by government troops on March 19 elated the nationalists but the communist spokesmen expressed confidence in final victory by force. By the year's end the government military forces had made no further important gains, with the exception of the capture of Weihaiwei and Chefoo on the coast of Shantung in early October, which cut the communist sea lane to the southern ports in Manchuria. On the other hand, the communist raiders managed to move into central China in September and caused the closing of the Nanking gates on Sept. 18. In Manchuria the communists succeeded in reducing the government's control to Changchun and Mukden, an isolated pocket in Kirin, and the rail line leading from Mukden into China proper.

The reorganization of the government was partly precipitated by the economic and financial crisis during the early part of the year. To stimulate China's meagre export trade, Premier T. V. Soong announced on Feb. 5 that the government would grant a 100% bonus to exporters and that an ad valorem surcharge of 50% would be imposed on selected categories of imports. On Feb. 8 the U.S. consulate in Shanghai notified the Chinese government that for every cent it paid as a subsidy on exports an equal amount would be collected by the United States in addition to normal duties. This ruling blasted China's bonus plan and caused a further rise in prices and depreciation of the Chinese dollar. To meet the crisis Chiang ordered reorganization of the government and sweeping economic reforms. On March 1 Soong resigned as the premier, but because of prolonged negotiation with minority parties, reorganization did not become effective until April when a new state council was esta lished to replace the supreme national defense council of t Kuomintang. It provided for 40 seats, but by the end of 194 only 29 seats were filled: Kuomintang 17; Young China par 4; Democratic Socialist party 4; Independents 4. The oth 11 seats were reserved for the communists and the Democrat league. However, the communists denounced the new gover ment as a reactionary and traitorous regime, and the Dem cratic league was outlawed in October on the charge of plotti with the communists against the government. The post of vic president was created and in April Sun Fo assumed this offi and Gen. Chang Chun became premier. The executive yuan cabinet was enlarged to include 26 members in order to acco modate a minority of ministers who were not Kuomintang a pointees. With this reorganization the one-party regime w supposed to come to an end. From Nov. 21 to 23, millions registered voters participated in the first national election elect delegates to the national assembly, which, in turn, w empowered to elect the president and vice-president for si year terms. The election of the members of the legislative yua was postponed to 1948.

STUDENT DEMONSTRATION in Nanking, China, being broken up by police using a hose-line on May 20, 1947. Students were marching on a meeting of the People's Political council to demand higher food rations and an end to civil strife

China's internal strife was closely linked with its diplomat relations with the United States and the Soviet Union. Aft one year of continuous effort to bring the national governme and communists together, the United States government aba doned its task as a mediator in the Chinese civil war by wit drawing from the Committee of Three and the executive hea quarters in Peiping in February. The United States polic became unpopular in China. To avoid further complication China's affairs, the U.S. government informed the Soviet Uni that U.S. forces in China would be reduced to 6,180 men June 1. However, the deterioration of the economic and mil tary situation in China and the spread of communism in eas ern Asia led to the appointment of a U.S. fact-finding missi to China and Korea headed by Lieut. Gen. Albert C. Wed meyer, who arrived in Nanking on July 22. His mission w welcomed by the Chinese government but attacked by the co munists as imperialistic. On his departure from China, Wed meyer stated, on Aug. 24, *inter alia* that "if the Chinese Co munists are truly patriotic . . . they will halt voluntary emplo ment of force" and that "to regain and maintain the confiden of the people, the Central Government will have to effect imm diately drastic, far-reaching political and economic reforms The latter statement displeased the Chinese government a Premier Chang Chun declared on Sept. 2 that China would n alter either its domestic or its foreign policy as a result Wedemeyer's mission. The department of state withheld Wed meyer's report on China from publication. On Nov. 11 Secr tary of State Marshall submitted a program to congress calli for $300,000,000 in new relief for China.

At the Conference of Foreign Ministers in Moscow in Marc Vyacheslav Molotov of the Soviet Union proposed the inclusi of China as an item on the agenda, but the Chinese governme opposed soviet participation in mediating the Chinese civil wa Upon the strong insistence of General Marshall, the soviet pr posal was dropped. Soviet delay in turning Dairen and Po Arthur back to China evoked two notes of protest from t U.S. government: one on Jan. 3 and the other on Aug. 21, as a foreign shipping was barred from the international port Dairen by the Russians. On June 25 the Chinese foreign offi declared that the repeated refusal of the soviet government agree to the stationing of Chinese troops in Port Arthur a Dairen as agreed to in the Sino-soviet treaty of Aug. 1945, a the formation, expansion and strengthening by the Chinese co munists of their armed forces in their vicinity left the Chine government free at any time to decide on the exercise of t

**EVACUATION OF YENAN, capital of the Chinese communists after 1936. The city was found stripped and deserted when taken by nationalist forces on March 19, 1947**

right of sending troops and police to the Port Arthur area and Dairen. The soviet government justified its position by arguing that a state of war still existed with Japan. Sino-soviet relations were further strained by the participation of the Korean communists in the Chinese communist forces in Manchuria and by the border clashes in Sinkiang. Concerning the making of a peace treaty with Japan, China was in favour of the treaty's being drafted by the 11 countries represented on the Far Eastern commission with the concurrent vote of the Big Four. China was not in favour of a separate peace and feared a resurgent Japan under U.S. policy.

**Education.**—The 1947 program was directed mainly toward the promotion of mass and normal education and the strengthening of vocational education. The universities and colleges in 1947 increased to 193 with a total enrolment of more than 120,000 but the quality remained low. Political and social instability caused student unrest and strikes and the arrest of students by the government. In 1946 there were 4,530 secondary schools with an enrolment of 1,394,844 and 785,244 primary schools with 21,831,898 pupils. About 4% of the 1947 budget was devoted to educational and cultural purposes.

**Defense.**—According to the 1947 official tabulation the army, navy and air force numbered 4,557,362 including 536,913 officers. The total strength of the communist army was given as 1,170,000 by Gen. Chen Cheng. China maintained an effective air force of 300 planes with about 700 personnel. The Chinese navy of about 60 small vessels was augmented by Pres. Harry S. Truman's April 26 order to transfer to China without cost not more than 271 small and obsolete vessels. Military expenses occupied about 80% of the national budget.

**Finance.**—On Feb. 16 the official rate of exchange of the Chinese dollar (yuan) further depreciated to 12,000 to $1 U.S., but the black-market rate of exchange exceeded Ch.$100,000 to $1 U.S. toward the end of the year. Prices in the metropolitan areas were more than 10,000 times the prewar level. At the end of 1946 the volume of note issuance was officially given as Ch.$2,150,000,000,000. In Nov. 1947 the note issue exceeded 20,000,000,000,000 yuan. The 1946 budget was 2,524,000,000,000 yuan. The actual expenditures more than doubled this figure. The 1947 budget was placed at 9,370,000,000,000 yuan although in April the expenditures had already reached 5,000,000,000,000 yuan. Only about one-third of the budget was met by revenue. China's wartime loans totalled $1,345,080,568 and from V-J day to July 15, 1947, the total stipulated amount of U.S. aid was $1,240,450,000 but the total value of supplies actually received was $561,398,672. There were about 600 banks with more than 2,350 branch offices.

**Trade and Communication.**—In 1946 the total imports, one-half of which came from the United States, were valued at Ch.$1,501,165,246,000, and exports at Ch.$412,111,811,000. The value of the imports and exports for the first eight months of 1947 was Ch.$4,022,028,000,000 and Ch.$1,772,164,000,000, respectively. The adverse balance drained off China's foreign exchange which was estimated at only $300,000,000 U.S. Chief imports were cotton goods, gasoline, kerosene, metals and ores, machines and tools, chemicals and drugs. Tung oil, wax, animal products, seeds and kernels, tea and silk made up the main exports.

Less than half of China's 18,000 mi. of railways were in operation in 1947. Because of the delay in delivery only two-thirds of the expected shipping tonnage of 1,500,000 was reached. More than one-third of China's 100,000 mi. of highway badly needed repair. Excluding military vehicles, automobiles numbered about 60,000. Civil aviation, telecommunication and radio remained undeveloped.

**Agriculture, Manufactures, Mineral Production.**—China needs 24,478,000 metric tons of wheat and 51,432,000 metric tons of rice annually. The estimated wheat and rice crops in 1947 were 21,528,000 metric tons and 48,344,000 metric tons, respectively. Poultry and livestock were greatly below the prewar level. The food shortage remained serious. More than 60% of the heavy industries were under the direct control of the National Resources commission. Production lagged behind prewar level and the expected output of several minerals for 1947 was: coal 7,000,000 tons; iron and steel 250,000 tons (meeting about one-third of the demand); crude oil 12,000,000 gal.; gasoline 18,000,000 gal. The production of tungsten, antimony and tin was also far below former capacity.

**Christian Science.** Continuing its relief program begun in 1941, the First Church of Christ, Scientist, in Boston, Mass. (the Mother Church), added several interesting features to its postwar work in 1947.

Gift literature sent to Germany during the year brought the two-year total to more than 30 tons of Christian Science books and periodicals.

Through the participation of Christian Science branch churches and societies in the United States and Canada, a food-parcel program sent more than 345,000 packages of food to needy persons in 25 countries. As a member of Cooperative for American Remittances to Europe, Inc., the committee augmented the food parcels with thousands of CARE packages shipped throughout the world to Christian Science churches for distribution. The climax of the 1947 program was a shipment to Germany, valued at $143,000, consisting of 974 cases of clothing, food and Christian Science books.

Christian Science servicemen at approximately 105 military and naval training centres were being served by the Mother Church. Christian Science workers had been assigned to 156 veterans' hospitals in the United States and Canada, in addition to 48 army and navy hospitals. Christian Science chaplains, assisted by volunteer workers, were stationed with the occupation troops in Germany and Italy. There was a Christian Science chaplain at Pearl Harbor, Hawaii, and volunteer workers were serving in Alaska, Panama Canal Zone, Japan, Guam, Okinawa, Korea and the Philippines.

During 1947, 1,132 Christian Science books were distributed by Christian Science chaplains and workers, and 2,580 subscriptions to Christian Science periodicals were sent to army and navy training centres and veterans' hospitals.

*The Christian Science Monitor* received second honourable mention in the F. Wayland Ayer Exhibition of Newspaper Typography, and a citation from the Institute for American Democracy, Inc., of New York city, for encouraging a better understanding among men of all creeds, races and national origins.

*The Monitor* maintains a large staff of correspondents throughout the world. The editor of this newspaper became a *chevalier* in the Legion of Honour for his and his newspaper's service to France. The chief of the Washington bureau received an honorary degree of Doctor of Letters at the commencement exercises of Dartmouth college, Hanover, N.H. The assistant to the managing editor was awarded an alumni membership in the Phi Beta Kappa national scholarship fraternity at Harvard university, Cambridge, Mass. The foreign editor was the recipient of a medallion award for outstanding achievements in journalism during 1946 by Sigma Delta Chi.

Transcribed radio programs produced in the Mother Church were broadcast over nearly 300 stations throughout the United States (including Alaska and Hawaii), and in Cuba, Canada, New Zealand and Australia. Broadcasting of the regular Sunday morning service of the Mother Church in Boston twice a month and a 15-minute religious program direct from the church every Sunday morning was continued, as were special programs in the "Church of the Air" series of the Columbia Broadcasting system, on the devotional period of the Canadian Broadcasting corporation, and on the "Faith in Our Time" and "Radio Chapel" series of the Mutual Broadcasting system. (W. D. K.)

**Christian Unity.** Church unity movements in 1947 showed notable development on different levels in many lands. Several influential interchurch conferences were held, designed to promote the spirit of unity. These included the American Inter-Seminary conference, held at Oxford, O., which brought together probably the most extensive and representative group of young theological students ever gathere the Second World Conference of Christian Youth held in Osl Norway, in July with about 1,000 official delegates from all co tinents; and the first postwar meeting of the International Mi sionary council representing virtually all of the Protestant mi sion boards of the world and federating national Christian cou cils in 29 countries or areas, which convened in Whitby, Ontari Can., July 5 to 18 and took stock of the critical world situati in regard to foreign missions. The World Council of Church sent a representative delegation to confer with Eastern Orthod Churches in the Mediterranean countries outside the zone Russian influence, which secured highly satisfactory respons concerning the participation of the Orthodox churches in t council.

Four additional Eastern Orthodox churches joined the cou cil in 1947.

Various phases of the church federation movement took enlarged activities. The Federal Council of Churches of Chri in America made influential representative utterances in r spect to the economic order, religious liberty, civil rights, rel tions of church and state and international relations. After e isting for a decade in provisional form because of the interru tion of communications by World War II, the World Coun of Churches completed final arrangements for its full organiz tion and the adoption of the constitution at the first plena assembly to be held at Amsterdam, Neth., in the summer 1948. Major decisions with respect to this meeting were ma at a session of the Provisional committee at Buck Hill Fal Pa., in the fall of 1947.

A total of 34 additional churches in 21 countries joined t World Council of Churches in 1947, bringing the total numb of member churches to 127.

Parallel with active discussion of plans for the permane federal union of the Congregational, Methodist and Presbyteri churches in Australia and New Zealand, a sponsoring committ including former President Herbert Hoover, Mrs. Calv Coolidge and Gov. Luther W. Youngdahl of Minnesota carri out an aggressive "Crusade for a United Church" under a feder plan. The campaign, conducted by the missionary, Dr. E. Stanl Jones, included 30 major American cities and was expected visit an equal number in 1948. The crusade apparently elicit very strong approval for some type of union of the Americ churches on the part of the rank and file of church members which it was specifically addressed. Without the predetermin tion of the particular form of union to be sought, strong e clesiastical backing for a large American movement towa unity was given by influential Methodist bishops. The reinforc ment of the entire group of movements by the urgency of t times was strikingly evidenced in many quarters.

Discussions and negotiations for the union of particul churches have been actively under way in many quarters of t globe. In the U.S., Baptists (Northern convention) and Dis ples of Christ both secured stronger authorizations for the negotiating bodies. The United Presbyterian and Reformed America churches and northern and southern branches of t Presbyterian Church also announced progress in their respecti conversations. The movement to unite the Waldensians a Methodists in Italy was advanced. The union of a wide ran of the denominations in Ceylon was showing promise of realiz tion. After formal reference to the minor units or congregatio of both bodies, voting upon the proposed merger of the Co gregational Christian and Evangelical and Reformed churches the U.S. was under way in the concluding months of the yea with strong majorities for the union which was expected become effective by the middle of 1948.

The most notable achievement of the year in the field

Christian unity was the consummation, after 28 years of negotiation, of the union of three great Protestant churches to form the new Church of South India. The merging bodies included the South India dioceses of the Anglican Church, similar units of the (British) Methodist Church, and the South India United Church, representing an earlier union of Presbyterian, Reformed and Congregational bodies, both British and American. The new church had more than 1,100,000 members. It united widely separated types of churches under a carefully guarded constitutional Episcopal system.

Conversations concerning possible union hinging upon the validity of their respective ministries in the establishment of intercommunion were actively under way between the United Church of Canada (combining the Congregational, Methodist and Presbyterian churches of the country) and the Church of England in Canada. Conversations approaching the same issue in a similar way were resumed by the Church of England and representatives of the leading Free churches in that country.

(H. P. D.)

## Chromite.

The output of chromite in the major producing countries of the world, and the estimated world total for late years is shown in Table I.

Table I.—*World Production of Chromite*

(Thousands of short tons)

| | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|---|
| Cuba . . . . . | 57.7 | 179.9 | 315.8 | 390.4 | 211.8 | 190.3 | 192.0 |
| Greece . . . . | 32.8 | 17.9 | 26.8 | 17.1 | 20.2 | 2.6 | 9.4 |
| India . . . . . | 62.2 | 56.1 | 55.5 | 37.2 | 44.3 | 34.3 | ? |
| New Caledonia . | 61.5 | 71.1 | 74.6 | 51.8 | 60.9 | 45.0 | 27.4 |
| Philippines . . . | 221.4 | 330 | 55 | 66 | 77 | ? | 63 |
| South Africa. . . | 180.4 | 156.4 | 372.2 | 179.9 | 98.0 | 109.2 | 208.2 |
| S. Rhodesia . . . | 273.1 | 357.1 | 384.0 | 316.9 | 305.4 | 205.4 | 166.9 |

| United States . . | 3.0 | 14.3 | 112.9 | 160.1 | 45.6 | 14.0 | 4.1 |
| Yugoslavia . . . | 78.3 | ? | 110 | 72 | ? | ? | ? |
| Total . . . . | 1,607 | 2,023 | 2,238 | 2,015 | 1,600 | 1,210 | 1,210 |

Note.—Figures without a decimal are estimates.

World production declined almost one-half from the 1942 peak, to about the 1936 level.

**United States.**—For comparison, the supply and demand in the United States during World Wars I and II are shown in Table II.

Table II.—*Chromite Data for the United States for the Periods of World Wars I and II*

(Thousands of short tons)

| | Production | Imports | Supply | | Production | Imports | Supply | Consumption |
|---|---|---|---|---|---|---|---|---|
| 1914 | 0.7 | 83.7 | 84.4 | 1939 | 3.9 | 355.6 | 359.9 | ? |
| 1915 | 3.7 | 85.7 | 89.4 | 1940 | 3.0 | 736.6 | 739.6 | 562.9 |
| 1916 | 52.6 | 129.9 | 182.5 | 1941 | 14.3 | 1,115.3 | 1,129.6 | 800.3 |
| 1917 | 49.0 | 80.9 | 129.9 | 1942 | 112.9 | 981.6 | 1,094.5 | 892.0 |
| 1918 | 92.4 | 112.2 | 204.6 | 1943 | 160.1 | 928.6 | 1,088.7 | 964.6 |
| 1919 | 5.7 | 68.9 | 74.6 | 1944 | 45.6 | 848.4 | 894.0 | 848.4 |
| 1920 | 2.8 | 168.3 | 171.1 | 1945 | 14.0 | 914.8 | 928.8 | 808.1 |
| 1921 | 0.3 | 90.2 | 92.0 | 1946 | 4.1 | 757.4 | 761.5 | 734.8 |

As happened at the close of World War I and was to be expected after the close of World War II, the production of chromite practically ceased in the United States, leaving the supply dependent on imports. The normal prewar pattern of supply was altered considerably by war conditions and the postwar readjustments were still under way late in 1947.

Domestic consumption was expected to continue to expand.

Table III.—*Imports of Chromite into the United States*

(Thousands of short tons)

| | 1940 | 1941 | 1942 | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|---|---|---|
| Cuba . . . . . . . | 58.2 | 179.9 | 137.8 | 310.7 | 349.1 | 297.8 | 204.3 |
| Greece . . . . . . | 15.7 | 2.2 | ... | ... | ... | ... | ... |
| U.S.S.R. . . . . . . | ... | ... | 30.1 | 99.9 | 112.3 | 166.1 | 99.0 |
| India . . . . . . . | 36.6 | 10.9 | 21.3 | 2.8 | ... | ... | 17.3 |
| Philippines . . . . . | 175.4 | 288.4 | 30.5 | ... | ... | ... | 30.5 |
| Turkey . . . . . . | 78.5 | 61.8 | 119.5 | 90.8 | 98.8 | 70.8 | 9.0 |
| South Africa . . . . | 126.3 | 189.7 | 262.3 | 111.6 | 40.4 | 110.4 | 235.3 |
| S. Rhodesia . . . . | 177.9 | 269.2 | 277.3 | 243.5 | 187.8 | 221.9 | 99.6 |
| New Caledonia . . . | 48.0 | 90.2 | 82.7 | 32.5 | 34.5 | 34.4 | 21.0 |
| Total . . . . . . | 736.6 | 1,115.3 | 981.6 | 928.6 | 848.4 | 914.8 | 757.4 |

The U.S. imports represented 51% of the world output in 1936 but 55% of the total in 1941. After 1942 world output had declined but the percentage of the total required for domestic consumption had increased to 62% in 1946.

New technological developments in the use of chromium and its alloys were expected to bring continued expansion in consumption, especially as applied to jet propulsion and other high-temperature alloys.

(G. A. Ro.)

**Chronology:** *see* CALENDAR OF EVENTS, 1947, pages 1–16.

## Churchill, Winston Leonard Spencer

(1874– ), British statesman, was born at Blenheim palace, Oxfordshire, England, on Nov. 30, the elder son of Lord Randolph Churchill. For his biography and his political career during World Wars I and II, see *Encyclopædia Britannica.*

In 1947 Churchill took further steps in his efforts for a United States of Europe, which he had advocated in a speech in Zürich, Switzerland, on Sept. 19, 1946. In January the formation of a United Europe committee, with Churchill as chairman, was announced. At a public rally in London on May 15, he called for "an organization in Great Britain to promote the cause of united Europe."

In the house of commons Churchill led the Conservative opposition. On Oct. 28, in moving an amendment to the king's speech he stated that the Conservative policy was to "establish a basic standard for life and labour, and (to) provide the necessary foods for all. Once that is done, set the people free." He was also active as leader of the party in its nation-wide campaign to prepare for the next election.

In May he visited Paris, where the premier, Paul Ramadier, decorated him with the *Médaille Militaire* in recognition of his services in the Allied cause.

## Church Membership.

The latest information concerning church membership in 54 religious bodies in the United States, each reporting more than 50,000 members, was that published by the *Christian Herald,* New York city, in June 1947 (*see* Table I). The total given for continental U.S. was 73,673,182 persons, mainly for years ending in 1946, compared with 71,700,142 reported by the same bodies the year previously. Some religious bodies do not compile and publish figures annually. In a few instances the latest data in the table are for the year 1936, the date of the last census of religious bodies taken by the federal bureau of the census. According to the official reports of the statisticians of the religious bodies, total church membership had been increasing for many years.

Church membership figures published in 1946 and 1947 represented the highest proportion of the total population ever reported in the religious bodies.

*A merger of the Evangelical Church and the United Brethren in Christ, Nov. 1946.
†Name changed from Norwegian Lutheran Church.

The religious bodies having more than 50,000 members had 97.4% of all the church members in continental United States, according to a compilation of the reports of 256 religious bodies, published in the *Yearbook of American Churches* (1945). The remaining 2.6% of the members were in more than 200 bodies. Of the total reported church membership in 1945, 32.3% was Roman Catholic, 1.3% Old Catholic, Polish Catholic and Eastern Orthodox; 6.4% Jewish and 60% Protestant. In 1945 there were reported by 256 religious bodies 72,492,669 members, of whom 59,717,181 were 13 years of age and over, mainly for years ending in 1944. (B. Y. L.)

**Great Britain.**—The figures in Table II rest for the most part on a calculation of communicants; the figures for the Church of England, however, are taken from the electoral roll membership, and those of the Roman Catholic Church represent the adult membership as given in the *Catholic Directory*. This difference between methods of calculating membership prevents a comparison between the churches; a clearer estimation of the comparative numbers of each church was not yet possible in 1947, since official returns had not in every case been made during and after World War II.

## Church of England.

In the course of the year the chur assembly inaugurated measures improve the payment and pensions of the clergy. Separate se sions of the house of laity, held under Lord Grey, resolved ask the laity to raise the stipends of the clergy to a minimu of £400 per annum, together with a house free of rates ar dilapidation charges, and allowances for dependents; the chur commissioners undertook to contribute £100,000 annually du ing the next six years for this purpose. Several diocesan boar supported the scheme, or a part of it, and in some cases t minimum stipend adopted was £500. A pensions measure, pr viding £200 at the age of 70 after 40 years of service, with £ for widows and £25 for orphans or fatherless children under r received general approval. Contributions were at the rate 5% per annum.

The work of reconstruction of the dioceses in bombed are went slowly forward. The Pastoral Re-organization measure w approved; it provided for the union of benefices and holdin in plurality, the diversion of endowment income and the r striction, in some cases, of the rights of patronage. The City London Tithe bill was passed by parliament, abolishing Lond tithe payments within 60 years and reducing the payments the successors of existing incumbents by 33%. Lord Selborn regulation to establish a Central Church of England Council Education to co-ordinate the work of the five councils co trolling different branches of educational activity received fin approval. The convocations of Canterbury and York receiv the report of the Canon Law commission (chairman, Dr. Cy Garbett, archbishop of York), together with a proposed ne code of canons. The code of 1603 had been completely revise and modernized. Important new regulations concerning nulli suits in marriage cases and concerning the church courts we proposed.

On Sept. 27 the four dioceses of Madras, Tinnevelly, Trava core and Dornakal were severed from the Anglican communi and became the Church of South India. They united with th Presbyterians, Methodists and Congregationalists in that are In convocation in October the archbishop of Canterbury fo mally condemned the book *The Rise of Christianity,* written b the bishop of Birmingham (Dr. E. W. Barnes), because it di not "adequately and faithfully express the general doctrines the Church of England."

The bishop of London (Dr. J. W. C. Wand) conducted h primary visitation at five centres of the diocese, the first epi copal visitation of London for 30 years. Bishop Arthur Hea lam of Gloucester died on Jan. 17. (A. J. MAC.)

## Civil Aeronautics Administration.

The year 1947 was one of increased, though not always profitable, activity in civil aviation, resulting in a heavy workload for the Civil Aeronautics administration.

The scheduled air carriers added 41,500 route miles, or more than 30%. Nonscheduled air-carrier operations were brought under regulation for the first time, CAA issuing 1,479 certificates to such services, with 1,384 applications pending.

Student pilot permits were issued at the rate of about 200,000 a year, due in great part to activity under the G.I. Bill of Rights.

To assure prompt performance of the safety regulation functions involved in this growing volume, the system of designating qualified volunteer personnel in the industry was used to a greater degree. By the end of the year, more than 8,000 designees were acting for the CAA in specified inspection capacities.

Significant improvements were effected on the 40,000-mi. airways system operated by CAA. Regular commercial use of the CAA instrument landing system was begun by 11 air lines at 41 cities, making possible completion of schedules under lower ceilings and visibility than previously permitted.

More than 50 very high frequency radio ranges were installed under the program of converting the airways system to this virtually static-free form of transmission.

Use of airport surveillance and precision beam radar was begun by CAA at Washington National airport, La Guardia field, N.Y., and Chicago Municipal airport, with equipment turned over by the army air forces.

The Federal Aid Airport program was moving into high gear by year's end, with more than 100 grants made to communities for airport construction or improvement. Appropriations by congress to CAA for this program, which works on a matching basis similar to that used for public roads, totalled $77,500,000. A list of 908 projects to be handled with these funds was prepared by CAA—171 of them being class 4 or larger airports, the balance smaller fields, significant in the development of personal and local commercial flying.

Two technical advances of outstanding importance to personal flying were carried forward. One involved the development of cross-wind landing gear for seven types of planes, ranging from the Piper Cub to the DC-3. For this purpose the CAA had $150,000 in contracts with six manufacturers, three of whom already had completed successfully the application of cross-wind gear to smaller aircraft. It was hoped that this gear would make possible single-strip landing fields in metropolitan areas where undeveloped land is scarce.

The other big technical effort for personal flying is in the direction of quieter aeroplanes. At the request of CAA, the National Advisory Committee on Aeronautics was sponsoring a study of propeller and engine noise and had developed a multi-bladed propeller that considerably reduces the noise of light aircraft.

Other technical development work covered prevention and detection of fires; impact-resistant windshields; new types of airport and approach lights; distance-measuring equipment to be used in connection with the V.H.F. radio ranges; and crash-resistant fuel tanks.

Psychological research was carried out on the relationship of eyesight to the ability to learn to fly safely; improved methods for selecting, training and up-grading air line pilots on the basis of the critical requirements of the job; and stall-perception.

Assistance was furnished by CAA to state school systems in extending and improving their aviation education programs for peacetime purposes, through consultations, staging of institutes, preparation of materials, etc. Courses were given in the U.S. by CAA to trainees from Central and South America and the Philippines. (*See* also AIRPORTS AND FLYING FIELDS; AVIATION, CIVIL.)

(T. P. W.)

## Civil Liberties.

U.S. civil liberties experienced both progress and regression in the year 1947. On the affirmative side, a federal court held segregation by state law on interstate railroads unconstitutional. The supreme court reversed a conviction on the ground that the defendants were deprived of a fair trial because the state systematically excluded women from the juries. A federal court in California held that the segregation of Mexican-U.S. children in schools was unlawful. In Massachusetts, in the first important trial under a new statute, sale of the book *Forever Amber* was permitted.

Perhaps the most important forward step in decades was the report of the president's committee on civil rights. The committee of 15 issued a widely debated report emphasizing particularly the impairment of civil rights because of race, creed or colour. It proposed legislation strengthening federal criminal statutes, a bill against lynching, legislation directed towards equality of employment privileges, abandonment of restrictive covenants on the occupancy of real estate and the withholding of federal grants-in-aid to schools, hospitals or housing develop-

STUDENTS, demonstrating before the N.Y. state capitol at Albany in March 1947, demanded passage of a bill to outlaw racial and religious discrimination in the schools

ments practising racial or religious discrimination. It further proposed a system of full disclosure, through income tax returns and as a requirement for postal privileges, of the powers behind mass movements directed towards influencing thought.

In addition to its recommendations for federal action, the report stressed that U.S. democracy was dependent on local vigilance in maintaining civil rights and that much progress lay within the power of the individual states. The government began preparing legislation in support of some of the measures recommended by the committee.

The Labor-Management Relations (Taft-Hartley) act aroused criticism as being an impairment of many rights of labour, including the right to strike.

Also criticized were actions of the house of representatives committee on un-American activities, particularly the hearings involving political affiliations of Hollywood writers. Cases arising out of these hearings raised the fundamental question whether congress had the right to inquire into a person's political party affiliation, even without violating the secrecy of his ballot. A collateral question involved the problem of the government as an employer vis-à-vis persons who because of affiliation with underground organizations presented a potential danger of division of loyalty. The civil liberties question impinged primarily on the propriety of congress' instructing the state and defense departments to discharge suspected persons without any hearing. Employees of other departments of the government continued to be protected in their right to be presented with the charges against them, to have counsel and a full hearing and appeal by the president's proclamation on loyalty issued to forestall more stringent action by congress. An important civil rights question arose with respect to the right of an accused employee to be confronted with the witness who obtained the evidence against him. The rights of the individual sometimes conflicted with the fact that there were some areas where the government could not afford to sacrifice an investigating employee whose usefulness would be ended once his identity was known.

By 1947 a dozen states had already branded the Communist party as illegal and banned it from the electoral ballot. The only alternative which might succeed in preventing the spread of communism and yet preserve civil liberties seemed to be the proposal, submitted by the president's committee and approved by J. Edgar Hoover, that anonymity is unnecessary to any organization in a democracy and that repressive measures are unnecessary among a people informed as to the exact nature and sponsorship of organizations. (*See* also Aliens; Anti-Semitism; Birth Control; Education; Law; Lynching; Motion Pictures; Negroes, American; Newspapers and Magazines; Radio.) (M. L. E.)

**Great Britain and British Commonwealth.**—The economic crisis compelled the British government to introduce planning measures that were thought by some to be restrictive of liberty. The only measures which affected civil liberty appeared to be limited to: (1) the Control of Engagement order, which came into force on Oct. 6, 1947, providing that all engagement of employees should, with certain exceptions, be effected through an employment exchange; (2) the announcement that the powers of direction in Defense regulation 58A would be used more freely; (3) the restrictions under the Exchange Control act, 1947, and the Defense (Finance) regulations on the movement of travellers by prohibiting or limiting the taking of money out of the country; (4) the increased tax on foreign films; and (5) the limitation of the importation of books.

Lord Reading, for the Liberal party, introduced a bill known as a Bill of Rights into the house of lords which dealt with a miscellaneous collection of matters, including some recommendations of the 1932 committee on ministers' powers. The problems it dealt with were important but the bill was ill-draf and, after severe criticism by the lord chancellor, was dropp The Crown Proceedings act, 1947, increased the citizen's rig against the crown by removing mediaeval privileges which p vented action in the courts against a government departm and by removing exceptional rights to which the crown was titled. For nearly all practical purposes the crown (includ government departments) was then placed on an equal ba with other litigants.

A small revival of fascist activities caused some concern, the home secretary declined to introduce antifascist legislat because of the difficulty of defining fascism without includ other parties or unnecessarily interfering with free speech. T existing law was enforced, however, whenever disorders w caused.

In Australia an act for the protection of approved defe projects provided heavy penalties for obstructing any s project and was introduced as a result of communist opposit to the experimental base for long-range rockets in cent Australia. Freedom of speech could, according to the minist be safe-guarded for pacifists and persons concerned with Australian aborigine, since "reasonable cause" was a defense a charge of obstructing a project by speech or writing.

**Other Countries.**—In Austria nazi activities were bann and members of the nazi party deprived of the rights to v and to hold public office; they were barred from certain prof sions. In Bulgaria, Hungary and Rumania the peace treat were ratified and came into force; in each, the state was f bidden to make a law abridging human rights or civil liberti In Italy the new constitution was still under discussion in 19

The French constitution adopted at the close of 1946 c tained in the preamble a definition of civil liberties and hum rights; earlier in 1946, forced labour and other practices w suppressed in the French overseas territories.

During the year the United Nations Committee on Hun Rights, appointed by the Economic and Social council, p duced a draft international Bill of Rights which was under c sideration by all governments. The adoption of such a would enable world public opinion to be focused on the need civil liberties and on any state or body which interfered w them. (R. S. W. P.

**Civil Service.** During 1947, the civil service of fede state and municipal governments in the Uni States achieved, for the most part, a return to peacetime con tions of operation after a readjustment period extending thro the preceding year. An economy-minded congress orde budget cuts for many federal agencies, resulting in further ductions in federal pay rolls that had already declined marke from the end of the war. In contrast with the decline in f eral employment, state and local government pay rolls increa somewhat during the year.

Toward the end of 1947, federal employment showed indi tions of approaching a stable postwar level after dropp steadily for more than two years. As the year began, there w 1,980,000 federal civilian employees within the U.S. and an ad tional 296,000 stationed outside the country—a combined to of 2,276,000 federal employees. During the next ten mon this total decreased steadily, and by the end of October offic figures showed 1,774,000 federal employees within the U.S. a an additional 250,000 employed outside the country—a reduction of more than 250,000 employees. While turnover the release of many war emergency employees accounted most of this reduction, several thousand "career" employ were also laid off.

The year produced an upsurge of popular feeling against s versive activity, and one of its by-products was an extensive program for checking on the loyalty of federal employees. This program, conducted jointly by the Federal Bureau of Investigation and the U.S. civil service commission, contemplated investigations of all current employees and all future applicants for employment. To protect employees against dismissal on unfounded charges of disloyalty, an appeal board was set up and staffed by a group of distinguished citizens. By the end of the year, the loyalty investigation program was well under way, but it was still too soon to determine how many actual cases of disloyalty would be disclosed. (*See* also CIVIL LIBERTIES.)

Strikes by government employees became the subject of restrictive legislation in several quarters during the year. The Labor-Management Relations Act of 1947 (the so-called "Taft-Hartley law") included a provision prohibiting strikes by federal employees under penalty of dismissal. Strikes by state and municipal government employees were also outlawed in ten states during the year: Indiana, Michigan, Minnesota, Missouri, Nebraska, New Jersey, New York, Pennsylvania, Texas, and Washington. One state, Virginia, had passed such a law during the previous year. Very few strikes among public employees were reported during 1947; those that occurred were minor in scope and of short duration.

An employee union, the United Public Workers of America, attacked the constitutionality of the Hatch act, restricting political activity by federal and certain state and local employees. The U.S. supreme court upheld the law, ruling that congress has full authority to enact such legislation whenever, in its judgment, such restrictions are needed to protect the integrity and competency of the civil service.

Several states and cities increased the pay of their employees to alleviate the economic pressure produced by mounting inflation. In most instances lower-paid employees received the greatest proportionate increases; in a few localities, however, elected officials and other higher-paid appointive employees also received pay raises.

Legislation establishing civil service systems was adopted in several localities during the year, including Hartford, Conn., University City, Mo., and Brown County, Wis. In Texas a law was passed requiring that a referendum be held in each of the state's larger cities on the question of adopting a civil service system for their fire and police departments. (J. J. DN.)

**Great Britain.**—In 1947 the civil service still carried a large, though declining, volume of work in winding up war activities. Thus, the number in the service and supply departments fell during the first nine months of 1947 by 15,000. The continued scarcity of so many goods and supplies did not permit any relaxation of rationing or of measures for the control of raw materials. These made heavy demands on manpower.

There was some expansion in the social service departments, the main feature being the building up of the ministry of national insurance, largely by transfers from approved societies, in preparation for the new scheme of social insurance which was to come into force in July 1948. Strong efforts were, however, made to reduce the total number in the civil service, which fell in 1947 from 722,000 on Jan. 1 to 690,000 on Oct. 1. The reconstruction recruitment competitions were more than half completed. Recruitment at the normal ages of entry was resumed.

A ministry of defense was set up at the beginning of the year under the Ministry of Defense act, 1946. A central economic planning staff was set up in April 1947. It was part of the cabinet office, but afterward served under the minister for economic affairs, appointed in October. The dominions office was renamed the commonwealth relations office and absorbed such functions of the India office as remained after the constitutional changes in that country. With the transfer of power to the Burmans Jan. 4, 1948, the Burma office was closed. (E. E. Bs.)

## Clark, Thomas Campbell

(1899– ), U.S. lawyer and attorney-general, was born Sept. 23 in Dallas, Tex. He was graduated with an A.B. degree from the University of Texas (1921) and practised law. He was civil district attorney of Dallas county, 1927–32. In 1937, Clark was made special assistant to the attorney-general of the U.S. He was shifted to the department's antitrust division (1938), was later named co-ordinator of alien enemy control in the Western Defense command, and was given charge of the war frauds unit in the antitrust division in May 1942. Clark became assistant attorney-general of the antitrust division (March 1943) and in Aug. 1943, he headed the justice department's criminal division with his authority extending to the war frauds unit. President Truman named Clark to succeed Francis Biddle as U.S. attorney-general, May 23, 1945. Clark assumed office June 30.

The alarming growth of "red" hysteria in early 1947 led Clark to promise on May 10, in a Boston speech, that there would be no "witch hunts" in the government move to eliminate "subversive groups." However, on Dec. 4, after listing 90 organizations which he claimed were "subversive," Clark was criticized by civil liberties groups who urged that hearings be given the accused organizations.

In the summer of 1947, an effort made by G.O.P. to probe charges that Clark had blocked an investigation of vote frauds in Kansas City, Mo., was defeated by the Democrats in the upper house.

## Clay, Lucius DuBignon

(1897– ), U.S. army officer, was born April 23 in Marietta, Ga. He was graduated from the U.S. Military academy in 1918, and during the latter days of World War I was an instructor at an officers' training school. In March 1942, he was made a deputy chief of staff in the army service of supply and was promoted to the rank of a major general the following December. Two years later (Dec. 1944), he was transferred to the Office of War Mobilization and Reconversion as deputy director for war programs and administration.

As the war in Germany was nearing its end, President F. D. Roosevelt appointed Clay (March 29, 1945) as deputy to Gen. Dwight D. Eisenhower in charge of civil affairs in Germany; the following month he was made a lieutenant general. On Jan. 6, 1947, he was named commander of U.S. occupation forces in the European theatre and commander-in-chief of U.S. occupation forces in Germany as well as U.S. military governor in Germany. He was made a full general on March 27.

At first Clay was tactful and friendly in his relations with the Russians on the Allied Control Council for Germany, but irked by their propaganda barrage, he announced (Oct. 28) that the U.S. would launch a counter propaganda program in the reich. His domestic policy in his zone was based on the concept of giving the Germans more local self-government; he also said they would have to decide for themselves on the question of whether they should have a capitalist or socialist economy. However, his criticism of German ineptness in handling their food program was reported (Sept. 6) to have brought down on him a Washington admonition not to overemphasize their "bungling" lest congress cut requested funds for food exports to the reich.

## Clays.

Data on the production and consumption of the various types of clays used in the United States (except bentonite and fuller's earth, which are treated separately) are shown in the following table, in thousands of short tons.

| | 1943 | 1944 | 1945 | 1946 |
|---|---|---|---|---|
| Ball clay | 147.8 | 155.7 | 174.5 | 243.1 |
| Kaolin | 929.4 | 873.1 | 940.0 | 1,322.3 |
| Fire clay | 7,798.2 | 6,344.4 | 6,090.4 | 7,908.0 |
| Miscellaneous clays | 11,215.3 | 9,080.7 | 10,848.7 | 20,190.3 |
| Total | 20,090.7 | 16,453.8 | 18,053.6 | 29,663.8 |
| Sold as raw clay | 4,140.4 | 3,520.7 | 3,611.9 | 4,455.2 |
| Used by producer | 15,950.3 | 12,933.1 | 14,441.7 | 25,208.6 |

The effect of the revival in the building industry is seen especially in the miscellaneous clays, used for brick, sewer pipe and other building materials. (*See* also BENTONITE; FULLER'S EARTH.) (G. A. RO.)

## Clayton, William Lockhart

(1880– ), U.S. government official and cotton broker, formerly headed the firm of Anderson, Clayton and company in Houston, Tex. He joined the department of commerce in 1942 as an assistant secretary, and, in 1944, was appointed federal war surplus property administrator.

On Dec. 4, 1944, Pres. Franklin D. Roosevelt named Clayton assistant secretary of state, and on Aug. 1, 1946, he was appointed undersecretary of state for economic affairs, a newly created office.

In the summer of 1947, Clayton was the state department's representative at the Geneva, Switzerland, conference of the International Trade organization and at the European Conference for Economic Co-operation in Paris, which drew up the blueprint for the requirements of western Europe under the Marshall plan. At the latter parley, some foreign delegates objected to Clayton's insistence that the U.S. be permitted to oversee European expenditure of U.S. funds; although all conferees signed the 16-nation report on Sept. 22.

Clayton resigned his governmental office Oct. 15.

## Cleveland.

Sixth largest city in the United States, Cleveland, O., had a population of 878,336 by the federal census of 1940. Area 73.1 sq.mi.

Mayor Thomas A. Burke was re-elected chief executive of Cleveland Nov. 4, 1947, by the largest majority ever given a mayoralty candidate in the city. Burke, a Democrat, polled 168,412 votes to 85,990 received by his Republican opponent, former Safety Director Eliot Ness. Although there was a heavy turnover in the personnel of city council, the Democrats retained control of that body.

Nine judges were elected to municipal court, Chief Justice John J. Busher, and Judges Mary B. Grossman, Andrew M. Kovachy, Lillian M. Westropp, Joseph H. Silbert, Charles A. Vanik, James T. Cassidy, Frank D. Celebrezze and Edward F. Feighan. William J. Reichle was elected clerk of the court. Robert H. Jamison, Franklin A. Polk and Joseph M. Gallagher were elected to the Cleveland school board.

An amendment to the city charter which would put the community on daylight saving time from the last Sunday in April to the last Sunday in September was approved by the voters. Also approved were a 2.5-mill Cleveland tax levy, and a 6-mill Cleveland school levy. The county 1.3-mill welfare levy, requiring a 65% vote, hung in the balance as the first count showed it defeated by a small margin and a recount showed it winning by a single vote. A further recount was ordered and court action was threatened.

The city council voted a pay increase for all city employees. A $22,000,000 bond issue for the municipal traction system was approved by the council but the issue was not sold because of an unfavourable bond market. In its final meeting of 1947 the council enacted legislation to redistrict the city, making the population of the city's wards nearly equal for the first time in more than a quarter of a century. The city reduced its bonded debt $7,091,000 in the fiscal year ended June 30, 1947, bringing its gross bonded debt to $89,309,500, the lowest it had bee in 25 years.

Mrs. Norma F. Wulff was re-elected president of the Clev land board of education, and Mark C. Schinnerer was given th post of school superintendent.

The Lakefront airport for light planes was opened Aug. 2 At the close of 1947, employment in Cleveland stood at 586,00 close to a peacetime high. Of these, 215,000 were factory worl ers receiving an estimated $10,500,000 in pay each week. I 1947 there were 125 new manufacturing companies establishe in the city. Exports and imports of Cleveland companies totalle about $405,000,000 for the year. (P. BY.)

**Climate:** *see* METEOROLOGY.

## Clothing Industry.

The year 1947 was one of profitab activity for the clothing industry. Pric in the United States and Canada rose to record heights as pos war inflation filtered through the industry. In comparison wi the calendar year 1939, prices of woollen fabrics in the U.S. o June 30, 1947, had risen 116%; cottons were up 340%. Th retail price of men's and boys' tailored wool clothing rose 79 during that period while wages increased 74%. The price women's apparel and cotton garments in general rose highe percentage-wise, than did woollen clothing. While unit produ tion and sales held their own, as compared with 1946, doll volume jumped greatly because of increased prices.

Despite the fact that profits were substantial, manufacture faced many difficulties. Rising raw material costs made futu operations hazardous; in staple sections of the industry (such regular woollen clothing, shirts and workwear) that factor intr duced a speculative note. Shortages of tropical worsteds and ce tain cotton constructions hindered production. A congression investigation into alleged high clothing prices badgered the i dustry. Some special machines were still unobtainable. Th most ominous fact of all, to some producers, was that consum ers were asking for standard brands—which spelled trouble f newcomers in the industry. This was responsible for an i crease in the quality of merchandise which, although not up prewar standards, was substantial.

GERMAN manufactures of women's wear consisted largely of samples li these in 1947. Textiles were among the severest shortages in Germany duri the year

Machinery research advanced. Several new cutting room devices promised added production and ease of operation. New variations of the electrically driven cloth spreader appeared; these included machines with trailer attachments (for laying material face one way) and knit goods machines. Aluminum cutting tables, featuring adjustable legs for uneven floors, came in short sections of any desired width. A new cutting machine feature provided automatic sharpening of cutting knives to different edges. New lights, needle coolers, pullers and feeders facilitated sewing. A new feed-off-the-arm felling machine (for joining long seams such as shirt sideseams) featured a pedestal mount for easier operation. An effort was made to introduce finger-tip control, compressed-air pressing machines; but their acceptability in the men's clothing industry, where pressers were used to handling heavy foot pedal machines, was problematical. Minor tools became available; but some small items were still short and new left-handed shears were virtually nonexistent.

Style changes were simple but noticeable. Shoulders were wide and backs were cut very narrow so that, from the front, suits had a straight hanging, tubelike effect. Sleeves were made wider at the top. Winterwear featured cotton garments lined with alpaca pile, spun glass or similar insulation. There was no style change in shirts, summer sportswear, work clothing or rainwear. The large sales of war surplus garments continued without seriously affecting other retail sales.

Textile development accented quantity. The enormous demand for U.S. fabrics placed emphasis on efficiency of operation. New and unusual synthetic textiles were not satisfactory for clothing.

Labour did not lose ground in the clothing industry. The union and a manufacturers' central organization in the tailored woollen clothing trade set labour prices and conditions of employment. In the garment trades, however, negotiations were carried on individually by manufacturers and local union boards. A jurisdictional dispute between the Amalgamated and the International Ladies' Garment Workers' union in Rochester, N.Y., concerned the status of men's wear factories which were making ladies' tailored suits.

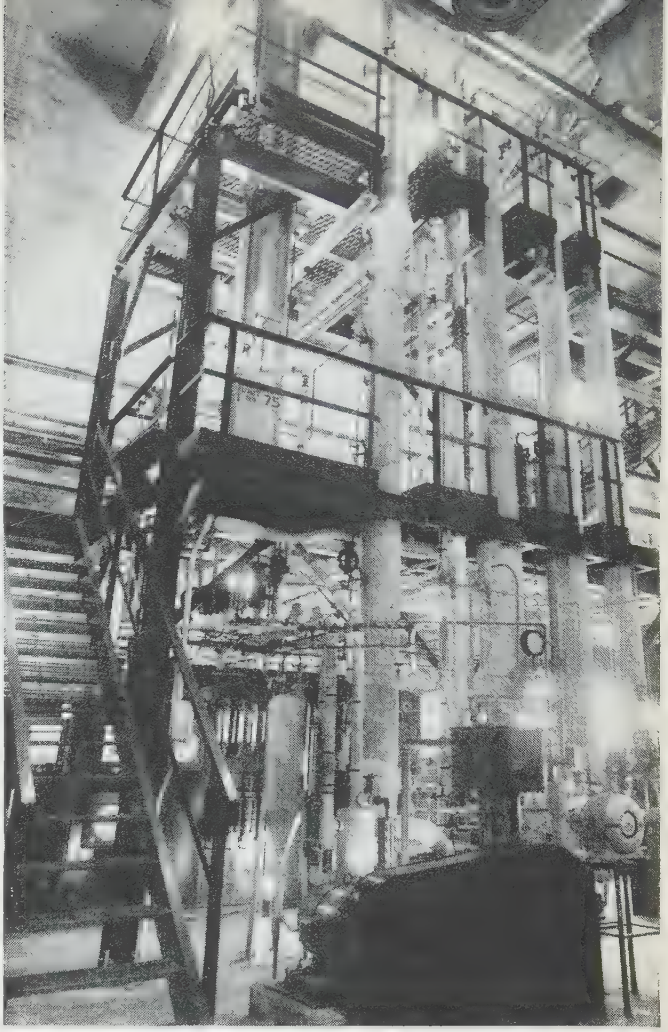
In other countries, the clothing industry suffered from a lack of dollar exchange which hindered the importation of efficient equipment. Manufacturers were especially interested in production techniques with emphasis on time and labour-saving devices and methods. Varied problems beset the industry in different lands. Australia experienced a manpower shortage, and many factories were operating at one-half prewar strength. Great Britain, to build foreign exchange, sacrificed woollens for dollars. South American countries, however, forged ahead with large modern installations. The reconstruction of world-wide clothing manufacturing facilities was a bright spot in the postwar era.

A great number of manufacturers and technicians went to the U.S. to observe factory methods and machines. A New York exhibit of garment textiles, machinery and equipment attracted 50,000 tradesmen, many from overseas.

Prices of consumer goods were high, and inventories were normal at the year's end. Great Britain prepared to regain its pre-eminent position as a style and production centre of men's wear; a new council was formed to gather technical data throughout the world and funnel it to London for analysis and distribution. A clearinghouse of such type would render invaluable aid to the industry. (S. L. S.)

## Coal.

Most of the gaps in production data for coal had been eliminated by the end of 1947, and Table I is more nearly complete than at any time since 1938. Also it is possible to show for the first time the approximate world totals for the years of World War II.



A PILOT PLANT, modelled on the one above, was under construction for the Pittsburgh Consolidated Coal Co. in 1947, as part of a revolutionary fuel project. If successful, coal was to be made into synthetic gas and liquid fuels at place of origin, rather than transported and burned as lump coal

Following the postwar slump, there was a marked improvement in coal output in most of the European countries, but far from enough to meet the demand for comfort, and hardly enough for bare existence in some areas. In few cases had outputs attained or even approached the prewar level of operations and so, with supplies inadequate for their own needs, surpluses for export were scarce.

**United States.**—The salient features of the coal industry of the United States are shown in Table II.

Coal output in the United States during 1946 declined to the lowest level since 1941, as a result of strikes in the industry during a quarter of the year. In 1947 the only major stoppage was in the "mourning period" in April that followed the Centralia,

Ill., mine disaster and the temporary government closure of more than 500 mines for safety reasons.

Up to August there was a pronounced downward trend in the 1947 weekly bituminous production figures; in the later months production improved, but failed to come back to the January average. Through the week ending Dec. 13, the bituminous output totalled 590,455,000 short tons, an increase of 17% over the same period of 1946. The final total for the year was estimated to be 618,800,000 tons, or somewhat better than the 1944 peak.

| Grand Total | 512.3 | 570.5 | 643.0 | 650.8 | 683.3 | 632.6 | 592.5 |

Anthracite operations were interrupted only to a minor degree in 1947, but there was decided lowering of the production rate, extending over practically the whole year, and the output suffered accordingly. Through the week ending Dec. 13, the anthracite output totalled 54,516,000 short tons, a drop of 6% from the same period of 1946. The final total for the year was estimated at 57,000,000 tons.

The total output, bituminous plus anthracite, through Dec. 13, 1947, was 644,971,000 tons, and the final total for the year was estimated to be 675,800,000 tons, just under the 1944 peak.

**Great Britain.**—On Jan. 1, 1947, the National Coal board, under the chairmanship of Lord Hyndley, took over 1,647 coal mines, 692,000 mineworkers and 20,000 officials, 1,000,000 ac. of land, 100,000 houses, and a host of railway wagons, ships, loading depots, brickworks and ancillary services. Colliery owners would receive £164,600,000 indemnity, in addition to the £66,450,000 paid when all unworked coal was taken over by the Coal commission under the Coal act of 1938. The National Coal board set up eight divisional boards to administer the coal fields of Great Britain and under them 49 area managements in charge of groups of pits. The latter became the board's "units of management" in place of the former 850 colliery companies. Colliery managers retained their statutory powers and responsibiliti under the Coal Mines (Regulations) act of 1911, and the Mine inspectorate continued to function independently. The interes of the coal consumers at home were protected by two Co Consumers' councils (industrial and domestic).

Scarcely had the new organization been set up when the fu crisis of February and March hit the country. In averting th worst consequences of this crisis the coal-mining industr played a notable part, practically all collieries remaining a work in spite of terrible weather and many miners workin extra hours, including Sundays, to help the country through.

This was only the first of the serious setbacks. On Aug. 1 there was the tragic explosion at Whitehaven, Cumberland, i which 104 men lost their lives, and this was followed by othe disasters in Durham and Yorkshire.

From Aug. 11 to Sept. 15 came the unofficial Grimethorp strike, which, starting as a dispute over an increased daily tas under the five-day week agreement, spread throughout Sout Yorkshire and cost the country nearly 600,000 long tons of coa

Throughout the year, the National Coal board pressed on wit short-term measures to increase coal production and also wit steps designed to improve the lot of the miner and to enlist hi good will, including: five-day week (with attendance bonus) payment for six statutory holidays a year; wages increas mainly for the lower-paid miner; doubling of the welfare lev of 1*d*. per ton; relief of the miners from maintenance charge for pithead baths; comprehensive schemes for training and education; establishment of a mines medical service; reorganization of the conciliation procedure; introduction of consultativ procedure at all levels down to and including the pit.

The five-day week agreement and other measures resulted i an increase in costs of production necessitating an increase i the pithead price of coal by 4*s*. a ton, bringing the total ir crease to 23*s*.5*d*. per ton above the 1939 average, but this represented a percentage increase still well below that of other ra material prices during the same period.

After an initial spurt in production it was found impossibl to produce sufficient coal for the nation's needs in five days week, even with the help of 710,000 tons imported from th United States and Poland; an agreement was therefore reache between the National Coal board and the National Union c Mineworkers by which the miners volunteered to work longe hours, on overtime rates, during the winter months.

This had immediate results and towards the end of the yea the weekly output reached and stayed at more than 4,000,00 tons, bringing within sight the achievement of the 200,000,00 long ton target (deep-mined and opencast) for the year, and als making it possible to resume, on a small scale, the export c coal as bunkers and to coaling-stations.

Improved production in the year was assisted by smoot working of machinery for the rapid settlement of pit dispute and by the establishment of consultative committees, representing the management, the deputies and the men, at nationa divisional and colliery level. Though accused of a tendenc toward overcentralization, the board could point at the end c the year to an increased annual production of 6,500,000 tons to an average output per manshift 7% higher than 1946; to a absentee rate in December 35% lower than the year before; t the increase in the industry's manpower of 26,000, compare with a net loss in 1946 of 3,000 and in 1945 of 17,000; and cor siderable progress in the planning of new sinkings, the modern zation of suitable long-life pits, and the development of shallo drift mines.

Opencast coal continued to be worked by the ministry of fu and power and some 197,000 tons per week were produce from this source during the year. (*See* also FUEL BRIQUETTES.

RELATIVES of 117 trapped miners waiting for news at the William mine in Whitehaven on the northwest coast of England after an explosion in undersea mine tunnels on Aug. 15, 1947. Only 13 colliers were rescued

**Canada.**—Coal production declined from 17,797,747 short tons in 1946 to 14,028,113 tons through Nov. 1947, a drop of 14% from the same period of 1946. To offset the decreased output, imports were increased to 21,538,532 tons through September, 17% over the same period of 1946.

**India.**—Production was proceeding at a uniform rate, with 32,790,000 short tons in 1946 and 18,286,000 tons through July 1947.

**Japan.**—Coal production in Japan rose from 1,447,000 short tons in Jan. 1946 to 2,421,000 tons in December, and 18,762,000 tons in the first eight months of 1947.

**South Africa.**—Production was 26,053,000 short tons in 1946 and 16,809,000 tons in the first eight months of 1947.

**Australia.**—Coal output declined from 21,589,000 short tons in 1946 to 10,322,000 tons through Aug. 1947.

**European Countries.**—In order to show the progress in the postwar revival of coal production in Europe, there are reproduced in Table IV the monthly production figures as reported by the Statistical office of the United Nations.

Table IV.—*Data of Coal Production in Europe*

*1944.

The first two columns of Table IV show the average monthly output reported in 1938, and in the lowest year, usually 1945. Columns three, four and five show the gradual recovery of output during 1946 and 1947. Column six shows the latest month in 1947 for which output was reported, while column seven gives the 1947 output up to and including that month, and column eight gives the monthly average during these months of 1947, for comparison with the averages during preceding years.

(G. A. Ro.; N. F. Ne.; J. A. S. R.)

## Coast and Geodetic Survey, U.S.

During the year 1947 activities of the coast and geodetic survey were devoted especially to carrying on surveys and investigations in coastal areas of commercial importance and in the interior where planning for development of natural resources was contemplated. It is the function of this bureau to furnish basic engineering and scientific data essential in all surveying and mapping projects and for large scale public works and construction programs. Triangulation and precise levelling were performed along the tributaries and in major river valleys for purposes of developing multiple water uses. Growing appreciation of the economic value of tying local surveys to the national network of geodetic control was indicated.

A new program of systematic tidal observations in the western Pacific and in the areas along the continental and Alaskan coasts provided original data for the prediction of ocean tides.

Magnetic projects were undertaken in the arctic and antarctic as part of navy expeditions to those regions. In the study of earthquakes, 52 strong-motion seismographs were maintained in the western part of the United States and in seven countries of the western hemisphere subject to frequent earthquakes. Six moderately strong earthquakes were recorded and the records were distributed among co-operating agencies for further study.

There was an increase in the sale of charts to the mariner and the aviator. These charts provide information for the safe navigation of surface ships and aeroplanes and are one of the major products of the bureau. A series of radio facility charts covering the entire United States was issued to provide the latest information for air navigation along the national airways. The charts were revised and reissued at frequent intervals to show existing information and were widely used by the military services and by commercial and private aviators.

Nineteen survey vessels were operated in the coastal waters of the United States and Alaska. The ships conducted hydrographic surveys and oceanographic observations for the production of navigation charts for the mariner. The use of shoran was continued with good results during the year. The equipment was used to fix the positions of soundings taken in the waters of the western Aleutian Islands and off the Atlantic coast. The coast and geodetic survey electronic position indicator designed for installation on a low-lying shoreline was successfully used for extending hydrographic surveys well offshore in the Gulf of Mexico.

To compile topographic features of coastal areas, aerial photographs were obtained and photogrammetric surveys made of nearly 2,000 mi. of Alaskan coastline; this included the shores of Bristol bay, the Aleutians and the Arctic ocean.

Under authorization of congress, the bureau participated in the program for Philippine rehabilitation by providing for the resumption of the coastal survey work in the Philippines interrupted by the war. The program included the training of Philippine citizens in the technical operations of this work both in the Philippines and in the United States. Co-operative projects for exchange of surveying and charting techniques were continued with all of the American republics participating. (*See* also CARTOGRAPHY; GEOGRAPHY; OCEANOGRAPHY.) (L. O. C.)

## Coast Guard, U.S.

Coast guard activities during 1947 were highlighted by the dramatic rescue in mid-Atlantic of 62 passengers and 7 crew members of the transatlantic flying boat "Bermuda Sky Queen." The plane had left Foynes, Ireland, for Gander, Newfoundland, at 3:40 P.M. on Oct. 13. En route she passed over the coast guard cutter "Bibb," stationed 800 mi. east of Argentia, Newfoundland, as an ocean weather observation vessel. After the plane had flown another 100 mi. westward, and beyond the point of no return, Capt. Charles Martin of the "Sky Queen" found that violent headwinds had eaten so deeply into his fuel supply that he could not risk going on to Gander. He decided to double back to the "Bibb" and about 7 A.M. on Oct. 14, the cutter received a report that the "Sky Queen" was returning to weather station "Charlie" for a landing. A short time later the plane was sighted and soon made a perfect landing on a sea where the waves were running as high as 35 ft.

The moderating weather which had been forecast would have reduced the hazard of rescue, but by 3 P.M. the weather had shown no signs of moderating and the plane was beginning to leak. Transfer of personnel was begun, therefore, despite the high seas that were still running. Three merchant seamen aboard the "Sky Queen" volunteered to make the first trip in a small rubber life raft, and they were picked up successfully by the cutter. A larger raft completed three more trips safely
bringing survivors to the "Bibb." On the fourth trip, with 1
persons aboard, the raft broke adrift. A motor surfboat wa
sent to the raft's aid and both were swamped. As the surfboa
began to break up, the "Bibb" moved in with seamen over th
side on landing nets. By miracles of courage and effort all thos
on the surfboat and in the water were rescued. By this tim
darkness had fallen and operations were suspended with 22 pe
sons still on the plane. Early next morning the "Bibb" radioe
"all passengers and crew safely aboard" and four days later sh
steamed proudly into Boston harbour, a broom lashed to he
masthead signifying a "clean sweep" in the rescue operation.

Ocean weather stations, such as the "Bibb" was patrolling, a
mid-ocean areas 10 mi. square, station "Charlie" being locate
at 52° 45′ N., 35° 30′ W. This and another station at 62° N
33° W. were the only two U.S. weather stations operating i
1947 in the North Atlantic. A third weather station was mai
tained in the Pacific halfway between San Francisco and Hon
lulu. As a member state of the International Civil Aviatio
organization the United States had agreed to man seven
these stations, and one jointly with Canada as soon as appr
priation would permit. The stations are a joint weather bureau
coast guard operation, the coast guard providing the ships an
communication facilities and the weather bureau providing th
observational personnel and special equipment required. The
obtain surface observations every 3 hr., winds aloft observation
every 6 hr. and transmit these to the weather bureau at Wash
ington, D.C., together with twice daily radiosonde observation
Transocean aviation interests make wide use of these report
basing their flights on them. The weather ships also serve as
radio beacon for the high-flying air liners. As they pass ove
head, often unseen in the overcast, they are picked up on th
weather ship's radar screen; radio communication is establishe
and, if they request it, they are given a radar fix as to the
actual course and speed as plotted aboard the coast guar
cutter. When all 13 weather stations, United States and foreig
called for by international convention, are fully manned an
equipped, no aircraft flying the Atlantic would ever be mo
than one and one-half hours' flying time from a source
rescue, and it would be possible to run a constant plot on a
transatlantic planes during the entire time they were over wate

The "Sky Queen" rescue was one of a number of less-specta
ular coast guard search and rescue activities which, during th
fiscal year 1947, resulted in 5,755 lives being saved or perso
rescued from peril. Brought into action by about 1,000 calls f
assistance received each month in the eastern area of the U.
alone, 180 lifeboat stations, 10 air stations, with 110 aircraf
and more than 2,000 vessels of all sizes, were able to carry o
instant and systematic search and rescue procedure. In Marc
the entire crew of a collier, wrecked off Cape Elizabeth, Me
was brought ashore by breeches buoy from a coast guard st
tion. In October, coast guard vessels carried hundreds trappe
by a forest fire at Bar Harbor, Me., to safety on the mai
land. In November, coast guard planes dropped food and su
vival gear to 41 survivors of a vessel shipwrecked in Belle Is
straits. In December, two cutters went to the assistance of th
"S.S. Michael" aground off Cape Charles, Va. The vessel, aflo
later and under her own power, was escorted to Hampt
Roads, Va. There were 1,074 flood rescues on the Mississip
and tributaries. Twenty-six coast guard radio stations, whic
supplemented land telephone lines and submarine cables ope
ating along the coast, formed a constantly alerted system
communications, connecting land, sea and air units instantl
effective in every maritime emergency.

During May and June, the coast guard cutter "Mendot
conducted the 1947 International Ice patrol. Ever watchful f
icebergs which drift into the transatlantic shipping lanes in th

Grand Banks area, the cutter detected only 37 icebergs and growlers in what was one of the "leanest" years of ice occurrence on record.

The ice-breaking cutter "Mackinaw," cruising more than 9,000 mi. on the Great Lakes, helped free 641 lake carriers from the ice during the late winter and early spring. Thousands of tons of iron ore thus reached their destination at eastern blast furnaces earlier in the open season, augmenting thinning stock piles. Meanwhile, the icebreaker "Northwind" led a navy scientific expedition through south polar ice to Antarctica.

Coast guard emergency communications trucks were in contact with outside points 20 min. after the explosion at Texas City, Tex. Later other units engaged in fire-fighting and assistance work during the disaster. After a coast guard investigation, a special interagency committee appointed by the secretary of the treasury recommended steps to be taken for the handling of ammonium nitrate with greater safety.

In the interests of greater maritime safety the coast guard maintained 36,465 aids to navigation. These included lightships, lighthouses, buoys, daymarks, fog signals and radio beacons. Thirty-seven Loran stations located at widely separated points from Labrador, around the coasts of the United States and into the Pacific as far as Japan, assisted surface and air craft to determine their longitude and latitude at all times and under all weather conditions through a pulse radio transmission system. At the same time 14 Racon, or radar beacons, gave distance and bearings to aeroplanes or ships within 120 mi.

During 1947 the coast guard operated 307 cutters, ranging in length from 65 ft. to 327 ft. These included icebreakers, patrol craft, ocean-going tugs, cargo ships, buoy tenders, cable layers, harbour tugs and patrol boats.

In addition it had 1,740 motorboats in service ranging in length from 10 ft. to 65 ft.

Among its 18,714 military personnel were 848 regular commissioned officers, 775 temporary service officers, 572 regular reserve officers, 227 cadets, 532 chief warrant and warrant officers and 15,760 enlisted men.

There were 4,535 civilian employees.

**U.S. Coast Guard Academy.**—The U.S. Coast Guard academy at New London, Conn., founded in 1876, is an institution of higher learning for the training of commissioned officers for the coast guard. Its present home, overlooking the Thames river, was constructed in 1932, with additions made just prior to World War II. The red brick, Georgian colonial buildings centre around the administrative building, Hamilton hall, named after Alexander Hamilton, first secretary of the treasury and founder of the coast guard in 1790.

At the end of 1947 there were 332 cadets. Entrance is restricted to unmarried men between 17 and 22 years of age, and appointments are obtained through competitive examinations. While emphasis is placed on a practical program in which engineering, navigation, seamanship, tactical signal drills and damage control drills are featured in a 21-week program, utilizing three training vessels, standard college courses in mathematics, languages and physical education complete a well-rounded curriculum. The academy confers upon its graduates the bachelor of science degree in engineering and a commission as ensign in the U.S. coast guard. About 100 cadets are graduated each year. (J. F. Fy.)

U.S. COASTGUARDSMEN and volunteers using a breeches buoy to bring a crew member to safety off Cape Elizabeth, Me., after a storm wrecked his vessel in March 1947

## Cobalt.

In the years prior to World War II Northern Rhodesia was the major producer of cobalt, but in late years about half of the world output has come from Belgian Congo. While the United States is the third largest producer, its output is limited to a few hundred tons a year. War demand brought the world total to about 6,600 short tons in 1945, an increase of about 50% over the normal output.

The consumption rate for cobalt in the United States during 1947 was about 2,000 to 2,200 short tons annually, about one-third of which went into the production of magnet steels. Other prominent uses were in stellite and related alloys, ceramic frits and enamels, and salts and driers. (G. A. Ro.)

**Cochin-China:** *see* French Overseas Territories.

## Cocoa

(Cacao). The supply of cocoa for the year 1947–48 was estimated at about 643,000 tons by the International Emergency Food council in Oct. 1947. The U.S. cocoa market was thrown into disorder when OPA control ended with the price at 14.95 cents per pound. Prices advanced to the unprecedented peak of 49 cents per pound—about 900% above the 1939 price. This advance was said to be due to speculative buying, when United States supplies were short, from the West Africa crop, controlled by the British Cocoa Control board, as well as from Brazil. Allocations of 429,300 tons by the International Emergency Food council in Oct. 1947 included 184,000 tons to the United States.

The United States remained the world's largest consumer of cocoa, with Britain second and France third. During the year ending Oct. 1, 1947, the U.S. received a total of about 270,000 tons. The West Africa production of cocoa for 1947–48 was reported as about 10% higher than a year earlier. (J. C. Ms.)

## Coconuts

(Copra). Imports of products of the coconut, copra or nut meat and oil, into the United States increased rapidly during the 1946–47 fiscal year. A total of 1,304,000,000 lb. of copra was imported to July 1, 1947, compared with 314,152,000 lb. in 1946; 16,336,000 lb. of coconut oil were imported, compared with 10,181,000 lb. in 1946. An allocation equivalent to about 966,000,000 lb. of copra was made to the United States by the International Emergency Food council for the year 1947–48.

Prices of copra advanced sharply in 1947 to nearly $200 per ton—more than double the record of 1920, when world production was beginning to expand. Coconut oil advanced in a similar manner, from about 7 cents per pound in 1940 to 20 cents in 1947. Production was rapidly increasing in the Philippines and Netherlands Indies. (J. C. Ms.)

**Coffee.** The supply of coffee in the United States in 1947 was ample to meet all demands, but prices advanced slightly with the general price rise. Imports to July 1947 were slightly less than a year earlier—2,471,633,000 lb. compared with 2,860,487,000 lb. in the year ending July 1946.

World coffee production in 1947–48 was expected to reach 40,086,000 bags, compared with 37,500,000 bags in 1946–47. About 31,000,000 bags of the new crop were expected to be exportable, and Brazil had at least 3,000,000 bags of old coffee on hand.

The Brazil crop was estimated at about 16,600,000 bags, largest since 1939.

Production in Colombia was estimated at 6,500,000 bags, of which about 6,000,000 (50% above prewar) would be available for export. Brazil and Colombia together produced two-thirds of the world's total crop; very little coffee was exported from India or the Netherlands Indies.

World coffee consumption was expected to be about 28,502,000 bags in 1947–48.

Coffee consumption in the United States increased during World War II but later declined; stocks were large throughout 1947. Per capita consumption was estimated at 18 lb. green basis compared with 19.3 lb. in 1946. In Europe only 60% as much coffee was used during the war as previously, and European countries were buying as little as possible in 1947. Colonial nations bought all they could to acquire foreign exchange. Prices declined in all markets but were still high enough to encourage production in Brazil. (*See* also BRAZIL.)

(J. C. Ms.)

**Coinage.** The three United States coinage mints located at Philadelphia, Pa., San Francisco, Calif., and Denver, Colo., manufactured a total of 1,174,017,781 domestic and foreign coins during the calendar year 1947.

United States coin production was valued at $48,043,575.50 and consisted of the following denominations:

| Denomination | Pieces |
|---|---|
| Half dollars: | |
| Regular issue | 7,994,600 |
| Booker T. Washington commemorative | 300,051 |
| Quarter dollars | 43,426,400 |
| Dimes | 203,195,000 |
| Five-cent pieces | 157,542,000 |
| One-cent pieces | 484,305,000 |
| Total domestic | 896,763,051 |

The composition of half dollars, quarter dollars and dimes was 90% silver and 10% copper; five-cent coins, 75% nickel and 25% copper; and one-cent coins, 95% copper and 5% zinc and tin in conformity with the United States coinage laws.

Foreign coinage during 1947 totalled 277,254,730 pieces of various denominations and alloys for nine governments, namely—Colombia, Dominican Republic, Ecuador, El Salvador, Ethiopia, Panamá, Philippines, Saudi Arabia and Venezuela.

In addition to the coinage mints, four other mint service institutions were in operation in 1947—assay offices at New Yor city and Seattle, Wash.; gold bullion depository at Fort Kno Ky.; and silver bullion depository at West Point, N.Y. Th entire mint service is administered by the director of the min with administrative offices in Washington, D.C.

The United States government gold and silver holdings i custody of the several mint service institutions on Dec. 31, 194 were as follows: Gold bullion, 650,107,101 fine troy ounce which, with a value of $35 a fine ounce, totalled $22,753,748 547; silver bullion amounted to 1,682,613,624 fine troy ounce The mint institutions were in custody of additional values cor sisting of silver and minor coins running into several millio of dollars.

At the Philadelphia mint many medals and decorations we produced in 1947 for the armed forces, consisting chiefly c World War II victory medals, American defense medals an others. Special gold medals awarded by the congress were mad for General George C. Marshall, General John J. Pershing, th late General William Mitchell and Admiral Ernest J. King. (*Se* also DECORATIONS, MEDALS AND BADGES—MILITARY, NAVAL AN CIVIL.) (N. T. R.)

**Coke.** In Table I below are presented the coke outputs of th major producing countries and the estimated world t tal, so far as data were available for late years.

Table I.—*World Production of Coke*

(Thousands of short tons)

| | 1942 | 1943 | 1944 | 1945 | 194 |
|---|---|---|---|---|---|
| Australia | 1,838 | 1,772 | 1,562 | 1,188 | ? |
| Belgium | 4,858 | 4,862 | 2,257 | 2,071 | 4,2 |
| Canada | 2,796 | 2,987 | 3,546 | 3,316 | 2,8 |
| Czechoslovakia | 4,287 | 4,497 | 4,991 | ? | ? |
| France | 5,521 | 5,500 | 3,206 | 2,762 | 5,4 |
| Germany | 56,590 | 58,159 | 58,863 | ? | ? |
| Great Britain | 16,688 | 16,186 | 15,771 | 15,664 | 15,6 |
| India | 2,075 | 1,740 | 1,550 | ? | ? |
| Italy | 1,839 | 2,200 | ? | ? | ? |
| Japan | 6,440 | 5,292 | 4,144 | ? | ? |
| Netherlands | 2,135 | 2,095 | ? | ? | ? |
| U.S.S.R. | 6,708 | 8,599 | 10,929 | 14,300 | ? |
| United States | 70,569 | 71,676 | 74,037 | 67,308 | 58,4 |
| Total | 188,213 | 191,928 | 191,179 | 126,708 | 129,4 |

**United States.**—Salient data on the production and co sumption of by-product and beehive coke in the United Stat are shown in the following table.

Table II.—Coke *Production in U.S., 1941–46*

(In thousands of short tons)

| | 1941 | 1942 | 1943 | 1944 | 1945 | 194 |
|---|---|---|---|---|---|---|
| Production | 65,187 | 70,569 | 71,676 | 74,038 | 67,308 | 58,4 |
| By-product | 58,482 | 62,295 | 63,743 | 67,065 | 62,094 | 53,9 |
| Beehive | 6,704 | 8,274 | 7,933 | 6,973 | 5,214 | 4,5 |
| Breeze made | 4,555 | 4,752 | 4,941 | 5,116 | 4,721 | 4,3 |
| Coal charged | 93,138 | 100,850 | 102,460 | 105,296 | 95,672 | 83,5 |
| Consumption, total | 64,944 | 70,107 | 71,407 | 72,971 | 66,074 | 57,3 |
| By iron furnaces | 49,470 | 54,695 | 56,701 | 57,072 | 50,653 | 43,0 |

Strikes in the steel and coal industries during the first half 1946 cut the coke output to far below its normal level.

As a result, coke output for 1946 was 13% less than that 1945 and 22% less than the peak of 1944.

There was a marked improvement in production in 1947, wi a total production of 60,250,276 short tons of by-product a beehive coke in the first 10 months of the year, equivalent a rate of 73,200,000 tons for the year. This 10-months' tot included 54,840,633 tons of by-product coke and 5,410,043 to of beehive coke.

In addition to the oven coke already reported, there were 1946 the following outputs of other varieties of coke: 131,1 tons of low temperature coke accompanied by 14,490 tons breeze, and 753,335 tons of gashouse coke accompanied b 96,819 tons of breeze.

The total coke output of all kinds in 1946 amounted to 5 382,377 tons, accompanied by 4,419,576 tons of breeze.

**Canada.**—The Canadian coke production decreased fro

3,862,000 short tons in 1945 to 3,314,000 in 1946. Conditions improved somewhat in 1947 with a total of 2,600,000 short tons in the first nine months, against 2,402,000 tons in the same period of 1946. Imports play a large part in the Canadian coke industry, since 70–80% of the coal used is imported, and in addition coke is imported to the extent of about one-third of the local production. (G. A. Ro.)

## Cold, Common.

Large-scale attacks on the problem of the common cold were under way in 1947 at the National Institute for Medical Research in England, the National Institute of Health at Bethesda, Md., and Western Reserve Medical school in Cleveland, O.

The chief problems were to classify the apparent group of similar disease entities which compose what is called the common cold and to isolate the cause or causes—presumably viruses. According to current views in 1947, several distinct diseases give rise to symptoms of the common cold, but they are clinically indistinguishable, unless their special characteristics emerge when many patients are seen at once in an epidemic. These diseases were classified tentatively thus: (1) the common cold; (2) exudative pharyngitis; (3) a mild epidemic disease of which the viral pneumonias are the severe forms and (4) true influenza, the cause of which is now known. Another new entity was delineated and called acute respiratory disease. Once the various entities were accurately grouped and their causes determined, further advances might be expected in methods for their prevention and treatment.

During 1947 the customs of prevention and treatment were critically reviewed. It was obvious that much nonsense still prevailed, chiefly because of habit, tradition and the desire "to do something." So long as no injury was done and so long as the normal progress of recovery was not impeded, these procedures were harmless, but many involved needless expense. Nothing in a practical way could be done to prevent these diseases, except influenza, for which a vaccine had become available. Studies showed that colds are fewer among groups of persons living in atmosphere into which certain aerosols are sprayed or in which the air is irradiated with ultra-violet light, but neither of these procedures was available for practical use. The same could be said for the use of gamma globulin when injected into the muscles.

Many measures used for the treatment of colds have no beneficial effects except perhaps psychic ones. The use of cough syrups, antiseptic sprays or gargles, poultices, foot baths, expectorants, vitamins, cathartics, diuretics, agents to cause sweating or to reduce fever, and ultra-violet light have no value in shortening colds or in curing them. Some of these measures may be harmful.

In 1947 the measures considered most comforting during colds were rest, warmth, a normal amount of food and drink and regular elimination. Warm drinks and small amounts of alcohol provide relaxation, aspirin is helpful for aching, and lozenges or codeine relieve severe coughing. Nasal congestion and running nose are relieved by sprays of vasoconstrictive agents, but they should be used as seldom as possible and only to the point of opening the airways. Inhalation of steam containing camphor or other volatile substances gives similar relief.

## Colombia.

A republic situated in northwestern South America adjoining the Isthmus of Panama. It is the only South American country with both Caribbean and Pacific coast lines. Area: 439,714 sq.mi.; pop. (1946 est.): 10,342,519. Approximately 68% of the population is classified as mixed blood, 20% as white, 7% as Indian and 5% as Negro. Most of the inhabitants live in the highlands and mountain valleys of the interior. The capital is Bogotá (pop. in 1945, 443,520). Other principal cities are Barranquilla (206,630), Bucaramanga (66,220), Cali (135,610), Cartagena (101,520), Cúcuta (72,440), Ibagué (78,970), Manizales (109,820), Medellín (219,790), Neiva (38,270), Pasto (60,070), Popayán (34,550), Santa Marta (41,310) and Tunja (25,380). Language: Spanish; religion: predominantly Roman Catholic. President in 1947: Mariano Ospina Pérez.

**History.**—The year 1947 brought renewed grief to the Conservative administration as congressional, state and municipal elections returned majorities for the Liberal party. The economic and social situation was marked by stringent new trade controls to offset a critical shortage of foreign exchange credits and by vigorous protests from labour against the rising cost of living.

In the congressional elections of March 16 (in which senators were elected by direct vote for the first time), the Liberals were divided between the leadership of the extremist Jorge Eliécer Gaitán, unsuccessful presidential candidate in 1946, and the moderate Eduardo Santos, a former chief executive. The balloting, however, gave them control of both houses of congress for the second consecutive year. Receiving a total of 801,341 votes, the Liberals won 35 seats in the senate and 74 in the chamber while the Conservatives, polling 650,840 votes, elected 28 senators and 27 deputies.

The cabinet resigned after the elections to allow a more representative membership, and Pres. Ospina Pérez's new appointments included an equal number of ministers from each party. When the new congress convened on July 21, the Liberal majority elected Dr. Gaitán president of the senate and César Ordóñez Quintero, another extremist, president of the lower house.

On Oct. 5, municipal elections throughout the country gave the Liberals a majority in 472 city councils and the Conservatives control of 307, but the Liberal victory was by the narrow margin of 13% of the 1,309,534 votes cast, and 135 councils formerly dominated by the Liberals passed over to the administration's party.

On Oct. 26, Dr. Gaitán was formally endorsed as the 1950 presidential candidate of the Liberal party. In November, the territory of Choco was admitted as the 15th state of the nation.

In the United Nations security council, Colombia's representative formally denied that a Hispanic-American bloc was being formed to control the international balance of power. An agreement was signed in March with the intergovernmental committee on refugees to admit an unspecified number of European immigrants into Colombia. At Washington, D.C., in March, former President Alberto Lleras Camargo was elected director general of the Pan American union, and at Bogotá preparations were made for the Inter-American conference scheduled to meet there in 1948 to discuss military, social and economic matters not considered at the 1947 conference in Rio de Janeiro.

A formal suggestion by the United States that the special privileges of the Grand Colombia fleet constituted discrimination against U.S. shipping aroused popular demonstrations in September which damaged the U.S. embassy at Bogotá. The administration apologized for the incident and offered indemnities, but the chamber of deputies resolved to insist on maintaining Colombia's navigation system.

A precarious economic situation arising out of an unfavourable balance of trade was reflected in the rapidly rising cost of living in Bogotá. The general retail price index (100 in Feb. 1937) was 231 in January and 252.2 in July. As a protest, organized labour struck for higher wages in several localities, and on May 13, the Colombian Federation of Workers declared a 24-hr. general strike. This demonstration only partially halted normal business activity, and the federation was temporarily suspended for its efforts. The government did create a new price-control agency, with powers to ration, and tried with little success to alleviate the dollar shortage by establishing monthly quotas and priority lists for imports. In its long-range drive for centralized control of key industries, the government created national boards in 1947 for the administration of petroleum, water utilities, telecommunications and aviation.

Increased control over civil aeronautics followed a series of five commercial air line disasters during the first three months of the year, the most serious costing 53 lives when a four-engine air liner crashed into the peak of Mt. El Tablazo on Feb. 15. Other disasters during the year included three earthquakes which shook the city of Pasto in July, injuring seven, and the collapse of a suspension bridge at Pauna in December which killed 120 persons.

**Education.**—In 1945, 12,147 elementary schools reported enrolments totalling 788,143 pupils with 23,432 teachers; 1,830 secondary and vocational schools listed 94,669 students and 7,825 teachers (1,421 elementary and 606 other schools not reporting). There were six public and two private universities. Approximately 7.4% (14,733,953 pesos) of the 1945 national budget was allocated to public education. As of Jan. 1, 1947, there were 430 motion-picture theatres with a seating capacity of 250,000.

**Finance.**—The monetary unit of Colombia is the peso, valued officially on Sept. 30, 1947, at 56.98 cents U.S. The preliminary budget for 1948 provided for expenditures of 320,500,000 pesos (291,695,159 pesos in 1947). For the first four months of 1947 the fiscal deficit was $11,764,000. The national debt as of May 31, 1946, was 269,129,235.30 pesos, internal; 420,279,960.58 pesos, external. On Jan. 1, 1947, money in circulation amounted to 662,000,000 pesos; savings bank deposits, 88,000,000 pesos; commercial deposits, 498,000,000 pesos. Gold and foreign exchange holdings by the national bank totalled $151,000,000 on April 30, 1947.

**Trade.**—Exports for 1946 were valued at $200,900,000 ($140,566,000 in 1945) while imports totalled $230,000,000 ($160,555,000 in 1945). The United States took 78% and supplied 63% of the trade. During the first seven months of 1947, exports amounted to $129,200,000 and imports, $217,900,000. Coffee shipments in 1946 established a new record, 5,661,463 bags of 132 lb., and August estimates placed the 1947 exports at 6,500,000 bags. Other important shipments were petroleum, gold, silver and platinum; imports were chiefly manufactured goods and construction materials.

**Communications.**—In 1945 there were 2,159 mi. of railways, 9,850 mi. of improved highways, 4,620 mi. of navigable rivers, 72.5 mi. of aerial cables and 41 airports. Registered motor vehicles included 15,306 automobiles, 3,738 buses and 10,062 trucks. Air, rail and highway transportation continued to expand rapidly in 1947, but oceanic commerce was hampered by severe fire damage to the Pacific port of Tumaco and silt clogging of the Caribbean port of Barranquilla. Plans were announced in December for port improvements costing 46,000,000 pesos.

In 1945 there were 28,842 mi. of telegraph and 103,826 mi. of telephone lines, exclusive of municipal services. In 1946 there were 112 private radio broadcasting stations in addition to the national transmitter. In 1947 the national government planned more than 3,000 mi. of new telephone and telegraph lines with modern automatic equipment.

**Agriculture.**—The basic industry of Colombia is agriculture, and coffee is the main commercial crop. The 1946–47 coffee yield amounted to 6,500,000 bags (5,478,000 bags for 1945–46). Other crops (with 1946 production figures) are: corn (25,408,000 bu.), potatoes (16,902,000 bu.), wheat (65,000 tons), rice (3,999,000 bu.), cotton (22,000 bales), tobacco (40,785,000 lb.), sugar (96,000 tons), rubber (1,845,250 lb.) and cinchona bark (12,500 lb.). In 1945 livestock estimates included 12,334 cattle, 1,000,000 sheep, 2,500,000 hogs and 630,000 goats.

**Manufacturing.**—The leading manufacturing industries are foodstuff processing, textiles and beverages. In 1945 industrial establishments totalled 7,853, capitalized at 399,940,643 pesos and employing 135,400 persons at pay totalling 641,081,498 pesos.

**Mineral Production.**—The chief extractive industries (with 1945 production figures) are petroleum (22,825,026 bbl.), gold (506,695 troy oz.), silver (168,699 troy oz.), platinum (34,757 troy oz.), salt (90,627 tons) and cement (302,730 tons). In 1947 petroleum production was estimated at 24,966,000 bbl. (22,119,000 bbl. in 1946). Gold mining slumped during the year as production costs rose without a corresponding rise in the price of the metal.

Rippy, 1938); periodicals: *Foreign Commerce Weekly* (Washington); *Revista del Banco de la República* (Bogotá); *Hispano-Americano* (Mexico City). (M. L. M.)

**Colorado.** A Rocky mountain state of the United States, the west-central part; mean elevation above s level, 6,800 ft., the highest of any state. Admitted to the uni in 1876 as the 38th state and known as the "Centennial state Area 104,247 sq.mi., including 280 sq.mi. of water surface. T U.S. owns 34.5% of the total land area and 59.3% is in priva ownership, the remainder belonging to state, county and munic pal governments.

The central and western portions are mountainous and t eastern half consists of rolling plains.

Population (1940) 1,123,296; 52.6% urban, 47.4% rura 93.6% native, 6.4% foreign-born; white 98.5%, Negro 1.1 other .4%; 102.6 males per 100 females. The 1940 census r ported 2,734 Japanese, the largest in number of all races oth than white and Negro. On July 1, 1947, the bureau of cens estimated the civilian population at 1,159,000, a gain of 3.2 from 1940. Capital, Denver (1940 census, 322,412) 1947 es (metropolitan district) 471,000; other cities, Pueblo (52,16 1947 est. 63,800; Colorado Springs (36,789) 1947 est. 45,00 Greeley (15,995) 1947 est. 19,000.

**History.**—The 36th general assembly met in regular sessi from Jan. 1 through April 18, 1947. The first major acti taken was the adoption of two public health bills; one reo ganized the state department of public health and greatly e larged the powers and duties of the department concerning su matters as the control of disease, the rendering of public heal services, sanitation and sewage inspection, etc.; the other pr vided for the optional creation of district or county health d partments.

To promote highway safety, the uniform financial respons bility bill was enacted, the personnel of the Colorado sta patrol increased, a highway safety council was created and state radio system authorized. The gasoline tax was increase from four cents to six cents per gallon to finance an enlarge highway construction program, covering not only state highwa but county roads and city streets as well.

In the field of public welfare legislation, amendments ma to the old age pension laws resulted in the payment of a max mum pension of $69 per month, the highest in the U.S. A to indigent residents afflicted with tuberculosis was increase as were allotments of funds for dependent children and the blin

To aid veterans, the duties of the state department of ve erans' affairs were extended, the appropriation for the depar ment greatly increased and its work co-ordinated with count veterans' officers. Municipalities were authorized to set u housing authorities and to give veterans preference in all housin constructed or acquired.

Increased state aid was given to schools, mainly for teacher salaries, financed by an increase in the state income tax rat and in the ad valorem property tax. State employees' salari were raised and for the first time based upon a classified sala plan. Workmen's compensation and unemployment compens tion benefits were increased. In a series of 23 bills a 10-yea building program for state institutions and agencies was aut orized, to be financed by a mill levy on property.

Finally, the legislature referred to the people, to be voted at the 1948 election, a measure providing for the racing horses and other animals and legalizing pari-mutuel wagering such race meets.

**Education.**—The 1947 legislature made appropriations $2,150,000 for county school tax replacement and $6,000,00 for equalization and general participation. These direct appr priations, in addition to about $800,000 earned income fro public school lands, provided roughly $9,000,000 for state su port of Colorado schools.

The 1947 census of school population including ages of through 21 years was 295,537, compared with 297,281 on the 1946 census.

**Social Insurance and Assistance, Public Welfare and Related Programs.**—Disbursements from the state public welfare fund in 1946 amounted to $30,137,775.34. A total of 40,692 persons received a monthly average old age pension payment of $41.49. In Jan. 1947 each pension recipient received a bonus of $220.80. Total pensions paid in 1946, including burials and 1946 bonus, amounted to $23,463,499. Allotments of state and federal funds for 10,027 aid to dependent children recipients were $2,022,077.31; 441 blind recipients received $162,090.32. Federal grants in 1946 for the above programs, including grants for child welfare services, amounted to $10,146,667.04. Allotments of state funds for general assistance to supplement county funds totalled $974,096.03. Tuberculosis allotments (matched 50% by counties, 50% by state funds) $114,724.98. Miscellaneous, including grants-in-aid for child care, and federal funds for child welfare administration, commodity distribution, etc., $56,109.33.

**Communications.**—Construction on the state highway system in 1947 was the greatest in history. Of the system's 12,416 mi., 4,045 were federal aid primary, 3,345 mi. were federal aid secondary and 5,026 mi. were state roads. City streets totalled 3,133 mi.; county and local roads 63,161 mi.; national forests roads 788 mi.; toll roads 8 mi.; total 79,506 mi. There were 24 railroads operating with 3,883 mi. of main line track. On July 1, 1947, the number of certified aircraft had increased to 1,088. There were 6 scheduled air lines serving the state; 93 designated airports and landing fields. As of June 21, 1947, Colorado had 321,165 telephones in use.

**Banking and Finance.**—As of Dec. 1946, there were 77 national banks and 65 state banks. Deposits in all banks at the close of 1946 amounted to $1,088,460,000. Clearing in Denver, Pueblo and Colorado Springs aggregated $4,393,339,745.03. The unexpended balance in the treasury on June 30, 1947, was $44,875,379.23, the largest on record. General revenue in the fiscal year of 1946 was $103,194,083.88. All expenditures, including functional services, debt services and transfers amounted to $100,574,449.36. Debts—bonded, $590,000; anticipation warrants, $12,315,000; warrants—cash and general revenue, $2,488,623.27. Investments totalled $26,701,510.29, which, plus an unexpended balance June 30, 1947, of $44,875,379.23 made a total of $71,576,889.52.

**Agriculture.**—New production records were established in 1947. Hay and roughage were ahead of 1946 and the 10-year average and the crops of peaches and beans were unusually large. Sugar beets harvested yielded 2,386,000 tons, a substantial increase over 1946. Farm wages were at a record high. Colorado marketed $20,000,000 worth of farm truck crops through the marketing agencies and Marketing act. Prices received by farmers for farm products in 1947 were higher than the 10-year average from 40% on fruits and vegetables to 120% on bean products.

Table I.—*Leading Agriculture Products of Colorado, 1947*

| Crop | Unit | Indicated Yield 1947 |
|---|---|---|
| Corn | Bu. | 13,756,000 |
| Wheat | " | 39,245,000 |
| Barley | " | 13,856,000 |
| Oats | " | 3,350,000 |
| Dry beans | 100# bags | 2,126,000 |
| Sugar beets | Tons | 2,386,000 |
| Tame hay | Tons | 1,760,000 |
| Broomcorn | Tons | 12,468,000 |
| Potatoes | Bu. | 20,626,000 |
| All sorghum (grain) | " | 1,850,000 |
| Peaches | " | 2,238,000 |
| Apples | " | 1,120,000 |

**Manufacturing.**—Colorado ranks high among the states in the manufacture of many commodities: beet sugar, chemicals, cement, coke, rubber products, mining machinery (in which Colorado is a leader in the world), canned fruits, vegetables, coffee roasting and grinding. It was estimated that in 1947 there were 1,500 industries in Colorado employing 57,800 workers, annually turning out an industrial product valued at $665,000,000.

**Mineral Production.**—Mining is Colorado's chief industry. It is a major gold-producing state and the largest producer of vanadium in the world. Colorado leads the entire world in the production of molybdenum and is among the first in the production of vanadium and uranium.

Table II.—*Mineral Production of Colorado, 1946 and 1945*

| | Value 1946 | Value 1945 |
|---|---|---|
| Gold—placer and lode | $4,991,455 | $3,532,725 |
| Silver | 1,810,042 | 1,583,488 |
| Copper | 568,296 | 400,950 |
| Lead | 3,713,848 | 2,931,568 |
| Zinc | 8,774,200 | 8,227,790 |

The production of coal in Colorado was 5,928,823 tons in 1946 compared with 7,653,979 tons in 1945. (P. Ae.)

## Colorado, University of.

The 1947 fall enrolment consisted of 8,700 on the Boulder campus, 500 in the medical and nursing schools in Denver, 2,500 in extension classes in Denver and other Colorado cities, and 5,000 in the correspondence school; a total of 16,700 individuals. Five out of six of the new dormitory buildings were completed, the total cost of the project amounting to $3,000,000. Approximately $400,000 was received from outside sources to support 90 research projects. The Bureau of Business Research compiled studies for state communities indicating the kind of industry the areas could support. The Division of Industrial Hygiene reduced industrial hazards and worked on ways of improving health of workers. In the Engineering Experiment station, 15 research projects were conducted on the Boulder campus, including experiments in solar heating which were expected to have an important effect on low-cost housing. The Child Research council work at the university medical centre in Denver was regarded as one of the most significant developments in the field of pediatrics. The university was one of 52 colleges and universities selected for the naval reserve officers' training corps educational program. A two-year program of cosmic-ray research was begun in June 1947. In December the university joined the Missouri Valley Intercollegiate Athletic association, which includes the universities of Kansas, Nebraska, Missouri and Oklahoma, Kansas State college and Iowa State college. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.)

## Columbia University.

An institution of higher learning in New York city. The budget appropriation for the academic year 1946–47 was $21,876,616.96. At a special meeting of the trustees on June 24, 1947, Gen. Dwight D. Eisenhower was elected 13th president of Columbia, to take office upon the termination of his service as chief of staff of the U.S. army; it was expected that General Eisenhower would assume his duties on June 7, 1948. Dr. Frank D. Fackenthal, acting president, became chairman of the trustees' committee on education. Upon the retirement of Virginia Crocheron Gildersleeve as dean of Barnard college, she was succeeded by Mrs. Millicent Carey McIntosh. The affiliation of Columbia with the New York Post-Graduate Medical school and hospital was terminated during the year, and the university announced its affiliation, for purposes of medical instruction, with three hospitals in Cooperstown and New York city. A large cyclotron for experimental work in nuclear fission was being erected by the university at the Hamilton estate, Nevis, at Irvington-on-Hudson, N.Y. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* Universities and Colleges.)

(M. H. T.)

**Columbium.** The production of columbium ores in the United States is relatively small—3,208 lb. in 1944 and 1,149 lb. in 1945, with 1946 production not yet reported at the close of 1947. The demand is met almost entirely from imports, which amounted to 1,842 short tons in 1944, 2,139 tons in 1945 and 1,213 tons in 1946, mainly from Nigeria.

## Committee for Economic Development.

The Committee for Economic Development was formed late in 1942 by U.S. businessmen to plan during World War II for quick conversion, and the attainment of a new high level of peacetime production and employment after victory.

Originally C.E.D. was set up in two divisions. One, the field development division, was formed to stimulate planning at the grass roots toward the above objectives. The national field development division helped organize 2,900 local committees with 70,000 businessmen serving as volunteer members.

The other, the research division, sought through objective study to determine what policies of government, business, labour and agriculture would contribute best toward the attainment and later the maintenance of high national levels of peacetime production and employment.

Early in 1946, six months after final victory, work of the field development division was terminated, its task of helping to achieve high employment having been largely completed.

On the basis of a comprehensive survey of results, C.E.D. was able to report to President Harry S. Truman in Sept. 1945, that within 12 months the United States would have 58,000,000 gainfully employed workers, and hence that no prolonged period of serious unemployment was to be expected during the transition from war to peace. The accuracy of this report was shown just one year later when the U.S. census bureau reported 58,370,000 such workers.

In 1947 all of the activities of C.E.D. were directed toward the central target of a more stable dynamic economy with high-level employment and production. The objective, which the C.E.D. considers to be practical and obtainable, is a reduction in the cyclical business swings from a maximum of 50% to between 15% and 20%. If achieved, it could bring about a doubling of the average standard of living in the next 25 years.

The procedures followed by C.E.D. in its research activities consist of four steps. These are: (1) selecting for study those factors which have important impact upon employment and business stability; (2) designating the economists and businessmen who are to undertake each study and whose first step is to gather all pertinent facts; (3) sifting the facts by subjecting them to intensive discussion by the economists and businessm and (4) integrating the facts into suggested policies for acti and submitting the recommendations to the public.

Up to the end of 1947, 13 statements on national policy w produced and distributed by the C.E.D. Research and Pol committee of businessmen. These statements and the date their issue follow:

*Postwar Employment and the Settlement of Terminated War Contra* (Oct. 1943); *Postwar Employment and the Liquidation of War Product* (July 1944); *Postwar Federal Tax Plan for High Employment* (Se 1944); *Postwar Employment and the Removal of Wartime Cont* (April 1945); *International Trade, Foreign Investment and Dome Employment* (May 1945); *The Problem of Changeover Unemploym* (Aug. 1945); *Toward More Production, More Jobs and More Freed* (Nov. 1945); *Agriculture in an Expanding Economy* (Dec. 1945); *End of Price Control—How and When?* (April 1946); *Fiscal Policy Fight Inflation* (Sept. 1946); *Collective Bargaining: How to Make More Effective* (Feb. 1947); *Meeting the Special Problems of Small B ness* (June 1947) and *Taxes and the Budget: A Program for Prospe in a Free Economy* (Nov. 1947).

During the same period 11 research reports also were co pleted for C.E.D. by independent scholars. These stateme and their authors follow:

*The Liquidation of War Production,* by A. D. H. Kaplan; *Demobili tion of Wartime Economic Controls,* by John Maurice Clark; *Provid for Unemployed Workers in the Transition,* by Richard A. Lester; *P duction, Jobs and Taxes,* by Harold M. Groves; *International Trade Domestic Employment,* by Calvin B. Hoover; *Agriculture in an Unsta Economy,* by Theodore W. Schultz; *Jobs and Markets,* by six members C.E.D. research staff; *Postwar Taxation and Economic Progress,* Harold M. Groves; *Financing Business during the Transition,* by Cha C. Abbott; *Controlling World Trade—Cartels and Commodity Ag ments,* by Edward S. Mason; *Small Business—Its Place and Probl* by A. D. H. Kaplan.

Most of the research reports and policy statements produ up to the end of 1946 dealt largely with problems of the tra tion. At that time there remained before the C.E.D. resea division numerous incompleted assignments, studies of lo range economic problems. Many representatives of governme business, agriculture, labour and the public urged that the search program be continued until these assignments could completed.

C.E.D. took two steps to meet the responsibilities of condu ing such an intensive research program and making known results of this research. One was to increase the members of its national board of trustees from 26 to 100. The other to form a national information committee, whose function is bring to the attention of interested individuals and groups results of this program.

During the year 1947, and growing out of the C.E.D. resea program, an important activity was started in the field of hig education. Precedent for this had been furnished by the U versity of Wisconsin and other universities which carried their liaison operations with C.E.D. beyond the termination the latter's field activities. Under a fulltime director assig by the University of Wisconsin, economic seminars were ganized throughout the state at which educators and busine men discussed important problems at the "grass root" le This activity was so promising that it was becoming nationa scope and was enlisting the interest of many leading universi and colleges.

The board of trustees is the governing body of C.E.D. P G. Hoffman, president of the Studebaker corporation of So Bend, Ind., was chairman of the board from the date the co mittee was organized. Ralph E. Flanders of Springfield, served as chairman of the Research and Policy committee u he resigned in Jan. 1947, following his election as United Sta senator from Vermont. He was succeeded by Raymond Ru cam of New York, co-founder and, until he retired, chairm of the board of the Young and Rubicam advertising age Sumner Slichter, Lamont professor of Harvard university, chairman of the Research Advisory board.

Walter Fuller, president of the Curtis Publishing company Philadelphia, was chosen as chairman of the National Infor tion committee when it was formed in 1946.

Officers of the corporation during 1947 were: executive director, Henry R. Johnston; research director, Theodore O. Yntema, professor on leave from the University of Chicago; associate research director, Howard B. Myers; director of information, John H. Van Deventer; field director, Robert S. Donaldson, and secretary, Elizabeth H. Walker.

C.E.D. is supported entirely by voluntary contributions from hundreds of business concerns. It has no relation whatever to any agency of government nor to any private business organization. It maintains offices in Washington, D.C., in Chicago and in New York. The address in the latter city is 285 Madison Ave., New York 17, N.Y. (P. G. H.)

## Communism.

During 1947 the world revolutionary movement of communism, under the leadership of soviet Russia, consolidated the gains which it made after 1944. But in spite of persistent efforts, it was unable to make further inroads against democracy, which regained its vitality and its confidence.

The strength of communism could be learned from membership figures of communist parties all over the world as published at the British empire communist congress in Feb. 1947. The influence of the movement, however, was many times greater. Several countries, above all the U.S.S.R., Yugoslavia and a large part of China, were totally controlled by communists although the party membership in each case represented only a small minority of the population. In other countries not so controlled the party represented only the hard and well-disciplined core of a movement whose influence was spread through a great number of organizations following the party line, especially in foreign policy, without actually adhering to the party.

According to the figures published at the British empire congress and later figures published in Moscow in Nov. 1947, the membership in the Soviet Union was placed at 6,000,000 in addition to 3,000,000 communist youth; Italy and China were reported to count more than 2,000,000 members each; France and Czechoslovakia had more than 1,000,000 members each. In most European countries membership was reported as having multiplied many times after 1938. The number of party members in Great Britain was listed as 43,000; in the United States, 74,000.

In Latin America 16 parties, many of which did not use the name "communist," had a total reported membership of 491,800; the strongest were those in Cuba, Brazil and Chile. Large votes were polled by the communists in the provincial elections in Bengal (India) and in the municipal elections in Brazil. The Communist party in Canada reported a membership of 23,000 and held one seat in the federal legislature until this member, Fred Rose, was convicted of giving wartime secrets to soviet agents. Communism was relatively weak in the middle east.

The competition between communism and democracy was especially strong where the "two worlds" met—in Germany, for example; at Greece's northern border and in Korea. In the soviet zone of Germany communism worked through the Socialist Unity party and the Free German Youth. These movements advocated a strongly centralized German government and proposed to arrive "by way of a plebiscite to the unity of Germany." In Germany, as throughout Asia, communism stressed the struggle against the imperialism of the western powers which "wished to enslave the world." This line of thought and proposed action was carried on through a number of organizations with world-wide affiliations which avoided use of the word "communist" and replaced it with derivatives of the word "democracy."

The communists called only communism or a pro-soviet attitude "democracy"; they called democracy "reaction" and an attitude critical of soviet policy or communist expansion "warmongering." In the struggle against reaction as defined by the communists, representatives of nine communist parties (U.S.S.R., France, Italy, Poland, Yugoslavia, Bulgaria, Rumania, Hungary and Czechoslovakia) met in Sept. 1947 in Poland and decided to establish a Communist Information bureau (Cominform) in Belgrade, Yugoslavia. This new unit represented the core of a united front against the threat of "reactionary and imperialist aggression" led by the United States. All those in favour of "democracy and peace" were asked to close ranks around this new people's front of "anti-imperialists." The attack against such European social democratic leaders as Léon Blum in France, Clement Attlee and Ernest Bevin in Britain, Karl Renner in Austria and others, was almost as strongly worded as that against U.S. "reaction." The Cominform established in Belgrade a fortnightly magazine, "For lasting peace—for the people's democracy." The first issue appeared on Nov. 15, in French and Russian. Weekly publication in several other languages was planned.

In the United States the loyalty of government employees in positions involving military security was checked, and a number of persons were dismissed. Government and public opinion in the U.S. asked the necessary precautionary measures to safeguard the rights and liberties of Americans against any indis-

REVIVAL of a communist international to defend the national sovereignty of European peoples "against U.S. aggression" was announced from Moscow on Oct. 5, 1947. This picture shows three members of a communist cell in Italy, one of the nine member nations of the new Cominform

COMMUNIST STRENGTH IN EUROPE, 1947

### COMMUNIST VOTE IN EUROPE

Communist strength in twenty-four European elections since early 1945 is indicated in the following table:

| COUNTRY | PERCENTAGE OF TOTAL VOTE | DATE OF ELECTION | COUNTRY | PERCENTAGE OF TOTAL VOTE | DATE OF ELECTION |
|---|---|---|---|---|---|
| U.S.S.R. | 99 | Feb. 10, 1947 | Denmark | 16 | Oct. 31, 1945 |
| Albania | 95 | Dec. 2, 1945 | Belgium | 14 | Feb. 17, 1946 |
| Yugoslavia | 90 | Nov. 11, 1945 | Sweden | 11 | Sept. 15, 1946 |
| Poland | 90 | Jan. 19, 1947 | British Zone, Germany | 10 | Apr. 20, 1947 |
| Rumania | 67 | Nov. 19, 1946 | Luxembourg | 10 | Oct. 21, 1945 |
| Bulgaria | 54 | Oct. 27, 1946 | Netherlands | 10 | May 17, 1946 |
| Soviet Zone, Germany | 54 | Sept. 1, 1946 | Greece | 9 | Mar. 31, 1946 |
| Czechoslovakia | 39 | May 26, 1946 | U. S. Zone, Germany | 8 | Dec. 1, 1946 |

criminate accusations. Soviet Russia and the eastern European and Balkan governments under communist control tried to enlist the sympathy of U.S. citizens of Slav descent for soviet policy.

Energetic action against communism was taken in Latin America. In Brazil the Communist party was outlawed and the government broke off relations with soviet Russia. The same happened in Chile. Communist influence remained strong in Brazil even at the end of the year with the infiltration of party members and their friends into the administration of the states of Pernambuco and São Paulo. President Eurico Dutra of Brazil warned on Nov. 6 "against the infiltration of foreign ideologists into national political life and the alliance of communists with democratic forces which is as illogical as it dangerous."

Growing strength was shown by the communists in Chin Their leader, Mao Tse-tung, had succeeded in creating strongly disciplined party under his authority and in winni the support of rural masses by intelligent consideration of the economic demands. In their foreign policy the Chinese communists followed the general party line against U.S. "reactio ary imperialism," which was accused of having replaced Ja anese and German fascism as the new common enemy of t peoples of the world. But they foresaw the triumph of t "democratic" forces supported by the "progressives" in the United States and the broad masses everywhere. On Christmas day 1947 Mao Tse-tung called for a Cominform of the far east to co-ordinate the "liberation movement" of 1,000,000,000 Asiatics.

By the end of 1947 communism was battling on several fronts: in Germany it represented itself as defending German national unity and greatness, and organized in Berlin a National All-People's Congress for Unity and Just Peace with the intention of developing it into a parliament and government claiming the whole of Germany. In China, communist forces advanced south of the Lung-Hai railway, in Shantung province, and especially in Manchuria against the last government strongholds there. Under Marshal Tito's leadership the complete consolidation and unification of the communist-led bloc along the Danube and in the Balkans was achieved; the attempt was intensified to mobilize world opinion and to influence opinion in the United States against American policy. In France and Italy, communist-led strikes tried to overthrow the two governments for their co-operation with the United States; and in Greece a communist "democratic government" was proclaimed on the northern borders of the country and tried to capture Konitsa, a small Greek town on the Albanian frontier, as its capital. ## Community Chest.

The community chest is the name given to a local federation made up of social-service agencies and individuals, the purpose of which is to promote joint planning for voluntary health and welfare services in the community and to raise, by a united annual campaign, the funds for their support.

Community Chests and Councils, Inc., was organized in Feb. 1918 as the national association of local community chests and councils of social agencies. It is a clearinghouse of information and ideas for its members and provides them with many services in the fields of health and welfare planning and fund raising.

Of the 1,247 community chests and councils of social agencies in operation in Aug. 1947 (897 chests and 350 councils), 854 chests and 325 councils were in continental U.S.; 4 chests and 3 councils in Hawaii; 35 chests and 21 councils in Canada; 2 chests in South Africa; 1 chest in the Virgin Islands; 1 chest in Puerto Rico; and 1 council in the British West Indies. Almost every city in the U.S. (except New York city, which has a limited joint financing organization) in 1947 had a community chest or similar plan of federated financing for its voluntary social services. In 897 cities in 1946 more than 16,000,000 contributions totalling $168,521,984 were given to community chests to be used during 1947 for voluntary social work in their communities and for national agencies. In 1946 the chest campaigns were united under the name "The Community Chests of America," using the national symbol of the Red Feather and the slogan "Everybody Benefits—Everybody Gives." In that year a national budget committee was organized by C.C.C., Inc. to review budgets of national and international services and relief agencies, and to make recommendations for their possible support by local chests.

Officers of C.C.C., Inc., for 1947 were: honorary president, Gerard Swope, New York city; president, Edward L. Ryerson, Chicago, Ill.; vice-presidents, J. B. Adoue, Jr., Dallas, Tex., H. L. R. Emmet, Erie, Pa., Philip Morgan, Worcester, Mass., Mrs. Henry P. Russell, San Francisco, Calif.; treasurer, Milton H. Glover, Hartford, Conn.; secretary, Mrs. Oswald B. Lord, New York city. Ralph H. Blanchard was executive director. The address of the association was 155 East 44th St., New York 17, N.Y. (*See* also Relief.)

(B. A.)

## Community Trusts.

Funds totalling $77,800,000 were under administration in 76 community foundations in the United States and Canada for charitable uses at the beginning of 1947.

In the preceding year, their aggregate appropriations for public purposes were $2,205,000.

A community trust consists of a number of trust funds of differing sizes and for varied charitable purposes, which funds retain their separate identities as investment units but are grouped for administrative simplicity into a single operational entity. If originally expressed desires of the founder of a fund concerning the purposes to be served by it become impossible or impracticable of execution, remedial action may be taken by a central distribution committee which has the donor's authorization and instruction to recast, if necessary or advisable, the philanthropic application of any fund within the trust.

Largest among community foundations at Jan. 1, 1947, was the New York Community trust in which were 76 funds valued at $17,543,000. Resources of the Chicago Community trust were $13,094,000.

The Cleveland foundation had $10,222,000; the Boston Permanent Charity fund, $6,030,000; and the California Community foundation, $4,283,000.

Out of the total disbursements of $2,205,000 in 1946, the New York Community trust allocated $580,059; Chicago, $349,012; Cleveland, $316,986; and Boston, $249,552.

New gifts to these foundations totalled $5,207,000 in that year. Winston-Salem, N.C., received $975,194; Chicago, $768,529; New York, $579,720; and Cleveland, $551,888. During the same period, the Seattle foundation became operative, the Pittsburgh foundation received its first funds and the Community Welfare foundation of Wilmington, N.C., made its initial outpayment.

## Congregational Christian Churches.

The Congregational Christian Churches of the United States represent a union (1931) of the Congregational Churches, established in 1620, and the Christian Churches, founded after the American Revolution. There were 5,783 churches in 1947, organized in 51 conferences, with a membership of 1,150,853. They are community institutions with no restrictions of race, creed or station, and each church elects its own minister and officers and writes its own covenant. Total contributions received for home expenses during 1947 were $21,718,437; for benevolences, $5,411,677; total property value was $186,408,296; and invested funds of the churches amounted to $34,593,156. There were 267 missionary churches of this fellowship in foreign lands, not including areas in Japan, north China and the Philippines where work was being resumed gradually. The central office of the denomination is the General Council of Congregational Christian Churches, 287 Fourth Ave., New York 10, N.Y. (*See* also Church Membership.)

**Congress, United States.** The 80th U.S. congress convened for its second session on Jan. 6, 1948. It comprised the following members (as of Jan. 6, 1948):

## United States Senate

Presiding Officer: Arthur H. Vandenberg of Michigan[1]
Majority Leader; Wallace H. White, Jr., of Maine
Minority Leader: Alben W. Barkley of Kentucky
Republicans: 51; Democrats: 45.

[16] Elected April 22, 1947, to fill the vacancy caused by the death of Robert K. Henry, Nov. 20, 1946.

## Congress of Industrial Organizations.

During 1947 every union affiliated with the Congress of Industrial Organizations (C.I.O.), with but one exception, reported an increase in membership. Added gains to the total membership of 6,238,000 were achieved through the formation of the Telephone Workers Organizing committee. A number of the formerly independent unions affiliated with the committee. The one union that did not report a gain in membership was the Industrial Union of Marine and Shipbuilding Workers, which was confronted with a decrease in ship construction.

During the year, the C.I.O. continued its basic drive to organize the unorganized workers, notably in the south. Wholly apart from the efforts of the national C.I.O. organizing drive, the major C.I.O. unions threw increased forces of organizers into the southern states in co-operation with the national organization. The ninth constitutional convention held in Boston, Mass., in Oct. 1947 pledged increased financial and moral support to the drive.

Another issue brought strongly to the fore during the year was that of the guaranteed annual wage, as the basis for full employment and full consumption.

An outstanding event in the history of the organization was the appearance on the Boston convention speaking program of Secretary of State George C. Marshall. It was the first time in history that any U.S. secretary of state had addressed a major labour organization. Secretary Marshall in his address gave added emphasis to the necessity of aiding nations stricken by the war to reconstruct their economies and become self-supporting. Following the secretary's address, the C.I.O. unanimously adopted a foreign policy resolution that contained in essence the principles stated by Secretary Marshall. The resolution was given unanimous support by the convention delegates.

During the year the C.I.O. continued to expand its relationships with the labour movements of other countries through steady participation in affairs of the World Federation of Trade Unions. A full delegation of C.I.O. representatives was sent to the W.F.T.U. general council meeting held in Prague, Czechoslovakia, in June. The Boston convention authorized the national officers to continue full participation in the W.F.T.U. During the year added recognition of organized labour was obtained from the Economic and Social council of the United Nations.

LONGSHOREMEN of the A.F. of L. made idle in New York city as they struck in sympathy with C.I.O. maritime unions during the latter's 4-day national work stoppage based on the "no contract, no work" policy in June 1947

National C.I.O. headquarters were at 718 Jackson place, N.W., Washington 6, D.C. National officers were Philip Murray, president; James B. Carey, secretary-treasurer.

(P. MY.)

## Connally, Tom (Thomas Terry)

(1877–    ), U.S. statesman, was born Aug. 19, in McLennan county, Texas. Connally was graduated from Baylor university (1896) and from the University of Texas (1898) with an LL.B. degree. He served with the army in the Spanish-American War and World War I. Elected to the senate in 1928, after having served in the house of representatives, Connally later was only lukewarm in support of President Franklin D. Roosevelt's domestic measures, although he gave wholehearted backing to the administration's foreign policy. He was one of the U.S. delegates to the United Nations conference in San Francisco in 1945 and a member of U.S. delegations to the U.N. general assembly through 1946.

Connally was re-elected to the senate in Nov. 1946, but the Republican sweep of both houses of congress deprived him of much of his former influence. One of the stanchest backers of President Harry S. Truman's foreign policy, he helped push through many important issues in the senate; he joined forces with Sen. Arthur H. Vandenberg of Michigan to secure senate ratification of the Italian, Hungarian, Rumanian and Bulgarian peace pacts on June 5, 1947. The following month, he was omitted from the U.S. delegation to the U.N. at his own request.

## Connecticut.

Next to the smallest of the New England states and third smallest of all the states, Connecticut is variously known as the "Nutmeg state," "Constitution state" or the "Land of Steady Habits." It is one of the 13 original states. Its area is 5,009 sq.mi. including 110 sq.mi. of water. The population, according to the 1940 census, was 1,709,242, but semiofficial estimates for July 1, 1947, increased these figures to 2,042,000, a gain of 19.4%. Semiofficial population figures for large cities are: Hartford (capital) 184,000; New Haven, 160,605; Bridgeport, 147,478; Waterbury, 99,314; New Britain, 69,035; and Stamford, 64,096.

**History.**—The regular biennial session of the general assembly was held from Jan. 8, 1947, to June 3, 1947, inclusive. The Republican party had substantial majorities in both the senate and the house. Much important legislation was enacted. After the state supreme court had passed upon its constitutionality, a veterans' bonus act was passed, granting veterans of World War II a cash bonus of $10 for each month in service with a maximum of $300. A ten-year bond issue of $50,000,000 was authorized to defray the cost. An act imposing a temporary general sales and use tax of 3%, effective July 1, 1947, and ending June 30, 1951, was passed. State aid to towns for the purpose of meeting costs of education was increased from $2,700,000 to $20,500,000, and the allocation thereof was prescribed. The gasoline tax was increased from 3 cents per gallon to 4 cents; the cigarette tax was increased from 2 cents per package of 20 cigarettes to 3 cents with one-third of this tax to be allocated to the Soldiers', Sailors' and Marines' fund. The corporation business tax was increased from 2% to 3%, but the old-age assistance tax of $3 was abolished.

The banking laws were codified and, for the purposes of the negotiable instruments law, Saturday was made a legal holiday, so that banks could close on that day. A Fair Employment Practices act was enacted giving the Interracial commission authority to investigate alleged discriminations in hiring or promotions because of race, colour, creed, national origin or ancestry of an individual. The maximum of unemployment pensation benefit was increased from $22 per week to $24, the maximum number of weeks from 20 to 22; the depend allowance was increased from $2 to $3 weekly with a maxi of $12. The maximum monthly old-age assistance award made $45 instead of $40.

Altogether the general assembly authorized expenditure nearly $300,000,000 (including bond issues) for the bienniu

The elective state officers for 1948 were: governor, Jame McConaughy (Rep.); lieutenant governor, James C. Sha (Rep.); secretary of state, Mrs. Frances B. Redick (Re treasurer, Joseph A. Adorno (Rep.); comptroller, Fre Zeller (Rep.); attorney general, William C. Hadden (Rep.

**Education.**—Total enrolment in public day schools for the year 194 was 261,185 divided as follows in 894 public schools: kindergarten elementary schools, boys 92,456, girls 85,201; junior high schools, 8,623, girls 8,385; high schools, boys 30,906, girls 35,614. The current expenses of all these schools was $36,324,127, apportic kindergarten and elementary $21,102,799; junior high $3,123,548 high $12,097,780.

**Social Insurance and Assistance, Public Welfare and Related Progra** The state public welfare department reported that the total numb people receiving some type of public assistance in June 1947 was 4 as compared with 44,729 in June 1946, a gain of 6.2%, while the of such assistance in June 1947 was $1,849,437 as against $1,511,67 increase of 22.3%. Types and numbers of persons receiving reli June were: general local relief 11,035, old-age assistance 14,991, in institutions 6,500, dependent children 9,997, county wards 3,265, wards, 1,901, blind 205.

**Communications.**—For the first ten months of 1946 the commiss of motor vehicles reported a total of 542,194 motor vehicles regis and 618,683 operators' licences issued including 72,216 free licenc ex-service men. Although no figures for highway construction available, more than 20 contracts for new construction had bee including the last link in the Wilbur Cross highway on which work being concentrated.

There were 12 broadcasting stations in the state, an increase of over 1945. There were 107 newspapers and periodicals being publi The state was served by 3 railway companies and 1 street railway pany, 48 bus companies and 111 taxicab companies. There were 50 telephone outlets compared with 468,177 in 1945.

**Banking and Finance.**—The report of the treasurer for the fiscal ending June 30, 1947, reveals the following: cash balance July 1, $23,644,510.39; total receipts year ended June 30, 1947, $176,248,92 total $199,893,433.45; disbursements $180,298,571.40; cash ba June 30, 1947, $19,594,862.05. The Postwar Purposes fund at that was $12,282,417.71. The state bonded debt was $28,183,000, ag which there was a bond retirement fund of $13,736,164.94.

The bank commissioner reported that as of Sept. 30, 1947, th mutual savings banks of the state had total assets of $1,418,201, 62 state banks and trust companies had total assets of $784,069. 32 building and loan associations had total assets of $50,074,706 national banks as of June 30, 1947, had total assets of $743,769,0

**Agriculture.**—The bureau of agricultural economics reported tha total farm income for 1946 was $126,475,000 as compared with $ 966,000 for 1945. The former figure was made up of $49,514,000 crops and $76,961,000 from livestock and livestock products.

*Leading Agricultural Products of Connecticut, 1945 and 1946*

| Product | 1945 | 1 |
|---|---|---|
| Apples | $2,651,000 | $3,90 |
| Truck Crops | 5,558,000 | 4,37 |
| Potatoes | 5,346,000 | 5,60 |
| Tobacco | 22,725,000 | 25,66 |
| Dairy products, including cattle and calves | 33,751,000 | 37,32 |
| Poultry, including eggs | 37,064,000 | 37,55 |

**Manufacturing.**—The state commissioner of labour reported that a Oct. 1947, there were 664,600 workers (including 286,300 women) ployed in private nonagricultural industries and that unemployment dropped to the lowest level after World War II. There were only 2 unemployed, including 4,400 World War II veterans and 8,100 wo A shortage of steel was hampering the expansion of manufacturin dustries, but there were only seven labour disputes in progress invo a total of 850 workers.

## Consumer Credit.

The important economic factor of sumer credit in the U.S. was part controlled by the government for the major part of 1947, was completely freed as of Nov. 1. Starting in January, total consumer credit outstanding was $10,024,000,000.

federal reserve system estimated that at the end of 1947 the total consumer credit outstanding exceeded $13,300,000,000, an increase of approximately $3,000,000,000 in 12 months.

Continuing their postwar program started in 1946 to secure new credit customers, many retail firms increased the tempo of their solicitation of charge-account business. Those offering 30-day consumer credit charge accounts as well as instalment credit sellers competed for this business.

Early in the year, leading retailers throughout the nation contemplated adhering closely to consumer credit terms laid down in Regulation W, the wartime measure controlling extension and use of such credit. However, pointed legal opinions from the U.S. department of justice, confirmed by outstanding attorneys throughout the country, emphasized the danger of concerted action of retailers to establish local community credit control policies.

More retail firms, even mail-order houses, expanded their service in the consumer credit field. Banks and finance companies not only increased their solicitation of personal loans but of consumer loans, financing directly with the consumer. They expanded credit service to retailers, offering to finance all such sales, absorbing investigation and contractual arrangement expense. While small and medium-sized retailers accepted their fairly new plan of financing, it marked a new departure generally in transferring the credit relationship between the customer and firm to an independent financing agent.

Generally, individual retail firms announced plans for retaining a majority of consumer credit terms effective under Regulation W. Almost immediately after control was terminated on Nov. 1, however, some retailers announced that they had lowered down-payment requirements from 33⅓% to 10% and had extended the over-all payment period from 15 to 24 months. This action was viewed with alarm by more conservative credit granters.

Railroads and travel services began a broad solicitation of use of their facilities on a credit basis. The major air lines also expanded their offers of business and social trips on a credit basis. Practically every form of luxury was being promoted on "easy terms." Banks continued to occupy a key position in the consumer credit field in lending money directly to consumers or finance companies and to business for financing consumer accounts receivable. Some of the larger cash chain retail firms established credit departments during 1947.

Reports from the credit bureaus of the country indicated that a larger percentage of families were becoming overburdened with too many obligations. Although not yet alarming, this trend was of particular importance in view of the high income tax rate, the abnormally high cost of living and the fact that credit reports to retailers indicated that more persons were having difficulty meeting payments. An analysis of the credit records of many consumers indicated that the obligations of families were quite diversified. They included all types of retailing, medical, personal loan and banking debts. The significance of the overburdened condition of these families was given considerably more thought by retailers, credit executives and credit bureau managers as the year closed. While government considered the advisability of re-establishing credit controls to help limit inflation and curtail overextension of consumer credit, business was about equally divided on the subject.

Various trade associations expressed the belief that consumer credit in 1947 did not materially influence inflation. A poll of members of the American Bankers association indicated that instalment lenders were holding a conservative line at the end of 1947 by requiring down payments of 33⅓% on new and used cars.

The Institute of Life Insurance indicated that at the end of 1947 the average U.S. wage earner owed approximately $750. The federal reserve board stated that 12,500,000 families spent more than they earned in 1947. The increase in production of semidurable and durable goods materially enlarged credit demand, a fact noted in all types of retailing. The rather sharp drop in collection turnover evidenced during the last half of 1947 by representative firms in cities in all population brackets caused some concern generally throughout all of North America. This trend toward slow payment of charge accounts indicated that some families were becoming overburdened with debt. More people were finding their savings exhausted, making necessary the use of consumer credit to help finance general living and current operating expenses. (H. A. We.)

**Great Britain.**—During World War II, the general increase of purchasing power, combined with the curtailed supply of consumer goods, especially durable goods, resulted in a much reduced demand for consumer credit facilities of all types. This tendency persisted during the immediate postwar period, despite an expanded supply of goods, largely because of the availability of wartime savings and ex-service gratuities. By 1947 there were signs of a revived demand for consumer credit facilities, but still much below the prewar volume.

Schemes of price control for practically all consumer goods, imposed during the war years and continued during the postwar period, were accompanied by restrictions on the charges additional to maximum cash prices which might be made for credit facilities of all kinds. These restrictions were codified during 1947 in the Hire-Purchase and Credit Sale Agreements (Maximum Prices and Charges) order. Certain goods were exempted from this control: bicycles and motorcycles; radios, phonographs and musical instruments; sewing machines, water softeners, refrigerators and other domestic appliances; deaf aids; hand tool kits; bakery machinery, cash registers and office machinery, hair-waving and drying machines. No restrictions were imposed on charges for the supply of the foregoing goods on credit terms, but such charges were prohibited in relation to all other price-controlled goods except those for long-term and short-term credit respectively which were specified in the order.

Charges for long-term credit, including hire-purchase, were permitted for furniture, carpets, linoleum, mattresses and perambulators on terms similar to those operating during the latter part of the war. The initial payment had to be not less than one-eighth of the maximum cash prices for the goods, and the balance was payable by at least nine instalments spread over not less than nine months nor more than two years. If these and certain supplementary conditions were fulfilled, but not otherwise, the balance referred to might be increased by 12½% for payment within 12 months, 15% for payment within 15 months, or 20% for payment within 2 years.

Additions to maximum cash prices in respect of short-term credit facilities were prohibited under wartime price control until the 1947 order. The latter provided that, if an initial payment was made amounting to at least one-eighth of the maximum cash prices and the balance was payable by instalments spread over from four to eight months, but not otherwise, 3¾% might be added to this balance. The foregoing applied where credit was provided by the supplier of the goods. The 1947 order itself did not make similar provision for "check" trading under which the credit was provided and instalments collected by enterprises not themselves supplying the goods.

Another significant change in this field, introduced during World War II, was the imposition of measures which in effect eliminated the right of repossessing goods supplied on hire-purchase agreements unless authorized by a court order.

(D. Bar.)

**Canada.**—Removal of wartime credit controls on Jan. 13, 1947, was greeted by business with mixed reactions. By October Canadian retailers noted that instalment buying business had jumped 43% in the first six months of 1947, while monthly repossessions were greater than during 1945 and 1946. The end of war veterans' rehabilitation credits, lower "family group" income because women had returned to homes from industrial jobs, and increasing supplies of consumer goods were factors in stimulating the demand for consumer credit. While 1947 down payments on appliances ran as low as 10% (during the control period one-third down payment was required), the minimum down payment on a new automobile was 30%.

With the lifting of federal controls, British Columbia and Saskatchewan passed enabling legislation to regulate consumer credit, but by the end of 1947 it had not been implemented. Quebec, however, passed specific legislation providing minimum payment of 15% down and specifying 6 months to pay when the sale was less than $50 and up to 24 months if $800, ceiling for the legislation. It became effective Aug. 15. (C. Cy.)

## Contract Bridge.

The popularity of contract bridge continued to increase in 1947, although the principal analysts and teachers of the game expected the upward trend to pause for a levelling-off period. The original contract bridge fad, which began in 1929, reached a peak in 1932, then gradually declined year by year until 1940. Then in 1941 the game suddenly became more popular than ever before. Each succeeding year saw another increase in the sales of bridge instruction books and playing cards, and in attendance at bridge tournaments. A poll taken by the American Institute of Public Opinion late in 1947 showed bridge to be the favourite card game of people of the U.S.,—especially those with high school education or better.

The principal tournament winners of 1947 in the championship contests of the American Contract Bridge league were: Charles J. Solomon of Philadelphia, Pa., masters' individual champion; Allen Harvey of Louisville, Ky., and Frank Weisbach of New York city, masters' pair champions; Waldemar von Zedtwitz, Lee Hazen, B. Jay Becker and Mrs. Helen Sobel of New York city and Charles H. Goren of Philadelphia, masters' team-of-four champions. (A "team of four" often has five members, so that each may have an occasional rest period.) Goren won the trophy awarded annually by William E. McKenney to the player with the best tournament record of the year.

At the end of 1947 McKenney retired as executive secretary of the American Contract Bridge league, and was elected honorary secretary by the members. He had been active in the league for 20 years, in which time its membership had grown from a few hundred to nearly 20,000.

There was no international competition with Europe, but early in the year a team composed of Mrs. Sobel and Goren, Becker and Sidney Silodor of Philadelphia, visited Brazil and played nine matches against teams in Rio de Janeiro and São Paulo. The U.S. team won all the matches. A proposed match between U.S. and British teams for the Charles M. Schwab international trophy was not played.

In bridge rules, and in methods of bidding and play, there was little development during the year. The lawmaking committees met regularly, with a view to replacing the 1943 U.S. laws and the 1935 international code used by British and European players with a 1948 international code to be issued late in the year. The Culbertson system of bidding had not been changed after 1941.

New trends included the variant (short contract) in which one plays four deals and then changes partners, instead of scoring by rubbers. On the first deal, neither side is vulnerable; the second and third deals, dealer's side only is vulnerable; the last deal, both sides are vulnerable. A deal passed out redealt by the same dealer. For making game, in one or mo deals, a side receives a bonus of 300 if not vulnerable and 500 vulnerable. A side making a part score on the fourth deal ceives a bonus of 100. Other scoring is as in regular bridg Oswald Jacoby was one of several authorities who express the opinion that this form of scoring would eventually repla rubber scoring. It was possible that elimination of the rubb which dated from 1683 or before, would be the next princip development in the history of a game that had progress from 16th-century *triomphe* (trump) through whist, brid whist and auction bridge. (E. Cul.; A. H. Md.)

**Great Britain and Europe.**—The increasing popularity the game during 1947 was evident from the fact that more th 900 teams competed in a new contest organized by the *Lond Sunday Times,* while 300 teams competed weekly in Glasgo Scotland, in regional league events.

In January an English team consisting of Ewart Kemps (captain), Graham Mathieson, Kenneth Konstam, L. Dodds a Edward Rayne paid a goodwill visit to Egypt and defeated t all-Egypt team.

In May the British Bridge league sent a team to Icela consisting of Harrison Gray (captain), S. J. Simon, Kempso J. O. Hastie and Jack Marx. The Icelandic players, with o local experience, deservedly won the first match but lost t remaining six matches.

In July an English team consisting of G. G. J. Walshe (ca tain), Konstam, Rayne, Mrs. Fleming and Mrs. Marcus w the international contest at Deauville, France.

(E. Kn.)

## Co-operative Movement.

Taxation of U.S. co-operativ became a lively issue in 19 with hearings before the house small business and ways a means committees to determine whether the groups had in fa escaped their fair share of federal income taxes. In a numb of state legislatures—Kansas, Wisconsin, Maryland, No Carolina, Ohio, Missouri, North Dakota—bills were introduc adversely affecting co-operatives. Some were based on t assumption that co-operatives were escaping tax obligations, b others had nothing to do with taxes.

Farm marketing and purchasing co-operatives were the pr cipal target of the attacks, especially the Farmers Union Gra Terminal association, Consumers Co-operative Association Kansas City with a network of oil wells, refineries and pipe lin and the Ohio Farm Bureau Co-operative association, with f tilizer plants and three insurance companies.

Rural electrical co-ops suffered through attacks on the app priations of the Rural Electric administration, and th were attempts to liquidate the 13 national banks for operatives.

Co-operative leaders called to testify on the subject concec that federal statute permitted farm co-operatives to qualify exemption from federal income tax by meeting certain requi ments, conceded that about 50% of farm co-operatives qualifi under the statute and paid no federal income tax but argued t the restrictions were so stringent that qualifying co-ops wo be truly nonprofit.

With respect to trading surpluses, they explained the tra tional co-operative business procedure: co-ops commonly cha the same retail price as competitors, return surplus money members at the end of the year in the form of rebates patronage refunds. The money returned to members on th dealings is not profit to the co-operative, co-op leaders argu but savings on the members' purchases. Surplus accumulated on business with nonmembers was recognized as profit to the co-operative and uniformly taxed as income.

The other significant development in 1947 was the increased interest of labour unions in consumer co-operation. The rising cost of living set union members and officers to looking for methods of holding prices down. In July the American Federation of Labor announced its conclusion that competition was not effective in lowering prices; manufacturers, it asserted, were cutting back production rather than lowering prices, thus controverting the theory on which abandonment of price controls had been based. The federation urged its members to join co-ops and help organize new ones.

Meanwhile, the United Automobile Workers (C.I.O.) was encouraging the organizations of co-operatives in various Michigan cities—Detroit, Pontiac, Lansing, Flint. Several co-op organizers were hired in Michigan, and in each city other community groups were invited to take part. Shares were sold, co-op-labelled merchandise was sampled and the slow process of organization was well under way by Labor day.

In September, however, new increases in food prices made union members impatient for immediate action. Spontaneously, in a number of union locals, plans were announced for direct distribution of groceries through union purchasing from wholesalers and nonprofit distribution to members. During September and October, projects of this kind were announced by a wide variety of U.S. unions.

Co-op leaders were aware that this sort of union program in itself offered little of permanent value but might be converted into a genuine co-operative program, giving the urban co-operatives strength they had long lacked in the United States. Consultations between union and co-op officers resulted in plans for converting the union food-distribution efforts into co-op stores; co-op shares were sold along with food, and community-wide membership campaigns were intensified.

Membership of farm marketing co-ops was estimated at 3,500,000, rural electrical co-ops at 2,000,000, credit unions 3,000,000, consumer co-ops (the majority farm purchasing co-ops organized on consumer principles) 1,500,000. (*See* also TAXATION.) (R. Gs.)

**Copper.** The production of copper in the major producing countries for the years 1941–46, and the estimated world total, is shown in Table I.

After reaching a peak in 1942 and 1943, world production sagged 7% in 1944, 12% in 1945, and 15% in 1946, to an estimated 2,050,000 short tons, the smallest output reported since 1936. Although Northern Rhodesia showed a drop of only 6%, all of the other major producers had declines in the vicinity of 20%.

**United States.**—The more important features of the copper industry in the United States are presented below in Table II, while the mine output by states is shown in Table III.

Continued demand after the close of World War II kept copper consumption at only a little below the war rate, while production dropped steadily, and in 1946 was 44% below the 1943 peak. Much of the 1946 decline resulted from difficulties connected with labour and reconversion, many of which were national in extent, rather than inherent to the copper industry itself.

The production rate improved materially in 1947, with a mine total of 712,054 short tons through Oct., against 608,737 tons in the full year 1946.

**Canada.**—Primary copper output declined from 237,457 short tons in 1945 to 183,968 tons in 1946, but revived to 225,294 tons in 1947.

**Chile.**—Demand from the United States pushed the copper output from 398,000 short tons in 1946 to 305,700 tons in the first eight months of 1947.

**Northern Rhodesia.**—Production was 204,500 short tons in 1946 and 138,800 tons in the first eight months of 1947. (*See* also MINERAL AND METAL PRODUCTION AND PRICES; STRATEGIC MINERAL SUPPLIES.) (G. A. Ro.)

**Copra:** *see* COCONUTS.

**Copyright.** Interest in the field of copyright during 1947 centred on three aspects: international copyright problems, new legislation affecting copyright and the reaching of an all-time high in registrations.

Highlighting the field of international copyright was the transmittal to the senate on July 17, 1947, by the president of the United States, of the Inter-American Convention on the Rights of the Author in Literary, Scientific and Artistic Works, with a

favourable recommendation for ratification.

Presidential proclamations were issued extending indefinitely the time for securing ad interim copyright and renewal of copyright by nationals and citizens of France and New Zealand. The proclamation for France was dated March 27, 1947, and for New Zealand, April 24, 1947.

A number of peace treaties containing clauses on copyright, and keeping in force or reviving copyright arrangements in effect with several foreign countries prior to World War II, were under consideration. The United Nations Educational, Scientific, and Cultural Organization had included copyright as one of the subjects coming within the scope of its activities.

On July 30, 1947, Title 17 of the U.S. code, "Copyright," became public law 281. This act codifies the existing law without substantive change. New legislation on copyright was introduced in congress covering textile fabrics design (H.R. 2860), acoustic recordings (H.R. 1270), coin operated machines (H.R. 1269 and H.R. 2570), and increasing fees in connection with copyright registration (H.R. 4052), but final action was not taken during 1947.

Copyright registrations during fiscal 1947 reached an all time high of 230,215, a 14% increase over fiscal 1946, the previous year of highest registrations. Domestic books, pamphlets, musical compositions, periodicals and newspapers, and commercial prints and labels accounted for 82% of the increase. It was believed that both domestic and foreign registrations had not yet reached their normal peacetime volume due to continued paper shortages and disturbed conditions abroad. The desire to maintain copyright protection after the original 28-year registration period expires had increased to the point where more than 13,000 renewal registrations were made during fiscal 1947.

(A. FI.)

## Cori, Carl Ferdinand

(1896– ), U.S. biochemist, was born on Dec. 5 in Prague (then in Austria-Hungary), son of a zoology professor. In 1914, he entered the German university at Prague where he met Gerty Theresa Radnitz. They studied chemistry in the same class and were married a few months after they were graduated together in 1920 with M.D. degrees.

Emigrating to the U.S. in 1922 (they became naturalized citizens in 1928), the Coris gave up medicine to work in biochemical research. Carl Cori was associated with the New York State Institute for the Study of Malignant Diseases in Buffalo, N.Y., from 1922–31 when they left for St. Louis, Mo., where Carl Cori joined the Washington University School of Medicine as professor of pharmacology and biochemistry.

At Washington university, the Coris collaborated in a study of the conversion of carbohydrates and starch in the human body into blood and tissue substances, winning numerous awards from national scientific societies.

On Oct. 23, 1947, the Nobel committee in Stockholm announced that the Nobel prize in medicine was awarded jointly to the Coris and to Bernardo A. Houssay, Argentine scientist. The citation to the Coris said their award was "for the discovery of the process in the catalytic metabolism of the glycogen" of animal starch.

## Cori, Gerty Theresa

(1896– ), U.S. biochemist, was born on Aug. 15 in Prague (then in Austria-Hungary). She studied at the German university in Prague, where she met Carl Cori, and shortly after graduating in 1920 with an M.D. degree, she married him.

Mrs. Cori was an assistant in the Children's hospital in Vienna from 1920–22 when she emigrated with her husband to the U.S. From 1922–25, she was an assistant pathologist and from 1925–31 an assistant biochemist at the New York S Institute for the Study of Malignant Diseases in Buffalo.

In 1931, the Coris were given simultaneous appointments the Washington University School of Medicine in St. Lo Mo., with Mrs. Cori serving as fellow and research associat pharmacology and biochemistry; she became full research p fessor in biochemistry in 1947.

Carl and Gerty Cori jointly shared the Nobel prize for me cine in 1947 with Bernardo A. Houssay of Argentina. The C were the third husband-and-wife team to share a Nobel scie award; the others were Pierre and Marie Curie (1903) Frédéric and Irène Joliot-Curie (1935).

## Corn

(MAIZE). The corn crop of the United States decline 1947 in acreage, yield and total production. The t crop was estimated at 2,400,952,000 bu., compared with 3,2 950,000 bu. in 1946 and an average of 2,639,100,000 bu. 1936–45. Unfavourable weather delayed planting, although a age was within 2% of the amount farmers had declared they tended to plant—83,981,000 ac. compared with 88,489,000 harvested in 1946 and 90,083,000 ac. average during 1936– Midsummer dry weather damaged the quality of the crop, dry weather in September matured the late corn so that the f damage was not as large as expected. The amount of "soft," immature corn was estimated at only a small amount in Ohi

Average yield, 28.6 bu. per acre, was near the ten-year a age of 29.4 bu. but below the 36.7 bu. average of 1946. In corn belt the yield per acre dropped sharply below the rec of 1946. The best yields were harvested in the southeas states. Hybrid seed was used on about 71% of the total a and 93% in the corn belt.

The price of corn in Jan. 1947 was $1.21 to producers, about ten cents per bushel above a year earlier. It began to vance in March, however, and by September had reached a ord $2.40. It then held at about $2.37 through December.

The world's corn crop was estimated at 4,755,000,000 about the same as before World War II but 12% less than record production of 1946. The decline was chiefly in the Un States. Danubian crops were better than in 1946 but were low the prewar average. The crop in Europe as a whole 68% above the small 1946 crop. (*See* also VEGETABLES.)

## Cornell University.

An institution of higher learning, sectarian and coeducational, at Ith N.Y., founded in 1865 and incorporated as a land-grant co under the Morrill act of 1862. The university comprises endowed schools and colleges of arts and sciences, enginee architecture, law, medicine and nursing, and the state-supported schools and colleges of agriculture, home economics, veterinary medicine and industrial and labour relations. There are also schools of education, nutrition and business and public administration. Degrees for advanced study other than professional are awarded through a graduate school. The divisions of medicine and nursing are in New York city and are operated in conjunction with the New York hospital. Two experiment stations, at Geneva and Farmingdale, N.Y., are operated in connection with the college of agriculture. The university also operates the Cornell Aeronautical laboratory in Buffalo.

A new administration building and Savage hall for the school of nutrition were completed during 1947. Construction was begun on a building for the Laboratory of Nuclear Studies, to house a synchrotron provided by the navy department and other facilities for research and advanced instruction. The Francis Norwood Bard professorship of metallurgical engineering, with an endowment of $250,000, was established, and a new curriculum in metallurgical engineering inaugurated in the school of chemical and metallurgical engineering. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* UNIVERSITIES AND COLLEGES.) (E. E. D.)

## Costa Rica.

A Central American republic, located between Nicaragua and Panamá. Area, approximately 19,238 sq.mi.; pop. (off. est. Dec. 31, 1946), 771,503, classified as about 80% white, 16% mixed, 3% Negro, less than 1% Indian. The major portion of the population lives on the central plateau. The capital is San José (pop. 1946, 83,242); other principal cities are Alajuela (11,177), Cartago (13,888), Heredia (11,382), Liberia (4,346), Limón (10,656), and Puntarenas (9,466). Language: Spanish. President in 1947: Teodoro Picado Michalski.

**History.**—Events during 1947 centred on the campaign for the presidential election scheduled for Feb. 1948. Party lines were drawn when the four opposition parties selected Otilio Ulate, San José publisher, in February as their candidate, and the National Republican party in March nominated the former president Rafael Angel García Calderón.

The campaign was fraught with street-fighting, accusation exchanges, and a 15-day general strike engineered by the opposition. The strike, allegedly in protest against official infringement on political rights, tied up transportation and commercial operations, led to clashes which killed 5 and injured 59 persons and caused food shortages resulting in some sacking of markets in San José. The opposition partisans blamed the government for the dollar shortage, high prices of imported goods and failure to maintain neutrality during the presidential campaign. President Picado, given a vote of confidence by his cabinet in July, promised the election would be free and honest, but declared the strike an illegal attempt to overthrow the government. Several radio stations were ordered to cease operations, but the press remained officially free.

The strike ended Aug. 5, when the government promised indemnities to casualties, declared a general amnesty, granted suffrage rights to public employees and enacted some emergency relief measures, including a three-months' moratorium on rent payments. On Aug. 26, congress changed the electoral law to allow separate balloting for president, congressmen and mayors. In October, President Picado urged natives of other Central American countries resident in Costa Rica to exercise their legal voting privilege in the February election. Sporadic political clashes continued throughout the year.

On the economic scene inflationary tendencies continued. The general index of wholesale prices (100 in 1936 and 222 in Dec. 1945) reached 239 by the end of June 1947.

Costa Rica refused to accord recognition to the new government in Nicaragua, but moved toward closer collaboration with the Central American union movement by joining with Guatemala in April to suppress passport requirements affecting citizens of the two countries.

**Education.**—At the close of 1946 there were 868 elementary schools with 3,808 teachers and 77,300 pupils. Intermediate public education was offered in all the provinces, enrolment totalling 4,101. There were 9,277 in private schools. The National university had 907 students and 180 professors in 1945. As of Jan. 1, 1947, there were 73 motion picture theatres with a total seating capacity of 40,549. Government appropriations for education in 1947 were increased by more than 3,000,000 colones, largely to cover increased rates in teaching salaries.

**Finance.**—The monetary unit is the colón, valued officially on Aug. 29, 1947, at 17.64 cents U.S. The 1946 budget (expenditures: 78,726,614 colones; revenues: 62,922,712) was carried over through July 1947, and funds provided for the last five months amounted to approximately 40,000,000 colones. As of Sept. 30, the National bank held $2,019,000 U.S. in gold and $2,036,000 in foreign exchange, while commercial banks held $2,458,000 in foreign exchange. Currency in circulation remained steady during the year, around 75,000,000 colones.

**Trade and Communications.**—Exports in 1946 amounted to $14,337,272 U.S. ($11,611,709 in 1945) while imports were valued at $33,041,135 ($26,948,735 in 1945), the U.S. supplying 77% and receiving 74% of the trade. Chief exports were coffee (45.5%), bananas (30.6%) and cacao (5.5%). Preliminary production forecast for coffee during the 1947–48 crop year was 450,000 bags of 60 kg. each (355,000 bags in 1946–47). Banana exports during the first 6 months of 1947 (3,204,943 stems) were up 28% over the first half of 1946, and the exportable production of cacao for 1947 was estimated at 9,000,000 lb. (8,800,000 lb. in 1946).

Railways totalled about 450 mi. and improved highways 771 mi. in 1941. In 1946 the air lines transported 103,573 passengers and 8,200,000 lb. of cargo. As of Dec. 31, 1946, there were 2,800 automobiles, 600 buses and 1,300 trucks registered in the country. Air service continued to expand during 1947, but rail service bogged down under increased demands, causing temporary congestion in the harbours.

## Cotton.

**Cotton Manufacture.**—"Cottonless Cotton Mill" was the headline of the year in 1947 in the cotton-textile industry. It introduced a description of a cotton mill in the southern part of the United States which does not process any cotton at all, but instead uses various synthetic fibres, as well as such natural fibres as wool, ramie and animal hairs. It is not a new thought to students of the industry, but it is new to a large part of the public and to many cotton manufacturers themselves.

Meanwhile, the cotton-textile industry—no matter what it processed—continued in 1947 to operate at a record high level of production and yet to fall far short of the world demands made upon it.

Cotton manufacture had experienced its longest period of sustained activity in 1937–47. The result of this situation was noted at the major meeting of the industry in the fall of 1947. It was stated that the industry would enter the year 1948 with unprecedented financial strength; also that earnings were being plowed back into corporate investment for purposes of re-equipment, modernization of methods and research. The necessity for such action grew out of the paucity of new machinery for a period of six years, including the war and immediate post-war periods.

Despite the threats to cotton from synthetic fibres, the demand for clothing all over the world was so great that the cotton-manufacturing industry in the United States operated in 1947 at least 5% above the level of 1946 and would have been on an even higher level if it had been physically possible. Looking toward the future, the industry was financing and maintaining a Cotton Mills Industry-Wide Committee on Public Relations which was presenting the case of cotton, an age-old fibre of great usefulness, to the general public by means of all available and appropriate media. (*See* also LINEN AND FLAX; RAYON AND OTHER SYNTHETIC FIBRES; TEXTILE INDUSTRY; WOOL.)

(D. G. WO.)

**United States Production.**—The threat of cotton surpluses in the near future had disappeared with the successive small crops and the increase of domestic consumption and exports. The crop of 1947 was one-third larger than the 1946 product, which was the smallest since 1895 except for the one year, 1921. The 1947 crop was estimated on Dec. 1 at 11,694,000 bales of 500 lb. each by the United States department of agriculture, which was 33% above the small 1946 crop of 8,640,000 bales, but below the 12,390,000 bales average 1936–45. The 1947 crop was harvested from 21,387,000 ac. compared with 18,190,000 ac. harvested in 1946, which was one of the two smallest acreages since 1885. The 1947 goal was put at 23,000,000 ac. which was about one-half the area grown in 1929.

The average yield in 1947 was estimated at 265.4 lb. per acre compared with 235.3 lb. in 1946 and an average of 250.6 lb. 1936–45. The high record yield was 298.9 lb., produced in 1944. This high yield period is attributed to the turning of less productive cotton land to other uses. Every cotton-growing state had a larger production than in 1946 except South Carolina, Arkansas and Tennessee. Texas held first place but Mississippi regained second place after losing it to Arkansas in 1946. The crop of American Egyptian cotton dropped to only 1,000 bales compared with 2,500 bales in 1946 and 32,100 bales average 1936–45.

The supply of fertilizer was larger in 1947 and more was used. About one-half of the cotton acreage was fertilized in 1946 at the rate of 337 lb. per acre. This was below the acreage fertilized during the previous ten years, but the rate of use was higher.

The larger acreage being devoted to feed crops, which were high priced, was cited as the chief factor in holding cotton acreage to low levels. While the introduction of new machinery such as flame-throwing weed eradicators and cotton-picking machines was continuing, these were adaptable only on the better level cotton lands of the southwest. The cotton-farm labour supply was reported to be about the same as in 1946.

The price of cotton to growers advanced early in 1947 from about 30 cents per pound in January to a peak of 35.88 cents in July and then declined slowly to 34.06 cents in December. The season's average for the 1946–47 crop was 32.64 cents per pound to growers. At this price the 1947 cotton became more than a $2,000,000,000 crop for the first time in 30 years. The previous record was made in 1919 when the crop was valued at more than $2,000,000,000 and the average farm price was 35.34

| | | | | All Others . . . | 11 | 10 | 18 |

cents per pound. Receipts for 1947 were nearly 30% abo 1946 and about three times the 1935–39 prewar average. Whi prices declined in late 1947, parity advanced to the record more than 29 cents per pound in September.

Stocks of cotton began to decline in 1939 and continued shrink steadily through 1947. Although the crop of 1947 w one-third larger than that of 1946, the shrinkage in carry-ov brought the total supply down to about 15% below 1946. Carr over on Aug. 1, 1947, was 5,293,000 bales or about thr months' supply, compared with 9,869,000 bales a year earli and an average of more than 10,000,000 bales for the previo five years. The carry-over stocks had not been down to th low total since 1928. About one-half of the carry-over of U cotton was in foreign countries and comprised about one-thi of the world's total supply.

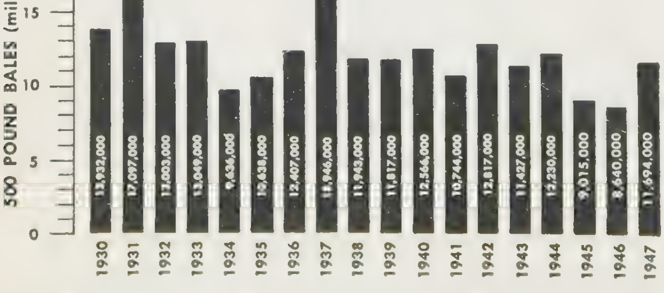
Exports of cotton reached a total of 3,502,000 bales on Au 1, 1946, almost the same as a year earlier but about twice t amount exported during the war years. In 1947 exports d clined and the total to be shipped was expected to be less th during the previous crop year unless the programs to aid Euro should stimulate foreign demand. Shipments to Japan and G many under credits extended by the Export-Import bank we begun late in 1947 and were expected to amount to nea 1,000,000 bales. The export subsidy was reduced from four cen per pound to one-half cent on Aug. 1, 1947. This put U.S. c ton in a less favourable position to compete with forei cottons.

**World Cotton Production.**—Total world production of c ton was estimated at 26,100,000 bales in the cotton year 194 48 or 21% above the small crop of 21,500,000 bales produc in 1946 which was largely caused by the small United Sta crop. Nearly all the increase in 1947 was caused by the larg crops of the United States and the Soviet Union. Some sm increases in production were reported for China, India a Argentina while the crops of Mexico, Brazil and Egypt w about the same as in 1946–47.

Cotton prices in most foreign countries were about the sa in 1947 as a year earlier and were more stable. The worl supply of cotton had declined from 1944 while consumption h increased even more rapidly, which resulted in a decline in t total carry-over to about 18,000,000 bales in 1946, compa with 26,487,000 bales in 1944. World mill consumption w about 26,000,000 bales in 1946–47.

Conditions were not yet favourable to any great expansi of cotton production in foreign countries because of the gr need for food grains and other crops. Disturbed conditions w retarding cotton growing in China, Egypt and India, which gether are the largest producers. Brazil had expanded prod tion to about the prewar average of 1935–39, which was abo 2,000,000 bales. No other country was an important produ except the Soviet Union, which reported only average prev production. The great developments announced by the soviet few years before, to be attained under irrigation in the area n the Caspian sea, had not materialized so far as reported.

**Cottonseed.**—The preliminary estimate of cottonseed p duction, which is made before ginning has been completed,



COTTON CROP in the United States. The figure for 1947 is the department of agriculture's estimate the 1947 output at 4,744,000 tons compared with 3,513,000 tons in 1946 and 5,143,000 tons average 1936–45. Texas produced 1,373,000 tons of the total followed by Mississippi and Arkansas. Prices of cottonseed rose in 1946 to more than $90 per ton in December and continued high through 1947 to $94.80 per ton in December. The short supply in 1946 combined with the strong demand for oils supported the high price. (J. C. Ms.)

**Cricket.** At the beginning of 1947 Australia won the "rubber" against England by 3 victories to 2 drawn games. England's bowling was the weakest ever to represent the country in Australia, and the side, under Walter Hammond's captaincy, never coalesced into a fighting machine. Don Bradman was still a great batsman and an astute captain and was well supported by a comparatively young Australian side, with S. Barnes and A. Morris the leading batsmen and a remarkable variety of bowlers, of whom R. Lindwall and K. R. Miller were really fast.

In the English summer of 1947 the South African tour won universal popularity. Their captain, Alan Melville, and B. Mitchell and A. D. Nourse had to carry too heavy a burden in batting, and the bowling proved inadequate. The first test match was drawn; the second, memorable for Denis Compton and W. J. Edrich reaching a record of 370 runs for the third wicket, was won by England, as were the third and fourth; but in the last match, which was drawn, South Africa enjoyed a consolation that approached a triumph: set to make 451 runs in the last innings, they had reached 423 for 7 wickets when stumps were drawn, Mitchell having batted for 13 hours for 120 and 189 not out. Alan Melville not only led the South African side ably but achieved a test match record by following up his century in the last innings against the English touring side of 1938 with centuries in his first three test match innings in 1947. England was hardly a convincing side, for, apart from D. Wright, its bowling lacked penetration, its fielding was uneven and the batting relied too much on Compton and Edrich. These two players both had a wonderful season: both exceeded the previous record aggregate (2,518 runs by T. W. Hayward in 1902), and Compton beat Jack Hobbs's record of centuries (16) in a season: splendid fielders and more than useful bowlers, they were in themselves half a side; inasmuch as their county, Middlesex, could reinforce them with variety in attack, great batting strength and an astute captain in R. W. V. Robins, it was not surprising to see them champions for the first time after P. F. Warner's captaincy in 1921. But Gloucestershire pressed them hard and in T. W. Goddard had the most successful bowler of the year.

The Gentlemen *v.* Players match, though drawn, was memorable for an innings of 162 by the New Zealand and Oxford university cricketer, M. P. Donnelly, which was acknowledged to be historic. Although Oxford was leading by 256 on the first innings, the match between Oxford and Cambridge universities was drawn. Eton and Harrow also played a drawn match.

At the close of the year an All-India team had begun, for the first time, a tour in Australia. In November Don Bradman scored his 100th century in first-class cricket. He was the first Australian cricketer to achieve this. (H. S. A.)

**Crime.** United States.—Postwar crime continued to climb in the rural areas during 1947 but showed a very slight decline in the cities. Latest available data for the first half of 1947, compared with the similar period in 1946, are shown in Table I.

Table I.—*Crime in 1946 and 1947 in 2,085 U.S. Cities*
*(Total population, 65,537,365)*

| Offense classification | January to June 1946 | January to June 1947 | Per Cent Change in 1947 |
|---|---|---|---|
| Murder and nonnegligent manslaughter | 2,005 | 1,876 | − 6.4 |
| Manslaughter by negligence | 1,496 | 1,334 | −10.8 |
| Rape | 3,850 | 3,984 | + 3.5 |
| Robbery | 19,824 | 20,124 | + 1.5 |
| Aggravated assault | 20,950 | 21,514 | + 2.7 |
| Burglary (breaking or entering) | 115,906 | 118,361 | + 2.1 |
| Larceny (theft) | 268,761 | 271,829 | + 1.1 |
| Auto theft | 80,043 | 62,220 | −22.3 |
| Totals | 512,835 | 501,242 | |

While the marked decline in the number of auto thefts was the only outstandingly favourable feature in this comparison, the drop in murders and manslaughters was also substantial. And whereas the sharp general upturn noted for the first half of 1946 over 1945 had led to fears in some quarters that the postwar crime level was destined ultimately for record-breaking levels, latest figures uniformly showed either a pronounced slowdown in the rate of increase or a complete reversal. Most heartening, of course, was the record of auto thefts which had risen by 19.6% in 1945–46, only to turn down so sharply in 1947 as to wipe out the earlier postwar gain. Nevertheless, the long-term trend was certainly upward for rape and aggravated assault (use of weapons). As to these crimes, the record for entire years 1939–46, inclusive, had shown net increases of almost 50%. Crimes against property rose only between 5% and 20% after 1939, and while as to these the postwar bulge would bear watching, it was still much too early to conclude that the new levels would be mantained for very long.

As noted above, rural crime trends were definitely higher, but in other respects were comparable with urban data—particularly in the sharp declines recorded in 1947 with respect to auto theft, murder and manslaughter. But the standards of crime reporting by sheriffs and constables were so strikingly inferior to those generally observed by city police that the rural crime data could not be viewed as more than very rough indices to the true situation.

As in prior years, the number of crimes per 100,000 population was generally highest in the larger cities, although 1947 showed cities in the 50,000–100,000 population bracket with the highest average rate for aggravated assault.

Viewed regionally, the south Atlantic and east central divisions showed 1947 declines in robberies, while other parts of the country registered a rise. Burglaries declined in the middle Atlantic and east north central divisions although the national trend for these also was upward. Most other regions showed similar improvement, but it was rather strikingly evident that the most favourable trends were in the southern states, with the mountain and Pacific states continuing to show fairly consistent increases in their crime rates. These regions led the rest of the country in crime rates—the southern states in crimes against the person (murder, manslaughter and aggravated assault) and the Pacific states in crimes against property (robbery, burglary, auto theft and other larcenies).

Distribution of highest crime rates among the individual states showed several marked departures from these broad regional patterns. Thus while the highest urban rates for murder were recorded in Georgia (13.22), for aggravated assault in North Carolina (245.1) and for robbery in California (95.5)—thus conforming to regional distribution—Florida led the country in burglary (517.2), Arizona in auto theft (235.2) and Nevada in other larceny (1487.6).

Table II.—*Number of Crimes Per 100,000 Inhabitants in U.S. Cities, 1946–47*

| | January-June 1946 | July-December 1946 | January-June 1947 |
|---|---|---|---|
| Murder and nonnegligent manslaughter | 3.13 | 3.36 | 2.92 |
| Manslaughter by negligence | 2.26 | 2.44 | 2.04 |
| Rape | 5.84 | 6.28 | 6.12 |
| Robbery | 30.00 | 32.80 | 30.70 |
| Aggravated assault | 31.90 | 35.60 | 34.40 |
| Burglary | 197.60 | 202.00 | 203.20 |
| Larceny (theft) | 458.90 | 509.30 | 473.10 |
| Auto theft | 121.90 | 128.00 | 94.50 |

Semiannual rates for U.S. cities in general during the postwar period are shown in Table II.

Among 1947 robberies, those effected on the highway represented about five-eighths of the total, with another one-fifth directed against commercial houses. Residences, oil stations, chain stores and banks were next in order.

Nighttime burglaries represented more than four-fifths of the total of all breaks, with business premises heavily favoured over residences during these hours. Considerably more than half of all larcenies fell into the $5 to $50 category with thefts from autos (not including auto accessories) the most favoured object of such crimes. With auto accessories in second place among larcenies, and auto thefts standing in an entirely separate major category, it was apparent that crime and the motor car continued to be closely related in many ways.

Crimes involving theft averaged $168 per case, with auto thefts nationally leading in values ($733 average) and with robberies ($187) and burglaries ($131) next in line.

The decline in property recoveries which was noted in 1946 was continued into 1947 so far as stolen cars were concerned, but there was a gratifying upturn in other property recoveries in 1947, although still only 24% of the total value involved.

With the close of 1947 the *Uniform Crime Reports* completed 18 years of uninterrupted publication on a steadily expanding scale. All 412 U.S. cities of more than 25,000 population were contributing reports to the system. In addition, 633 cities from 10,000–25,000 and 2,123 other cities, villages and rural townships also were participating. These with various county, state and territorial agencies reached a grand total of 5,499. (*See* also Federal Bureau of Investigation; Juvenile Delinquency; Kidnapping; Law; Police; Secret Service, U.S.)

Bibliography.—Federal Bureau of Investigation, *Uniform Crime Reports* (semiannual bulletins) for 1946 and the first half of 1947; U.S. Bureau of the Census, *Judicial Criminal Statistics* (1945) and *Prisoners* (1945). (Br. S.)

**Great Britain.**—It was clear from the few official references that the upward trend in crime after 1938 had come to an end, although a wave of crimes of violence continued to give the authorities grave concern. The reasons for it were said to be the inability to trace older criminals during the war and the rise of a new generation, scarcity of goods encouraging black market transactions and the tendency to keep money and valuable possessions at home. The decline in crime, however, was most noticeable in London, where one in every ten public telephone calls to the police led to an arrest; shopbreaking crimes dropped by more than half, and fewer cars were stolen. Children roaming the London streets in gangs of three or four committed one in eight of the crimes tracked down by the police, and service deserters were responsible for 9% of them. More police supervision of lotteries and sweepstakes in London was ordered in view of increased illegalities. Police detection methods included considerable new developments in mobile radio by which a county police headquarters could keep in two-way speech contact with patrol cars all over its area. In Leeds the chief constable proposed street patrols of householders to help the police to detect winter crime.

Official figures of national crime for 1938–45 were presented to the house of commons and showed that nonindictable offens had decreased from 709,019 in 1938 to 297,438 in 1945; th crimes against the person had risen from 1,583 a year to 2,45 sexual offenses from 2,321 to 3,228; breaking and entering fro 10,814 to 21,260; and larceny from 56,092 cases to 75,9 (*See* also Prisons.) (P. Bn.)

## Cripps, Sir (Richard) Stafford

(1889– ), Briti statesman and lawy was born on April 24, the youngest son of the 1st Bar Parmoor. Educated at Winchester and University college, Lo don, he was admitted to the bar in 1913. He was knighted a appointed solicitor general in the Labour government in 19 and in 1931 was elected Labour member for East Bristol. O Jan. 25, 1939, Sir Stafford was expelled from the Labour par for attempting to create a popular front.

In June 1940 Winston Churchill appointed him ambassad to Moscow, where he completed the Anglo-Soviet pact. He r turned to London in Feb. 1942 to become lord privy seal, and March left for India to work out terms for independence. November he was appointed minister of aircraft productio and on Feb. 28, 1945, he was readmitted to the Labour par In the Labour government he was president of the board trade, July 1945 to Sept. 1947, minister for economic affa Sept. 29 to Nov. 13, when upon the sudden resignation of Hu Dalton (*q.v.*) he became chancellor of the exchequer, b retained general responsibility for economic affairs.

In winding up for the government in the two-day debate the state of the nation in August, Sir Stafford appealed for great effort by all the people, saying that only higher producti could bring relief to the country. In the house of commons Oct. 23, he spoke once again on the economic situation and a nounced cuts in capital expenditure in the import of food, a the need for even greater output, especially for export. O Nov. 17 he made his first speech in the house of commons chancellor in replying to the debate on Hugh Dalton's inter budget, when he stated he was in full agreement with predecessor's proposals.

## Cryolite.

The United States imported 11,424 short tons cryolite in 1946, as compared with 17,952 tons 1945. Exports decreased from 1,901 tons in 1945 to 1,299 to in 1946. Greenland is the only source of supply and exports a material that had previously been imported. The chief use cryolite is as a constituent of the bath for the electrolytic p duction of aluminum, with small amounts going into cerami abrasives and insecticides. (G. A. Ro.)

## Cuba.

A West Indian republic, including the island of t same name, the Isle of Pines, and other minor islan and keys. The area of the main island is 44,217 sq.mi. (Isle Pines, 1,180 sq.mi.); pop. (1943 census), 4,778,583 (1946 e 5,052,000); the density is 108.07 per sq.mi. Racial distributi is officially estimated at 75% white (of which about one-th is mulatto), 24% Negro and 1% Mongoloid (mostly Chines Almost 200,000 Spaniards reside in Cuba. The capital and ch port is Havana (officially, La Habana) with a pop. (1943 c sus) of 659,883. Other important cities (with 1943 census p unless otherwise indicated) are Santiago de Cuba (1946 e 152,000); Marianao (a Havana suburb, 120,163); Camag (1946 est., 87,009); Matanzas (54,844); Cienfuegos (52,91

Guantánamo (42,423); Cárdenas (37,059); Holguín (35,865); Manzanillo (36,295); Ciego de Ávila (23,802); Santa Clara (53,981); Pinar del Rio (1946 est., 63,461); Regla (23,037); Güines (22,669); Guanabacoa (30,287) and Placetas (19,693). Roman Catholicism is the predominant religion. President in 1947: Dr. Ramón Grau San Martín.

**History.**—The year 1947 was a turbulent one in Cuban affairs. A two-hour work stoppage on Jan. 21 by 10,000 Havana workers, protesting the high cost of living and food shortages, partially paralyzed the capital city. Rafael González Mónoz became the new foreign minister Feb. 1, replacing Alberto Inocente Álvarez. A second protest strike occurred Feb. 10 when Havana dock workers, as a gesture against Franco Spain, refused for 24 hours to unload a Spanish ship in Havana harbour. Workers in Baracoa (Oriente province) went out on a 24-hour general strike on Feb. 19 because of the government's failure to build a promised highway in that area. The Havana produce exchange, an alleged black market centre, was bombed March 29. On April 2, Havana police detained Carlos Duque Estrada, alleged revolutionist, for large dynamite thefts. On the same day Liberal Representative Manuel Cuevas Rivero was killed at Manzanillo, reputedly by a political foe. Felix Palau, an Auténtico party leader, was killed in Oriente province April 5 in a clash with communists. In an attempt to preserve order, Interior Minister Alfredo Pequeno thereupon suspended a meeting of the Cuban Confederation of Workers. The interior ministry three days later, after a series of clashes between the government and communist labour factions, some of which resulted in deaths, banned all political meetings which might cause disorder. Senate President Miguel Suárez Fernández resigned his office on April 15 because of dissension in the Auténtico party. His resignation was rejected by the senate in a stormy session on April 21, during the course of which the capitol was sprayed with machine gun bullets from a speeding car. The cabinet resigned on April 30 because of Pres. Grau's controversy with congress over economic conditions; Grau named a new Auténtico cabinet headed by Raul López del Castillo as premier.

The Havana mayor, Manuel Fernández, committed suicide May 5, allegedly because of difficulties in getting a new waterworks system for the city. Cuba on July 10 signed a cultural relations treaty with Mexico, at which time Pres. Grau was awarded a Mexican decoration. The government on July 29 sided with opponents of the communist officers of the Confederation of Workers, ousting the officers from their posts and from the labour headquarters. On Aug. 1, Sen. Eduardo Chibás, formerly the most vocal supporter of Pres. Grau, became head of a new opposition group, the Party of the Cuban People. The Cuban navy on Aug. 6 seized four U.S.-made war planes which had landed illegally in Cuba but refused to comment on their possible connection with a rumoured invasion of the Dominican Republic. The army on Sept. 15 crushed a police revolt in Havana; six were killed; four days later the government announced the arrest of 40 persons for alleged complicity in the police plot. On Sept. 21 the government reported the smashing of an opposition plot and seizure of 13 truckloads of munitions and arms near Havana. The government announced on Sept. 29 that an attempt to invade the Dominican Republic by forces opposed to Pres. Rafael Trujillo of that government had been foiled by Cuban seizure of its Cuban based military, naval and aviation elements. One of the leaders in the movement was allegedly the Cuban education minister, José Manuel Alemán, who resigned his post on Oct. 1, after the senate had passed a no-confidence vote, but who was promptly reappointed by Grau as a minister without portfolio. The Cuban supreme court on the same day ordered the release of the rank and file of the approximately 1,100 insurgents seized in the projected expedition. On Oct. 2 the army released 376 of the revolutionists and the supreme court ordered the freeing of 545 more. The court on Oct. 5 released 26 of the alleged leaders of the group on bail and freed the remaining members. Havana university and high school students on Oct. 13 called a two-day strike to protest the killing of a student during a demonstration against Minister Alemán. On Oct. 16, a former lieutenant accused Pres. Grau of being an organizer in the plot against the Dominican government. Authorities on Oct. 17 arrested more than 700 for participation in a four-hour communist-led strike protesting communist expulsion from labour federation posts. Havana police on Oct. 27 fired on bus employees demonstrating outside the communist newspaper *Hoy* against the arrest of communist labour leaders. (*See* also DOMINICAN REPUBLIC.)

CUBAN MILITIA searching for contraband arms in Aug. 1947, following reports of a planned invasion of the Dominican Republic from Cuba, by armed revolutionists. An expeditionary force was found and arrested in Cuba and their sizeable cache of arms seized, late in September

**Finance.**—The monetary unit is the peso, officially pegged at par with the U.S. dollar. Bank deposits May 31, 1947, were 599,600,000 pesos; loans and discounts on the same date were 245,300,000 pesos. The estimated holdings of gold and foreign exchange on June 30, including U.S. currency in Cuba but excluding balances held abroad by individuals, were $868,900,000. Wages and salaries paid during the first six months of 1947 by private industries totalled $280,939,100 as against $204,099,400 in the same period in 1946. Gold bullion holdings at the end of June were $270,000,000. The total peso issue as of the same date was 428,000,000; per capita circulation on May 31 was 88.39 pesos. National income from the record sugar crop during 1947, it was estimated, would reach $700,000,000, a figure greater than in any year except 1920; the 1936–41 average was $125,000,000. A cabinet decree March 13 froze monthly rentals of less than $25 as a partial answer to protests against inflation. The government during the year gradually relaxed wartime price controls.

**Trade and Communications.**—Exports for the first four months of 1947 were valued at $205,771,101, of which the United States took $164,257,421 or 79.8%; the comparable figure in 1946 was $132,299,158, of which $96,339,722 or 72.8% went to the U.S. Imports for the first four months of 1947 were $149,258,140, of which the U.S. supplied $126,063,747 or 84.4%; the corresponding figures for 1946 were $108,689,472, of which $76,305,431 or 70.2% were from the U.S. Sugar exports in the first six months of 1947 were about 2,600,000 long tons, including 2,298,421 tons of raw and 297,995 tons of refined sugar; of the refined sugar, all exports went to the U.S.; of the raw sugar, the U.S. took 1,676,711 tons, the United Kingdom 552,437 tons and Canada 52,621 tons. Molasses exports in the first six months of 1947 totalled almost 93,000,000 gal., representing 80,000,000 gal. of 1947 production and 13,000,000 gal. from the 1946 carry-over; of the total amount, the U.S. took 46,478,000 gal., the United Kingdom 37,730,000 gal. and Canada 5,145,000 gal. The estimated export of bananas in 1947 was 5,000,000 stems; the actual export in the first three months was 768,000 stems. Grapefruit shipments in 1947 totalled 4,900,000 lb. (or 56,495 crates), as against 46,000 crates in 1946 and a prewar average of 100,000 crates. Avocado exports in the first nine months of 1947 were 3,697,000 lb.; the 1939–41 average for the first nine months was 11,262,000 lb. Butter imports during the first seven months of 1947 were more than 1,000,000 lb. Imports of lumber during the same period totalled 26,493,498 board ft., of which yellow pine represented 92%; lumber imports during that period showed a 47% increase over the corresponding period in 1946. It was anticipated that heavy imports of potatoes would be necessary in the second half of 1947.

Exports of fresh pineapple during the first six months of 1947 were 88,000,000 lb. (same period in 1946: 111,000,000 lb.); canned pineapple exports in the same months of 1947 were 430,000 cases (same period in 1946: 500,000 cases). The pineapple trade showed a definite tendency to decline from the wartime boom conditions. Tobacco exports in 1946 were valued at $55,900,000, the highest figure in 16 years. Tobacco sales in 1947 tended to decline, chiefly because of the lack of foreign exchange in countries which normally bought the largest amounts of Cuban tobacco; much of that sold in 1947 was carry-over from 1946. Banana exports in 1946 totalled 4,076,000 stems, valued at $3,400,000. Candy exports during the same year were 34,565 metric tons, valued at more than $10,000,000 (1945: 23,458 metric tons, valued at $7,046,000); of the 1946 exports about 60% went to the U.S. Imports of wheat flour in 1946 were 264,000,000 lb., valued at $11,500,000; this was the second largest import item during the year. Corn imports in 1946 were 387,150 kg., of which 76% were from the U.S., 15% from the Dominican Republic and the remainder from Honduras. Imports of corn meal during the same year were 176,998 kg. (1945: 140,505 kg.), all of which came from the U.S.

Pres. Grau on May 8, 1947, lifted all duties on beef imports after 56 meatless days in Havana caused by lack of cattle shipments to market resulting from low prices. The sugar trade caused difficulties in 1947, although an agreement on Dec. 13, 1946, ended the long controversy between the government and producers caused by the government's seizure of the price differential on 250,000 long tons of sugar sold above the U.S. price and also by government sequestration of an increase in price offered by the Commodity Credit corporation. U.S. congressional legislation in the late spring of 1947, which Cuba interpreted as adversely affecting U.S. sugar policy toward the island, resulted in a Cuban decree on Aug. 22 setting a quota for U.S. industrial and agricultural imports into Cuba, as a means of retaliation. The government during the year reserved 300,000 Spanish long tons of the 1947 sugar crop for sale to other countries than the U.S. on a government-to-government basis.

On March 11 Cuba signed a civil airlines agreement with Peru. The Compañía Cubana de Aviación was given an Inter-American Safety council award in 1947 for its world record of flying 12 consecutive years without fatalities. Cuban aviation interests organized during the year, with government support, the Asociación de Transportadores Aéreos de Cuba, a group comparable to the Air Transport association of the U.S. A government commission left for the U.S. in July to buy freight vessels of 5,000 tons or less to expand the Cuban merchant marine.

**Agriculture.**—The 1947 sugar crop set a record of 6,448,320 short tons of raw sugar and 299,400,000 gal. of blackstrap molasses; total cane production during the season was 52,575,060 short tons. Of the huge sugar crop, about 4,300,000 short tons were scheduled to be shipped by Sept. 30 under a contract with the Commodity Credit corporation, and 1,400,000 tons were to be shipped in the last quarter of the year. The U.S. department of agriculture agreed on Oct. 15 to pay 4.9625 cents per lb. for the portion of the 1947 Cuban sugar crop sold in the U.S. Sugar cane acreage in 1947 was 2,850,000 but this figure was expected to drop at least 10% by the 1949 season. It was anticipated, however, that 1948 production would run from 5,800,000 to 6,000,000 short tons. It was reported in Cuba during the latter part of 1947 that 1948 sugar production quotas might be restricted if prospects for additional European sales did not improve. The industry faced the possibility of glutted markets inasmuch as the 1947 crop was about 9% higher than the record crops of 1925 and 1929. Tobacco production in 1945–46 was 84,700,000 lb., the largest in 20 years; production in 1946–47 declined to about 65,000,000 lb., and the continuance of marketing difficulties led to the report that the ministry of agriculture might restrict the 1947–48 crop to about 50% of the average for the preceding two years.

The estimate of cacoa production in 1946–47 was 6,000,000 lb., an increase of 20% from the 1944–46 average. The coffee crop in 1946–47 was estimated at 545,000 bags of 60 kg. (1945–46: 381,524 bags). Potato production in 1946–47 was 151,000,000 lb. (1945–46: 160,000,000 lb.). Production of henequen fibre in 1946 was 30,500,000 lb. (1945: 29,100,000 lb.). Production of processed fruits and vegetables in 1946 reached a record 111,000,000 lb. The 1946 corn crop was estimated at 375,000,000 lb. of shelled corn; this figure was almost exactly equal to the average estimated consumption of 376,000,000 lb. The government on Jan. 17, 1947, requisitioned 50% of all beef cattle as raisers refused to sell in any considerable quantities at the official price of eight cents per lb. on the hoof. On May 23 the government created an office of animal quarantine, aimed at protection against the hoof-and-mouth disease. Experiments with kenaf fibre, as a rival of jute, were conducted during 1947. Milk production was estimated in 1947 at 1,100,000,000 lb. (1946: 1,000,000,000 lb.); the number of dairy cattle decreased, however.

**Manufacturing.**—The nine leading chocolate manufacturers processed 3,650,000 lb. of cacao beans in the first half of 1947. The 1947 fruit and vegetable pack was between 30,000 and 35,000 short tons (1946: 50,000 tons), the decrease being attributed to a lower export demand for high-sugar-content products such as grated coconut and preserves. Beer production in the first six months of 1947 was 38,700,000 l. (same period in 1946: 40,500,000 l.); the decline was accounted for because of a shortage of allocated malt and production was expected to increase in the second half of 1947. Production of sea salt in 1946 was 125,183,240 lb. The building industry in 1947 lagged behind 1946 figures; Havana province building permits in the first seven months of 1947 were $11,434,629 (same period in 1946: $21,224,767). Nine kilometres of aqueduct were under construction for Havana at a cost of $3,217,984. A $6,000,000 flour mill was being planned for Havana. (*See* also WEST INDIES.)

**Curaçao.** A Netherlands colony of six West Indian islan off the Venezuelan coast near the mouth of La Maracaibo. The same name is given to one of the six islan Total area 403 sq.mi.; total population (1944 est.) 127,8 Three of the islands, about 40 mi. north of Venezuela, inclu Curaçao (210 sq.mi.; est. pop., 78,587), Bonaire (95 sq.m est. pop., 5,798) and Aruba (69 sq.mi.; est. pop., 39,318). T other three small islands which are in the Leeward group, abo 500 mi. northeast, include the southern part of St. Martin ( sq.mi.; est. pop., 1,877; the remainder of St. Martin belon to France), St. Eustatius (7 sq.mi.; est. pop., 1,092) and Sa (5 sq.mi.; est. pop., 1,194). The only important town is t colonial capital, Willemstad (est. pop., 36,000), on Curaç The chief racial elements, aside from native Curaçaoans, a English, Dutch and Venezuelans; the natives are largely Neg from 65% to 95% on the different islands. Dutch is the offic language but many of the inhabitants speak a patois known Papiamento, composed of Spanish, Dutch, English, Portugue Carib and native African words. Governor in 1947: Dr. Pie A. Kasteel.

**History.**—The colony continued to be greatly interested 1947 in the prospect of achieving greater autonomy, based Queen Wilhelmina's speech to the empire on Dec. 6, 1942. S members of the first and second chambers of the Netherlan arrived at Willemstad on Jan. 25 to repay the visit made by committee of the Curaçao legislative council to the Neth lands in mid-1946 and to discuss further plans for administ tive decentralization. The community council of Aruba cabl Queen Wilhelmina on its own behalf on Sept. 9 petitioning a larger degree of home rule. A government-sponsored Neth lands Antilles central tourist board was established at Wille stad on April 1; subordinate tourist committees were organiz on each of the three Leeward Islands.

**Education and Religion.**—About 18,000 pupils are enrolled in the schools in the colony. About 90% of the permanent population is Ron Catholic. The church operates 36 of the 52 schools. Catholics of Cura are organized as a political party which at times has controlled t thirds of the legislative seats. Protestant denominations on Curaçao Aruba joined in a united Protestant community with 5,930 members.

**Finance.**—The monetary unit is the guilder or florin of 100 Curaçao ce Curaçao currency was detached from Netherlands currency in 1943 a new coinage went into circulation in that year. The financial situat in the fall of 1947 was serious because of dollar shortages resulting fr the freezing of dollar exchange by the Bank of England. The Cura exchange office hence adopted a series of temporary relief measures September to conserve dollar exchange. Governor Kasteel went to Netherlands in mid-October to discuss the financial crisis and it announced on Oct. 20 that the Netherlands government would imm ately place $2,600,000 at the disposal of Curaçao; the home governm agreed to allot the colony $1,500,000 monthly for the remainder of year instead of the $1,300,000 it had received monthly until Aug. 19 A delegation including Governor Kasteel, Finance Minister Pieter Liefti and Finance Administrator Dr. H. J. M. Hoogeveen subsequently w to London for conferences with treasury and Bank of England offici The Curaçao chamber of commerce strongly urged disengagement of colony from the Anglo-Dutch monetary agreement.

**Trade and Communications.**—Imports for the first quarter of 1947 cluded: foodstuffs and beverages $3,547,868 (46% from the U.S.); goods $2,076,282 (71%); machinery and apparatus $909,852 (37 crude oil $14,763,409 (21.8%); miscellaneous $5,550,504 (41%). T United States trade with Curaçao in the first nine months of 1947 $53,375,000 as against $24,536,000 for the same period in 1946. Exp of refined petroleum products from Aruba in 1946 was 111,385,453 (1945: 105,815,228 bbl.). Of total 1946 petroleum product shipme North America took 57,537,736 bbl., Europe 34,904,954 bbl., So America 12,881,724 bbl.; U.S. military consumption was 5,512,345

Royal Dutch Airlines (K.L.M.) continued to expand its services 1947, including opening of the first direct flights from Curaçao to José, Costa Rica, on March 25. Air express to and from Curaçao creased 400% in 1947 and passenger traffic through the colony 1 The 1948 budget alloted 1,000,000 guilders (about $526,000) for bour improvements at Curaçao; the corresponding amount in the 1 budget was 100,000 guilders. Telephone service with the United Ki dom was opened April 8.

**Manufacturing.**—Crude oil runs to stills in 1946 were 122,877,759 (1945: 109,302,234 bbl.).

**Curling.** Utica, N.Y., dominated curling in the United States by sweeping all three finals in Grand National matches involving the Allen, Mitchell and Country club competitions. Utica No. 1, skippered by Roy E. Read, defeated Schenectady, N.Y., 22 to 9, for the Allen medal. Utica No. 2, ed by R. Ward Murray, defeated Lake Mahopac, 20 to 10 for the Mitchell medal, while Utica No. 1, skippered by Kenneth S. Hurd, downed Ardsley No. 1, 20–16, in the Country club match. Schenectady, directed by R. D. Thomson, dethroned the New York Caledonians as winners of the Gordon medal, 20 to 11. Ardsley No. 2 regained the Douglas medal after a two-year lapse by defeating Ardsley No. 1, 14 to 10. The Douglas winners were skippered by W. Barton Eddison, author of the same accomplishment in 1944. Utica No. 2 won the Stockton cup, and the Toronto Granite rink captured the McCrae bonspiel. (M. P. W.)

**Currency:** *see* COINAGE; EXCHANGE CONTROL AND EXCHANGE RATES. *See* also under various countries.

**Cycling.** The big world event in cycling for 1947 was the running of the six-day international bike race. Bill Anderson of Cleveland, O., and Stan Bransgrove, Melbourne, Austr., teamed to win the classic which was held at the Coliseum in Chicago, Ill. They travelled 1,996 mi. and 9 laps and gained 16 sprint points. Alf Letourneur of Los Angeles, Calif., and Bill Jacoby of Chicago did the same distance but gained only 26 sprint points. Only six of the ten starting teams finished, and the race ran for 107 hr.

Ted Smith, Buffalo, N.Y., national amateur champion in 1945, won a 25-mi. point race to take his second senior men's national championship for amateurs, winning by a single point. He covered the distance in 1 hr., 6 min., 29.8 sec. Jack Heid was second, representing Westwood, N.J.

Other titles and their 1947 winners were: world's professional, oseph Scherens, Belgium; middle-distance speed, Raoul Leueur, France; amateur speed, Reginald Harris, Great Britain; men's national amateur, junior, Joe Cirone, Fontana, Calif.; women's, Doris Travani, Detroit, Mich.

It was reported by the American Youth Hostel headquarters that membership had increased 60% over 1946; the sale of bicycles during the year exceeded that of the year 1900, when cycling enjoyed halcyon days. (T. J. D.)

**C.Y.O.:** *see* CATHOLIC ORGANIZATIONS FOR YOUTH.

**Cyprus.** British colony and island in the eastern Mediterranean lying south of Asia Minor and west of Syria. Area: 3,572 sq.mi.; pop. (1945 est.), 434,616. Chief towns: Nicosia (cap., 1931 pop. 25,507); Larnaca (11,715); Limasol (15,066); Famagusta (8,771). Languages: Greek and Turkish, the Greek-speaking element comprising about 80% of the total population. English is also widely understood. Religions: Christian (Autocephalous Orthodox Church of Cyprus) and Moslem. Executive authority is vested in a governor (appointed by the British crown) assisted by an executive council mainly official in composition. Governor: Lord Winster (appointed 1946).

**History.**—It was announced by the British government in Oct. 1946 that a consultative assembly was to be called together in Cyprus to consider the framing of constitutional reforms, including the re-establishment of a legislative council. Steps to bring such an assembly into being were duly taken in 1947. In Oct. the governor published a statement to the effect that he had asked the chairman to convoke a meeting of the assembly at the earliest convenient date, despite the fact that the majority of those invited to serve had declined the invitation (the exceptions, *i.e.*, those willing to serve, included the Turkish representatives as well as the mayors of the four principal towns). The old agitation for "Enosis," or union with Greece, was active throughout the year among the Greek-speaking population of the colony. Apart from questions of "higher politics," substantial progress was made in Cyprus during the year both in the development of economic projects and in the expansion of local government in the districts. Of the various large development schemes sanctioned in 1947 under the Colonial Development and Welfare act, one was a grant of £20,800 for the provision of improved access to St. Hilarion castle and Bellapais abbey.

**Finance and Trade.**—The gold sovereign is legal tender in Cyprus, but for normal purposes the local unit of currency is the piastre. It is linked to sterling (£1 = 180 piastres). Revenue (1946) £4,358,000; expenditure £3,938,000. Imports (1946) £8,138,000; exports £4,202,000. The most important natural resources of Cyprus are agricultural. Carobs (used mainly in the manufacture of cattle food) furnish the leading agricultural export. The island is also rich in minerals, of which cupriferous pyrites represent the largest and most valuable deposit. Apart from carobs and metalliferous ores, exports of the colony's produce include fruit, vegetables (mainly potatoes), asbestos and wool. (J. E. SH.)

**Czechoslovakia.** An independent republic of central Europe. Area: 49,353 sq.mi.; pop. (est. Oct. 1947): 12,242,000. Chief towns (pop. est. May 1947): Prague (cap., 921,800); Brno (266,000) Moravská Ostrava (172,000); Bratislava (126,000); Plzeň (166,000). Language: Czech and Slovak; religion: mainly Roman Catholic. President: Dr. Eduard Beneš; prime minister: Klement Gottwald.

**History.**—In 1947 Czechoslovakia continued under a coalition government formed by four parties: Communist, strongest single party, to which Prime Minister Gottwald belonged; Social Democrat; National Socialist, a liberal centre-of-the-road party to which President Beneš belonged, and People's party, representing largely the Catholic element. By the end of the

LIDICE, Czechoslovakia, which was destroyed by nazis during World War II, is shown being rebuilt in 1947. Both women shown were survivors of German concentration camps

year the constituent assembly had not yet finished elaboration of the new constitution.

The incessant struggle between the communists on the one side and the three other parties on the other side continued throughout 1947. The communists endeavoured to bring Czechoslovakia more and more into line with the ideology and foreign policies of soviet Russia, while the other parties—though entirely faithful to the alliance with the U.S.S.R.—wished to retain the limited democratic liberties which still survived in 1947. Trade between Czechoslovakia and the democratic nations was so strong at the beginning of 1947 that the communists, alarmed, demanded a reorientation of the nation's foreign commerce.

While the German minority problem had been solved by expulsion of the more than 3,000,000 citizens of German descent, the Magyar minority problem in Slovakia remained unsolved because of the resistance of communist authorities in Hungary. Only a part of the Magyar minority in Slovakia could be transferred to Bohemia and Moravia and dispersed under the compulsory labour decree or exchanged for the Slovak minority in Hungary.

The principal nationality problem, relations between Czechs and Slovaks, had not yet found its solution by the end of 1947. The hanging of Mgr. Joseph Tiso, president of the independent Slovak republic from 1938 to 1945, on April 18 did not facilitate the reconciliation of the two Slav peoples. The elections in Slovakia had given a large majority to the Slovak Democratic party and had revealed much less communist strength than in the Czech parts of the republic. The national court in Prague, sitting in judgment over the members of the Czecho-Slovak cabinet of March 1939, sentenced former Premier Rudolf Beran and former Minister of Defense Gen. Jan Sýrový to 20 years of forced labour. The other defendants, Dr. Jiři Havelka, Dr. Otakar Fischer and Dr. Joseph Černy, were acquitted. The revolutionary system of people's courts was abolished in May, the country returned to the democratic system of judicial t and procedure.

The communists were resolved to undermine the majo held by the Democratic party in Slovakia by means simila those employed in Hungary against the Small Landhold Communist-controlled organizations of partisans and work demanded removal from the party of all "subversive elemen In Sept. 1947 a large number of influential Slovaks were rested under the suspicion of separatist tendencies and of nections with Slovaks abroad. Other arrests followed, and the end of October the communists had succeeded in forcin crisis in the Slovak regional administration, where four c munists faced eight democrats. They demanded appointmen representatives of nonparliamentary communist-contro bodies to the regional administration. The democratic pa resisted these demands with some success and the stru ended with a compromise which gave the communists a stro position in the administration. Meanwhile, Jan Ursiny, Slovak deputy prime minister in Prague, had resigned.

In possession of the key Czech ministries of the interior of information, the communists tried to influence cultural ac ties and education, although students were in the large majo anticommunist. They tried to suppress all criticism of U.S.S.R. while freely indulging in bitter attacks upon the Un States and democracy.

The democratic parties resisted, not without success, t attempts. On Nov. 5 the Nationalist Socialist party publish protest against attempts to replace the concepts of an i pendent state of free citizens. On Nov. 11 President Beneš manded a synthesis "between the necessary social co-ordina and the vitally indispensable need of disciplined individual dom." On Nov. 29 many members of parliament protested munist domination of the nationalized Czechoslovak film in try.

After accepting unanimously the invitation to the Paris conference on the Marshall plan, the government was forced by Russian pressure to reverse its decision. Reorientation of Czech trade from the west to the east, as demanded by the communists, was inaugurated by trade pacts with Poland and with the U.S.S.R. The treaty with Poland called for an exchange of Czechoslovak-manufactured products for Polish raw materials, amounting to 15,000,000,000 crowns over five years. At the beginning of December a five-year trade treaty was signed with the U.S.S.R., under which the latter promised to deliver 400,000 tons of wheat and rye by the end of April 1948. The goal of revision of the nation's trade balance was to shift 40% of its trade to other Slav nations, including 17% to the U.S.S.R., and a total of 50% to the eastern bloc, including Rumania and Hungary.

**Education.**—1945–46: primary schools 11,244, scholars 980,038; higher grade 1,952, scholars 400,963: secondary, classical and technical schools 268, scholars 98,091; industrial, commercial and vocational schools 1,383, scholars 298,977; teachers' training schools 62, scholars 6,603; colleges 12, students 27,336; universities (1946) Prague, students 19,798; Brno 7,181; Olomouc 1,057; Bratislava 9,380.

**Finance.**—Revenue (est. 1947) Kc.48,400,700,000; expenditure (est. 1947) Kc.73,304,933,000; bank notes in circulation (June 1947) Kc.44,393,000,000; public debt (June 1947) Kc.118,272,000,000; assets of national bank (gold and foreign exchange, Feb. 1947) Kc.5,769,000,000. Currency: the unit is the koruna ceskoslovenská (Kc.); = 2.066 U.S. cents.

**Trade and Communication.**—Foreign trade (1946): imports Kc.10,239,130,000; exports Kc.14,344,960,000. Railways open to traffic (1946) 8,154 mi.; locomotives 2,626; goods trucks 53,000; passenger coaches 8,853; roads (main) 22,770 mi., (secondary) 16,758 mi.; airways, miles flown 2,129,400, passengers carried 91,924. Inland waterways, freight transported 1,443,600 short tons.

**Industrial Production.**—Production (July 1946–June 1947) in short tons: bituminous coal 16,941,600; brown coal 22,885,369; iron ore 14,744,700; pig iron 13,644,000; ingots and castings 22,330,900; vehicles, etc. (numbers produced), railway engines 207, trucks 18,629, tractors 3,065, cars 6,967, bicycles 151,736, machine tools (Jan.–June 1947) 3,575, sewing machines 35,346. Textiles (Jan.–June 1947) in short tons: staple fibre 7,565; rayon 1,314; cotton yarn 31,277. Total employed in industry (Dec. 1946) 1,086,500. Unemployed (April 1947) 27,000.

**Agricultural Production.**—Harvest (1946), in short tons: wheat 1,350,104; rye 1,429,726; barley 840,759; oats 908,705; mixed corn 14,854; maize 194,029. Preliminary estimates for 1947: wheat and rye 2,716,400; other grain crops 2,141,180. Other production (1946) beef 132,200; pork 158,400; lard 32,400; butter 54,000; eggs (number) 747,722,000. Livestock population (1946): horses 648,552; cattle 4,142,867; pigs 2,362,151; sheep 570,319; goats 1,310,700.

**Dahomey:** *see* FRENCH OVERSEAS TERRITORIES.

**Dairy Industry, Bureau of:** *see* AGRICULTURAL RESEARCH ADMINISTRATION.

**Dairying.** Production of the dairy industry in the United States as measured by number of cows declined slightly in 1947 from the wartime peak attained in 1945 and was also somewhat below the output of 1946. The number of milk cows on farms Jan. 1, 1947, was estimated at 26,100,000 head, about 2% less than a year earlier; the number of replacement heifers was also about 3% less. Average production per milk cow was estimated at about 5,000 lb. U.S. consumption of fluid milk declined to 400 lb. per person in 1947 from the peak of 433 lb. in 1945, but was still above the pre-World War II average of 345 lb.

Production of butter, cheese and evaporated milk each increased in 1947. Exports of dairy products declined from the peak of 1944, when the equivalent of about 5% of the total U.S. milk supply was shipped to other countries. In 1945 and 1946 this proportion declined to about 4%. In 1946 exports took about 1% of butter, 17% of cheese, 30% evaporated milk, 31% condensed milk, 77% dried whole milk and 25% nonfat dry milk. Previous to 1947 about one-fourth of these shipments went to Great Britain, but in the first half of 1947 nearly one-half the exports went to Britain. British buying dropped sharply toward the end of the year, however.

The price of dairy products to farmers began to decline early in 1947. Milk averaged $4.96 per cwt. in January then declined to $3.78 per cwt. in July followed by an advance to $4.35 in September and $5.02 in December. Butterfat prices followed the same trend. At the same time the prices of feed advanced. (*See* also BUTTER; CHEESE; MILK.)

(J. C. Ms.)

**Dalton, (Edward) Hugh John Neale** (1887– ), British politician, was born on Aug. 26 at Neath, Glamorganshire, Wales, the son of the Reverend John Neale Dalton, canon of St. George's, Westminster, and was educated at Eton and King's college, Cambridge. He served on both the French and Italian fronts during World War I, and after the Armistice began practising law. After contesting four by-elections he was elected Labour member for the Peckham division in Oct. 1924. From 1929–31 and from 1935 onward he sat for the Bishop Auckland division. In Churchill's coalition government he was minister of economic warfare from 1940–42, and from 1942–45 president of the board of trade. When the Labour party was returned to power in July 1945, Dalton was appointed chancellor of the exchequer.

On Nov. 12, 1947, Hugh Dalton presented a supplementary budget, his fourth after taking office, which was designed to curtail spending, in which he announced taxes on totalizator bets on dog tracks and on football pool stakes, increases in purchase tax and profits tax, and in duty on beer, wines and spirits. The following day he apologized to the house of commons for "a grave indiscretion" in revealing details of his budget proposals to a newspaper correspondent. The newspaper published the information before he had made the announcement in the house. A few hours later it was announced that in view of this incident the chancellor had offered his resignation, which the prime minister felt it his duty to accept. Although Dalton had many critics, his sudden departure was regarded as a lamentable personal tragedy.

**Dams.** Food requirements and fuel shortages caused increased activity during 1947 in the construction of dams in connection with irrigation and hydroelectric power developments in various parts of the world.

The world's highest earthfill dam, Anderson Ranch dam in the United States, was practically complete in Sept. 1947. With a capacity of 500,000 ac.ft., it had already stored 130,000 ac.ft.

Foundation excavations at the Davis dam, under construction on the Colorado river 65 mi. below Hoover dam, disclosed a severely jointed rock foundation with numerous faults, necessitating design changes and relocation of the 225,000-kw. powerhouse, intake structure, and spillway. The design of the main embankment of the dam was not affected.

Awarding of the contract late in 1947 for the first stage of the Garrison dam on the Missouri river, launched the construction of the world's second largest dam, major element of the Missouri valley joint program of the U.S. army engineers and the U.S. bureau of reclamation. This stage of the work involved excavation of 6,000,000 cu.yd. of material from the foundations of the powerhouse and intake, and the placing of about 7,000,000 cu.yd. of embankment in the main dam.

The third stage of the Ross dam on the Skagit river was under construction during 1947 to raise the height of the dam to 545 ft., and increase its storage capacity to 1,400,000 ac.ft.

Dams for several combined flood control and hydroelectric projects were undertaken during 1947 by the U.S. army engineers, including Buggs Island dam on the Roanoke river in Vir-

ginia, Bull Shoals dam on the White river in Arkansas and Clark Hill dam on the Savannah river between Georgia and South Carolina.

In Colombia, the Anchicaya dam, a concrete arch dam 150 ft. high and 520 ft. long, was under construction during 1947 by the Central Hydroelectrica del Rio Anchicaya to produce 88,000 kw.

Stirling dam, Australia's largest and highest earth dam, was completed during 1947. Construction for irrigation purposes progressed during 1947 in Victoria, at Rocklands dam on the Glenelg river, at Cairn Curran dam on the Loddon river and in New South Wales, at five irrigation dams including Glenbaum dam on the Hunter river and Ballyrogan dam on the Lachlan river.

The Mingechaur dam, an earthfill dam 250 ft. high and 5,000 ft. long, on the Kura river in Transcaucasia, was reported to be under construction in 1947.

Europe's highest dam, a concrete structure 460 ft. high, was under construction in 1947 on the Non river in Northern Italy to provide hydroelectric power. On the Sarine river in Switzerland, construction of the 261-ft.-high Rossens dam was speed during 1947 to make available 60,000 kw. of hydroelectric pow

SIXTY-TON "SPIDER," part of the first generating unit to be put into service after the close of World War II, is shown being hauled into place by trailer at the Grand Coulee dam, Wash., in June 1947

In France, on the upper Rhône river, the Génissiat dam, se ond largest concrete dam in Europe, was being rapidly co pleted in 1947, to provide 400,000 kw. of hydroelectric pow Concrete placing proceeded at the rate of 1,200 cu.yd. per da attaining a maximum during one 24-hr. period of 3,500 cu.y L'Aigle dam, completed in 1947, and second of four dams to erected on the Dordogne river, was expected to provide abo 200,000 kw. of hydroelectric power, generating 400,000,0 kw.hr. annually.

At Solleftea, Sweden, a concrete dam and 55,000-kw. hyd electric plant on the Angerman river was completed duri 1947.

The table herewith lists 15 important dams of the world co pleted or under construction during 1947. (*See* also AQU DUCTS; IRRIGATION; TENNESSEE VALLEY AUTHORITY.)

(B. O. M.)

## Dance.

Although the dance still maintained the interest a enthusiasm of the general public in 1947, it distinct felt the tightening up of public spending. This meant few new works, smaller travelling companies and reduced numb of performances.

**United States.**—Ballet society continued to present n works, develop young artists and build an audience to supp a contemporary lyric theatre.

*Pastorella* presented at the Hunter College playhouse, N York city, in January was based on the Mexican play *I Pastores* and was choreographed by Lew Christensen to mu by Paul Bowles. On the same program Iris Mabry present two original solo dances, and Ratna Mohini, a Javanese danc made her U.S. debut.

In March at the Central High School of Needle Trades, N York city, three ballets were presented. A dramatic ballet *T Minotaur,* choreographed by John Taras, was set to music Elliott Carter. On the same program *Zodiac,* to contempora popular music by Rudi Revil, dealt with the movement a rhythm of the cheap dance hall as seen through the eyes the astrologer. Todd Bolender was choreographer and danc *Highland Fling,* a romantic ballet in three scenes by Bill Dol with music by Stanley Bate, combined the national folk danc with the classical ballet.

In May two more ballets were premiered. *The Seasons,* ballet in one act with choreography by Merce Cunningha used the idiom of the modern concert dance. John Cage's *T Seasons* was the musical background. *Black Face* on the sa program was set to the music of Carter Harman and chor graphed by Lew Christensen.

The Ballet Russe de Monte Carlo scored in its New Y seasons, its Mexican sojourns and its coast-to-coast tour. Alexandra Danilova, Fred Franklin, Natalie Krassovska, Leon Danielian, Mary Ellen Moylan and Ruthanna Boris danced leading roles.

Three new ballets were presented. Ruthanna Boris' *Cirque de Deux* to music by Charles Gounod was a charming novelty and made an instantaneous hit. A witty satire on the pas de deux, it drew on the circus for its setting and apparatus. Antonio Cobos choreographed *Madroños*, a ballet in the Spanish idiom, that turned out to be colourful, lively and pleasant, but without any special theme or depth. It was set to music by Moszkowski and Yradier. *Lola Montez* with choreography by Edward Caton, music by Fred Witt, was less successful. It was concerned with the romantic interlude of the famous dancer which took place when she was driven to the United States to escape a student uprising in Austria. *Virginia Sampler,* to music by Leo Smit and choreography by Valerie Bettis, was an experiment in blending modern dance technique with the traditional ballet. The theme was the struggle between tradition and progress which took place in the romantic Virginia Sampler of early Virginia.

Besides a country-wide tour, Ballet Theatre had its usual spring and fall seasons in New York city. To inaugurate its 1947–48 season it presented a new and highly successful classical ballet by George Balanchine to Peter Tchaikovsky's *Theme and Variations.* Decor was by Woodman Thompson.

A revival of *Princess Aurora* included the rose adagio, and both the pas de deux of the prince and the princess and that of the prince and the lilac fairy. Principal dancers for the season were Igor Youskevitch, Nora Kaye, Hugh Laing, Alicia Alonso and John Kriza.

Following the New York season the Original Ballet Russe opened at Covent Garden, London, in July, featuring Tatiana Riabouchinska and David Lichine. John Taras, Nicholas Orloff, Vladimir Dokoudovsky, Roman Jasinsky, Genevieve Moulin and Vania Psota danced leading roles.

Two new ballets, both by Boris Kniaseff, were presented. *Silver Birch,* to music by Tchaikovsky, was a lyrical story of a birch tree with whom the earth was in love. The other ballet *Piccoli* was a witty burlesque on marital infidelity, and was hilariously received.

In October the company opened a season at the Palais de Chaillot, Paris. After this the company recessed. Some of the U.S. dancers returned to their own country, but a nucleus remained with Col. W. de Basil.

In June the San Francisco ballet at Sigmund Stern's Grove presented *Coppelia* in three complete acts. In August at Stern's Grove it introduced *Dr. Pantalone,* music by Domenico Scarlatti, together with divertissements from *Nutcracker Suite* and a ballet set to Ludwig von Beethoven's *Sonata Pathétique.*

In November the San Francisco Civic Ballet association made its first appearance at the War Memorial opera house, San Francisco, with Alicia Markova and Anton Dolin as guest artists. *Mephisto* was presented to the San Francisco audience at a world premiere with choreography by Adolph Bolm. The following night the company gave another performance at the War Memorial opera house and presented *Parranda* set to Morton Gould's new *Symphonette.* Choreography for this ballet was by William Christensen. Other ballets given were *Lady of the Camellias, Pas de Deux* from the *Black Swan, Henry VIII, Fantasia* and *Giselle.*

Several small ballet companies made their appearance. Ruth Page and Bentley Stone formed a small touring ballet. Nana Gollnar and Paul Petroff organized a Ballet Intime for tour. Miriam Winslow, U.S. dancer, formed a company of six men and eight girls in South America which toured Argentina with the following repertoire: *Barn Dance, Valses Nobles et Sentimentales,* a new ballet based on Nathaniel Hawthorne's *Scarlet Letter* and a group of solos. Simon Semenoff and company on the west coast presented a streamlined edition of *Coppelia* and several of Semenoff's own ballets. Markova and Dolin went on tour with their own small ballet company. Maria Slavenska and George Zoritch went on tour with Ballet Variante.

MARTHA GRAHAM and company in "Letter to the World," performed at the Ziegfeld theatre, New York city, in Feb. 1947

Harald Kreutzberg gave a series of recitals in New York city and was enthusiastically received by his audiences. Trudi Schoop and company returned to New York after an absence of eight years. Jose Limon and company gave a series of recitals. Martha Graham gave a successful Broadway season and presented her own *Errand into the Maze* and Erick Hawkin's *Stephen Acrobat.* Peter Hamilton organized a small company of his own and appeared at the Studio theatre, New York city.

Paul Draper made a political speech the theme of his newest tap dance and created a furor with its humour. Ted Shawn took a leave of absence from Jacob's Pillow, Lee, Mass., and travelled and lectured as far away as Australia. Arthur Mahoney produced a jazz ballet *Crosstown, Parnassus* to George Frederick Handel's music and *La Noche Clara.*

Edwin Strawbridge and company continued to dance for 500,000 children a year in his coast-to-coast tour. His dance plays in 1947 were *Simple Simon* and *An Arabian Night.* Ivy Kitchell and Miriam Marmein continued their country-wide tours.

La Meri, besides conducting a lively program of teaching in the School of Ethnologic Dance, and dancing and producing in the Dance theatre, found time to organize a Young Artists series which presented 12 young artists. Dance theatre also lent its facilities to as many well-known dancers. In October La Meri launched the Exotic Ballet company with a season of ballets and dance-dramas.

ALICIA ALONSO and Igor Youskevitch in the grand *Pas de Deux* from "The Nutcracker" during the 1947 season of repertoire performances by the Ballet theatre

Ruth St. Denis resumed her activities in the Church of the Divine Dance in California. Catherine Littlefield choreographed Sonja Heine's ice show with numbers set to classical music.

Civic ballets showed increase in number and activities. Appleton, Wis., launched a civic ballet. The Young People's Theatre of New Jersey held to its intention of two or more large programs each year and the Atlantic Civic ballet gave 14 performances in Georgia.

Broadway continued to feature dance in its productions and signed dance artists for the choreography as well as the dancing. Such stars as Harold Lang, James Starbuck, Dorothy Etheridge, Nicolas Magallanes, Barton Mumaw and Pearl Primus danced the leading roles.

**Great Britain.**—In England Sadler's Wells ballet had a brilliant five-month season from January to June, sojourns to the provinces and a two-month continental tour which included appearances in Moscow. For the fall season Léonide Massine restaged his *Mam'zelle Angot* and presented it for the first time in Europe with Margot Fonteyn, Michael Somes, Alexander Grant and Moira Shearer. Frederick Ashton's new ballet *Valses Nobles et Sentimentales* was presented to the music of Maurice Ravel's waltzes, with decor and costumes by Sophie Fedorovitch.

During the spring season in London, Ballet Rambert presented *Plaisance,* a classical suite by Walter Gore, to Gioachino Rossini's music. *The Sailor's Return* with choreography and decor by Andrée Howard, music by Arthur Oldham, was enthusiastically received.

Ballet Rambert left England for Australia via Canada and stopped off in the United States long enough to be entertained by the San Francisco ballet.

International ballet presented Nana Gollnar and Paul Petroff as guest artists. The company then toured the suburbs for three weeks and finally played the State cinema at Kelburn for a week.

The Metropolitan ballet, newest English company, presented *The Lovers' Gallery* by Frank Staff, music by Lennox Berkeley, decor by George Kirsta. The company was organized by Leon Hepner in January with Victor Gsovsky as maitre de ball and choreographer of the ballets *Pygmalion* and *Dances* *Galanta.* During the fall season John Taras staged a new ball for the company called *Designs with Strings* to Tchaikovsky music.

The London dance season was further enriched by the a pearances of the Anglo-Polish ballet, the Ballets des Cham Elysées and the Indian dancer, Ram Gopal, with his 30 dancer

**France.**—Both the Paris Opéra and Opéra Comique in Par gave weekly ballet performances, equally popular with the pul lic. At the former, Serge Peretti choreographed *Call of t* *Mountain* to music by Arthur Honneger. Its theme was li in the Tyrol. At the Opéra Comique J. J. Etcheverry put *T* *Barber of Seville* into ballet form and called it *The Usele* *Caution.* He also choreographed Oscar Wilde's *Nightingale an* *the Rose,* to P. Auclert's music and *Khamma,* a ballet by Clau Debussy.

The Opéra Comique boasted such dance artists as Mar Louise Didion, Jean Guelis, Torres (the Spanish dancer Michael Royne and Lucienne Berggren. The Paris Opéra ha beside Lysette Darsonval, Tamara Toumanova and Alexand Kalioujny.

In its summer season the Paris Opéra ballet featured To manova, Kalioujny and Maria Tallchief in Balanchine's *L* *Baiser de la Fée* to music by Igor Stravinsky. Balanchine's ne ballet *Le Palais de Cristal,* to Georges Bizet's symphony, ha settings by Lenor Fini.

Grand Ballet de Monte Carlo, organized by the Marqu George de Cuevas, opened at Vichy and enjoyed a successf season. It featured Andre Eglevsky, Rosella Hightower, Ethe Pagava, Youly Algaroff, George Skibine and Yvonne Patterso The U.S. ballerina, Hightower, was acclaimed by the Par press. Nijinska and Lifar were choreographers and Willia Dollar's *Constantia* had its European debut. After vario appearances in the provinces the company opened in Paris the Alhambra theatre, with *Les Sylphides, Brahms Variation* *Romeo and Juliet* and *Pictures at an Exhibition.*

Ballets des Champs Elysées had a season in England ar France as well as touring the provinces. Among the season novelties was a reconstruction of the old ballet *Les Sylphide* *Le Bal des Blanchisseuses* to music by Vernon Duke wi choreography by Roland Petit had many styles of techniq but the result was movement and fun. Danielle Darmanc skating star as well as ballerina, and Petit danced the princip roles.

Opera of Monte Carlo ballet under Serge Lifar's directi also had a popular season.

**Other Countries.**—The Nederlandsche opera in Amsterda was formed of six men and ten women dancers; Darja Colli was maitresse de ballet as well as choreographer and dance De Amsterdamsche Ballet Combinatie continued to add balle to its repertoire. Choreographer Max Dooyes and Pieter va der Sloot appeared also as soloists. Marie Jeanne van der Vee and Mascha ter Weeme were the ballerinas.

In Stockholm, Sweden, the Danish Royal theatre presente *Sylvia* staged by Niels Bjoern Larsen, and Harold Lander ballet to Karl Czerny's *Etudes.*

In Italy La Scala had a short ballet season with the oper Aurel Milloss did most of the choreography. Featured dance were Luciana Novaro, Milly Wanda Clerici and Ugo dell 'Ar

The Jooss ballet after an unsuccessful U.S. tour returne for a limited tour in Europe, had a season in Paris and the returned to London to hibernate before appearing in publi again.

The Stadtische Opera ballet produced Henri Sauguet's *L* *Nuit,* Manuel de Falla's *Three-Cornered Hat* and William Wa ton's *Façade.* Jens Keith was the choreographer and the leading dancers were Jockel Stahl, Lilo Herbeth, Liselotte Koster and Eddy Albertini.

Mary Wigman choreographed and presented a group of dancers but did not dance herself.

The Czech ballet leader, Sasha Machov, set a record as director of the State ballet by introducing four new ballets in one evening—*Spring Symphony,* a series of classical variations to two short symphonies by J. V. Stamic, *Night on the Bare Mountain* to music by Modest Mussorgsky, *Lachian Dance,* based on Moravian folklore, and *Wedding,* a ballet in three scenes by the composer V. Nelhybel.

At the Grand Opera theatre Vaclav Kaslik trained the singers as dancers and produced operas conceived as ballets, in addition to presenting regular ballet performances. An attempt was made to harmonize various techniques of movement and use light to accentuate the rhythm of movement.

Mexico enjoyed a varied program of ballet for 1947. Irene Hawthorn from the United States with the local Waldeen ballet made the Mexican opera season a real dance event. The new Institute of Fine Arts took over the Waldeen ballet and presented a series of programs in March. The Markova-Dolin Co. at the Palacio de Bellas Artes in Mexico City joined forces with the local ballet headed by Gloria Campobello and George Chaffenberg. (L. Mh.)

**Ballroom Dancing.**—The year 1947 brought a return to the more graceful type of dancing. The waltz and tango showed only a slight increase but the samba became extremely popular throughout the world, and the rumba continued to hold its strong appeal.

Jitterbug dancing, more commonly called "swing," decreased in favour toward the last half of the year. Fox trots of the romantic, ballad type were more popular and with these, dancers used smooth walking and balance steps. Even the youngsters avoided the acrobatic antics of jitterbug. This was especially evident at the big contests held in England, Australia and the United States.

The slightly increased interest in waltz was probably caused by two unusually popular songs—a revived and revised version of "I Wonder Who's Kissing Her Now" and "The Anniversary Song" from the motion picture *The Jolson Story.* The movie *The Great Waltz* was redistributed in November because of public interest in the dance.

Through motion pictures, the radio and recordings, the same music and the same type of dancing spread throughout the world at almost the same time. There were no new ballroom dances in 1947. (A. Mu.)

## Dartmouth College.

The major developments at Dartmouth in 1947 were a record-breaking enrolment of 3,000 students in the fall semester and the inauguration of the new required course for all seniors in "Great Issues." Dartmouth's total of 2,850 students during 1946–47, as compared with the prewar 2,400, crowded all facilities in the village of Hanover, N.H., but the trustees determined that the capacity could be stretched to permit accepting a full freshman class of nonveteran secondary-school graduates. There were 6,000 applications for 675 places in the new entering class which, together with returning veterans in the upper years of college, increased total undergraduate enrolment to record figures. The three associated schools of medicine, business and engineering were also crowded to capacity. A gradual decrease in enrolment at Dartmouth was to be effected as rapidly as graduations and pressure from returning veterans would permit. About 300 students were married and were provided housing in apartments constructed by the college and by the government. Pres. John Sloan Dickey directed the new course required of all seniors beginning in the fall of 1947. "Great Issues 81–82" presents important issues in the broad fields of the making of peace, the building of a good economic society, and the values by which U.S. culture can live. It emphasizes the use and analysis of public information. The purpose of this course is to bridge the gap between undergraduate education and the responsibilities of adult living. President Dickey, guest lecturers and members of the faculty conducted the course. (For statistics of endowment, enrolment, faculty, library volumes, etc., *see* Universities and Colleges.) (S. C. Ha.)

## Deafness.

No reliable census of the adult deaf had been made in the United States in 1947, but a rough estimate indicated there were 100,000. Approximately 18,000 deaf children were being educated in 64 public residential schools, 118 public day schools and 20 denominational and private schools in the United States. Mothers of deaf children were advised to seek information about early training so that a child's native ability would not be unnecessarily retarded.

The American Hearing society, Washington, D.C., estimated that in 1947 there were 10,000,000–15,000,000 people in the United States who were hard of hearing to some extent in one or both ears. But only 4,000,000 or 5,000,000 adults were believed to have a serious handicap and at least 3,000,000 required hearing aids or the use of lip reading or both. Probably no more than 800,000 used hearing aids. It was also estimated that there were at least 1,000,000 or more hard-of-hearing children in the public schools.

Significant progress was made in the establishment of centres at which the hearing loss might be determined and assistance given in the selection and fitting of a hearing aid. A few of these centres were established in the larger medical schools while others were operated at a few of the local branches of the American Hearing society in about 117 cities.

The otologists were better able to perform the fenestration operation and thus ameliorate the hard of hearing by surgery. The ear specialists had learned to diagnose with more reliability the type of hearing defect for which the fenestration operation was most likely to give successful results. It is relevant to point out that improvement by the operation, no matter how well performed, does not re-establish normal hearing.

In 1947 most of the hard-of-hearing persons were rehabilitated by wearing aids or by lip reading or a combination of the two. Most of the hearing aids sold in 1947 were of the "single unit" type in which all the component parts were enclosed in a single case with the exception of the receiver and its connecting wire. The hearing aids weighed approximately 7 to 10 oz. and cost from $75 to $200. The upkeep for maintaining the batteries was approximately 10 cents per day on an 8-hr. operational basis.

The hearing loss of 30 to 35 decibels in the speech frequency was regarded as a handicapping loss. The hard-of-hearing person was advised to have his ears examined by a physician before purchasing a hearing aid. It was considered essential that a comfortable ear mould be made and fitted before attempting to select a hearing aid.

A list of acceptable hearing aids and requirements for acceptance was obtainable from the Council on Physical Medicine, American Medical association, 535 N. Dearborn St., Chicago 10, Ill. (H. A. C.)

**Deaths** (of prominent persons in 1947): *see* OBITUARIES.

**Death Statistics.** Provisional reports indicated that the death rate for the United States in 1947 was practically the same as that for 1946, the best year on record. The rates for January, February and September of 1947 were lower than for the like months of 1946, but for each subsequent month through August, the later year had rates at the same, or a higher, level than the earlier year. For the first nine months as a whole, the death rate in 1947 was only 1% higher than in 1946. During the entire year 1946, the total number of deaths in the United States was estimated as 1,402,000—a rate of 10.0 per 1,000 population. For Canada also, there was only a small indicated change in the death rate from 1946 to 1947; reports from cities of 10,000 or more showed an increase of 2.6% for the first eight months of 1947 over the like period of 1946. In Canada there were, altogether, 113,519 deaths during the whole of 1946, the rate being 9.2 per 1,000. Fragmentary reports from England and Wales pointed to a rise in the death rate from 1946 to 1947; a comparison based upon the first ten months of both years for London and the great towns showed a 7.4% rise in the number of deaths. In all of England and Wales, there were 492,088 deaths during 1946—a rate of 11.5 per 1,000 population.

The provisional death rates per 100,000 population during 1946 in the United States for the more important causes of death were: diseases of the heart 306.6; cancer 129.6; cerebral haemorrhage 90.5; total accidents 71.2, of which motor vehicle accidents accounted for 24.1; nephritis 58.0; pneumonia and influenza 46.1; tuberculosis 37.2; premature birth 29.1 and diabetes 24.7. The provisional maternal mortality rate for 1946 was 1.6 per 1,000 live births, as compared with a rate of 2.1 for 1945.

Indications from the records of millions of industrial policyholders of the Metropolitan Life Insurance company pointed to reductions, from 1946 to 1947, in death rates from pneumonia and influenza, tuberculosis, acute poliomyelitis, diabetes, appendicitis, nephritis, measles, suicide and accidents. On the other hand, the rates increased for cancer, diseases of the heart and cerebral haemorrhage. Rates according to age, for ages one year and more were as follows (on a provisional basis): ages 1 to 14 years, 1.1 per 1,000; ages 15 to 24, 1.7; ages 25 to 44, 3.2; ages 45 to 64, 13.7; and ages 65 and more, 65.5.

A study by Louis I. Dublin and Mortimer Spiegelman of the longevity and mortality of U.S. physicians, based upon records for the period 1938–42, showed that their expectation of life was practically identical with that of the general population, when compared age for age (*Journal of the American Medical Association,* Aug. 9, 1947). Thus, for male physicians at the age of 25, the expectation of life was 43.54 years, only a little greater than the comparable figure of 43.31 years for white males in the general population of the United States. For female physicians at age 25, the expectation of life was 47.10 years, compared with 46.86 years for white females generally. When the rates of male physicians were compared, age for age, with those for white males in the general population, important differences were found. Thus, at ages 25 to 34 years, the death rate for male physicians, 173 per 100,000, was 39% below the rate for white males at the same ages. At ages 35 to 44 years, the rate for the physicians was the lower by 19% and at ages 45 to 54 by only 2%. This diminishing advantage turned to an actual disadvantage at ages 55 to 64 years, where physicians had the higher rate by 11%, and again at 65 to 74 years where their death rate was the higher by 5%. At ages 75 and more, male physicians and white males in the general population had practically identical death rates. It was surmised that the advantage of the younger physicians reflected the lower mortality of the mo favoured social-economic classes from which most of them a drawn; also, those who undertake and last through the requir ments of a medical education are usually a select group in rega to health. The strain of a strenuous professional life appea to take its toll with advance in age, as the death rates of phys cians at first approach and then exceed those of the gener population. The physicians surviving to the highest ages, whe their death rates are the same as in the general populatio may be those who led a less strenuous career or who have t advantage of a better heredity or environment. From a con parison of mortality according to cause of death among ma physicians and white males in the general population in t United States, it was concluded that the physicians have t higher death rates from the degenerative conditions, but low death rates from most surgical conditions, infectious diseas and accidents.

A survey of occupational differences in mortality among wag earners was made by Dublin and Robert J. Vane from records white male industrial policyholders of the Metropolitan Life I surance company for 1937–39 (*Monthly Labor Review,* Ju 1947). A relatively high mortality from tuberculosis was o served in occupations having the common characteristic exposure to silica dust; among such occupations were san blasters, stonecutters, underground miners (other than coal pottery workers, iron foundry workers and metal grinder Pneumonia was relatively high, as a cause of death, in occup tions where there was undue exposure to heat, dust or fume occupations in this category are welders, iron and steel found operatives, underground miners (other than coal), potte operatives, buffers and polishers of metal and automobile fa tory operatives. Excess mortality from accidents was record for electric light and power linemen, structural iron painte and workmen, steeplejacks, building wreckers, lumbermen a loggers, quarrymen, railway enginemen and trainmen, roofe and slaters, coal miners, fishermen, seamen and other mari workers.

The beneficial effects of insulin upon the longevity of di betics was made strikingly apparent from a study of the re ords of diabetic patients at the New England Deaconess hos tal in Boston (*Statistical Bulletin of the Metropolitan Li Insurance Company,* Aug. 1947). The contrast was most e dent in a comparison of expectation of life in young childre In the pre-insulin era, the expectation of life for a diabet child of age 10 was only 1.3 years in 1897–1913, and 2.6 yea in 1914–22. In the early insulin era, 1922–25, the figure ro sharply to 14.3 years, and continued to mount rapidly, reachi 45.0 years for the period 1939–45. The higher ages also show great gains in expectation of life. The record of diabetics, ho ever, still remained below that of the general population at t same ages and, with more intensive educational measures amo both physicians and patients, further gains were anticipated.

A survey of disasters involving five or more deaths during t decade 1937–46 (*Statistical Bulletin of the Metropolitan Li Insurance Company,* March 1947) revealed that there were 9 such accidents costing 12,987 lives; 14 disasters each took 1 or more lives. The peak year was 1942, when 118 catastroph resulted in about 1,950 deaths, and the low year was 1939, wi 66 and about 600 deaths. It was found that about nine-tent of the accidents, and more than three-quarters of the deat resulted from human failures and not from natural causes.

The average length of life (expectation of life at birth) c responding to mortality conditions among the general popul tion of the United States during 1945, the latest year of reco in 1947, was: white males 64.44 years; white females 69. years; Negro males 56.06 years; Negro females 59.62 yea

In each case, the figure was the highest yet on record. (*See* also ACCIDENTS; CENSUS DATA, 1947; DISASTERS; INFANT MORTALITY; SUICIDE STATISTICS.)

**Debt, National.** For the second successive year the U.S. government was able to reduce the gross public debt in 1947. From a peak of $279,214,000,000 reached at the end of Feb. 1946, the national debt was reduced to $259,149,000,000 by the end of Dec. 1946 and to $256,900,000,000 by the end of Dec. 1947. In his budget message of Jan. 12, 1948, Pres. Harry S. Truman estimated that by the end of June 1948 the national debt would be further reduced to $250,900,000,000.

Table I.—*National Debt of the United States, 1913–48*

| June 30 | (Millions of dollars) | June 30 | (Millions of dollars) |
|---|---|---|---|
| 1913 | $1,193 | 1931 | $16,801 |
| 1914 | 1,188 | 1932 | 19,487 |
| 1915 | 1,191 | 1933 | 22,539 |
| 1916 | 1,225 | 1934 | 27,053 |
| 1917 | 2,976 | 1935 | 28,701 |
| 1918 | 12,244 | 1936 | 33,545 |
| 1919 | 25,482 | 1937 | 36,427 |
| 1920 | 24,298 | 1938 | 37,167 |
| 1921 | 23,976 | 1939 | 40,445 |
| 1922 | 22,964 | 1940 | 42,971 |
| 1923 | 22,350 | 1941 | 48,961 |
| 1924 | 21,251 | 1942 | 72,422 |
| 1925 | 20,516 | 1943 | 136,696 |
| 1926 | 19,643 | 1944 | 201,003 |
| 1927 | 18,510 | 1945 | 258,682 |
| 1928 | 17,604 | 1946 | 269,422 |
| 1929 | 16,931 | 1947 | 258,286 |
| 1930 | 16,185 | 1948 | 250,900 |

Source: Data from 1913 to 1947 are from U.S. treasury department, daily treasury statement (revised); 1948 estimated.

Thus, in the period after Feb. 1946, the upward trend of the national debt which had been apparent since the onset of the depression of the 1930s was reversed. The debt had risen from $16,185,000,000 in 1930 to $42,971,000,000 in 1940, partly because government revenues fell to a low level during the depression but, more importantly, because of the expenditure policies which were adopted by the government to combat the depression. During the years of rearmament and war, however, the national debt increased by even greater amounts to attain the record level of 1946.

The new trend of debt retirement was begun by the treasury in March 1946. Gross reductions in marketable interest-bearing securities amounted to more than $34,000,000,000 between that date and the end of 1947. The distribution of this reduction among the various types of securities is shown in Table II. The debt reduction program in 1947, as in 1946, was concentrated in the shorter-term obligations of the government.

The funds used to retire the aggregate maturities of $23,197,000,000 during the last ten months of 1946 were obtained chiefly from the general fund cash balance accumulated during the Victory Loan drive. As the cash balance was drawn down to a level commensurate with reduced expenditures following the end of World War II, the source of funds shifted. In 1947 funds for gross debt retirements were obtained chiefly from net budgetary surpluses and a continued growth in other public debt accounts. Nonmarketable savings bonds were increased by $2,312,000,000 and special issues to U.S. government agencies and trust funds by $4,370,000,000. The former consisted of series A to G savings bonds, while the latter was made up primarily of the investments of the various retirement, unemployment and insurance systems operated by the government.

operations in 1947 resulted in a further redistribution of the ownership of the national debt. As shown in Table IV, the total held by non-bank investors increased from $160,400,000,000 in June 1946 to $163,300,000,000 a year later. In contrast, total bank holdings declined from $108,200,000,000 to $91,900,000,000 over the same period.

Significant features of the management of the public debt during 1947 were the firming of open-market interest rates on government short-term securities and a growing necessity on the part of the federal reserve system to purchase long-term bonds in order to maintain their market value at a level which would hold the yield at 2½%. Short-term rates were allowed to rise gradually, as evidenced by an increase in the three-month treasury bill rate from 0.376% in June to 0.944% in the week ending Nov. 29. The yield on 9–12 month certificates of indebtedness advanced from 0.85% in June to 1.01% at the end of November. This firming in open-market rates tended to diminish the pressure on banks to sell short-term government securities in order to obtain the higher returns from longer-term investments.

Heavy demands for mortgage money and business expansion during 1947 led many financial institutions to reduce their government bond portfolios substantially, resulting in conditions under which it was necessary for the federal reserve banks to purchase government bonds in the market in order to maintain the 2½% return. As par levels were being approached, the federal reserve banks, both on their own account and for the account of federal agencies and trust funds, became heavier and heavier purchasers of long-term government bonds. The federal reserve banks lowered their support prices by steps, allowing prices of some issues to fall to, or nearly to, the par level.

Perhaps the most dramatic example of this trend occurred on Dec. 24 when the federal reserve banks announced new buying prices for long-term government bonds at substantially lower premiums than had been offered prior to that date. For example, the 2½% of Sept. 1969–72, eligible for purchase by all types of investors including banks, dropped from 103¼ on Dec. 3 to 101 on Dec. 24. The trend of these bonds earlier in the year had been from 106 9/16 on Aug. 31 to 104¾ on Nov. 12. While the declines in the other issues were of smaller magnitude, the trend was similar throughout the whole range of government long-term securities.

Other developments related to the national debt were indirect effects of the trends noted above. An encouraging indication was the reduced rate of monthly redemptions in U.S. savings bonds, with an accompanying increase in the total outstanding. The monthly rate of redemptions in early 1946 was about 1.25%; in 1947 the rate had fallen to approximately 0.8%.

The average interest rate on the total debt outstanding rose from 2.059% in Jan. 1947 to 2.129 in October, reflecting both the changing composition of the debt and the stiffening rates in the short-term issues mentioned above. The upward trend in interest rates would tend to retard the contraction in annual interest payments of the federal government accompanying a reduction in total national debt. President Truman in his January budget message estimated interest charges in fiscal year 1948 at $5,200,000,000 and in fiscal year 1949 at $5,250,000,000. Interest on the public debt amounted to $4,958,000,000 in 1947, compared to $4,722,000,000 in 1946.

**State and Local Government Debt.**—Statistics on state and local government debt in the United States are shown in Table V. In 1947 the downward trend characterizing the war period was reversed. During World War II, state and local government revenues increased with the rapidly expanded national income, while at the same time capital expenditures were restricted because of scarcities of labour and materials. The resulting surpluses enabled state and local governments to redu their total debt from $20,246,000,000 in 1940 to $15,922,000,00 in 1946.

tion had been of a more moderate character. On the other hand, in countries where inflation had been more severe governments had found it much more difficult to secure a balance between receipts and expenditures. It should be emphasized, however, that debt changes generally after the end of the war were much smaller than those which occurred during the war years. (*See* also BUDGET, NATIONAL; GREAT BRITAIN.)

## Decorations, Medals and Badges—Military, Naval and Civil.

The U.S. army announced during 1947 that the decoration system was primarily intended as recognition for war service and the liberal standards then established are not applied during peacetime. World War II service was considered terminated March 2, 1946.

The issue of World War II victory medal and American defense service medal was initiated in 1947.

Die samples of the European, African, middle-eastern campaign medal were approved July 17, 1947. Medal obverse shows a landing operation with troops and ships in foreground and a plane flying in war clouds in background. Reverse consists of an American eagle close with head erect standing on a rock between the inscription "1941 1945" and "United States of America."

The design of the Asiatic-Pacific campaign medal was approved May 22, 1947. Obverse depicts a landing operation with two figures among war-torn palms in foreground; a submarine, vessel, and an aircraft carrier and flying planes in background. Reverse, same as European, African, middle-eastern medal.

Die samples of the American campaign medal were approved Nov. 25, 1947. Obverse shows a sinking submarine with a patrol ship and aeroplane in foreground, and buildings in background representing the antisubmarine warfare and that the Americas were the arsenal of the world during that period. Reverse—same as European, African, middle-eastern and Asiatic-Pacific campaign medals.

The design of the army of occupation medal approved Dec. 1946 was rendered and die sample approved March 2, 1947. First issues were made to General of the Army Dwight D. Eisenhower and General of the Army Douglas A. MacArthur on April 2, 1947, while token issues were made to the army on Army day.

Miniature ribbons of decorations and service medals on a scale of one-half size were authorized for civilian wear. Miniatures of aviation badges for civilian wear, 21/32 of an inch in length, were authorized Feb. 28, 1947.

Public law 306 approved by congress Aug. 1, 1947, provided for the secretary of war and secretary of the navy jointly to fix the size, design and composition of a Gold Star lapel button to be furnished widows, parents and next of kin of members of the armed forces who lost their lives in the armed services of the United States in World War II.

Hawaii announced the creation of a ten-year continuous service medal and bars for additional service of five years.

California established on May 26, 1947, the federal service ribbon in the state colours, blue and gold.

**National Military Establishment Seal.**—On Oct. 8, 1947, the president of the United States approved the seal of the national military establishment as provided in Sec. 202c of the National Security Act of 1947. It is described as an American bald eagle with wings displayed horizontally, grasping three crossed arrows and bearing on its breast a shield paleways of 13 pieces argent and gules, a chief azure. Above the eagle an arc of 13 stars with alternating rays. Below the eagle a wreath of laurel to dexter and olive to sinister. On an encircling band the inscription "National Military Establishment" and "United States of America."

**Flag for Secretary of Defense.**—On Oct. 8, 1947, the president of the United States approved the flag for the secretary of defense. The flag is of medium blue with four white corner stars and the central design consisting of the eagle shield and arrows of the seal of the national military establishment.

**Department of the Army Seal.**—By direction of the president the seal previously designated for the department of war, which contains the words "War Office" was announced on Sept. 18, 1947, as the seal for the new department of the army.

**Department of the Air Force Seal.**—By executive order Nov. 1, 1947, the president of the United States approved the seal of the department of the air force. This seal is heraldically described as a—Shield; *Per fess* nebuly abased azure and argent, in chief a thunderbolt or inflamed proper. Crest: On a wreath argent and azure an American bald eagle wings displayed and partially elevated proper in front of a cloud argent. Encircling the shield and crest an arc of 13 stars and below the shield the inscription "MCMXLVII." On a band encircling the whole the inscriptions "Department of the Air Force" and "United States of America" (A. E. DU.)

**Great Britain.**—*Naval General Service Medal,* first established in 1915, with clasp for southeast Asia, 1945–46, was to be awarded to naval ranks and ratings who took part in operations in Java and Sumatra between Sept. 3, 1945, and Nov. 30, 1946; in French Indo-China between the same commencing date and Jan. 28, 1946; and for specified service in Palestine after Sept. 27, 1945. The same medal, with distinctive clasp, would be awarded to naval personnel for six months postwar minesweeping service at sea, and, with a clasp "Bomb and mine clearance, 1945–48," to naval officers and men actively engaged for six months in the removal and disposal of bombs and mines inside the United Kingdom.

*General Service Medal, Army and Royal Air Force,* with the clasp, for southeast Asia, for Palestine or for bomb or mine clearance, would be awarded to army and air force personnel under the same conditions as for the navy.

*Long Service and Good Conduct Medal, Army.*—Qualifying conditions were slightly amended by royal warrant of May 14, 1947. Officers who were commissioned subsequent to Sept. 3, 1939, and who had completed a minimum of 12 years in the ranks might, upon completion of 18 years' service, qualify for the L.S. and G.C. medal.

*Efficiency Medal* was now awarded to officers and other ranks of the territorial army who were serving on the active list of the territorial army on Sept. 2, 1939, and who had completed 12 years' qualifying service, whether their service had been wholly in the ranks or partly as an emergency commissioned officer. Women of the auxiliary territorial service were also similarly eligible.

**Norway.**—*King Haakon VII Liberty Cross* and *Liberty Medal* were established for award to Norwegian and foreign nationals for distinguished services during the war.

**Denmark.**—*King Christian X's Liberation Medal,* in silver, was established for men and women of Danish or foreign nationality, resident abroad, who rendered conspicuous service for the liberation of Denmark from the Germans.

*King Christian X War Medal,* 1940–45, in silver, was for men and women of Danish nationality who volunteered to fight for the Allied cause in the Allied forces. Danish naval or military personnel sent abroad for such purpose were not entitled. (H. T. DG.)

## Delaware.

Delaware, on the middle Atlantic seaboard, one of the original 13 states of the United States, is called the "First state," having been the first to ratify the federal constitution, Dec. 7, 1787. A popular name used chiefly in business and commerce is the "Diamond state." Area 2,057 sq.mi. (land, 1,978; inland water 79). Population (1940) state-wide 266,505, of which 139,432 were urban, 127,073 rural. Native white numbered 215,695; foreign-born 14,913; Negro 35,876. Wilmington, 112,504, is the one city of more than 6,000; Dover, 5,517, is the capital. The bureau of the census, 1947 estimate, was 286,527.

**History.**—Delaware veterans attending schools and colleges under the G.I. Bill of Rights numbered 2,785 at the end of the year; 1,537 were in on-the-job training and 3,731 were receiving disability pensions. Revised plans and specifications for construction of the $6,000,000, 320-bed U.S. veterans' hospital near Wilmington were completed. Test borings were made and bids for construction of piers received by the state highway department for the $40,000,000 bridge across the Delaware river, a memorial to the Delaware dead in World War II.

The state employees' pension act of 1945 went into effect July 1, 1947. The housing shortage continued acute.

Legislative enactments at the 1947 session, January to April, included: temporary increase of $200 per year for state employees receiving less than $5,000 salary; proposal to amend the constitution increasing the two-year term of four state officers to four years: attorney general, auditor, treasurer and insurance commissioner; requirement of report and certificate of physical examination including blood test from applicants for marriage licences; restrictive regulation of labour unions; provision for declaratory judgments by the courts in all cases of actual controversy except divorce or annulment of marriage.

The chief state officers in 1947 were: governor, Walter W. Bacon; secretary of state, William J. Storey; adjutant general, Paul R. Rinard; attorney general, Albert W. James; chancellor, W. Watson Harrington; chief justice, Charles S. Richards.

**Education.**—The 1947 legislature continued the state commission engaged in making surveys and studies preliminary to recommending an improved public school system, and created a uniform state supported salary schedule for teachers. The requirement of the Wilmington board of education charter that the city council appropriate the full budget requested annually by the board up to seven mills of the tax dollar, was declared constitutional by the state supreme court. Citizen participation in the movement for better schools increased during the year. In 1947, through rehabilitation service, the state board of vocational education placed 342 disabled persons in earning jobs.

The 165 elementary schools had an enrolment of 25,692, and a teaching staff in June of 870 (increased to 898 in December); the 46 secondary schools had 16,736 pupils and 811 teachers in June (increased to 850 in December).

**Social Insurance and Assistance, Public Welfare and Related Programs.**—The amount of social insurance paid out for the year 1947 was $2,740,509. Active claims, Dec. 19, numbered 2,468. The cost of outside relief for the year was $332,416 for cases averaging 750 per month. The cost was shared half and half by the state and the county in which the relief was given. In Dec. 1947, 1,293 persons were receiving old age pensions compared with 1,184 the previous December. For the fiscal year ending June 30, 1947, 873 dependent children were cared for in their own or foster homes, and welfare services given to 1,028 additional children; state appropriation, $249,140. Appropriation to Ferris school (correctional for boys) $155,960; to Kruse school (correctional for Negro girls) $49,300. There is no state prison, but small jails in the two rural counties; the New Castle county workhouse accommodates long-term prisoners from all counties. During the year ending June 30, 1947, the workhouse received 2,082 prisoners and discharged 1,980; inmates in June numbered 367.

**Communications.**—Mileage of highways and rural roads, all under state control, was 3,899.31; income of the state highway department for the fiscal year ending June 30, 1947, was $5,177,729.62; expenditures $4,820,494.60; cash balance June 30, $2,057,435.58; federal aid $1,047,747.55. Total motor vehicle accidents increased: fatal accidents and deaths resulting from accidents (outside the city of Wilmington) decreased 9%. Railroad mileage was approximately 270.

Business for the calendar year at the port of Wilmington made its highest annual record. Tonnage was 573,481 compared with 419,245, in 1946; the number of vessels docking, 650 compared with 477. The value of cargoes was $26,614,870 compared with $13,570,440 in 1946. Tonnage through the Delaware and Chesapeake canal was 5,388,095 (13,491 vessels) compared with 3,653,258 (11,730 vessels), the previous year.

Regular passenger, express, and freight service was opened Nov. 29 at the New Castle county airport by American Airlines and Trans World Airlines. On Dec. 31, the state had in use 91,817 telephones. The city of Wilmington had three radio broadcasting stations.

**Banking and Finance.**—There were 28 state banks, mutual savings banks, and trust companies with 6 branch banks and 9 branch offices; 13 national banks, 39 building and loan associations and 21 small loan companies. Total assets of state banks and trust companies on June 30, 1947, were $557,688,794.21 compared with $567,963,881.80 in 1946; deposits were $495,286,057.93 compared with $507,740,263.89; assets of the national banks were $42,809,679.43 compared with $42,321,549.05; the 39 building and loan associations had assets of $18,129,329.64 compared with $17,082,094.91 in 1946.

Total state revenue for the year ending June 30, 1947 was $23,385,534.14; nonrevenue income $2,296,682.47; total $25,682,216.61. Expenditures were $25,162,553.68; balance $519,662.93, added to a balance of $17,367,485.86 at the beginning of the year, made a cash surplus of $17,887,148.79 at the end of the fiscal year. The gross debt (serial bonds for permanent improvement) was $4,179,000.

**Agriculture.**—The estimated total cash income from agricultural production in 1947 was $80,926,000. Income from the broiler industry, estimated at $51,000,000, was below normal because of the shortage and high price of feed; total livestock income, January to October, was $54,570,000; total from crops for the same period, $14,319,000. W conditions ruined the Delaware peach crop which dropped from 4 bu. in 1946 to 171,000 bu. for 1947.

Table I.—*Leading Agricultural Products of Delaware, 1947 and 1946*

| Crop | 1947 | 1946 |
|---|---|---|
| Corn, bu. | 4,340,000 | 4,270,000 |
| Apples, bu. | 396,000 | 825,000 |
| Hay, tons | 102,000 | 99,000 |
| Wheat, bu. | 1,326,000 | 1,216,000 |
| Tomatoes, tons | 54,000 | 42,000 |
| Strawberries, crates | 43,000 | 66,000 |
| Lima beans, tons shelled | 9,730 | 8,160 |

**Manufacturing.**—Gross receipts of manufacturers licensed for th ending June 30, 1947, were $344,049,916. The total of employees the unemployment compensation law in Sept. 1947 was 92,026 com with 86,000 for Sept. 1946; total wages for the year Oct. 1946 to 1947, $231,522,108 compared with $204,000,000 the previous ye Nov. 15, 1947, 516 plants in the Wilmington area reported an er ment total of 60,046 compared with 59,275 in 621 plants in Nov. Turnover for the month ending Nov. 15, 1947, was 1,288 emp 1,176 laid off. In 1947, 2,787 new companies were chartered in Del compared with 3,392 in 1946.

Table II.—*Principal Industries of Delaware, 1947 and 1946*

| Industry | 1947 | 1 |
|---|---|---|
| Chemicals | $33,627,076 | $29,6 |
| Shipbuilding | 16,936,110 | 18,3 |
| Leather | 20,278,153 | 27,6 |
| Foundries, machine shops, tools | 18,202,885 | 22,6 |
| Fibre | 14,878,588 | 11,8 |
| Textiles | 51,656,907 | 43,9 |
| Canning and packing | 11,354,419 | 10,7 |

**Mineral Production.**—The chief products, building stone, granite, brick and clay, for the year ending Nov. 1, 1947, had a total va $663,113 compared with $363,159 for the previous year.

## Democracy.

During 1947 democracy was under very h attacks from communism. The use of the t "democracy," "people's democracy" or "new democracy" b communists tended to confound the issues. Neverth throughout the year democratic resistance against commu was growing everywhere, except in those countries where a munist regime had been imposed.

As in its struggle against fascism a decade before, demo in 1947 seemed to successfully overcome its initial weakn in its efforts to secure the survival of free man and of society.

In a statement to the Council of Foreign Ministers in M on the democratization of Germany, Secretary of State G C. Marshall defined the inalienable rights of individuals u democracy.

> They include the right of every individual to develop his mind a soul in the ways of his own choice, free of fear and coercion—pr only that he does not interfere with the rights of others. To us a s is not democracy if men who respect the rights of their fellow me not free to express their own beliefs and convictions without fear tha may be snatched away from their home or family. To us a society free if law-abiding citizens live in fear of being denied the right to or deprived of life, liberty and the pursuit of happiness.

A democracy demands that

> freely constituted political parties should be insured the right to ticipate in a free and competitive election system in which each is acc equal opportunity to present its views, win adherence and obtain representation. The rights of free and autonomous trade unions to on in accord with the wishes of their members should be clearly establ

Democracy demands a free press and radio and rejects monopolization of information media in the interests of party.

The people must enjoy an unrestricted access to informa including the press, radio, books, magazines, publications, f the theatre and music.

In a similar way President Harry S. Truman defined de racy in his message to congress on March 12, determining foreign policy:

> At the present moment in world history nearly every nation must c between alternative ways of life. The choice is too often not a free One way of life is based upon the will of the majority and is distingu by free institutions, representative government, free elections, guara of individual liberty, freedom of speech and religion, and freedom political oppression. The second way of life is based upon the will minority forcibly imposed upon the majority. It relies upon terror an pression, a controlled press and radio, fixed elections, and the suppre of personal freedoms. I believe that it must be the policy of the U States to support free peoples who are resisting attempted subjugatic armed minorities or by outside pressures.

The Federal Council of the Church of Christ in Am adopted a statement prepared by the Commission on a Just

Durable Peace in which it stressed that

> The critical and supreme political issue of today is that of the free society versus the police state. It is not the economic issue of communism versus capitalism or of state socialism versus free enterprise. As to such matters it is normal that there should be diversity and experimentation in the world.

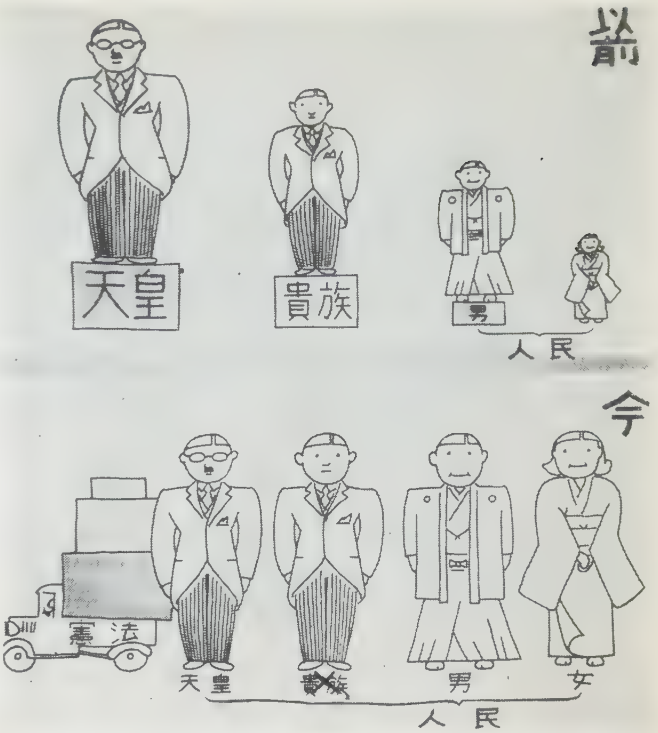
A free society, or a democracy, is

> a society in which human beings, in voluntary cooperation, may choose and change their way of life and in which force is outlawed as a means to suppress or eliminate spiritual, intellectual and political differences between individuals and those exercising the police power.

The United Nations Commission on Human Rights was discussing an international bill of human rights in 1947. An international treaty guaranteeing the free flow of information everywhere was drafted. By the end of 1947 no agreement was yet reached about the fundamental concepts involved between the democratic nations on the one hand and the communist states on the other.

While in the countries under Russian influence democratic opposition was liquidated during 1947 and the democratic leaders who did not succeed in escaping abroad were either executed or imprisoned—only in Czechoslovakia and in Finland democratic parties continued to exist and to maintain a considerable though limited freedom of action—in the European countries outside direct Russian influence communism was either weak or was resisted successfully, as in France and Italy, the only two countries outside the Russian orbit where communism had a mass following. The struggle in Europe was not a struggle between capitalism and socialism but between free democratic society and communist totalitarianism. The social democrats in most countries (including Finland and Czechoslovakia) were for the socialization of the means of production within the framework of a democratic society safeguarding the inalienable rights of the individual and were opposed to communism and all forms of totalitarian society. The Marshall plan for the economic recovery of Europe, not entirely approved in the U.S., promised to strengthen democracy and was violently combated by the communists. Russia and the eastern European nations had been invited to participate in the Marshall plan. Czechoslovakia accepted at first, but Russia decided against participation and forced its point of view upon all the states in the soviet bloc, including Czechoslovakia. Thus, through Russian intransigence, Europe was split into two parts. Sixteen European nations, however, met in Paris and drew up a joint European recovery program with the assistance of the U.S. under the Marshall plan. Democracy in Europe expected new strength from the implementation of the Marshall plan in 1948. (*See* European Recovery Program.)

Elections held in Europe confirmed the general trend toward strengthening democracy. In Oct. 1947 municipal elections in France ended communist control of most of the large French cities. The French government representing the parties of the centre, especially the (Catholic) Republican Popular Movement and the Social Democrats, defeated in Dec. 1947 nation-wide communist strikes which exploited the legitimate economic grievances of the wage earners for political purposes. The Confédération Générale du Travail, the French federation of trade unions which had been under communist control from 1945, split at the end of 1947. Its noncommunist members under the veteran trade union leader Léon Jouhaux formed a rival federation, the Force Ouvrière, the Workers Strength, whose purpose was to free the trade union movement from political subservience to any party.



POLITICAL RIGHTS under the Japanese constitution effective May 3, 1947, as presented in a "before-after" poster. Stratification (top) of classes and sexes is abolished and equality (bottom) established as a truck (the constitution) carts all pedestals away

In the elections to the municipality of Rome, Italy, the communist-led People's Front received 32.1% of the votes. The Christian Democrats gained considerably compared with the elections of Nov. 1946. In the same month municipal elections in Norway showed a weakening of the communist and socialist votes and the strengthening of the agrarian and conservative parties. In Denmark, national elections strengthened the Social Democrats at the expense of the communists; the former gained the nine seats lost by the communists. The Social Democrats emerged as the strongest single party without, however, commanding a majority.

In national elections in Switzerland the communists gained seven seats in a parliament consisting of 194 members, while in the municipal elections in Britain the communists could not carry a single one of their candidates.

Some progress was made, at least outwardly, under U.S. guidance, in the democratization of Japan. In the general election of April 1947 the Socialist party emerged as the strongest single party, though without commanding a majority in the house. The communists received 4 out of the chamber's 466 seats and 870,000 votes out of 25,800,000 cast. For the first time a Socialist and a Christian became Japanese prime minister in the person of Katayama Tetsu. Attempts made in China to broaden the regime and to introduce full democratic liberties had not yet succeeded by the end of 1947 though definite steps in that direction were taken in April. In Latin America, Venezuela offered a bright prospect for democracy when in Dec. 1947 in free elections Rómulo Gallegos, a well-known novelist, was elected president. (*See* also Communism; Education; Fascism; Great Britain; Union of Soviet Socialist Republics; United States.)

**Democratic Party.** The Democratic party in 1947 enjoyed the paradoxical experience of staging a remarkable political comeback at the very moment when the Truman administration struggled with national and international problems as grave as any chief executive had faced in times of comparative peace and prosperity.

As the year waned, every public and private poll suggested that President Harry S. Truman had slightly better than an even chance for re-election in 1948. With such questions as acute inflation and postwar difficulties with the Soviet Union still unsolved, it was recognized that his slim margin could be wiped out by untoward events. Nevertheless, there was no other Democrat who approached him in ballot-box stature.

Political observers naturally essayed an examination of the reasons for this transformation. In making this inventory, they listed near the top his utter reversal of Franklin D. Roosevelt's friendly attitude toward Moscow. His defiance of the expanding and aggressive Soviet Union, strongly reinforced by Secretary of State George C. Marshall's actions at 1947 conferences of foreign ministers, and also by promulgation of the four-year aid program for western European nations resisting communism, seemed to have had a popular, bipartisan appeal, even though full implementation of the foreign recovery proposal still faced a fight in congress.

Despite inflation that saw prices on bread-and-butter commodities surpass wartime peaks, his friends figured that he would not be seriously damaged by this issue if even more sensational skyrocketing could be checked in 1948. In any event, they calculated that the failure of a Republican-controlled congress to enact his ten-point anti-inflation program, which called for wage, price and priority controls on key materials, would enable them to throw the dust of responsibility in the eyes of the political opposition.

Another Democratic explanation for Truman's new strength was his defiance of John L. Lewis. Although the administration party felt that it would receive a majority of the labour vote in 1948, based on Truman's veto of the Taft-Hartley act, his 1946 attempt to jail the president of the United Mine Workers, in the opinion of his advisers, satisfied many conservatives without antagonizing labour elements which had long thought that the U.M.W. boss was too bold and arrogant.

Last but not least, the leaders attributed Truman's increased popularity to his kindly, unassuming and homey nature. Even his political enemies warmed, personally, to the man from Missouri.

Although not so intended, perhaps, several major administration moves during the year showed plainly the Democratic pattern for 1948 victory, and it did not differ in many essentials from Roosevelt's formula of mobilizing numerous heterogeneous elements behind him.

The Marshall plan, as well as U.S. co-sponsorship of the partition of Palestine, was expected to hold great racial and religious minority groups in key cities. So were various administration-sponsored gestures against real estate and educational segregation. Truman's veto of the Taft-Hartley act appeared to have won him the favour of labour, organized and unorganized. Thus, it was felt that if he could command this support, together with the nominal Democratic strength in 1948, he would make strong claim to four more years in the White House.

As the year closed, however, Henry A. Wallace became a man of concern to the Democrats. Ever since Pres. Truman asked him to resign as secretary of commerce, his speeches and writings had been derogatory to the administration; he charged that the official attitude toward the U.S.S.R. had transformed the Democrats into a "war party," and threatened to revolt.

In a Dec. 29 radio address, Wallace announced that he would be an independent, third-party candidate, with the backing of the Progressive Citizens of America. Although his action led large labour unions and prominent Democrats to disown him,
and the party strategists hoped to discredit his candidacy
"giving aid and comfort to Moscow," they feared his poss
strength in such electorally important states as New Y
Pennsylvania, Illinois and California. They realized that if
could split the normal Truman vote in these areas, he would
a welcome asset to the Republicans. Nobody, of course, g
him any chance of election.

In his announcement, the former vice-president assailed b
major parties for pursuing policies which, he charged, wo
lead to a third world war. He urged that U.S. aid to west
Europe be advanced on a "humanitarian" basis through
United Nations rather than by the United States alone in
avowed attempt to combat the spread of communism. In
emotional and evangelistic peroration, he called upon an "Ar
of Gideon" to reinforce him in a battle for "peace, progr
and prosperity."

Another difficulty confronted the Democrats in their sea
for a 1948 running-mate for Truman. They were handicap
in the hunt because the Republicans controlled congress
every important state whence a governor, as had happened
often in the past, could be elevated to the vice-presiden
nomination.

James Forrestal, secretary of national defense, Secret
Marshall and Senator Scott W. Lucas of Illinois were frequen
mentioned, but in seemingly unequivocal language the
eschewed the tentative offers. Among those often on the p
ticians' tongues were Senator Joseph C. O'Mahoney of Wyomi
Senator Brien McMahon of Connecticut, Senate Mino
Leader Alben W. Barkley of Kentucky, Governor Monrad
Wallgren of Washington, Secretary of Agriculture Clinton
Anderson of New Mexico, Secretary of Commerce W. Ave
Harriman of New York, and William O. Douglas of Oreg
associate justice of the supreme court. Despite their offi
prominence, however, it was recognized by Democratic stra
gists that none of these men would contribute national stren
to the presidential ticket, with the possible exception of Sec
tary Marshall.

Whereas Pres. Truman behaved in the early months af
entering the White House as if he were a trustee of the Roo
velt regime and policies, he took complete command of
administration and the party in 1947. He framed and enuncia
its basic viewpoints on foreign and domestic issues. All Roo
veltian holdovers had resigned or had been dismissed, so t
every cabinet member and head of a key agency was a man
his own choosing.

On the last day of the year, significantly enough, he refus
to reappoint James M. Landis, former dean of Harvard L
school and last survivor of the original New Deal "brain trus
as chairman of the Civil Aeronautics board.

He completed the political shakeup when, in September,
named a former senate colleague, J. Howard McGrath of Rho
Island, as chairman of the Democratic national committee
succeed Robert E. Hannegan.

In the process of becoming president in his own right rat
than merely Roosevelt's legatee, Truman was aided indirec
by publication of memoirs by several members of the offic
Roosevelt family. They tended to cast historical doubt on
fundamental wisdom of certain New Deal policies, especially
monetary matters, the conduct of the war, Roosevelt's execut
talent and his relationship with Russia.

Among the authors appearing in book form or anticipat
magazine articles were Henry L. Stimson, Cordell Hull, James
Farley, Henry Morgenthau and Frances Perkins—five form
cabinet members who had been conspicuously close to Truma
distinguished predecessor. (*See* also UNITED STATES.)

(R. Tu.)

**Denfeld, Louis Emil** (1891– ), U.S. naval officer, was born on April 13 in Westboro, Mass., and was graduated from the U.S. Naval academy at Annapolis in 1912. During World War I, Denfeld served with U.S. destroyer squadrons in European waters.

In the years between World Wars I and II, he shuttled between sea and shore duties. In 1941 he went to London as a special observer; between April and December of that year, he also took command of a task force that convoyed merchant ships to Britain. The following May, he was promoted to a rear admiral and was made assistant chief of naval personnel.

Denfeld returned to sea duty in March 1945 as commander of battleship division 9, which supported the Okinawa landings and participated in the bombardments of Hokkaido and Honshu in the last days of the war. After the collapse of Japan, he returned to Washington, and on Sept. 11, 1945, his appointment as chief of naval personnel was confirmed; later he was given the added post of deputy chief of naval operations for personnel.

Raised to the rank of admiral on Jan. 29, 1947, Denfeld was made commander of the Pacific fleet a month later (Feb. 28), and on Nov. 13 President Truman announced his appointment as chief of naval operations to succeed Fleet Adm. Chester W. Nimitz.

**Denham, Robert N.** (1885– ), U.S. government official, was born on Oct. 23 in St. Louis, Mo., and was graduated from the University of Missouri in 1907 with a bachelor of laws degree. He received his master's degree at the University of Michigan. He practised law in St. Louis but, stricken with ill health, he moved to Texas and later to Washington, D.C., where he practised law. He was a trouble shooter for banks and investment houses from 1920 to 1933, later worked for the treasury department and in 1937 was hired by the National Labor Relations board as a federal trial examiner.

At NLRB, Denham became the leader of a small conservative group who fought what he called a "rearguard action against the radicals" in the government agency. On July 17, 1947, he was selected by Pres. Harry S. Truman to become general counsel of the newly revamped National Labor Relations board.

Shortly after taking office, Denham fell afoul of his own political supporters, as well as the opposition, by issuance of the celebrated noncommunist affidavit order; the criticism was that Denham had committed a political blunder in demanding signature of the order by national as well as local union leaders.

Later, on Oct. 7, the board itself overruled Denham's order by a 4–1 vote.

**De Nicola, Enrico:** *see* NICOLA, ENRICO DE.

**Denmark.** A monarchy of north central Europe. Area, 16,569 sq.mi.; pop. (1945 census) 4,045,232. Capital: Copenhagen (731,707). Other principal cities: Aarhus (107,393); Odense (92,436); Aalborg (60,880). Religion: Lutheran Christian. Ruler in 1947: King Christian X until his death on April 20, and thereafter his son, Frederick IX (*q.v.*); prime minister, Knud Kristensen, from Nov. 1945 to Nov. 1947; after Nov. 1947, Hans Hedtoft.

**History.**—To crown the disasters of war came industrial strife, political turmoil, vicious weather and international complications to plague Denmark in 1947.

In the industrial arena the most serious items were the unemployment of 19,000 (in April) and the four-month typographers' strike, March to July, which left only Socialist and Communist dailies—except for some mimeographed leaflets. Communist agitation was disruptive at other points also, as when the Communists got workers to march in a demonstration against the scarcity of potatoes—in a country where the diet was 3,000 calories, or about double the European average.

KING FREDERICK IX, Queen Ingrid and Princesses (left to right) Margrethe, Anne-Marie and Benedikte of Denmark. King Frederick ascended the throne on April 20, 1947, upon the death of his father, King Christian X

Political disaster struck first in the death of Christian X, fearless and beloved monarch, who had presided graciously over Denmark for 35 years. The 76-year-old ruler suffered a heart attack on Easter Sunday, and the crown prince was appointed regent. Pneumonia complicated the trouble, and on April 20 the king's death was announced to the sadly expectant throng outside the palace. Frederick IX took over the kingship and with Queen Ingrid promised to reign like "the old couple."

One of the difficult problems of domestic politics was the status of South Slesvig (or Schleswig in the German spelling), In the plebiscite of 1920, North Slesvig had voted for Denmark and had been annexed. From Flensburg south, the people had chosen to go with Germany, and in later elections had voted 40%–41% nazi. Under the changed circumstances of 1947, increasing numbers yearned for the Danish flag—and perhaps for Danish butter. Most of Denmark's leading statesmen were wary of the issue. Christmas Møller resigned the chairmanship of the Conservative party because he opposed expansion. The Farmer-Liberal prime minister, Knud Kristensen, was a vigorous advocate of Danish acquisition of the Flensburg district at least, by means of a plebiscite. As the differences of opinion waxed hotter, Kristensen calmly flew off to an Oxford Movement conference. Aplomb, however, was not enough, nor an offer to resign. The opposition demanded an election. Kristensen lost a vote of confidence by 80–66 on Oct. 4 and the election was held Oct. 23. The Communists lost slightly, and no single party got a working majority in the Folketing. Kristensen stayed on for a time while leaders manoeuvred for a new cabinet. The Social Democrats had a plurality, and eventually their chairman, Hans Hedtoft, was named premier. The parties and votes:

| | Delegates | Votes |
|---|---|---|
| Socialdemokratiet (Social Democrats) . . . | 57 | 836,231 |
| Radikale Venstre (Radicals) . . . . . | 10 | 144,246 |
| Konservative (Conservative) . . . . . | 17 | 259,185 |
| Venstre (Agricultural) . . . . . . . | 49 | 529,140 |
| Kommunister (Communist) . . . . . | 9 | 141,037 |
| Retsforbundet (Georgist) . . . . . . | 6 | 94,538 |
| Færøerne (Færoe Islands) . . . . . . | 1 | |

Foreign attitudes on the Slesvig question were interesting: Britain seemingly thought it would be all right for Denmark to occupy the Flensburg district, but feared a move farther to the south, thinking that Denmark would not be strong enough to defend the Kiel canal. France apparently relished the prospect of a Danish seizure which might be accepted by the U.S.S.R., because France would then have a good precedent for what it wished to do in the Ruhr. In any case, the whole issue still hung fire at the end of 1947.

Rationing of foods involved both political and economic difficulties. Denmark had ample food, but its balance of trade was highly unfavourable, forcing it to ration food to its own people in order to sell food abroad. Meat rationing was applied on April 1, for the first time after World War I, but had to be abandoned in August because lack of fodder forced heavy slaughter. After a brief surfeit of beef, rationing was then reinstalled.

Denmark had to curtail imports to maintain its finances. It was impossible to control food or foreign exchange as long as Danes could send across the sound and buy what they pleased in Sweden. At length Denmark placed an embargo: only Danes who stayed in Sweden for at least four days could bring back such forbidden luxury items as bananas; on the day before this regulation became effective 30,000 Danes jammed the boats to and from the Swedish shore.

On the positive side, Denmark made a finance and trade agreement with Switzerland involving a $7,000,000 credit. It also joined in a balance of payments agreement with Norway, Sweden, Great Britain, Benelux (the Belgium, Netherlands, Luxembourg bloc), France and Italy in connection with the 16-nation economic conference at Paris (and later Basel). Most helpful would have been re-establishment of the old healthy trade with Great Britain, but Danish costs were rising and the British felt they could not pay the prices the Danes thought they must have. Repeated negotiations produced meagre results. The money question produced acrimonious debates. Once a Communist delegate asked in parliament, "Where do the Liberals get their money from? Where do the Conservatives, the Social Democrats, the Radicals, get their money from?" Another deputy roused a big laugh when he shouted, "Where do the Communists get *their* money from?"

The Danes were averse to continuing to care for some 75,000 German refugees at the end of 1947, but they were grateful that 50,000 had been admitted to western Germany. The Danish Red Cross undertook to feed 81,000 German children in Slesvig and sent three months' rations to 15,000 children in Hungary. In another kind of foreign movement, Denmark marched 4,000 troops into Germany to take over a segment of the British zone of occupation.

The question of U.S. privileges in Greenland, Denmark's great island, was raised vociferously by the Danish Communists. Danish scientific and business activities in Greenland, as well as a press uproar demanding improvement in the administration of the colony, all indicated a determination to keep control and not to sell out to the United States, as had been rumoured.

**Education.**—In 1940 there were 407,355 students in the elementary schools and 67,064 in the middle and secondary schools. In the two Danish universities 6,474 students were enrolled. Even during World War II about one-third of Denmark's famous folk high schools continued to function.

**Finance.**—The Danish crown (krone) was officially worth 20.877 U.S. cents in 1947. Some of the significant financial statistics:

| | | 1945–46 | estimates 1946–47 |
|---|---|---|---|
| Ordinary account: | receipts | 1,304,200,000 kr. | 1,230,400,000 kr. |
| | expenditures | 1,551,500,000 kr. | 1,570,400,000 kr. |
| Capital account: | receipts | 12,729,700,000 kr. | 1,481,500,000 kr. |
| | expenditures | 12,729,700,000 kr. | 1,481,500,000 kr. |

The domestic debt amounted to 3,830,500,000 kr., the foreign debt to 611,900,000 kr., making a total public debt of 4,442,400,000 kr.

| | 1945 | 1946 |
|---|---|---|
| Notes in circulation | 1,561,000,000 kr. | 1,487,000,000 kr. (end of |

| Total imports | 1,166,801,000 kr. | .... |
| Total exports | .......... | 1,360,467,0 |

In 1945 Denmark's trade with Germany decreased to imports 156, 000 kr., exports 184,270,000 kr., and with Switzerland to imports 839,000 kr., exports 20,388,000 kr. Trade with Sweden increased, ever, to imports 152,990,000 kr., exports 72,064,000 kr., and with way to imports 90,629,000 kr., exports 115,220,000 kr. Total im into Denmark for 1945 were 700,000,000 kr.; exports from Denmark 903,690,000 kr.

Failure to achieve trade recovery in 1946 meant that Denmark ha plan to reduce imports in 1947 by 600,000,000 kr.–800,000,000 kr. L in export trade forced cancellation of many orders in Britain and quired a drive for new export markets.

Denmark had 1,630,000 mi. of telephone wires (1947) and 371,00 struments (1945); 904,610 radio sets (1945); 30,290 motor veh (1944); 4,860 km. of railway lines (1944) of which almost exactly half was privately owned and one-half state owned. The Danish merc fleet was almost back to prewar tonnage.

**Agriculture.**—Production of the chief agricultural products in short t

| | 1944 | 1945 (preliminary fig |
|---|---|---|
| Bread grains | 758,000 | 636,000 |
| Feed grains | 3,329,000 | 3,220,000 |
| Potatoes | 1,553,000 | 1,731,000 |
| Sugar beets | 1,400,000 | |
| Milk | 4,420,000 | 4,519,000 |
| Butter | 141,000 | 146,000 |
| Beef and veal | 143,000 | 127,000 |
| Pork | 237,000 | 293,000 |
| Eggs | 51,000 | 55,000 |

The livestock census showed for 1944: 612,224 horses, 3,185,823 ca 1,555,176 milk cows, 2,032,623 pigs. In 1947 the drought so reduced grain harvest that imports of 150,000–200,000 tons would be requ to maintain rations.

**Manufactures.**—Industrial production in 1944, from 6,717 establishm and 195,097 workers, totalled a value of 4,791,711,000 kr. In 1946 number of industrial workers was increased by a shift of 10% of agricultural workers to industry.

## Dentistry.

Reports of the increasing prevalence of diab in the United States during 1947, with the mated number of cases exceeding 2,000,000, had important plications for dentists. Gingivitis and inflammation of the s porting structures of the teeth (diabetic pyorrhoea) may app early in the disease. In all cases tests of blood and urine sugar were recommended.

Workshops were held in several states during 1947 to st the problems of community dental health planning and the trol of dental caries. The workshop in Michigan, devoted tirely to the evaluation of dental caries control techniques, attended by 114 dentists, physicians, biochemists, nutrition and dental health educators who devoted one week to a crit analysis of the problem. The mechanism of the caries pro and its relationship to system conditions, the effectiveness prophylaxis, tooth brushing, chewing gum, dentifrices and mo washes, the utilization of fluorides and silver salts, the rela of vitamin and mineral ingestion and the contribution of vari types of diet in caries control were all given careful study.

One of the summary statements by the group studying to brushing was of special interest. Its conclusion was that "m tenances of oral hygiene by means of dental prophylaxis tooth brushing with acceptable aids can be recommended numerous reasons, although the evidence that such measu are effective in the prevention of dental caries is limited and, at present, inadequate." (The Michigan Workshop, *The Evaluation of Dental Caries Control Technics,* Sept. 8–12, 1947, Brochure.)

On the subject of fluorine, which had received wide attention, the group confirmed the statement that "there is no direct evidence demonstrating whether or not the addition of fluorine to a fluorine-free community water supply will decrease the incidence of dental caries in the community." Studies were begun in several communities to determine the facts. It was stated that "caries reduction of approximately 40% has been observed in the teeth of groups of children treated topically with sodium fluoride solutions."

If dental caries could be reduced 40% in children by the single and inexpensive procedure of topical application of sodium fluoride, a profound social and health advance would result, and such a procedure should be universally adopted, especially in all clinics for children and in offices where children receive treatment.

Much publicity was given to the importance of vitamin C, especially in keeping the gums in healthy condition. That lemon juice may harm the teeth, however, was reported during 1947. Fifty patients who had been taking lemon juice chiefly in water showed evidence of dissolution of the dental structure. The degree and rapidity of decalcification varied, but all showed tooth damage. The proportion of women to men in the group was four to one. In most cases the lemon juice had been taken on nonprofessional advice. The authors of the report concluded that "an adequate amount of vitamin C can be had without resorting to improper use of lemon juice." (*Proceedings of the Staff Meetings of the Mayo Clinic,* 22:81–84, March 5, 1947.)

Another source of abrasion and damage to teeth had arisen from the habit of repeatedly using the upper incisors as a convenient means of opening bobby pins. These abrasions, named "bobby-pin notches," occurred in women mostly in the 19 to 25 age group, but were found also at other ages. The destruction of tooth structure occurs at the incisal edges of the upper incisors and takes the form of a notch which may advance to a point where it is disfiguring. To prevent this damage, an acrylic appliance was devised to slip over the teeth. Bobby pins can then be readily and easily opened without damage.

## Dermatology.

Rickettsialpox is the name given to cutaneous manifestations of a self-limited febrile disease which is preceded by an initial lesion of the skin and is accompanied by general malaise, chills, backache and a rash with round elevated spots. Cases were first reported by L. N. Sussman and B. Shankman in the borough of Queens, New York city, and numerous others soon developed in that region. Complete clinical epidemiologic and laboratory studies were soon under way by M. Greenberg and his associates, and by R. J. Huebner and W. L. Jellison. Within a short time the cause, epidemiology and clinical course of the disease were elucidated.

The causative organism was found to be a Rickettsia, named *Rickettsia akari.* This organism is inoculated into the human being by the bite of a mite, *Allodermanyssus sanguineus* (Hirst), which infests the common house mouse. The bite of this mite inoculates the Rickettsia and produces a painless initial lesion which is first a large elevated spot, then topped with a blister and next covered with a dry black crust. About a week after the appearance of the initial lesion, chills, fever, backache and headache develop. At the same time or a day or two later, the spotty rash appears. In a day or two, the papules are surmounted by blisters. This eruption does not have a characteristic distribution.

Extensive laboratory investigations were carried out and blood tests for typhoid bacilli, paratyphoid A and B bacilli, *Brucella, Leptospira icterohaemorrhagiae, Leptospira canicola* and *Pasteurella tularensis* and *Proteus* OX 19, OX 2 and OX K were negative. Heterophil antibody tests were also negative. The organism was recovered from the tissues of a mouse inoculated with blood drawn from one of the patients; it was also cultivated in the yolk of embryonated eggs. Antigens prepared from this organism gave negative complement fixation tests (similar to the Wassermann test) when tested with serums of patients who had recovered from endemic typhus, tsutsugamushi fever, Q fever and syphilis. There was a positive cross reaction for serum of Rocky Mountain spotted fever.

A new approach to the treatment of cancer of the skin was established by F. E. Mohs in the development of the chemosurgical method of therapy. This technic combined the use of a paste containing zinc chloride which hardens the tissues with the use of immediate microscopic examination of thin slices of tissue fixed by the paste so that the smallest processes of the cancer tissue could be located and removed. Thus the entire lesion could be removed, and massive destruction of tissue was avoided by applying the paste only to the area shown to be cancerous by the histologic examination.

Gradually increasing incidence of Rickettsial disease led to more intensive study during 1947 of a disease called eastern spotted fever, which had been indigenous to the Southampton, N.Y., area for several years. The dog tick, *Dermacentor variabilis,* was found to be the vector of the disease in this area. The pinkish, spotty eruption appearing first on the wrists and ankles and spreading centripetally, becomes full of large confluent spots of a deep purple colour, but no death of skin was seen as in Rocky Mountain spotted fever. Also, the white blood count and the differential blood count were normal except for a slight increase of white blood cells in about one-fourth of the cases. However, of the cases admitted to the Southampton hospital, there was a mortality of 30%.

A promising new therapy for Rocky Mountain spotted fever was further investigated by L. B. Flinn and associates following the report of the first use of para-aminobenzoic acid in this disease by H. M. Rose and others. This drug, when given in large doses at frequent intervals throughout the 24 hours, appeared to lessen definitely the morbidity and mortality of Rocky Mountain spotted fever.

With the continuing spread of the epidemic of ringworm of the scalp (tinea capitis), the subject was investigated from various angles. S. Rothman and his associates showed that adult hair contains a higher concentration of low boiling point saturated fatty acids than does the hair of children. The fatty acids that were particularly destructive of fungi were identified as those made up of an odd number of carbon atoms such as pelargonic, undecylenic and tridecylic acids. The increased concentration of these active fatty acids at puberty prevents the growth of *M. audouini*—a ringworm organism—in adult scalps, and by sterilizing the skin and follicles brings about a slow cure of the infection of the scalp when the infected hairs fall out naturally.

Since benadryl had been generally accepted as of value in the treatment of various allergic conditions, studies and development of other so-called antihistamine drugs were carried out. R. L. Mayer had first called attention to pyribenzamine (N′ pyridil-N′ benzyl-N-dimethylethylenediamine). E. D. Osborne and coworkers, who studied the use of this drug in diseases of the skin, reported that, as with benadryl, almost all patients with acute wheals and blisters (urticaria) were relieved and about two-thirds of those with chronic urticaria were benefited. They also found that patients with chronic allergic inflammation of the skin and with physical allergies responded to pyribenzamine in many cases. An important finding was the fact that at least in these cases, reactions to pyribenzamine were minimal.

A new drug for the treatment of lupus erythematosus (a skin disease with inflammation) was studied by C. S. Wright and E. R. Gross. This is a soluble salt, sodium bismuth triglycollamate ("Bistrimate"), which can be taken orally and was reported to be of low toxicity and therapeutically more effective than the injection of bismuth. Not all cases of lupus erythematosus responded to this therapy but the ease of administration, the low toxicity and the inconsistent responses to other therapy established the drug as one form of treatment to be tried. These investigators also reported improvement in some cases of scleroderma (hardening of the skin) treated by sodium bismuth triglycollamate.

The search for a satisfactory antibacterial agent for local use continued, and one such substance, Furacin, 5-nitro-2-furaldehyde semicarbazone, was investigated by J. G. Downing and coworkers. This particular agent was incorporated in a water soluble base. The investigators believed the drug to be of value in treatment of superficial infectious eczematoid inflammation of the skin, and in ulcers of the skin, either traumatic or postoperative bed sores on the back. Excellent results were obtained in impetigo. The fact that several patients developed local and even generalized skin sensitization, however, made general use of such treatment questionable.

The use of streptomycin in the treatment of various types of cutaneous tuberculosis was investigated by P. A. O'Leary and associates, and this drug showed some promise of being effective in treating scrofuloderma particularly. Another disease which appeared to respond to streptomycin was infected glands in the groin, according to R. L. Barton.

Following earlier investigations on the therapeutic use of nitrogen mustards, H. H. Henstell and J. N. Tober used the drug methyl-bis (B-chloroethyl) amine hydrochloride in the treatment of a case of mycosis fungoides. They reported that the eruption and the itching disappeared, at least temporarily. Temporary favourable results were also reported in this disease by O. S. Philpott and associates. (*See* also MEDICINE.)

## Detroit.

Fourth largest city of the United States in the 1940 census, Detroit is the centre of the large industrial area of southeastern Michigan. Area, 137.9 sq.mi.; pop. (1940) 1,623,452, of whom 320,664 were foreign-born whites, British and Canadian ranking first with 110,698, and Polish second with 52,235. Pop. est. (Jan. 1947), 1,785,000.

Assessed value as of June 30, 1947, $3,642,146,922; gross bonded debt, $299,955,900; net bonded debt, including u debt, $271,183,284; net tax supported debt, $205,796,916; city appropriations, fiscal year ending June 30, 1947, $ 305,615 including schools and utilities; tax levy, city and sc purposes, $98,965,469; combined city and school tax $28.585. Mayor, Jan. 6, 1948: Eugene I. Van Antwerp, ser a first two-year term.

Freed from important work stoppages, the automobile dustry reached an all-time peak of production during 1947. manufacture of replacement parts was four times that of highest prewar period; more trucks were produced than in previous year; the total output of trucks and cars exce 5,000,000. Production was slowed somewhat by shortag steel and parts. The Kaiser-Frazer company, operating at former Willow Run bomber plant, passed its other compet to become the fourth largest manufacturer of motor cars.

The most momentous change in the motor world resu from the death of Henry Ford and the passage of control o Ford industries to his grandson, Henry Ford II. The nonvc stock of the Ford Motor company passed to the Ford fou tion, giving it approximately a 95% ownership of the pany. The value of the foundation was estimated conse tively in excess of $500,000,000, making it the largest fou tion in the world.

Also of great importance to the automobile industry was election of Walter Reuther as president of the United A mobile Workers (Congress of Industrial Organizations), an executive committee favourable to him. Since the oppos was allegedly radical left wing, the election presaged a p of regularized labour relations.

Although the city was free from serious labour difficulti relative minor disturbance, the strike of garage mechanics, important political effects. Edward J. Jeffries, Jr., who ma bid for a fifth term as mayor, was accused of limiting p activity in a turbulent situation. His opponent, Eugene I. Antwerp, won by a substantial majority said to have augmented, if not created, by the attitude of Mayor Jeffri the strike and by his endorsement by the U.A.W.-C.I.O. new councilmen in a total of nine were also elected ove candidates endorsed by the C.I.O.

The tax rate was reduced by nearly $4 a thousand of ass valuation over the previous year, a loss made up in part 10% increase in assessments. Late in 1946 the voters adc a constitutional amendment sponsored by Detroit officials designed greatly to increase state aid to local units of go ment (est. $11,000,000 for Detroit) and to alleviate the h tax on real property. This was promptly off-set by legisl reduction in other state grants and resulted in a defic excess of $7,000,000—the first major operating deficit decade.

(L. D. U

## Dewey, Thomas Edmund

(1902– ), U.S. lawye politician, was born on M 24 in Owosso, Mich. Graduating from the University of M gan, Ann Arbor, Mich., he took his law degree at Colu university, New York city, 1925, and was admitted to the York bar the following year.

In 1933 Dewey was U.S. district attorney for New Y southern district, in which post he achieved nation-wide pr nence for his successful prosecution of gangsters and crimi In 1938 he ran as Republican candidate for governor but defeated by Herbert H. Lehman, the Democratic incum by a narrow margin. Four years later (1942), Dewey ran and this time was elected.

Although Dewey lost out to Wendell L. Willkie as G candidate for president in the 1940 Republican national ention, he won the nomination on the first ballot in the party's nvention in 1944. In the election, Dewey received more than 2,000,000 votes, but was defeated by Franklin D. Roosevelt. is re-election as governor of New York in 1946 again put im in the forefront of presidential aspirants for 1948. How- ver, his refusal to commit himself during the first ten months f 1947 caused apprehension among his supporters. He ended is long silence on Oct. 10 with a nation-wide broadcast in hich he maintained that the health of the U.S. people must ave precedence over the admitted responsibility for feeding urope's hungry.

While he was still regarded as one of the leading presidential hopefuls," his candidacy was unannounced as the year ended.

**iabetes.** Diabetes ranked sixth, barring accidents, as a cause of death in the United States during the rst nine months of 1947, according to a survey by the Metro- olitan Life Insurance company. In another survey, conducted y the United States public health service in Oxford, Mass., ests were made of 3,516 individuals, or 70.6% of the 4,983 habitants. There were 40 known diabetics in the community rior to the survey, and 30 unknown diabetics were discovered. he inference was, therefore, that if all residents had been xamined, an unknown diabetic would have been discovered for ach known case. The implication would be that instead of ,000,000 diabetics in the United States there were actually ,000,000.

The death rates and life expectancies of diabetic patients for uccessive periods in the experience of the George F. Baker linic were tabulated by the Metropolitan Life Insurance com- any in 1947. The accompanying table is notable in that it hows an uninterrupted decrease in mortality for all ages and ll periods during the years 1897–1945.

*Death Rates per 1,000 at Specified Ages Among Diabetic Patients in Successive Periods, 1897-1945; Experience of George F. Baker Clinic, Boston, Mass.*

Note:—Excludes deaths within one week of first observation or hospital discharge.
*Statistical Bulletin,* Metropolitan Life Insurance Company, Aug. 1947.

An analysis of cases admitted to the Central hospital in oras, Sweden, between 1932 and 1941 revealed that at the onclusion of the period, 515 were alive (66%), 240 dead 30.8%) and 24 untraced (3.2%). Females predominated among he living, 55.8%, and among the dead, 60.7%. A comparison as made between the results of treatment for the first five ears, during which Petrén's low carbohydrate diet was em- loyed, and the second five years, in which a "normal" diet was iven, but the writers carefully pointed out that many extrane- us factors entered into such a comparison. The mortality was ssentially the same in the two periods. However, it should be entioned that insulin was given to 52.5% of the patients in he first five years compared with 74.2% in the second five ears.

Improvements in the manufacture of insulin as a result of iscoveries in Denmark and the United States were reported by harles H. Best. An anti-insulin factor, a small amount of hich had been present even in crystalline insulin, was elimi- ated; although this achievement was not of great clinical significance, it was of real scientific importance. Furthermore, new methods disclosed how both insulin and trypsin can be obtained from the pancreas without sacrificing the one to the other. Thus the diversion of millions of pounds of pancreas to the amino-acid digest and tanning industries could now be averted and make more insulin available for diabetics.

Recognition of the work of Carl F. and Gerty Cori of St. Louis for their discovery and isolation of the enzyme phosphorylase which begins the conversion of glycogen into sugar in the metabolism of carbohydrate, and of Dr. Bernardo A. Houssay of Buenos Aires for his discovery of the significance of the hormone produced by the frontal lobe of the hypophysis and its importance in the distribution of glycogen in the body and in the control of diabetes was accorded by the Nobel prize committee.

D. Stetten, Jr., proved that once glucose has been phosphorylated it may be converted to glycogen, to fat or it may be oxidized. He and his co-workers showed that in the well-nourished rat, only about 3% of the glucose ingested is converted to glycogen, while about 30% is consumed in the manufacture of fatty acids.

A. Lazarow found that intravenous injection of large doses of glutathione or cysteine, sulphhydryl compounds normally found in the body, a minute or two prior to the injection of a diabetogenic dose of alloxan, protected the rat completely from diabetes. BAL (British anti-lewisite) also prevents the diabetogenic action of alloxan in rats, presumably because it, too, is a sulphhydryl compound. A low protein diet or high lard diet increases the rats' susceptibility to alloxan. The high lard diet, however, loses this effect if methionine, thiouracil or coconut oil is added. Although encouraging results were cited in one case of hyperinsulinism presumably due to islet cell adenoma treated with alloxan, very poor results were described by others as summarized by C. C. Bailey and P. le Compte.

The appalling incidence of arteriosclerosis in diabetes was shown by an investigation of its presence in the eyes and the arteries of 200 among 350 diabetic children who had survived the disease for more than 20 years. Of this group all but eight had lesions in the eyes and the vessels as demonstrated by X-ray or by disease of the kidneys. Particularly notable in this study by Priscilla White was the demonstration that pelvic arteriosclerosis was common, and especially that it was of prognostic import for the foetus in pregnant diabetics. When calcified pelvic arteries were found in pregnant women the chances for a living child were reduced to one in five. The tendency to calcification was so strong in diabetics that among 19 instances of calcification of the vas deferens there was but one in a non-diabetic.

In H. Dolger's studies of 200 diabetics of 25 years' duration, not one had escaped vascular damage as shown by retinal haemorrhages, albuminuria, or hypertension in varying degree. On the other hand, in the children's series investigated by White, there were a few instances in which no evidence of arteriosclerosis was found by competent ophthalmologists, roentgenologists and clinicians after 20 years, and at least two in cases with onset in childhood but of 25 years' duration. (*See* also PHYSIOLOGY.)

*Estimated.

The production total for 1946 shows a decrease of 28% from 1945, practically all of which was confined to Belgian Congo. Increases in output were scattered, the largest of which was in South Africa.

**Cutting.**—When the German invasion of the Low Countries disrupted the diamond-cutting centres in Antwerp and Amsterdam, new cutting centres were established or existing ones were expanded in Palestine, Cuba, South Africa, Brazil and England. By 1947 the Belgian and Dutch industries were again getting on their feet and there was a surplus of cutting capacity.

**United States Imports.**—The imports of diamonds into the United States showed a sharp increase in 1946. While the major increase was in cut stones, the increasing importance of the cutting industry established in New York city was evidenced by imports of rough stones which for the first time exceeded 1,000,000 carats.

Table II.—*U.S. Diamond Imports, 1939–46*
(Thousands of carats)

| | Rough | Cut | Industrial | Total |
|---|---|---|---|---|
| 1939 . . . . . . . . . . | 153,982 | 488,154 | 3,570,111 | 4,212,247 |
| 1940 . . . . . . . . . . | 227,886 | 321,471 | 3,809,856 | 4,359,213 |
| 1941 . . . . . . . . . . | 215,026 | 229,582 | 6,882,750 | 7,327,358 |
| 1942 . . . . . . . . . . | 278,437 | 126,004 | 11,204,754 | 11,609,195 |
| 1943 . . . . . . . . . . | 751,674 | 193,701 | 12,173,918 | 13,119,293 |
| 1944 . . . . . . . . . . | 896,547 | 169,097 | 12,656,823 | 13,722,467 |
| 1945 . . . . . . . . . . | 893,761 | 377,243 | 10,792,186 | 12,063,190 |
| 1946 . . . . . . . . . . | 1,044,517 | 604,638 | 4,705,118 | 6,354,273 |

Most of the rough diamond imports reach the United States directly from South Africa, but cut stone imports come from all of the various cutting centres. Arranged according to the decreasing order of magnitude of the 1946 imports, the sources of supply of cut stones were in the following order: Belgium, Palestine, South Africa, Cuba, Netherlands, England and Brazil.

Although gem stones make up the greater portion of the value of the diamond imports, industrial diamonds make up the bulk of the weight. Imports of industrial diamonds in 1946 dropped heavily but still showed an increase in value, indicating a market advance in prices, from $1.19 per carat in 1945 to $3.04 per carat in 1946. (G. A. Ro.)

## Diatomite.

The production of diatomite in the United States is not reported annually, but sales in the three-year period 1942–44 averaged 140,624 short tons per year. This average was reported to have been exceeded in 1945 and again by a considerable margin in 1946. More than half of the output is used as a filter aid, about one-fifth as filler ar
eighth as insulation. (G. A.

## Dimitrov, Georgi

(1882– ), Bulgarian statesma
born on June 18, at Radomir. A
positor by trade, he was active in the trade union mov
and in 1904 was elected secretary of the Trade Union
tion. In 1919 he was in control of the Bulgarian Com
party and two years later was elected member of the exe
committee of the Comintern. In Sept. 1923 a coup d'ét
ganized by him in Bulgaria failed and he fled to Moscow,
he was active as organizer and supervisor of the Com
movement on behalf of the Comintern. Arrested in Germ
1933, he was charged with complicity in the burning
Reichstag, but was acquitted. On returning to Moscow
appointed secretary-general of the Comintern in 1935 an
office until the official dissolution of that body in 1943.
meantime he became a soviet citizen and in 1937 was
deputy to the supreme soviet (parliament). He retur
Bulgaria in 1944 to transform the country into a Com
republic. After succeeding in this objective he renounced
citizenship and reverted to Bulgarian nationality. On N
1946, Vasil Kolarov, president of the republic, appointe
prime minister. In July 1947 he made a state visit to Be
and in November went to Sochi, Georgia, where he
Joseph Stalin.

## Dinnyes, Lajos

(1901– ), Hungarian statesman
born in 1901 in Alsódabas in the cou
Pest, of a Protestant farmer's family. After his secondar
cation at a Protestant grammar school, he graduated fro
Agricultural academy at Keszthely. Elected to parliam
1929, he belonged to the dissident Agrarian group led by G
Gaal, which later fused with the Independent Smallh
party. Dinnyes was returned to parliament at the genera
tions of 1931 and 1936. He was a member of the opp
against Gen. Julius de Gombos' pro-fascist government.
Gombos' death in 1936, the political importance of the
pendent Smallholders considerably increased and Dinnyes
a part in the opposition to German influence. He had to g
hiding after March 1944, when German forces assume
control over Hungary, and reappeared only after the R
army had driven out the German forces in the winter of 19
A deputy of the constituent assembly in Nov. 1945, he succ
General Albert Bartha as minister of national defense on
15, 1947, and after Ferenc Nagy's resignation (*see* HUNG
he was appointed prime minister on May 31, as leader
group of the Smallholders party which still consented to r
in the coalition with the communists. The Smallholders
suffered a heavy defeat at the elections on Aug. 31, 1947.
the less, Dinnyes, after some reshuffling of his cabinet, rem
as prime minister. (B. M

## Disabled American Veterans.

An organizati
veterans, com
called the D.A.V., who served honourably in time of war
armed forces of the United States and who became wou
gassed, injured or disabled as a result of that service. A
group of World War I veterans, while taking vocational

ing in Cincinnati, O., early in 1920, founded this organization in an attempt to improve the methods then being inefficiently employed in the administration of the affairs of veterans in vocational schools, hospitals and the then existing complicated system of overlapping government bureaus.

There was steady growth in the importance and usefulness of the organization. In recognition of its policies and valuable services to disabled veterans, their dependents and the public, a charter was granted by congress in 1932, and was amended in 1942 to extend eligibility to those who served in World War II.

The training of disabled veterans to handle administrative and service duties connected with assisting disabled veterans in their claims for benefits to which they are entitled continued to completion during 1947, with more than 300 such trainees having finished their studies in American university, Washington, D.C.

Funds for maintaining the executive and service activities are derived from per capita tax from membership dues, from voluntary gifts and contributions and from other sources. The production and distribution of "Ident-O-Tags," assumed by the organization in 1946, was continued in 1947, and yielded a substantial portion of the total financial income. The "Ident-O-Tags" are miniature automobile licence plates, worn on key rings. In the event that the keys are lost, the finder may deposit them in any letter box. They are then delivered to D.A.V. headquarters for identification and subsequently returned to the owner without charge.

National headquarters are located at 1423 E. McMillan street, Cincinnati, O. National service offices are maintained at 1701 Eighteenth street, N.W., Washington, D.C. As of 1947, Vivian D. Corbly had served for 22 years as national adjutant and business manager in charge of executive functions at national headquarters. At the annual convention in Las Vegas, Nev., on Aug. 22, 1947, John L. Golob was elected national commander.

Membership at the close of the fiscal year, June 30, 1947, was 127,023 in about 1,200 local chapters throughout the United States and in foreign countries. Eligibility requirements are such as obviously limit the numerical strength of the organization, but in 1947 it nevertheless ranked third in size among all veterans' organizations in the United States.

Publications include a newspaper, *The D.A.V. Semi-Monthly*, sent to all members, also reports to congress, various pamphlets and leaflets occasionally distributed to acquaint potential members and the public with the activities of the organization, and the annual convention proceedings.

The women's auxiliary is composed of wives, widows, mothers, sisters, daughters and granddaughters of D.A.V. members. Mrs. Fred C. Jeths, Chicago, Ill., was national commander in 1947. Headquarters office was at Colorado Springs, Colo., where Mrs. Ann Weber served as national adjutant. (*See* also VETERANS' ORGANIZATIONS.) (V. D. C.)

## Disasters.

During 1947 loss of life and property in disasters included the following:

### Aviation

| | |
|---|---|
| Jan. 4 | Northern Brazil. Eleven passengers and crew members of Brazilian air liner were killed when craft crashed into Solimoes tributary of Amazon river. |
| Jan. 5 | Near Tsingtao, China. Crash of Chinese air liner brought death to all 42 persons aboard craft. |
| Jan. 12 | Galax, Va. Passenger air liner flying from Detroit, Mich., to Miami, Fla., burst into flames after crashing during rainstorm, bringing death to 15 passengers and all 3 crew members; only 1 person survived disaster. |
| Jan. 12 | South China sea, off northern Luzon. Thirty-six survivors of air liner that crashed into South China sea were rescued by U.S. army transport "Gen. E. T. Collins." Six others aboard aircraft were killed in crash. |
| Jan. 25 | Hong Kong, China. Crew of 4 were killed and $5,000,000 cargo in gold bullion and coins was scattered when craft of Philippine air lines crashed into peak near Hong Kong. |
| Jan. 25 | Croydon airport, England. Dakota air liner crashed and burst into flames a few minutes after take-off. Twelve of 23 persons aboard were killed. |
| Jan. 26 | Near Copenhagen, Denmark. All 22 persons, including Grace Moore, U.S. opera star, and Prince Gustavus Adolphus of Sweden, aboard Dakota air liner of K.L.M. (Royal Dutch Airlines) were killed when craft crashed and exploded onto Kastrup airport several minutes after taking off. |
| Jan. 27 | Albuquerque, N.M. Army B-29 plane crashed and caught on fire shortly after take-off from Kirtland field, killing 11 persons. |
| Feb. 1 | Near Cintra, Portugal. Sixteen persons aboard French passenger plane were killed when craft crashed into peak near Lisbon airport. |
| Feb. 5 | West of Madrid, Spain. Crash of Cuban air liner in mountains west of Madrid resulted in death of all 11 occupants of craft. |
| Feb. 13 | Near Macon, Ga. All seven occupants aboard army passenger plane were killed when craft crashed in Georgia swamp. |
| Feb. 15 | Near Terracina, Italy. Seventeen persons, including Princess Armena Sazil of Egypt, were killed when army plane in which they were riding crashed into Tyrrhenian sea. |
| Feb. 15 | Near Bogota, Colombia. Fifty-three occupants of Avianca Airlines passenger plane were killed after plane crashed into El Tablazo cliff, 30 mi. northwest of Bogota. |
| March 14 | Near Grenoble, France. Air France passenger plane passing through heavy fog crashed into mountainside in French Alps, bringing death to all 23 occupants of craft. |
| April 18 | London, England. R.A.F. reported Halifax aeroplane with crew of nine was missing on meteorological flight from its base in Northern Ireland. |
| April 21 | Kwajalein, Marshall Islands. Fourteen U.S. army air force personnel aboard B-29 that crashed into Pacific shortly after its take-off from Kwajalein were presumed dead. |
| April 22 | Columbus, Ga. Nine persons were killed when 2 aircraft collided 30 ft. above Muscogee airport and crashed in flames. |
| May 20 | Near Champaign, Ill. Crash of army plane resulted in death of five persons aboard craft. |
| May 29 | New York city, N.Y. Crash of four-engined commercial air liner near La Guardia field shortly after its take-off brought death to 44 persons and injuries to 5 others on craft. |
| May 29 | Southwest of Tokyo, Japan. U.S. army courier plane flying to Tokyo from Korea struck mountain southwest of capital killing all 40 persons aboard craft. |
| May 29 | Northern Iceland. Icelandic air liner crashed into mountainside, killing all 25 occupants aboard. |
| May 30 | Port Deposit, Md. All 53 persons aboard commercial air liner that crashed and burned in wooded swamp in Cecil county, Maryland, were killed. |
| June 13 | Near Charles Town, W.Va. Air liner carrying 50 passengers and crew members crashed into mountain top near there and exploded, bringing death to all persons aboard craft. |
| June 15 | Near Springfield, Vt. Twelve men aboard army B-29 bomber that crashed and exploded onto granite ledge of Hawkes mountain were killed. |
| June 18 | Mayadine, Syria. U.S. air liner en route from Karachi, India, to Istanbul, Turkey, crashed near east bank of Euphrates river, killing 15 of 36 persons aboard. |
| July 13 | Melbourne, Fla. Crash of DC-3 air liner in coastal swamp brought death to 21 persons aboard craft, including 18 Puerto Rican residents of New York city who had chartered plane for visit to homeland; 15 others were injured. |
| July 29 | Eglin Field, Fla. B-29 superfortress crashed in swamp north of airfield after taking off on routine flight, bringing death to nine of crew and injuries to remaining two crew members. |
| Aug. 7 | Everett, Mass. Four persons were burned to death when pilot of small plane apparently mistaking glowing lights for airport illumination, steered craft into maw of flaming oil and gas furnace. |
| Aug. 16 | West of Oahu, Hawaii. Six of 13 passengers were killed and 4 others, including George Atcheson, Jr., ranking U.S. diplomat in Japan, were missing and presumed dead when army B-17 plane bound from Tokyo to Washington, D.C., forced down by fuel shortage, sank in Pacific; remaining 3 were rescued. |
| Aug. 28 | Northern Norway. Thirty-five persons were killed when Norwegian hydroplane crashed against mountainside near Lofoten Islands. |
| Sept. 15 | Near Aberdeen, Md. Nine of 10 persons aboard B-17 perished when bomber exploded and crashed into Bush river; lone survivor parachuted to safety. |
| Sept. 19 | Nazca, Peru. At least 3 persons were killed in crash of U.S. army transport plane en route from La Paz, Bolivia, to U.S.; 11 others were listed as missing. |
| Sept. 27 | Near New Delhi, India. Fourteen persons aboard British army plane were killed when craft crash-landed at Palam airport. |
| Oct. 16 | Near Cartagena, Spain. Forty-two of 44 persons aboard French air liner that crashed in Mediterranean were believed lost. |
| Oct. 24 | Bryce Canyon, Utah. All 52 persons aboard passenger air liner were killed when craft crashed into hillside. |
| Oct. 26 | Near Athens, Greece. Crash of Swedish air liner on Mt. Hymettos brought death to 45 persons aboard craft. |
| Oct. 26 | Annette Island, near Ketchikan, Alaska. All 18 persons aboard commercial air liner perished when craft crashed into mountainside. |
| Oct. 28 | Dog Lake Mt., Oregon. Gov. Earl Snell (of Oregon), his two companions and pilot were killed in crash of private aircraft into mountainside. |
| Nov. 18 | Near Ravello, Italy. Twenty Swedish pilots were killed and five others were injured when Swedish air liner crashed near there. |
| Nov. 27 | Near Yakutat, Alaska. All 13 persons aboard commercial air liner were killed when craft crashed shortly after predawn landing attempt. |
| Dec. 9 | Near Goose Bay, Labrador. Twenty-three of 29 persons aboard |

| | |
|---|---|
| | U.S. C-54 air transport plane were killed in crash; 6 survivors were evacuated from scene by helicopter. |
| Dec. 11 | Near Memphis, Tenn. All 20 persons aboard army C-47 plane were killed when craft crashed on wooded hillside. |
| Dec. 11 | Europe. U.S. air force ended search for C-47 plane which vanished Nov. 28 with 20 persons aboard while en route from Pisa, Italy, to Frankfurt-on-Main, Germany. |
| Dec. 16 | Near Davis-Monthan airfield, Ariz. Twelve persons were reported killed in crash of B-29 superfortress. |

## Fires and Explosions

| | |
|---|---|
| Jan. 13 | Nottingham, Pa. Gas explosion in coal pit resulted in death of 15 miners. |
| Feb. 8 | Berlin, Germany. Overheated furnace caused fire in dance hall in British zone. Many of patrons were killed or injured in panicky attempts to flee from burning building. Toll of dead was put at at least 81 and number of missing at 10. |
| Feb. 20 | Los Angeles, Calif. Sixteen persons were killed and about 100 others injured in explosion that completely razed electroplating plant and badly damaged near-by buildings. Cause of blast was laid to mistake in mixing chemicals. |
| March 25 | Centralia, Ill. One hundred and eleven miners were killed in explosion in coal pit. |
| March 30 | Camden, N.J. Forty-year-old woman, 6 of her 14 children and her grandson were burned to death in fire that destroyed their home. |
| April 2 | Clinton, Mo. Twelve workers were killed in fire and explosion that wrecked one-story frame fireworks plant. |
| April 10 | Exeter, Pa. Gas pocket blast in coal mine brought death to ten miners and injuries to nine others. |
| April 16–18 | Texas City, Tex. Five hundred and fifty persons were killed in catastrophic series of explosions set off by blast of nitrate cargo in anchored ship that destroyed larger part of Texas City, setting fire to chemical plants, oil refineries, docks, buildings, etc. Estimated damage caused by fires was put at $35,000,000. |
| April 18 | Fiume, Italy. Twenty-six persons were killed when dynamite-laden freight car exploded, causing heavy damage to station and near-by buildings. |
| June 22 | Wilmington, Calif. Explosion on tanker carrying 3,000,000 gal. of gasoline destroyed shore installations valued at about $10,000,000 and brought death to at least 4 crewmen; 10 others were missing. |
| July 1 | Santo Stefano, Italy. Blast aboard freighter "Panigaglia," which occurred during unloading of munitions, resulted in death of at least 68 crew members and dockers. |
| July 29 | Harrisonburg, Va. Blast that wrecked beauty shop killed 13 persons and injured 30 others. |
| July 31 | Paris, France. Twenty-one women prisoners perished in flash fire that swept through Caserne des Tourelles barracks. |
| Aug. 15 | Whitehaven, Cumberland, Eng. One hundred and four miners perished in blast that trapped them in undersea workings of mine. |
| Aug. 18 | Cádiz, Spain. Explosion in naval arsenal resulted, according to unofficial estimates, in 149 deaths and injuries to 5,000 others; government refused to permit publication of complete casualty figures. |
| Aug. 23 | Annfield Plain, Eng. Nineteen miners were killed in explosion in Morrison North coalpit. |
| Aug. 30 | Rueil, France. Eighty-seven persons perished in fire that stroyed Select motion picture theatre; estimated 200 others injured. |
| Oct. 9 | Chicago, Ill. Ten persons perished in fire of unknown origin started in four-story tenement populated by Negroes. |
| Oct. 21 | Hof, Germany. Twenty-eight persons were burned to deat fire that razed asylum for old people. |
| Oct. 24 | New England. Forest fires sweeping through New Engl particularly Maine, destroying large part of Bar Harbor, ca damage estimated at $30,000,000 and razed 110,000 ac timberland and townships; at least 17 persons perished. |

**RESCUE WORK** at Texas city, Tex., which was virtually destroyed by fire and explosions on April 16-18, 1947. A freighter carrying nitrates blew up, setting off nearby oil and chemical plants; 550 persons were killed and thousands injured

## Marine

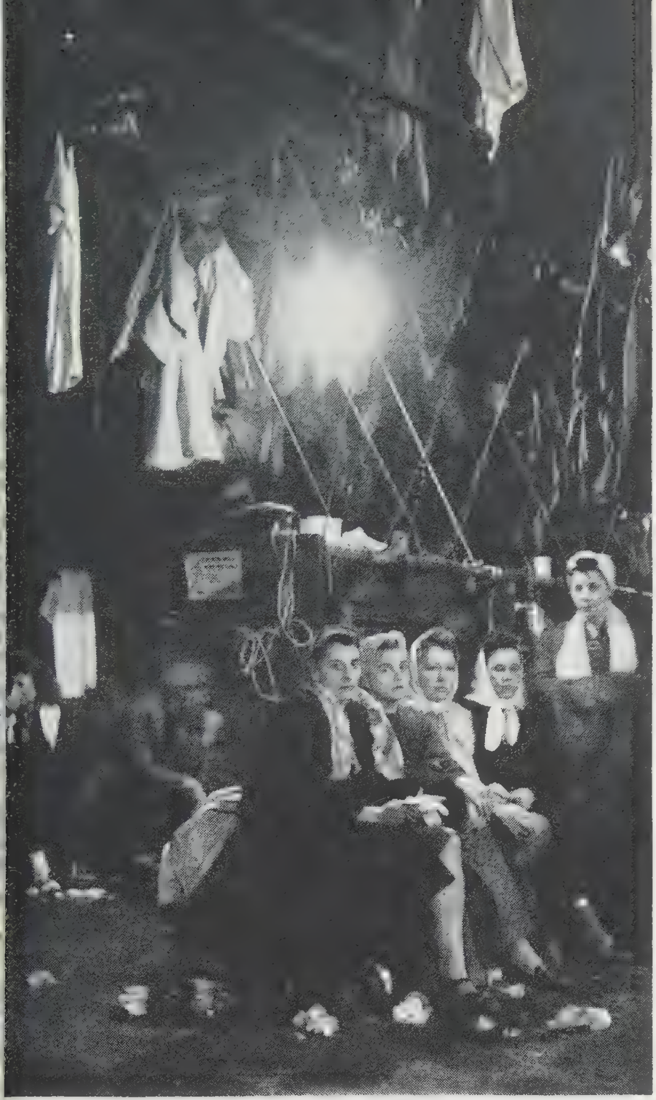
| | |
|---|---|
| Jan. 19 | Gulf of Petalia, Greece. One thousand, five hundred-ton Gr steamship "Himara," plowing through heavy seas 20 mi. offsh from Athens, struck mine near entrance to Gulf of Petalia sank in 30 min. At least 392 persons of 637 passengers and cr men aboard vessel were killed or drowned. |
| Jan. 30 | Near Cape Finisterre, Spain. Eighteen of 44 persons who esca in lifeboats from burning British ship "Samwater" were drow after 2 lifeboats capsized in heavy seas. |
| March 21 | Near Honolulu, Hawaii. Twelve or 13 men who escaped in lifeb when tanker "Fort Dearborn" split in two on March 12, presumed lost at sea after thorough navy search for surviv proved fruitless; 22 others were rescued from ship which s 500 mi. from Honolulu. |
| April 24 | Porthcawl, England. Tanker "Samtampa" smashed up in he seas near there; 40 persons aboard who abandoned wrecked s were lost, as well as 8 members of a lifeboat crew who went the rescue. |
| June 4 | Off Isle Royale, Mich. Twelve crew members perished in sink of Canadian freighter "Emperor" that rammed against ro jutting out into Lake Superior. |
| July 17 | Bombay, India. Small ferry steamer "Ramdas" sank in sto in Bombay harbour; about 626 persons aboard 400-ton c were believed lost. |
| July 28 | Brest, France. Explosion aboard Norwegian freighter "Oc Liberty," laden with nitrate, killed at least 8 persons and inju several hundred others; vessel caught fire and exploded just side of Brest harbour; damage caused by blast was estimated minimum of $3,000,000, as flames spread to city. |
| Sept. 9 | Pittsburgh, Pa. Twenty-one persons were killed in blast that fire to excursion steamer "Island Queen." |
| Nov. 25 | Hippa Island, off British Columbia. Forty-nine persons presumed drowned in wreck of army transport "Clarksdale tory" off Hippa Island; four persons were rescued. |
| Dec. 1 | Oporto, Portugal. Hurricane that struck north and south Oporto virtually wiped out Portugal's north coast fishing and killed or drowned at least 160 fishermen. |
| Dec. 24 | Southwest Finland. Ten U.S. merchant seamen were killed died of exposure in wreck of U.S. freighter "Park Victory" Turku. |
| Dec. 25 | The Hague, Netherlands. Twenty-six aboard "Skoghaug," wegian ship, perished when vessel struck mine off Netherla coast. |

## Miscellaneous

| | |
|---|---|
| Dec. 13 | Boyacá department, Colombia. At least 37, and possibly 50, sons were killed when the Pauna bridge spanning the Minero r suddenly collapsed. |

## Natural

| | |
|---|---|
| Jan. 30 | Southern U.S. At least 20 persons were killed by tornado swept through Georgia, Alabama, Arkansas, Tennessee Missouri. |
| April 9 | Western Texas and Oklahoma. Tornado whipping through sou western U.S. communities killed 167 persons and injured 1, more; 70% of town of Woodward, Okla., was destroyed by twis |
| April 29 | Worth, Mo. Freak windstorm razed every building on Wort main street, killing 16 persons and injuring 25 others. |
| June 1 | Pine Bluff, Ark. Tornado sweeping through rural communitie Pine Bluff region killed 35 persons, injured scores more and cau heavy property damage. |
| June 22 | Cambridge, Neb. Sixteen persons were killed in flash flood inundated Cambridge at dawn, catching most of its residents bed. |
| July 5 | St. Louis, Mo. Floods in Missouri and upper Mississippi vall brought death to 16 persons, left 34,812 others homeless caused damage totalling at least $850,000,000. |
| Sept. 17–19 | Gulf of Mexico. Violent hurricane that cut through south Florida and struck Louisiana and Mississippi before spend itself, caused widespread property damage; casualties were put 84 dead and missing. |
| Sept. 20 | Honshu Island, Japan. Five-day floods borne in wake of typho caused widespread damage in Kanto and Tohoku districts; fi casualty figures were 999 persons killed, 984 missing and 1, injured. |
| Sept. 21 | New Orleans area, La. Floodwaters coming in wake of hurric inundated vast areas, caused heavy crop damage, crippled co munications and resulted in casualty toll of 55 dead, with oth listed as missing. |
| Oct. 5 | Eastern India. Disastrous flood in eastern Bengal destro 100,000 tons of rice and thousands of cattle; made 1,000,000 sons homeless and caused famine that took thousands of lives. |
| Nov. 2 | Andes Mountain region, Chile. Earthquake that struck east Lima killed 233 persons and destroyed considerable property. |
| Dec. 26 | New York city and North Atlantic states. Greatest snowfall |



OMEN keeping a night-long vigil following the coal dust explosion at Cen-alia, Ill., on March 25, 1947, when 111 miners lost their lives in the worst .S. mine disaster after 1928

recorded history of New York blanketed city under record snow mantle of 25.8 in. Storm, heaviest in metropolitan area, paralyzed all forms of traffic, buried city under estimated 99,000,000 tons of snow and resulted in 55 deaths in 8 North Atlantic states. (*See* also SEISMOLOGY.)

### ailway

| | |
|---|---|
| ın. 17 | Near Bakersfield, Cal. Eight persons were killed and 70 were injured in derailment of Southern Pacific railway train. |
| ın. 27 | Walton, Ind. Four persons were killed and 20 injured when a roll of bailing wire derailed a Pennsylvania railroad train en route from Cincinnati to Chicago. |
| eb. 17 | Near Michigan City, Ind. Thirteen railway workers were killed when electric train crashed into their bus at crossing. |
| eb. 18 | Near Altoona, Pa. Twenty-four persons were killed and 124 others injured when Pennsylvania railroad flyer pitched over 150-ft. embankment as it headed for celebrated "horseshoe curve," 2 mi. west of scene of accident. |
| ug. 9 | Near Doncaster, Yorkshire, England. Collision of 2 trains packed with holiday crowds outside the Doncaster railway station resulted in death of at least 17 persons and injuries to 46 others. |
| ug. 23 | Near Berlin, Germany. Twenty-four persons were killed and more than 50 others injured when overcrowded passenger coach of train caught fire; fire started mysteriously in section where packages of films and gasoline were stored in same car. |
| ept. 1 | Dugald, Man. At least 35 persons were killed when speeding train plowed into stationary transcontinental express at flag station. Estimated 15 other persons were listed as seriously injured. |
| ept. 30 | Central Java. Twenty-five persons were killed and 70 others were injured when 4 passenger coaches broke loose from train and rocketed down steep hill between Parakan and Temanggung. |
| ct. 24 | South Croydon, England. Thirty-one persons were killed and more than 70 others injured when speeding suburban train ploughed into slowed train ahead, telescoping 2 rear passenger coaches. |
| ct. 26 | Near Goswick, England. Twenty-eight persons were killed when speeding London express jumped track and hurtled into embankment; 71 others were injured. |
| ec. 12 | Pontmort, France. Collision of fast passenger express with mail train brought death to at least 17 persons. |
| ec. 22 | Fahr-Irlich, Germany. Head-on crash between 2 express trains resulted in death of 36 persons and injury to more than 300 others. |

### Traffic

| | |
|---|---|
| Oct. 15 | Near Mazagan, French Morocco. Fifteen persons were burned to death when bus and truck collided and burst into flames. |
| Oct. 25 | Palestine. Thirteen British soldiers were killed or mortally injured in collision of two army buses on Haifa-Jerusalem road. |
| Dec. 26 | Near Como, Italy. Twenty-one skiers were killed and 29 others injured when truck in which they were riding ran off mountain road. |

**Disciples of Christ.** Statistics as of June 30, 1947, showed a world membership of 1,838,397 (loss of 50,667 for the year), of whom 1,703,010 (loss of 15,000) were in the United States and Canada. Additions by baptism numbered 59,350 in U.S. and Canada (up 11%), more than one-fourth of which were reported from Indiana and Oklahoma. In addition, there were 7,404 baptisms in other countries. The apparent loss in membership may not, and probably does not, reflect a decrease in strength. The Disciples are a free association of autonomous congregations. The margins of the group, for statistical purposes, are somewhat vague, owing to the existence of a fringe of churches whose willingness to co-operate with the central agencies, or even to report to them, varies from season to season. During the same period, and doubtless for the same reason, the number of congregations reported in the U.S. and Canada dropped from 7,945 to 7,844. Of these, only 5,871 made contributions through agencies reporting to the international convention or through state and provincial missionary societies. The total of gifts for missions and benevolence through the co-operative agencies was $10,376,544, an increase of $435,492 over the preceding year. Of the total amount, $596,293 was contributed as "Week of Compassion" gifts. The per capita average of gifts for missions and benevolence was $5.89. The resumption of foreign missionary work continued with accelerated tempo. A joint committee was exploring the possibility of union between Disciples of Christ and the Northern Baptist convention. Friendly but noncommittal reply was made to a suggestion looking toward union with the Congregationalists, and the Disciples joined with the Congregationalists in petitioning the Federal Council of Churches to invite to a conference on union all those denominations which "recognize one another's ministry and sacraments." The international convention (U.S. and Canada) met at Buffalo, N.Y., July 29–Aug. 6, 1947, with Rev. Hampton Adams, St. Louis, Mo., as president. It elected Rev. Roy C. Snodgrass, Amarillo, Tex., as president of the next convention, which was to meet at San Francisco, Calif., Sept. 27–30, 1948. The world convention, quinquennial except when war interferes, followed the international convention at Buffalo. (W. E. GA.)

**Displaced Persons:** *see* PRISONERS OF WAR; REFUGEES.
**District of Columbia:** *see* WASHINGTON, D.C.
**Divorce:** *see* MARRIAGE AND DIVORCE.

**Dodecanese.** A group of 14 inhabited islands in the Aegean sea. Area, 1,035 sq.mi.; pop. (Oct. 19, 1947, census), 115,913; pop. of the island of Rhodes, including the city of Rhodes (cap.), 22,121. Language: Greek (92%), Turkish (7%). Religion: mainly Greek Orthodox, but the Turkish minority is Moslem.

**History.**—The Italian peace treaty, signed in Paris on Feb. 10, 1947, stipulated (article 14) that Italy was to cede the Dodecanese to Greece. Sovereignty of the islands was transferred from British military administration to Greek control on Sept. 15 when the ratification instruments of the Italian peace treaty were exchanged in Paris.

Later, the Greek administration had some difficulty with the adjustment of wages and prices between the islands and the mother country. As the islands were not self-supporting, they were for the time being a financial burden on Greece to the sum of about £500,000 a year. (*See* also ITALIAN COLONIAL EMPIRE.) (K. SM.)

## Dog Racing.

Greyhound racing flourished in both the United States and Europe during 1947. England especially was affected by the betting craze, although the fuel shortage necessitated the limiting of races to week ends. Ninety tracks operated in England. Dog racing in the U.S. again was restricted chiefly to Florida and Massachusetts. A bill to legalize dog racing in New Hampshire was defeated, 226 to 105. (M. P. W.)

**Dog Shows:** *see* SHOWS, ANIMAL.
**Dominica:** *see* WINDWARD ISLANDS.

## Dominican Republic.

A West Indian republic occupying the eastern two-thirds of the island of Hispaniola or Haiti. Area: 19,129 sq.mi.; pop. (1946 est.) 2,059,113. Racial distribution is estimated to be 15% white, 15% Negro and 70% mestizo and mulatto. The capital is Ciudad Trujillo (formerly Santo Domingo) with a population (1946 official est.) of 131,271. Other urban centres (with 1945 or 1946 pop. ests.) are Santiago de los Caballeros (56,618), San Pedro de Macorís (23,267), San Felipe de Puerto Plata (15,610). Roman Catholicism is the predominant religion; the official language is Spanish. President in 1947: Gen. Rafael Leónidas Trujillo y Molina.

**History.**—Chief developments of 1947 centred around the opposition to the Trujillo regime, culminating in an abortive attempt to invade the republic from Cuba in late September. President Trujillo was named on March 22 as the candidate of the Dominican (or government) party for re-election. Two other candidates appeared, Rafael A. Espaillat (National Democratic party) and Francisco Pratts Ramírez (National Labour party), though neither was conceded any chance of election. The election was held May 16 and, as expected, resulted in an overwhelming sweep for the Dominican party, which won all senate seats and all but two in the chamber of deputies of the other parties getting one of the latter. Puerto sources on June 18 reported a government purge of p opponents. The Dominican embassy in Washington, charged on July 31 that three ships with 3,000 filibust cruited in Cuba, Guatemala, Venezuela and Puerto Ric sailed from Cuba to invade Dominican territory in an ef overthrow Trujillo.

President Trujillo was inaugurated for a new term, 19 on Aug. 16. Two days later he repeated charges that munists" planned an armed invasion from Cuba; he ask an international inquiry, though Cuban officials denied an activity. On Aug. 23 the Dominican government charge Guatemala and Venezuela were providing planes and mo aid anti-Dominican revolutionists gathering in Cuba; bo the other governments denied complicity. The Dominica ernment on Aug. 26 promised to recognize any new w hemisphere government which was "definitely anticommu The Cuban government announced on Sept. 29 that an revolutionary plot against the Dominican government had smashed, that Cuban army and navy units had captured 1,100 insurgents (including several North Americans), 11 ers and large amounts of arms and munitions on keys Nuevitas in Camagüey province, Cuban airfields and 2 L in Cuban waters. Leaders of the movement were announc Dr. Angel Morales, former League of Nations official and man of the "central committee of the Dominican revolu and Cuban Education Minister Dr. José Manuel Alemán. Dominican government on Nov. 18 demanded that Cuba "damages" for the plot. On Dec. 5 a mob ransacked the D ican consulate in Santiago, Cuba; the Dominican govern "identified" participants as members of the International munist brigade.

The Dominican government early in the year began cre of an army reserve of 50,000 men from 18 to 40, mostly from government employment. On May 17 the govern announced that from 5,000 to 10,000 Yugoslav refugees Italy would be admitted to colonize a new industrial area the Haitian border. The government completed contract the Columbus Memorial lighthouse at a cost of $5,000 construction was planned to be started Oct. 12.

NONSECRET BALLOTING in the Dominican elections at Ciudad Trujillo, May 16, 1947. Pres. Trujillo was returned to office by 93% of the voters

**Education and Religion.**—The 1947 budget allotment for educatio $2,307,759. Government statistics indicated a total of 2,484 school an enrolment of 229,417; there were 1,161 "emergency schools" a was planned to increase the number ultimately to 5,000. Illiteracy officially claimed to be less than 36%.

**Finance.**—The monetary unit is the peso, valued at par with the dollar. The 1947 budget estimated revenues at $40,224,620 (ge fund $29,683,770; special fund $9,941,850; municipal fund $599 and expenditures at $40,087,155.41 (general fund $29,546,305.41; cial fund $9,941,850; municipal fund $599,000), leaving a surpl $137,464.59. On the strength of the estimated surplus, President Tr recommended salary increases for all government employees. Gover receipts in 1946 were $47,971,435.00 as against budget estimates 22, 1945, of $26,831,960.66; expenditures for 1946 were $44,332,6 as against estimated expenditures of $26,866,714.87; the surplus 1946 was $3,638,743.83. Total bank deposits May 31, 1947, were 749,551. The construction program in force by June 1947 inv $6,033,826.34; it included sewage systems, waterworks, street rep government buildings and police barracks in various parts of the public. Constitutional amendments effective Jan. 10 established an pendent monetary board and a central bank authorized to issue Do can currency to replace U.S. currency which had long been legal ter the new currency, issued in October, was backed by $2,000,000 in me gold and $48,215,000 in U.S. dollar resources. The government on 19 discharged its remaining foreign debt by payment to U.S. bondho of $9,271,855.55, plus $1,102,625.70 on credit in New York city. left a remaining public debt of $8,053,797.23, consisting of an int loan of $6,423,743.90 and an Export-Import bank credit of $1,630,05

**Agriculture.**—Sugar production from Sept. 1, 1946, to June 30, was 458,446 metric tons. The leaf tobacco crop in 1946 was 28 metric tons (1945: 18,640 tons); the estimate of production in 1947 12,500 tons, but the quality, it was thought, would be poor. Milled production in 1946 was 52,423,457 kg. (1945: 62,467,337 kg.). estimate of cacao production in 1947 was 300,000 bags of 70 kg. Government appropriations for irrigation canals in 1947 were $1,395

**Trade and Communications.**—Exports for the first six months of were 515,407 metric tons valued at $55,555,246 (same period in 1

477,542 tons valued at $40,755,949); imports during the same period were valued at $20,621,983 (1946: $12,349,769). Total exports in 1946 were valued at $64,792,054 and imports at approximately $33,000,000. Great Britain was the republic's best customer in 1946, buying products valued at $26,978,956 (41% of total exports; crude sugar accounted for all but $66,351 of British purchases); other important 1946 customers ncluded the United States $11,998,083 (20% of total); Canada $5,883,750; the Netherlands $2,570,269; France $2,064,790; Spain $1,913,002; Netherlands West Indies $1,746,533. Principal exports by items in 1946 were sugar and other cane products $36,058,709; tobacco $8,795,260; coffee $5,419,975; cacao beans $4,450,712; corn $1,456,256; beans $896,214; bananas $875,689; pine lumber $781,599; copra $721,146; chocolate $718,467; fresh beef $502,908. Green coffee exports in the first four months of 1947 were 5,849,997 kg. valued at $2,602,864 (same period in 1946: 3,347,913 kg. valued at $1,011,355). Banana exports in the first six months of 1947 were 532,368 stems valued at $373,812. Cacao exports for the first six months of 1947 were 21,550,991 kg. valued at $8,806,171 (same period in 1946: 13,810,737 kg. valued at $2,178,251). Leaf tobacco exports in the first half of 1947 were 6,360,870 kg. valued at $1,861,730.

The government in 1947 undertook port construction and improvement projects at Puerto Plata on the north coast at a cost of about $1,000,000 and at San Pedro de Macorís at a cost of $4,593,150. The appropriation for road construction in 1947 was $1,089,668.

**Manufacturing.**—Tobacco processing in 1946 involved 32,000,000 cigars, 511,619,000 cigarettes and 1,455,725 kg. of andullos; for the first quarter of 1947 the manufacture was 7,990,280 cigars, 139,430,000 cigarettes and 408,265 kg. of andullos. Building permits in 1946 numbered 3,851 valued at $10,711,475.

**Donaldson, Jesse M.** (1885– ), U.S. government official and postmaster general, was born on Aug. 17 in Shelbyville, Ill. Educated at Teachers Normal college, he gave up teaching in 1908 to become a mail carrier. By the time he was 30, Donaldson had become a postal inspector, serving for 17 years in this capacity at Kansas City, Mo.

During this period of his career, he became an expert in detecting mail swindlers.

In 1933 Donaldson became first assistant postmaster general, about as high a position as a "career" postal employee could hope to attain in view of the tradition that the postmaster generalship was generally awarded on a political basis. However, Pres. Harry S. Truman upset tradition on Nov. 25, 1947, by naming Donaldson to succeed the retiring Robert E. Hannegan as postmaster general. Great significance was attached to the Donaldson appointment insofar as some Washington political observers claimed to see in it a continuation of what they called President Truman's new policy of selecting cabinet members on the basis of public rather than political service.

**Donations and Bequests.** Total U.S. philanthropy in 1947 apparently receded somewhat from the record high levels set during World War II, according to the annual study of giving made by the John Price Jones corporation. Year-end estimates indicated that the level of $2,500,000,000 set in 1946 was probably not attained in 1947.

Many factors affected the total giving, but an important one appears to have been a probable decline in corporation contributions. While corporate gifts were allowable for war philanthropies, certain questions arose as to the legality of such gifts for some peacetime philanthropies. Another important factor was a decline in organized foreign relief. While cash contributions for such purposes apparently declined, gifts-in-kind increased considerably as facilities became available for sending food and clothing packages abroad. It was estimated that at least $250,000,000 worth of food packages were sent by individual citizens of the U.S. to relatives and friends in other countries during 1947.

The study of the John Price Jones corporation in eight large cities showed that during 1947 publicly announced gifts and bequests in these cities totalled $232,013,104 as compared with $275,853,339 in 1946. The cities studied were New York, Baltimore, Boston, Chicago, Los Angeles, Philadelphia, St. Louis and Washington, D.C. Of the totals, gifts accounted for $194,956,461 in 1947 and $249,445,290 in 1946; bequests were $37,056,643 in 1947 and $26,408,049 in 1946. Only one major classification—health—showed an increase in gifts during 1947—$33,994,965 in 1947 as compared with $19,652,327 in 1946.

Established annual campaigns during 1947 showed, in the main, exceptional success. The American Red Cross announced receipts of $75,322,700, or 125.54% of its 1947 goal. In December, 344 community chests reported they had raised $103,908,155 or 2.8% more than in the previous year. The National Foundation for Infantile Paralysis reported $17,987,800 raised in 1947, as compared with $15,982,150 in the preceding year. The American Cancer society reported $12,075,000 raised in 1947, as against $11,614,749 in 1946. (J. P. J.)

**Great Britain.**—Donations to the National Trust in 1947 included those of Buckland abbey, Devon, the home of Sir Francis Drake, by Capt. Arthur Rodd, and of the famous Knole house, Kent, by Lord Sackville; the oratory of All Souls, Burghclere, Hampshire, was also given to the trust for the preservation of its modern mural paintings by Stanley Spencer. Major General Sir Harold Wernher announced his intention of opening the mansion of Luton Hoo, Bedfordshire, as an art gallery, in memory of his only son who died in active service in World War II; pictures in the house included works by Romney, Holbein, Botticelli and Constable. Arthur Sims, New Zealand industrialist, was the donor of a commonwealth travelling professorship in medicine, to which Sir Hugh Cairns, Nuffield professor of surgery at Oxford university, was first appointed. The Nuffield foundation offered £50,000 to Oxford for the founding of a haematological research unit. The Castle Eden vase, the finest glass vase of Anglo-Saxon workmanship, was presented to the British museum.

Two thousand acres of the Brockhampton park estate in Hertfordshire were bequeathed to the National Trust by Col. John Talbot Lutley, and Histon court in Somerset was bequeathed by Hilda Proctor Wills. The painter Sir Cuthbert Cartwright Grundy left his house at Blackpool to serve as a home art museum. Dr. Thomas Watts Eden left £10,000 to the Royal College of Obstetricians and Gynaecologists for the establishment of an Eden travelling fellowship, and £10,000 to the Royal College of Physicians for the same purpose. (*See* also COMMUNITY CHEST; SOCIETIES AND ASSOCIATIONS.)

**Douglas, Lewis Williams** (1894– ), U.S. businessman and diplomat, was born on July 2 at Bisbee, Ariz., and was graduated from Amherst college, Amherst, Mass., in 1916 with a B.A. degree. In 1917 Douglas abandoned his postgraduate studies at the Massachusetts Institute of Technology, Cambridge, Mass., to join the army and went overseas as 1st lieutenant in a field artillery outfit.

After the armistice, he taught history at Amherst until 1921 when he returned to Arizona and entered politics. In 1926 he was elected to the federal house of representatives and was twice re-elected. In 1933 Douglas left congress to become budget director in Franklin D. Roosevelt's government; but denouncing the New Deal's "unsound spending" policies, he resigned on Aug. 31, 1934. He supported Alfred M. Landon in 1936 and Wendell L. Willkie in 1940.

He was vice-president of the American Cyanamid Co. (1934–38), principal and vice-chancellor of McGill university at Montreal, Can. (1938–39) and president of the Mutual Life Insurance Co. (1940). Roosevelt and Douglas buried their differences in 1941, and the latter returned to the government as deputy administrator of the War Shipping administration. After the nazi surrender, he went to Germany to help establish the initial policies for governing the U.S. zone of occupation.

Then, on Feb. 26, 1947, President Harry S. Truman appointed Douglas as ambassador to Great Britain. In England, he made several important speeches supporting the Truman doctrine and the Marshall plan and stressed Anglo-U.S. community of interests.

**Drug Administration, U.S.** Worthless therapeutic devices and the laboratory and manufacturing controls in drug plants received major regulatory attention in 1947 from the Food and Drug administration, operating under the Federal Security agency.

Many of the devices seized were assembled from surplus electrical parts manufactured for war use; they were designed to create a scientific impression upon gullible purchasers. Labelled with blatant claims for the cure of many serious diseases, they were found by experts to be incapable of curing any but imaginary ailments. Usually the machines were harmless in themselves, but they caused irreparable damage to persons who turned to them for treatment of the type of diseases that require immediate competent diagnosis and rational medical treatment. The highest fine of the year, coupled with a suspended jail sentence, was imposed upon the promoter of a coloured-light machine that had been used for the treatment of diabetes, cancer and other critical diseases, with tragic consequences.

Persistent sellers of misbranded nostrums continued to misrepresent their compounds through the subterfuge of oral sales talks or collateral literature. The products were often shipped with meaningless statements on the labels, in a mistaken belief that the terms of the law could thus be circumvented. Actions were continued against products promoted by false claims in circulars that were eventually brought together with the medicine, and against products sold for diseases for which no directions were given in the labelling.

A number of reports of manufacturing errors or label mixups in pharmaceutical plants were received in 1947. In most cases manufacturers took prompt and effective steps to recall all outstanding lots, but in some instances the recall was superficial in coverage and the manufacturers failed to disclose to consignees the dangerous nature of the products until they were required to do so. In each case, the Food and Drug administration checked upon the effectiveness of recalls and the safe disposition of the returned goods, and, when necessary, conducted a thorough roundup with the assistance of state and local enforcement agencies. In 1947 seizures of drugs for violation of official or professed standards continued to decrease in number. For all types of violations, 194 drugs and devices were seized and 108 criminal prosecution and 3 injunction cases were instituted in the federal courts. New-drug applications made effective in the fiscal year numbered 145.

By amendment to the Food, Drug, and Cosmetic act, streptomycin was added in 1947 to the groups of drugs requiring predistribution certification by the Food and Drug administration. Certified during the year were 447 batches of streptomycin, 7,327 batches of penicillin and 261 of insulin and insulin-containing drugs. (*See* also Narcotics and Narcotic Traffic.)

**Duke University.** A privately endowed institution at ham, N.C., founded by James B. D in 1924. It includes Trinity college for men, which goes ba its origin to 1838, the woman's college, the college of engi ing, the graduate school of arts and sciences, the school divinity, law, medicine, dietetics, nursing and forestry, and summer session. By the beginning of the academic year 194 all military organizations except the naval reserve officers t ing corps had left the campus, and the return to the normal semester year was made. It was deemed wise not to accep enrolment larger than could be well taught and housed and w more students were enrolled than ever before, sections in all jects were kept to reasonable size by increases in the teac staff.

Careful study of the various curricula leading to gradua and preparatory to advanced graduate study or professi training was continued in the effort to aid students bette understand and meet the increasing changes, social and polit in the U.S. and the rest of the world.

The large building, begun in 1946, to accommodate the col of engineering was completed and was being fully equipped occupancy early in 1948. A large additional physics building begun in 1947. To provide needed additional library faciliti large addition to the main university library was begun in vember. A building properly equipped for various kinds medical research was completed in October. (For statistic endowment, enrolment, faculty, library volumes, etc., *see* U versities and Colleges.)

(R. L. Fs

**Dulles, John Foster** (1888–      ), U.S. government ficial, lawyer and church laym was born on Feb. 25 in Washington, D.C. He was gradu from Princeton university, Princeton, N.J., in 1908, took law degree at George Washington university, Washington, D three years later and started the practice of law. Dulles ser in World War I as a major attached to the general staff later was the principal counsel for the U.S. delegation at Paris peace conference. He thereafter became a successful W street lawyer, an authority on international law and a promin lay member in the Federal Council of the Churches of Ch in America. In the critical years preceding U.S. entry into Wo War II, he was a noninterventionist; after Pearl Harbor swung around to the other extreme, and following his appoi ment April 5, 1945, as an adviser to the U.S. delegation to United Nations, he urged the senate to ratify the U.N. char After the war, he was regarded as the Republican party's ex on foreign policy, and he accompanied both James F. Byr and George C. Marshall to important diplomatic conferences the role of adviser. In July 1947 he was appointed U.S. deleg on the U.N. general assembly.

An ardent supporter of the Truman doctrine and Marsh plan, Dulles also advocated a western bloc of European nati to restrain what he called the soviet policy of expansionis Andrei Y. Vishinsky, in his celebrated speech on Sept. 18, 19 labelled Dulles as one of the principal U.S. "warmongers."

**utch Possessions:** *see* CURAÇAO; NETHERLANDS INDIES; URINAM.

**utra, Eurico Gaspar** (1885– ), Brazilian statesman and army officer, was born May 18 Cuiabá, Brazil. He joined the army in 1902, and after study-g at the Brazilian Military school in Rio de Janeiro (1904–08) e was commissioned in 1910 as a second lieutenant. Dutra be-ame one of the leaders of the Brazilian officers clique and par-cipated in the coup d'état that put Getulio Vargas in the presi-ency in 1932. Dutra helped to crush the anti-Vargas revolt aged by Paulistas and in 1936 he was appointed minister of ar. Upon relinquishing the presidency in Oct. 1945, Vargas apported Dutra's candidacy as his successor. Elected Dec. 2, utra was inaugurated Jan. 31, 1946.

In 1946 and 1947, Dutra took drastic measures to check the owth of communism in Brazil. (Some 800,000 Brazilians oted for communist candidates in the Jan. 1947 provincial ections.) He ousted Brazilian communists from government osts, suspended communist newspapers and youth organizations id shut down the Brazilian Workers confederation and its af-iates for six months. On Sept. 1, Dutra greeted President arry S. Truman who arrived in Rio de Janeiro to attend the ter-American conference.

**yestuffs.** The pent-up demand for colour by consuming industries which originated during the years of 'orld War II had been largely responsible for an all-time rec-d in 1946 for the production of dyes. Preliminary figures for 47 indicated that this record was surpassed. Temporary short-ges of certain coal-tar intermediates and inorganic chemicals isted but were not serious enough to hinder production gen-ally. The U.S. dye industry, operating at the peak of its pro-ictive capacity, still was unable to satisfy the domestic and port requirements for colour. Producers had always been tive in the export field, and during the war the United States overnment permitted export of allotted quantities of dyes to iendly nations. After the cessation of hostilities concentrated forts were directed toward establishment of a stronger posi-on in foreign markets, and increasing quantities of both high-iced and tonnage colours were being sold to other countries.

Despite higher costs, principally in raw materials and labour, ices of dyes remained fairly constant until the latter part of 47, when increases ranging from 6% to 10% on certain col-urs went into effect. These were still below the market index iown for other commodities.

Research was continued in developing new and improving olours, and many dyes with superior fastness and simplified iaracteristics of application were placed on the market. Study dyeing and application techniques resulted in numerous im-rovements in processing methods; fast vat colours were applied iore economically than formerly in high-speed equipment by ontinuous methods, and their utilization in a wide variety of bres and constructions continued to increase.

According to official figures prepared by the United States iriff commission, the production of all types of U.S. dyes in 946 amounted to 186,307,000 lb.—41,000,000 lb. or 28% above ie total reported in 1945 and 18,000,000 above the former ecord high reached in 1941. Sales of all dyes in 1946 were 84,855,000 lb., valued at $120,289,000, compared with 138,-48,000 lb., valued at $103,489,000, in 1945. The unit value f all dyes sold amounted to $0.65 per lb. compared with $0.75 1945. The class of vat colours still remained the most im-ortant from the standpoint of both production and sales, and 1946 accounted for 29% of the total quantity produced; irect dyes accounted for 21%, sulphur dyes for 16% and acid dyes for 12%. Production of azoic dyes and their components increased 59% to 8,000,000 lb. in 1946 from 5,000,000 lb. in 1945; sales totalled 7,000,000 lb., valued at $10,000,000. Production of direct dyes increased 9,966,000 lb. to 39,301,000 lb., acid colours increased 4,646,000 lb. to 23,208,000 lb., and sulphur colours 12,617,000 lb. to a total of 29,926,000 lb. Sales of vat dyes other than indigo were valued at $30,069,000, direct dyes at $24,613,000, acid dyes at $17,579,000 and sulphur colours at $7,466,000.

Of the colours produced in large quantities, sulphur black increased 72% in output to 20,075,000 lb., synthetic indigo increased 67% over 1945 and direct black 28%. A good portion of these cheaper tonnage colours was absorbed by export markets. Production of many other less important colours was two or three times higher than in 1945. Figures for 1947 production and sales were not yet available at the end of that year.

(A. G. BR.)

**Ear, Nose and Throat, Diseases of.** **Use of Penicillin in Acute Sore Throat.**—Selvan Davison discussed the bacteriology of acute tonsillitis and pharyngitis, reviewing briefly the effects of sulfonamide preparations, but emphasizing the greater efficacy of penicillin. He outlined the method of therapy in a group of 28 cases: 20,000 units were given every 3 hr., day and night; the average dose of penicillin in these cases of acute sore throat was 360,000 units, during 54 hr. There was only one relapse, in which recovery occurred without further penicillin treatment. One patient's condition did not respond until sulfadiazine replaced penicillin in the treatment. No complications occurred either during or after the treatment. A short but intensive course of penicillin would hence seem to be effective against acute sore throat.

**Vertigo.**—Vertigo may be a symptom of some toxic disorder. Its occurrence in septic patients, after the administration of certain drugs and of the antibiotic streptomycin, is considerable proof of this assumption.

Vertigo may be the result of a nervous depression. The diagnosis is not difficult, although a therapeutic response is not always obtainable. The otologist must be careful not to say or do something that will fix the patient's symptoms upon some specific cause. The sedative dilantin seemed to benefit some of these patients.

Vertigo is occasionally a symptom of high blood pressure. The prospect of relieving the patient of this troublesome condition is favourable if surgical measures result in a substantial reduction in blood pressure.

Organic lesions of the central nervous system may produce vertigo, but they are usually associated conspicuously with other clinical signs of intracranial disease. The classical example is the tumour between the cerebellum and the pons at the back of the brain.

There are instances when vertigo is the result of an end organ lesion in the acoustic nerve. The vertigo derived from this source, as for example that of Ménière's disease, is so specifically characteristic as not to be confused with any other type. Also, if a patient suffers with a violent paroxysmal vertiginous attack—one that fells him in his tracks—he probably has an end organ lesion, not an intracranial disease.

**Treatment of Hay Fever Patients by Chilling.**—L. C. Lazarowitz slowed up the rapid absorption of aqueous ragweed extracts in 30 patients by chilling the mid-outer part of the arm with an ice bag for 15 min. before and 15 min. after the subcutaneous injection. The chilling made it possible to give larger doses further apart so that the patient made 40% less visits to the allergist. General constitutional reactions occurred very seldom and no delayed reactions were observed. There was a greater degree of improvement in these individuals because of the ability to reach higher dosages at an earlier date. He also found that the chilling of the area made the injection painless.

**Headache.**—A review of 1,000 cases of headache revealed that the commonest causes in the order of frequency were: allergic reaction of the nasal mucous membrane, inflammation of the muscles in the neck; mechanical nasal obstruction, inflammation of the sinuses and neuropsychiatric disorders. Less frequent causes were the vascular headaches, pharyngeal, dental and cervical spine disorders.

Vasomotor rhinitis was diagnosed 552 times but could be designated as the prime cause of headache in only 282 instances. Myositis cervicalis was found 630 times and was regarded as the prime cause in 241 instances.

The importance of recognizing muscle inflammations and the vicious cycle of headaches for which they may be responsible was pointed out. It was indicated that this cycle may be responsible for the continuation of a headache long after the prime cause has been corrected. It was concluded that the patient with a headache must be studied in a systematic manner which will evaluate all the factors that may either directly cause, increase or prolong the ache. Researches resulted in clearer concepts of the mechanics of the vacuum headache, spastic muscular headache, vascular cephalgia and psychosomatic headache.

Evaluation of the possible causative factors permits the planning of effective schemes of treatment.

**Other Treatments.**—A new treatment for troublesome infections of the ear was put forward by Merrill B. Hayes and C. Fremont Hall. Dalyde or dibromsalicylaldehyde in solution (2%), ointment or powder was put into the external canal, after careful cleansing and drying. Minute bacteriologic studies revealed that the *Bacillus pyocyaneus* is often the instigator. Most of the cases cleared up within a few days or several weeks, and very little relapse was encountered.

The penicillin spray, hand-operated, in respiratory infections was highly recommended by Samuel Morse. He spoke of the absorptive properties of the lung, directing attention to the fact that its inner surface has an area 500 times as great as the body surface. Drugs given as aerosols are absorbed so rapidly that their effect is similar to that of intravenous injection. In general the author used, over a period of 24 hr., spraying every 4 hr., the following amounts: 100,000 units in the severe pneumonias; 60,000 units for severe sinusitis and only 40,000 units for moderate sinusitis and laryngitis.

## Eastern Orthodox Churches.

The Russian Orthodox Church made substantial progress in re-opening its churches, re-organizing its dioceses and, in general, building up its hierarchical structure. The Church of the Kingdom of Greece continued under the impulse of a patriotic emergency to recover from the discord caused by the deposition of Archbishop Chrysanthos in 1941. In the Levant the Orthodox Church showed new vigour, well illustrated in the *Mouvement de jeunesse orthodoxe* which had expanded in Syria under the guidance of the patriarch of Antioch.

At the same time, the Orthodox Church as a whole s
more and more from an embroilment in the political di
of the world. On the one hand the ecumenical patriarcha
associated itself, in effect if not through any political
with the canonical defense of those Slavonic Orthodox me
who, in exile, were desirous of retaining their independe
the Soviet Union, for instance by confirming the Metro
Vladimir as exarch for Russian parishes in western Euro
the other hand, the patriarchate of Moscow was energe
extending its influence and, indeed, as in Czechoslovak
jurisdiction, outside Russia. The consequences of thes
conflicting tendencies were many and unhappy. The Pat
Alexei of Moscow announced in the spring his intention o
ing a conference of all Orthodox churches which should m
Moscow at the end of September; he postponed it unt
summer of 1948 when the ecumenical Patriarch Maximos
cated, in a friendly but firm reply, that it was for him al
summon a conference of this nature. The patriarchs of A
and Alexandria had already declined the invitation to M
as had most Orthodox hierarchs outside the soviet sphe
political influence, and even some within it, such as the S
patriarch and the Finnish metropolitan, and it seemed
when the conference met it would have an excessively sec
and political complexion. Other political considerations ar
Cyprus, where an election was made in June to the archbi
ric, vacant from 1933 in consequence of certain governm
acts incompatible with canon law, such as the requirement
there must be a government scrutiny of the election and
candidates must necessarily be Cypriots by birth. The m
politan of Paphos, Leondios, was elected, and accepte
throne with much reluctance at the instance of the repres
tive of the ecumenical see, only to die a fortnight later. I
further election, in October, Bishop Makarios of Kyreni
successful; he belonged to the opposite school. In other w
what was called "the Left" gained a victory in the summe
Leondios, although he declined the invitation to the proj
Moscow conference, was the opponent of the British co
government and the advocate of the union of Cyprus
Greece; but what was called "the Right" prevailed in Oct

## Economics.

The questions receiving most attention
professional U.S. economists as well as
business and governmental economic administrators were
following, all posed and answered with the fact that 1947
a pre-election year: how could high production rates be m
tained? How could the technological, transportation and
eign trade bottlenecks responsible for the more spectac
price rises be eliminated? How should industrial and la
monopolies be dealt with? When would inflation and high
ployment break up in recession? How could the "surplus"
slightly anti-inflationary federal fiscal policy be maintaine
the face of the urgent demand for lower taxes? What were
inflationary, budgetary and long-run European productivity
plications of the Marshall plan? Was the Taft-Hartley act
stitutional and workable, and would it, in combination with
Wagner act, provide an adequate basis in law for effective
lic policing of the employer-employee relationship over

long run?

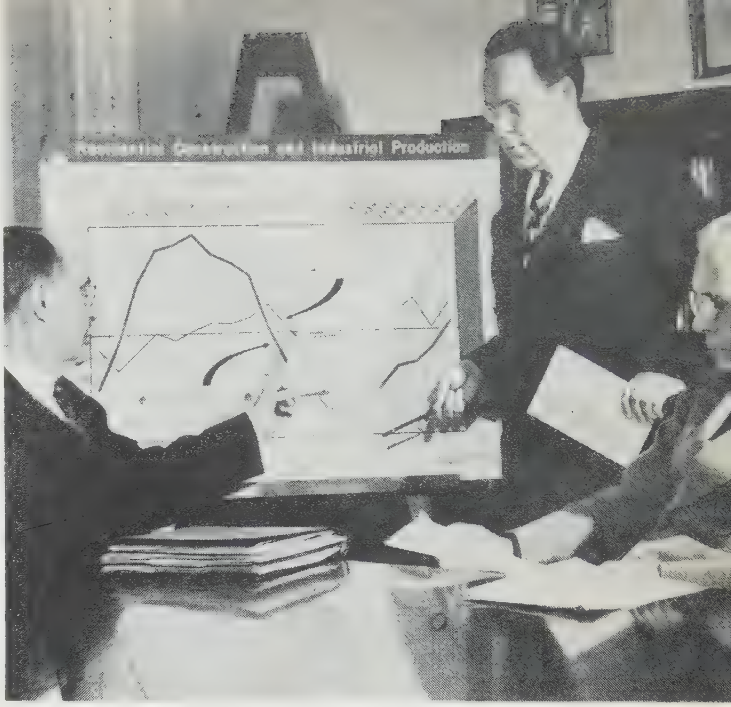
A survey of the more important economic journals indicated, however, a continuing lively concern with abstract theory. A controversy developed during the year over the general adequacy of the marginal analysis in price and distributive analysis. Interest in imperfect competition, monopoly, oligopoly, etc., as well as in the Keynsian economics was sufficiently great that the program of the American Economic association convention held in Chicago in December was organized largely about the theoretical and policy implications of these two systems of analysis. Considerable attention was also directed in these meetings toward the basic laws of production. The members of the association appeared, however, to be most keenly interested in such questions as the high cost of food, aid to Europe and the Taft-Hartley act. American economists in 1947 had a "problem" orientation.

The president's council of advisers set up under the Full Employment act continued to stress the necessity of halting expansion of the money supply. The annual report dealt with generalities, however, and apparently attested both to the difficulties of getting the definitive type of prediction contemplated in the act, as well as to the inescapable influence of approaching presidential elections on such bodies. The National Bureau of Economic Research published a number of technical and research reports, including a study entitled *Business Finance and Banking*. The Committee for Economic Development in its various publications stressed the importance of entrepreneurial innovation with special reference to the problems of small business. The chief publications of the Brookings institution were *Aluminum Cartel* and *A National Labor Policy*. The Federal Reserve board studies were concerned with such subjects as the money market and rates, consumer credit, small business, department store sales, bank debt holdings and individual and business holdings of liquid assets.

Histories of various economically oriented war agencies and boards began to flow into print in greater volume during 1947. The war experiences of specific industries were set forth both in governmental reports and in industrially sponsored publications. (G. J. C.)

**Ecuador.** A west-coast republic of South America, astride the equator, for which it is named. It is bounded on the north, east and south, and west, respectively, by Colombia, Peru and the Pacific ocean. Area, 104,510 sq.mi. (including the Galápagos Islands, a Pacific dependency, 3,029 sq.mi.); pop. (1946 est.) 3,340,000. Racial distribution is estimated at 60% or more pure Indian, 25% to 30% mestizo, and at most 15% white. The capital is Quito (est. pop., 211,000); other important cities (with pop. ests.) are Guayaquil, the chief port (172,948); Cuenca (52,519); Riobamba (27,459); Jipijapa (22,097); Vinces (21,860); Chone (21,834); Ambato (21,692); Loja (20,776) and Latacunga (20,357). Roman Catholicism is the predominant religion. Presidents in 1947: Dr. José María Velasco Ibarra, to Aug. 23; Col. Carlos Mancheno, Aug. 23–Sept. 2; Mariano Suárez Veintimilla, Sept. 2–Sept. 17; Carlos Julio Arosemena, from Sept. 17.

**History.**—The last day of 1946 saw Ecuador's 16th constitution, and its second within less than two years, effected. The new basic law set up a unitary government headed by a president elected by direct, popular vote for a four-year term and ineligible for immediate re-election; a vice-president, who regularly presides over the senate, is also elected. The executive branch is also served by presidentially appointed ministers of state. Congress is bicameral, including a senate and a chamber of deputies. The senate is composed basically of two senators from each province, plus certain "functional senators," all of whom serve four years. Deputies are elected on a population basis for two-year terms. The judiciary is headed by a supreme court of justice.



PRESIDENT TRUMAN'S three-man council of economic advisers, headed by Edwin G. Nourse (right), and including John D. Clark (left) and Leon H. Keyserling, was commissioned in June 1947 to study the effect on domestic economy of U.S. foreign aid under the Marshall plan

The national assembly on Jan. 12, 1947, elected Mariano Suárez Veintimilla, a Conservative, as vice-president under the new constitution. On Feb. 9 the government arrested Capt. Luis Cerón and 16 others for alleged revolutionary plotting. Four days later the national assembly recommended dissolution of the Ecuadorian Labour federation. Dr. Humberto Albornoz resigned on Feb. 24 as leader of the Liberal Radical party. The government announced on March 14 that it had suppressed a military coup by Gen. Alberto Enríquez Gallo. On Aug. 23, Col. Carlos Mancheno, who had only recently been appointed defense minister, seized control of the government in a bloodless coup which forced the retirement of Pres. Velasco Ibarra. The crisis was precipitated when Velasco tried to oust Mancheno from his cabinet post. Mancheno on Aug. 24 proclaimed himself "president and chief of government" and Velasco fled by plane to Cali, Colombia. Mancheno on Aug. 27 reorganized the cabinet with four new appointments, although he retained Velasco's foreign minister, who at the time was heading the Ecuadorian delegation to the hemisphere defense conference at Rio de Janeiro; this retention was in order to preserve Ecuador's standing in that conference, but that body ultimately excluded Ecuadorian delegates from voting and they thereupon withdrew. Mancheno on Aug. 28 declared the constitution of Dec. 31, 1946, abolished and that of 1906 restored provisionally. At the same time he warned Vice-President Suárez Veintimilla, who had proclaimed himself president as the constitutional successor to Velasco, against creating unrest.

Quickly gathering opposition to Mancheno, both within and without the army, flared into open revolt on Aug. 30 in Riobamba and elsewhere, spread to Guayaquil and other cities, and brought about the downfall of the Mancheno regime on Sept. 2. The countermovement was led by Col. Angel Baquero Dávila. Mancheno resigned and fled the country. Suárez proclaimed himself acting president, with Baquero as defense minister, but in Guayaquil Maj. Sergio Enrique Girón announced the creation of an eight-man "junta of national concentration" and claimed that it represented the insurgents who overthrew Mancheno; both regimes agreed in rejecting any return by Velasco.

The council of state, acting independently, also barred a return by Velasco but, following prescriptions of the 1946 constitution (which it proclaimed restored), called a session of congress for Sept. 15 to name a new president. The Suárez government announced on Sept. 5 that Girón had accepted its leadership. Congress on Sept. 16 elected Carlos Julio Arosemena as vice-president to serve as president until Sept. 1, 1948; he assumed the presidency the following day and José Rafael Bustamante, a Liberal leader, became vice-president. The army announced on Nov. 9 that a revolt at Quito had been crushed.

**Education.**—A governmental decree on Aug. 9 created a national council of education, composed of the chief of the technical department of the ministry of education and one representative each of primary, secondary, higher and private education.

**Finance.**—The monetary unit is the sucre, valued at 7.41 cents, official rate (Oct. 31, 1947), or 5.56 cents, free rate (Sept. 30, 1947), U.S. currency. Congressional investigators reported on March 10 that $1,860,000 was missing from public funds. It was reported on July 15 that currency circulation and living costs had increased 500% from 1939. Later in the year it was reported that the Export-Import Bank of Washington would loan the municipalities of Quito and Guayaquil each $4,000,000 for construction of modern water systems.

**Trade.**—Total exports in 1946 were valued at $39,787,000 (1945: $27,992,000), of which the chief items were crude petroleum and gasoline, copper, rice, cacao, hats and coffee. The principal customers in 1946 were the U.S. ($13,607,000) and Cuba ($5,621,000). Imports in the same year totalled $30,686,000 (1945: $23,965,000). The chief suppliers were the U.S. ($17,795,000), Argentina ($2,447,000) and Great Britain ($2,103,000). Exports of cinchona bark (the natural source of quinine) dropped 97% by volume and 93% by value in 1946 from 1945; the volume in 1946 was 28,436 kg. (1945: 827,886 kg.) and the value was 218,709 sucres (1945: 2,847,831 sucres). Balsa wood exports also dropped greatly in 1946 from 1945; the respective figures were 2,778,228 kg. valued at 7,125,099 sucres and 7,354,387 kg. valued at 18,509,184 sucres; 93% of 1946 exports went to the U.S. Rice exports in 1946 were 67,099,907 kg. (1945: 29,318,378 kg.). Crude oil exports in 1946 were 1,229,839 bbl., including 936,166 bbl. to Uruguay and 293,672 bbl. to Argentina. Coffee exports in 1946 were 7,635,607 kg. valued at 34,839,189 sucres (1945: 10,736,688 kg. valued at 33,862,637 sucres); of the 1946 exports the U.S. took 3,407,356 kg. valued at 16,698,052 sucres and Cuba 2,628,130 kg. valued at 10,734,024 sucres. Cocoa exports for the first eight months of 1947 were 14,226,471 kg. (same period in 1946: 12,695,753 kg.), of which the U.S. took 9,842,837 kg. (69%) and Colombia 1,318,765 kg. (9%). Rice exports for the first six months of 1947 were 10,014,885 kg. (same period in 1946: 11,663,774 kg.). Coffee exports for the first five months of 1947 were 1,465,980 kg. valued at $629,752 (same period in 1946: 3,420,596 kg. valued at $1,012,541). Banana exports for the first five months of 1947 were 890,196 stems (same period in 1946: 345,912 stems). Toquila hat exports in the first three months of 1947 were 983,490 units (same period in 1946: 843,432), of which the U.S. took 801,364. Kapok exports in the first three months of 1947 were 157,156 kg. (same period in 1946: 138,295 kg.). Crude rubber exports in the first three months of 1947 were 69,533 kg. valued at 905,107 sucres (entire 1946: 1,326,862 kg. valued at 15,111,035 sucres).

**Production.**—Production of sugar in 1946 was 32,890 metric tons but was expected to increase in 1947. The rice estimate for 1947 was about 2,200,000 Spanish quintals of 110.23 lb. (1946: 2,218,442 quintals). Estimate of the 1947 coffee crop was 300,000 quintals. Rubber production in 1947 was estimated at about 1,000 metric tons. Crude oil produced in 1946 totalled 2,322,000 bbl. (1945: 2,624,000 bbl.); refined petroleum products in 1946 amounted to 1,076,498 bbl., and included 277,337 bbl. of motor fuel, 76,935 bbl. of kerosene, 120,216 bbl. of distillates and diesel oil and 573,177 bbl. of fuel oil.

BIBLIOGRAPHY.—*South American Handbook* (1947); *Foreign Commerce Weekly*; Pan American Union, *Bulletin* (monthly). (R. H. FN.)

**Edinburgh, Prince Philip,** DUKE OF (1921–     ), the only son of Prince Andrew of Greece (d. 1944) and Princess Alice of Battenberg, was born on Corfu Island, June 10, but at an early age went to live in England, where he was brought up by his uncle, Lord Louis Mountbatten (now Earl Mountbatten of Burma, *q.v.*), and educated at Cheam school, Surrey, and Gordenstoun, Scotland. At 18 he entered the royal naval college, Dartmouth, and in 1940 served on H.M.S. "Ramillies." He subsequently served on H.M.S. "Shropshire," and on H.M.S. "Valiant" during the battle of Matapan. His later war service took him to the Pacific, and he was present at the Japanese surrender in Tokyo bay. After the war he served as an instructor at the shore establishment at Corsham, Wiltshire.

On March 18, 1947, his naturalization as a British subject was announced, and he became known as Lieutenant Philip Mountbatten. His betrothal to Princess Elizabeth, the heiress-presumptive to the British throne, was announced on July 9. O eve of his marriage to the Princess Elizabeth, which solemnized in Westminster abbey, London, on Nov. 20, the conferred upon him the honour of Knighthood and investe with the Order of the Garter, created him duke of Edinb earl of Merioneth and Baron Greenwich, of Greenwich i county of London, and at the same time authorized him t the title his royal highness.

**Education.** The outstanding developments in 1947 in United States were (1) the steps to bette economic status of the teacher; (2) increases in enrolme the elementary schools and colleges; (3) greater interest participation in international educational co-operation, cially in the United Nations Educational, Scientific and Cul organization, U.N.E.S.C.O.; (4) the attempts to get fe aid for education; and (5) the growing controversy on the of religion in public education.

In September, the U.S. office of education estimated that total scholastic enrolment would reach 32,100,000, with r than 1,000,000 veterans in attendance. The over-all registra in the elementary school was expected to attain 22,620, with 2,450,000 children in the first grade. The latter figure increase of 200,000 over that of 1946, was generally attrib to the high birth rate during the early part of World Wa High-school registration was predicted to be 6,330,000, 25,000 more than in 1946. This small gain was ascribed to low prewar birth rate. The cost of education below the col level for 1947–48 was estimated at $4,800,000,000, about $3 000,000 above that of the preceding year.

The actual fall enrolment in 1,753 collegiate institutions 2,338,226, 12.5% higher than in 1946, according to figures c piled in November by the office of education. To observers Pres. Raymond Walters of the University of Cincinnati it peared that the veteran attendance of 1,149,993 represente peak, or a plateau at least. Proof was found in the slowing of veteran registration in comparison with nonveteran incre and in the decided decrease in the number of veterans ente as freshmen (*School and Society*, Dec. 27, 1947). (*See* VETERANS' ADMINISTRATION.)

**The Teacher Crisis.**—The teachers' strikes for better sala were carried over into 1947. The first major strike occurre February in Buffalo, N.Y., the nation's 14th largest city. aftermath of this strike, which was ended by a comprom was the passing of a law by the New York state legislature hibiting strikes by teachers and civil servants. Similar l were enacted by Ohio, Pennsylvania and Texas.

The teacher's financial status was so effectively publicize the newspapers and in other media of communication that p lic opinion was created in behalf of salary increases and o improvements. One of the outstanding factors in directing tention to the teacher situation was the series of 12 article the *New York Times*, Feb. 10–21, 1947, by Benjamin Fine which the following facts were revealed: since 1940, ab 350,000 have left the profession; 1 teacher out of 7 posse an emergency or substandard certificate; there are 70,000 tea ing vacancies; the annual teacher turnover, now 20%, is dou that of prewar days; the average salary of teachers is $37 week, with 200,000 paid less than $25 weekly; more than of the U.S. teachers are not protected by tenure rights; en ments in teachers' colleges are far below those in other colle These articles were reprinted in a brochure, "The Crisis in Am ican Education," and later expanded into a book, *Our Child Are Cheated.*

The various state legislatures began voting pay increases early as January. By the end of June, at least three-fourths e legislatures had appropriated emergency funds toward rais-g minimum salaries or granting cost-of-living bonuses. The *ew York Times* estimated on Dec. 30, that the average teach-'s salary for 1947–48 would exceed that of the previous year $400. On the other hand, as Prof. Harold F. Clark, Teachers llege, Columbia university, pointed out, teachers were not as ell off as previously, since the cost of living rose about as uch and only few communities took the higher living costs to account when raising salaries. Prof. Clark warned that blic interest would be difficult to arouse in behalf of addi-onal salary increases.

Another trend in the teacher crisis was the growing senti-ent to adopt a single salary schedule for elementary and high hool teachers. The American Conference of Teacher Examin-s expressed unanimous satisfaction in October "at the in-easing number of single-salary schedules being adopted roughout the United States" and predicted that they "will do uch to alleviate the teacher shortages in the elementary field d will encourage more competent candidates to prepare for aching in the elementary school."

There were other improvements in teachers' conditions of rvice throughout 1947: more than half of the states enacted w or liberalized retirement plans; Maryland and Arkansas duced class loads to 30; Illinois and Virginia eliminated marage as a cause for dismissing a woman teacher; South Caro-a provided legal redress for teachers in cases of salary dis-imination; Connecticut legislated against racial and religious as in the employment of teachers. Among the other reforms ere better provisions for sick leave, tenure protection and the scontinuance by some towns of restrictions on the teachers' rivate lives. All in all, however, the situation was still unsatis-ctory. The Citizens Federal Committee on Education, a oup formed under the auspices of the office of education, re-orted in October that "the conditions under which teachers ork and live still leave much to be desired" in many parts of e country and that "many communities do not let their achers live like normal human beings."

Despite the gain in the number of teachers during 1947, there as no letup in the critical teacher shortage. Estimates of the tio of teachers employed on emergency substandard certifi-ates to qualified teachers varied at the end of the year from 1:9 1:8. In Wisconsin, the ratio was 1:5, according to a report y the Wisconsin Educational association. Little encouragement ame from teacher-education institutions, which reported only n 8.1% increase over the 1946 registration, whereas the aver-ge increase for colleges and other higher institutions was 12.5%, ith a range from 12.0% to 26.0%.

Surveying the rapidly rising elementary-school enrolments, rofessors Harl R. Douglass and Lloyd H. Elliott inquired in *chool and Society* (Society for the Advancement of Education, nc., Nov. 15, 1947): "The $64-question is—where are the eachers coming from?"

During April and May, the Commission on Teacher Educa-on and Professional Standards of the National Education asso-iation launched an intensive campaign to urge outstanding oung people to enter the teaching profession, to eliminate un-ualified teachers and to secure the best conditions necessary to ttract and hold the most qualified teachers. A group of 300 epresentative school leaders, constituting the National Con-erence for the Improvement of Teachers, issued in July a Bill of Rights" with a program calling for a 40-hour week, a aximum class load of 25, a minimum annual salary of $2,400, single-salary schedule, greater academic freedom, more demo-atic procedures in planning the school program, satisfactory enure and retirement laws and reforms in educational service.

**Federal Aid.**—The 80th congress voted $3,000,000 toward providing equipment and facilities for the Veterans' Educational Facilities program (public law 76); $35,000,000 for temporary housing for veterans studying under the G.I. Bill of Rights (public law 85); a program of institutional on-the-farm training for veterans (public law 377); and the establishment of a navy postgraduate school (public laws 302 and 303). Other appropriations included $65,000,000 for the School Lunch program and $1,633,900, representing a substantial increase over the preceding year, for the office of education. The National Science Foundation act, providing federal subsidies for scientific research, was passed by the senate and the house but vetoed with "deep regret" by the president because of alleged administrative deficiencies in the act. Held over for the 1948 session were S. 140 (Fulbright-Taft), proposing a department of health, education and security; H.R. 3342 (Mundt), on the international exchange of information and educational services; and S. 472 (Taft), an annual appropriation of $300,000,000 of educational aid to the several states.

No articulate opposition to the principle of federal aid was apparent in educational circles. At the 30th annual conference of the American Council on Education in the spring, Pres. George F. Zook suggested that a minimum of $1,000,000,000 a year in federal aid was necessary for the educational welfare of the states.

None of the delegates, who comprised the leading educators, school administrators and college presidents voiced dissent. Even the principle of federal aid to colleges and universities failed to arouse protest.

Universal Military Training (U.M.T.) received much attention during 1947. In May, the President's Advisory Commission on Universal Training reported unanimously that "universal training is an essential element in an integrated program of national security intended to safeguard the United States and to enable us to fulfil our responsibilities to the cause of world peace and the success of the United Nations." U.S. educational leaders ranged themselves on both sides of the question: Presi-

PUBLIC SCHOOL STUDENTS at Buffalo, N.Y., pouring hot coffee for teachers who struck for higher wages on Feb. 24, 1947. The U.S. teacher shortage grew in 1947 as salaries continued to lag behind a rising cost of living dents Karl T. Compton (Massachusetts Institute of Technology) and Harold W. Dodds (Princeton), members of the commission, pro; Chancellor Robert M. Hutchins (The University of Chicago), George D. Stoddard (University of Illinois), and Harold Taylor (Sarah Lawrence college, Bronxville, N.Y.), con. To promote the cause of U.M.T. and to counteract the efforts of such groups as The National Council Against Conscription, 50 national organizations created in October the National Security committee, with Presidents James B. Conant (Harvard), Edmund E. Day (Cornell), Charles Seymour (Yale) and Donald Tressider (Stanford) as members.

At least 20 states increased their educational appropriations during 1947, Iowa leading with a rise of 266%. Many states provided salary increases for their teachers.

**Elementary and Secondary Education.**—The trends of recent years continued with little radical change. Social studies in co-ordinated form received stress in the elementary curriculum, while science and social studies were particularly emphasized in the high school. American history interested professional leaders as a result of the publication of the 17th yearbook of the National Council of the Social Studies. Work experience and vocational guidance again occupied significant positions in secondary education. Hope for the basic revision of the secondary curriculum was held in the appointment of the Commission for Life Adjustment Education.

**Higher Education.**—Despite mounting registrations in undergraduate, graduate and professional schools, there were signs that the peak had been reached. Occasional decreases in enrolment warned college administrators of possible future trends. Surveys indicated that the rising tuition and other college expenses, as well as the persistent housing shortage, were responsible for discouraging students from going to college. According to a *New York Times* survey in September, the average cost in 400 colleges rose 37% over that of 1940–41. The cause of democracy in higher education was seen injured by the withdrawal of students of moderate means.

Student veterans continued to do well, although there was no conclusive, consistent evidence that they were superior or inferior to nonveterans. The Evening college of the University of Cincinnati reported a slight edge in favour of the former in grades, attendance, attention and comprehension of subject matter. On the other hand, veterans' grades at Cornell were slightly below those of nonveterans.

Changes in the administrative organizations of institutions included the conversion of the Massachusetts State college into the University of Massachusetts, of the Junior College of Connecticut into the University of Bridgeport, and of Bucknell University Junior college into Wilkes college (Wilkes-Barre, Pa.). Sacramento State college was opened by the California legislature.

The influence of World War II and of the current world situation on the college curriculum may be seen in the adoption by some colleges of a core requirement in contemporary international issues. The intensive language program of wartime was being continued, with some modification, in many institutions. Language and area studies—in Portuguese, Russian and Japanese, especially—became popular all over the country. By the end of 1947, a number of colleges were planning area-study programs on the Arctic region, the U.S.S.R., China, the near east, India, southeast Asia and Scandinavia.

Experiments in the correlation of science and the humanities, with special reference to the history of science, were started at Harvard, Yale and Wisconsin, ostensibly as a result of the ideas advanced by Pres. James B. Conant in "On Understanding Science," the 1946 Terry lectures.

Other developments included the attempts made to link the social-science courses with actual conditions in politics, in
and society; the increase in the number of colleges o
majors in American civilization; the establishment of a
of public relations at Boston university; the use of a fleet
planes, "flying classrooms," in the teaching of geology
University of Illinois; and the formation of the Nationa
dent association, an organization representing 1,100,000 stu
in 351 colleges.

The first report of the President's Commission on E
Education recommended in December a program of feder
to double the present college enrolment by 1960, to provid
public education through the first two years of college f
able to profit therefrom, and to establish "community col
(junior colleges). From the standpoint of the curriculun
commission urged better co-ordination between liberal e
tion and professional and vocational education, less ov
cialization, and training for "citizenship in our democracy."
second report, released Dec. 22, proposed that congress a
priate immediately $135,000,000 for a program of federal
arships and fellowships to aid more than 300,000 need
qualified students to complete college and graduate school
suggested grants, ranging up to a maximum of $1,500 ann
for graduate students, would amount to $1,000,000,000 ann
by 1960, according to the estimate of the commission.

**Adult Education.**—Interest in adult education continu
be high throughout the year. A Gallup poll disclosed tha
out of five Americans were actively interested in adult e
tion. The United States Armed Forces institute reporte
enrolment of 300,000 service personnel. The Great B
foundation, headed by Chancellor Robert M. Hutchins, pla
to expand its campaign to extend free adult education thr
out the country. In the meantime, discussion groups o
Great Books were organized in many cities.

**Race and Religion.**—Several incidents in Gary, Ind
Louis, Mo., and other communities convinced Negro le
and others interested in racial equality that the Negro wa
a long way from attaining educational opportunity on the
level as the white man. While there was some improveme
Negro education under segregated conditions, the discrep
between the white and Negro schools was too great. N
schools in the segregated areas suffered from inadequate f
cial support, the lack of qualified teachers, insufficient sa
for teachers and other difficulties.

Some attempts were made to alleviate the situation. Fe
Security Administrator O. R. Ewing appointed a committ
discover new opportunities for training Negro physicians.
Southern Governors conference requested congressional
proval of interstate agreements for the establishment o
operative regional schools for Negro professional and tech
students. That these measures were deemed unsatisfactor
Negroes was evident from the decision of the National
ciation for the Advancement of Colored People to file "cou
by-county" law suits to end educational segregation.

The relation of religion to public education grew in import
as an issue in 1947. The American Council on Education u
a reconsideration of the place of religion in the curricu
Ecclesiastical leaders deplored the lack of religious conte
the school program. In North College Hill, O., sectarian
ferences were injected into an incident involving the refus
the local school board, consisting of a Catholic majority, t
appoint the superintendent. The 5–4 decision in February o
U.S. supreme court upholding the subsidization by New J
of the transportation of children to parochial schools aro
much discussion. The supreme court of Iowa and the atto
general of Minnesota ruled, on the other hand, that paro
school pupils may not travel free in public school buses.

appeal to the U.S. supreme court from the decision of the Illinois supreme court in the Vashti McCollum case, wherein religious teaching during school hours on public-school premises was declared legal, was not yet decided when 1947 came to a close.

Presidential committees urged the abolition of racial and religious discrimination from U.S. education. The President's Committee on Civil Rights condemned in October "the separate but equal doctrine" of educational and other facilities for the Negro, and proposed "the elimination of segregation, based on race, color, creed, or national origin, from American life." The President's Commission on Higher Education stated in December: "The first condition toward equality of opportunity for a college education can only be satisfied when every qualified young person, irrespective of race, creed, color, sex, national origin, or economic status is assured of the opportunity for a good high school education in an accredited institution."

**International Educational Co-operation.**—The United Nations Educational, Scientific and Cultural organization completed its first year of operation in 1947. Actually, it was not until April that the revised program and the detailed budget were approved and active work begun. National conferences were held in various countries, the U.S. conference taking place in March in Philadelphia. Internationally there were regional study conferences on fundamental education during June in Nanking and during November in Mexico City. In July and August, 79 educators from 31 countries attended the first U.N.E.S.C.O. Seminar on Education in International Understanding at Sèvres, near Paris. Director-General Julian Huxley reported encouraging progress in the four comprehensive projects which involved all or most of U.N.E.S.C.O.'s constituent fields: educational reconstruction and rehabilitation in war-devastated countries; plans for fundamental education, especially the pilot projects in Haiti, China and British East Africa; textbooks and other methods of teaching international understanding in the schools; and the scientific-social project, the "Institute of the Hylean Amazon." Another phase of U.N.-E.S.C.O. activity was the work of the Commission on Technical Needs, which studied the technical needs of the press, film and radio of 12 war-devastated nations, and submitted comprehensive recommendations on how to meet those needs (*United Nations Bulletin*, Jan. 1, 1948).

Throughout 1947, U.N.E.S.C.O. was popularized by many educational, cultural and other groups. Yet the results of a survey released in December by the National Opinion Research centre disclosed that many Americans who look with approval upon the aims of U.N.E.S.C.O. are not willing to translate their feelings into action. (*See* also United Nations.)

In October, the Board of Foreign Scholarships, appointed by the president to administer the Fulbright act, which authorizes agreements with foreign countries whereby the latter set up scholarships for U.S. students in part payment for surplus U.S. war property, requested outstanding educational groups to select the U.S. scholarship recipients. Exchange difficulties, however, made it unlikely that more than a few foreigners would be able to study in the United States. Only one nation, China, signed the act by the end of 1947, although six others were studying its possibilities. Educators looked upon the pending Mundt bill, which provides scholarships for foreign students in the United States, as a necessary supplement to the Fulbright act.

The National Education association initiated the Overseas Teacher-Relief fund in the fall to provide aid to teachers in war-devastated areas. U.S. teachers were urged to contribute sums from $1 to $100 for food, clothing and supplies. This was a teacher-to-teacher Thanksgiving-to-Christmas campaign, administered by the local, state and national educational groups.

Canadian and U.S. historians and educators collaborate report which revealed that history textbooks used in the sc of both nations presented inadequate and incorrect accou each other. This report, which was based on two years' under the auspices of the Canada-United States Council on cation, recommended that the history textbooks be revised

Observers of conditions in Europe reported a deteriorati youth in most countries. Ideological differences stood i way of effective educational co-operation among the occu powers in Berlin. In Bavaria and in the other sections o U.S. zone, the process of re-education was retarded by the of textbooks, insufficient and untrained personnel, and pa resistance on the part of German school authorities. The military government estimated that 10,000 additional class and 7,500 teachers were required in Bavaria alone. Vario forms suggested by U.S. educational advisers in Germany rejected or ignored by German school officials on various nomic and academic grounds. The first official acts of the Bavarian minister of education, Alois Hundhammer, inc the introduction of corporal punishment and the demoti women teachers (*New York Herald Tribune*, Nov. 16, 1 There were no indications that a more stringent policy be adopted by the U.S. military authorities toward recalc German educators.

Visitors to the countries of eastern Europe reported tha spite domination by the Communist party and a general ori tion toward soviet Russia, there was no evidence of com Communist control in education. English was the most po language in the schools throughout Europe, including P and Czechoslovakia. In the latter country, the ministry of cation remained in the hands of non-Communists, while i land, notwithstanding the Communist-dominated govern and the Communist ministry of education, the Communist ence on education was not complete (*New York Herald Tri* Oct. 26, 1947).

In the western hemisphere, the ministry of education of ico announced during the summer that its three-year cam against illiteracy succeeded in reducing the percentage of can illiterates from 35 to 30. About 1,000,000 individuals taught to read and write during the progress of this drive.

The *New York Times* reported on Dec. 26 that a gro Argentine professors who had been dismissed by Pres. Perón founded a Free university, "a sort of university-in within the borders of the country itself." This was interp as "the most formidable challenge" to the dictatorial contr President Perón over the Argentine universities. There indications that the government would adopt a more co tory attitude toward the professors and would reinstate ma them in 1948. The Argentine scholars, however, were rep as unwilling to accept anything short of "very specific gu tees of full political and academic freedom." (*See* also C Welfare; Libraries. For statistics of institutions *see* versities and Colleges.)

(W. W. B

**Great Britain.**—In accordance with the terms of the E tion act, 1944, and the Education (Scotland) act, 194 April 1, 1947, the upper limit of "compulsory school age" raised from 14 to 15 years. There were no exemptions; boy and girl in England, Wales and Scotland must receive cient full-time education suitable to his/her age, ability, aptitude, either by regular attendance at school or other between the ages of 5 and 15 years. It had taken nearly 30 to secure this advance; full-time education for all up to 14 made compulsory in 1918.

The step was not taken without opposition. Few people questioned the principle, but many doubted whether at a time of acute economic crisis the entry of some 400,000 recruits to employment should be deferred and the expense of keeping them at school continued. But the government rejected the idea of postponement, and public opinion undoubtedly supported it.

The full benefit of raising the age would not be felt for some time. School building was restricted to relieving extraordinary shortages of accommodation caused by raising the age, the increased birth rate, new housing estates and industrial developments. Consequently, many thousands of children had to be given the longer course of education in premises neither designed nor equipped for the purpose. To meet ordinary shortages of accommodation, schools were being supplied with prefabricated huts, popularly called "Horsa" huts (huts operation—raising school age), each housing two classes. Many local education authorities also transferred 14-year-old children from small or less well equipped schools to larger or better equipped ones. Valuable experiments in the teaching of children of varied educational attainments were being launched as a result of this procedure.

Four days before the compulsory school age was raised in Britain the Education (Northern Ireland) act, 1947, became law. In accordance with the policy of the British government that the provision of public education should be on approximately the same level throughout the United Kingdom, this measure was similar to the Education act, 1944, many of the main sections being identical. As in Britain, the statutory system of public education was organized in three progressive stages: primary, secondary and further education. The same statutory duties are laid upon the local education authorities, and upon parents. Compulsory school age was to be from April 1, 1948, 5 to 15, although local education authorities might with the approval of the minister make bylaws prescribing 5½ or 6 years as the lower limit. Religious worship and instruction were made compulsory in primary and secondary schools. All private schools were to be registered and inspected. The most important difference from the English and Scottish acts is that there was no provision for compulsory part-time education of young persons after leaving school.

Thanks largely to the success of the emergency training scheme, a sufficiently large number of male teachers was entering the schools. Recruitment of men under this scheme ended in June, except for one or two specialist categories. Because of strong competition from industry and administration for the services of highly qualified graduates, there was a growing shortage of specialist teachers, particularly scientists, in grammar schools. In October the Burnham committee recommended revised salary scales for teachers, to operate from April 1, 1948, offering, *inter alia,* larger allowances to highly qualified graduates. Women teachers were still in short supply, especially for younger children, of whom larger numbers were daily entering the schools as a result of the increasing birth rate.

A promising reform in the organization of teacher training was launched by the inauguration in October of the Bristol and Birmingham University Institutes of Education, which federated university and training college facilities under the direction of the university. Similar schemes were planned elsewhere.

The exchange of teachers between Britain and the United States, reopened successfully in 1946, was continued and expanded, with 126 teachers exchanged as compared with 74 in 1946.

Despite all handicaps, much good experimental work was done in the schools, especially the new secondary schools. This was encouraged, in England and Wales by the publication of a forward-looking pamphlet, *The New Secondary Education,* by the ministry of education, and in Scotland by a remarkably progressive report on *Secondary Education* made by the Scottish Advisory Council on Education. The main emphasis in both documents is on development of more active methods without neglect of intellectual standards.

The British government increased its educational budget for 1947–48 by more than £22,000,000, because of the raising of the school age to 15 and other changes required under the education acts of 1944 and 1946. The total cost of education, including the expenditures of the local educational authorities, was estimated to be £212,685,000, an increase of £27,850,000 above the cost of education in 1946–47. Additional government funds, administered by the University Grants committee, were spent for higher education.

The universities were full to overflowing; it was estimated that they contained nearly 70,000 students, as compared with a prewar peak of 50,000. Rather more than two-fifths were ex-service men and women. In June Trinity college, Cambridge, celebrated its fourth centenary, and Eton its fifth centenary. In April the Educational Institute of Scotland, the all-embracing teachers' organization, celebrated its centenary.

In March a comprehensive scheme of compulsory general and voluntary individual education in the army was announced. (*See* also CAMBRIDGE UNIVERSITY; LONDON UNIVERSITY; OXFORD UNIVERSITY.) (H. C. D.; X.)

## Eggs.

The production of eggs in the United States continued at a high level in 1947, reaching a total of 5,015,000,000 doz., compared with 5,098,000,000 doz. in 1946 and the record of 5,365,000,000 doz. in 1944. This high output was sustained with about the same number of laying hens. During the first 11 months of the year the average production per hen was estimated at 149 eggs, compared with 145 eggs in 1946 and a five-year average of 132. Civilian consumption of eggs continued at about 380 per capita, although retail prices were 25% higher.

The number of laying hens on farms in 1947 was lower than in 1946 until July, and only the high rate of laying per hen held up production. A goal for 1948 was set at about 8% below 1947 for egg production and chickens raised to save grains during the winter of 1947–48.

Prices of eggs advanced steadily through 1947. The average farm price was 41.3 cents per dozen in January and held close to that level until June, then advanced to a high of 58.7 cents in December. In October the U.S. government's appeal to the public to cease eating poultry and eggs one day a week had a depressing effect on the market. When this policy was reversed on Nov. 4, the market recovered immediately. Government buying was discontinued in July until late in the fall. Under the Steagall act, price support at not less than 90% of parity was provided through Dec. 1948. The buying of eggs for European relief was expected to support the market through 1948.

Storage stocks of shell eggs declined steadily through 1947 and on Aug. 1 were the lowest on record—4,268,000 cases. Frozen eggs were in larger supply, reflecting increased use by the processed-food industries. The government bought about 275,000,000 doz. shell eggs for shipment to Britain and for price support in 1947. After the confusion resulting from the "no-poultry" holidays in October, the government advised producers that poultry and egg production would probably decline in 1948 because of the large demand for grains for export under the Marshall plan.

World egg production was somewhat higher in 1947 than in 1946 in all countries for which reliable estimates were available. European countries made definite progress toward restoring the prewar numbers of chickens, but the severe grain scarcity appeared likely to retard the increase in flocks. Egg production in France, Italy and the United Kingdom was so near prewar levels, that increases were unlikely. Reliable statistics on poultry raised and eggs produced were very difficult to assemble because of the many small flocks both on farms and in villages. As a means of subsistence poultry was of great importance in all war-devastated areas. (*See* also FOOD RESEARCH; POULTRY.)

(J. C. Ms.)

**Egypt.** An independent kingdom of northeast Africa; bounded N. by the Mediterranean, S. by the Anglo-Egyptian Sudan, N.E. by Palestine, E. by the Red sea, W. by Libya and the Sahara. Area: *c.* 383,000 sq.mi. (arable land 13,600 sq.mi.); pop. (est. June 1947) 19,090,448. Chief towns: Cairo (cap. 2,100,486); Alexandria (928,237); Port Said (132,000); Tanta (105,000); Mansura (79,000); Damanhur (71,000); Asyut (65,000). Language: Arabic; religion: Mohammedan 91%; Coptic 7%. Ruler: King Farouk I; prime minister: Mahmoud Fahmy el-Nokrashy Pasha (Dec. 9, 1946).

**History.**—The events of 1947 were overshadowed by the continued dispute with the United Kingdom, arising out of the Egyptian request for the revision of the Anglo-Egyptian treaty of 1936. The British refusal to meet Egyptian demands greatly excited Egyptian feeling and made friendly relations between the two people increasingly difficult. Another sign of the worsening of Anglo-Egyptian relations and of the embarrassment thus caused was that the situation obliged the Arab league to take sides as between Egypt and Britain. On Jan. 5 the league issued a declaration stating that it supported Egypt's demands in the Sudan. The demand for the unification of the Nile valley had been heard since Egyptians began to call for a revision of the treaty immediately after the end of World War II. Egypt claimed that the Sudan was an essential part of the dominions of the king, both historically and on grounds of common religion and culture, and, particularly, because of the importance of the Sudan in respect to the Nile, upon which Egypt's economy and life depend. The British government maintained, on Jan. 25, that it could not "sign away a people's right of self-determination in a treaty with a third party," and that "the Sudanese may, at the proper moment of political maturity, choose full independence from Egypt." Next day Nokrashy Pasha informed the press that the Egyptian government would submit the whole question of Egypt and the Sudan to the United Nations. In March the British prime minister, Clement Attlee, reiterated the British attitude and stated that British troops would nevertheless leave Cairo for the central zone. This move was completed by March 29. In July the terms of the Egyptian government's note to the Security council were published. The council was asked to order the evacuation of British troops from Egypt and the Sudan, and the termination of the existing regime in the Sudan; it was claimed that the treaty of 1936 was no longer binding, as it had outlived its purpose and contravened the spirit of the charter of the United Nations. Feeling continued to run high and in August, in demonstrations in Cairo and Alexandria, organized by the Moslem brotherhood, casualties amounted to more than 100.

Meanwhile, on Aug. 5, the prime minister of Egypt had put his country's case to the Security council. An Arab delegate supported Egypt but the council passed, with many abstentions, a recommendation for the renewal of direct negotiations. (*See* ANGLO-EGYPTIAN SUDAN.)

EGYPTIANS gathering on the esplanade of Kasr El Nil, April 3, 1947, to se King Farouk raise the Egyptian flag over the garrison, marking the end o the 65-year occupation of Cairo by British troops

Egyptian feeling remained unsatisfied, and their press displayed dissatisfaction, sometimes in the strongest terms. But in the autumn, political affairs were considerably overshadowe by an outbreak of cholera in the provinces which, although i had not affected the great cities, was by the end of Septembe sufficiently serious to lead the government to postpone the opening of the schools, and of the universities of Cairo and Alexandria, and to ask the governments of the United Kingdo and the United States for supplies of anti-cholera serum. Th epidemic spread. Neighbouring countries took severe precautionary measures, limiting travel from Egypt, while aircraf sprayed Egyptian cities with DDT. By the end of October th daily death-rate was officially reported to be in the neighbourhood of 400; by the end of November it had fallen to about 20 Meanwhile political considerations had affected the economi affairs of the kingdom. In May the minister of finance announced that Egypt was unwilling to scale down its sterling balances. After negotiations, a temporary agreement between Egypt and Britian was signed by which £8,000,000 were made available to Egypt before the end of the year. Subsequently Egypt left the sterling bloc.

(H. S. D.)

**Education.**—(1943) Elementary and secondary schools 8,007 scholars 1,309,300; technical and professional schools 115, scholars 19,711; special schools 170, scholars 32,363; higher institutes 42, students 12,522; universities: Al Azhar (Moslem) students 14,185; King Fuad I, students (male) 7,677, (female) 722; King Farouk I, students (male) 1,127, (female) 30.

**Banking and Finance.**—Revenue (est. 1947–48) £E.94,175, 500; expenditure (est. 1947–48) £E.103,257,800; notes in circulation (1946) £E.140,924,000; coin in circulation (1946) £E.7,162,000; public debt (Oct. 1946) £E.128,001,850; gold reserve (March 1947) £E.6,376,000; currency, Egyptian pound (£E.) divided into 100 piastres. Exchange rate £E.1 = 413 cents U.S. (1947).

**Trade and Communications.**—External trade (merchandise): imports (1945) £E.60,476,000; exports (1945) £E.45,159,000. Communications and transport (1945): roads 8,203 mi.; railways 3,385 mi.; navigable canals (1944) 7,323 mi. Shipping (1945): tonnage entered 24,633,000; tonnage cleared 24,013,000. Suez canal (1940): commercial ships passing 2,419, tonnage 12,713,000; war transport ships 40, tonnage 380,000. Airways (1944): Misr air lines: number of passengers 33,322; freight 526 short tons; mails 30 short tons; miles flown 1,023,430; regularity of service 94.2%.

**Agriculture and Minerals.**—Production (1945) in short tons: cotton 259,000; maize 2,679,000; rice 954,000; wheat 1,302,500; lentils 58,400; beans 339,400; barley 288,700; fenugreek 36,300; onions 175,200; sugar cane 2,818,100; petroleum 1,487,119; phosphates 358,010; iron oxides and ochre 4,469; talc 4,262; natron 7,380.

**Eire.** A republic associated with the British commonwealth of nations, Eire occupies five-sixths of an island to the west of Great Britain. Area: 26,602 sq.mi.; pop. (May 13, 1946, census): 2,953,452. Chief towns (1946 census): Dublin (cap. 506,635); Cork (75,361); Dun Laoghaire (44,689); Limerick (42,987); Waterford (28,332). Language: English (76.3%), Erse (Gaelic) 23.7%. Religion: Roman Catholic 93.4%. President: Sean T. O'Kelly; prime minister: Eamon de Valera.

**History.**—The year 1947 was dominated by economic problems, with political issues in abeyance. The temporary British ban on coal exports (Feb. 6) had a crippling effect on the fuel and power situation. Apart from the Great Northern railway (operating on both sides of the border) no passenger trains were run for a prolonged period, and freight trains were limited to three a week. Bread rationing was introduced in March, and the butter ration was cut by half.

After a period of relative stability since 1943, the cost of living index rose sharply in the third quarter to 319 (1914 = 100), representing an increase of roughly 80% since 1939. This threatened to wreck the series of wage adjustments made after the removal in Sept. 1946 of the "standstill" orders governing wages and salaries. The result was a number of strikes, the most serious being that of the road passenger transport service, which began on Sept. 3 and lasted for more than two months.

Accordingly, a supplementary budget was introduced in October. This proposed to subsidize the cost of flour, bread, tea, sugar and fertilizers by means of increased taxation. Substantial increases were made in the duties on whiskey and tobacco, and a new stamp duty imposed on sales of estates: 5% on the purchase price when the buyer was a national, and 25% in the case of nonnationals. A Prices and Efficiency bill was also introduced, designed to increase industrial efficiency by state control.

The volume of external trade was considerable, showing a heavy adverse visible balance. In the first six months imports were £52,700,000 and exports £15,900,000. The disparity was largely remedied by interest on investments and the tourist trade. Ministerial talks in London raised hopes that the export trade would be encouraged by an assured market for agricultural produce in Britain. The Irish contribution to the Paris conference also envisaged a desirable expansion of agricultural production. In conformity with other countries, imports from the United States, which amounted to some £10,000,000 in the first six months, were heavily cut in the autumn. (D. J. O.)

**Education.**—Elementary schools (1946–47): 4,957; scholars 451,820; secondary schools 393; scholars 42,927. Universities (1946–47): National, 4,857 students; Trinity college, Dublin, 1,484 students.

**Finance.**—Budget (1946–47 actual): revenue £54,353,000, expenditure £58,865,000; (1947–48 est.) revenue £66,901,000, expenditure £66,884,000. Public debt (March 31, 1947) £86,797,000. Notes in circulation (June 30, 1947) £42,977,000. The Irish pound has the same value as the pound sterling. £ = 403.5 U.S. cents.

**Trade and Communications.**—Foreign trade (1946): imports £72,043,400; exports £38,612,000. Shipping entered (1946): 2,956,000 tons; cleared 1,998,000 tons. Railways: total length (1945), including the mileage situated partly in Northern Ireland: 2,835 mi. Motor vehicles licensed (March 1946): 176,200. Wireless receiving set licences (1944): 173,300. Telephone installations (March 1946): 55,426.

**Agriculture and Fisheries Production.**—Production (1946, in short tons): wheat 518,039; oats 771,850; barley 124,437; potatoes 3,613,100; sugar beets 107,389. Livestock (1945): cattle 3,856,000; sheep 1,922,000; horses 445,000; pigs (1946) 479,280. Fisheries: total value of fish caught (1946): £594,336. Number of unemployed persons (Feb. 1947): 74,968.
